39 fore a judge of the superior court to whom the affidavit and
40 warrant of apprehension shall be delivered to be filed with the
41 clerk. The judge shall then inform him of the charge against
42 him, and inform him of his rights to make a defense to such
43 charge and to produce witnesses in relation thereto.

44 The judge shall by order fix such time and place for the
45 hearing and examination in open court as will give a reason-
46 able opportunity for the production and examination of wit-
47 nesses. This order shall be entered at length in the minute book
48 of the court by the clerk or shall be signed by the judge and
49 filed and a certified copy thereof shall be served on the person.
50 The judge may order that notice of the apprehension of the

1 person and of the hearing of the charge be served on such rela-
2 tives of the person known to be residing in the county, as the
3 court deems necessary or proper.

4 5654. Where a rehabilitation center for the care and treat-
5 ment of inebriates is maintained in a branch of the county
6 jail within the county, the judge may, upon the written recom-
7 mendation of one medical examiner and the written consent
8 of the person charged, order the person confined to such re-
9 habilitation center immediately and without further hearing
10 or examination for a term not exceeding one year. Any person
11 confined pursuant hereto, may, upon written demand filed with
12 the clerk at any time during the period of confinement, request
13 hearing and examination as provided in Article 2 (commencing
14 with Section 5550) of this chapter. Upon the filing of any
15 such request, the judge shall by order, fix a time and place
16 for hearing and examination and proceed as in cases where no
17 order of commitment has been made pursuant to the consent of
18 a medical examiner and the person charged.

19 5655. The hearing and examination shall be had in compli-
20 ance with the provisions of Sections 5564, 5565, and 5566 of
21 this code.

22 5656. If the judge, after such hearing and examination,
23 believes the person is so far addicted to the intemperate use
24 of habit-forming drugs, as provided in this article, as to have
25 lost the power of self-control, he shall make an order that the
26 person be committed to the Department of Mental Hygiene for
27 placement in a hospital for the care and treatment of the
28 mentally ill designated in such order, or that such person be
29 confined in a regional jail camp maintained by the Department
30 of Corrections or in an industrial farm or industrial road
31 camp within the county or, in the event that the county main-
32 tains a branch of the county jail at which inmates thereof are
33 required to perform agricultural and other out-of-doors labor,
34 in such branch of the county jail. The order of commitment
35 and statement of financial condition shall be in substantially
36 the form provided by Section 5567 of this code for the com-
37 mitment of mentally ill persons.

38 Before a person is committed to a state hospital, however,
39 satisfactory evidence shall be submitted to the trial judge
40 showing that the person to be committed is not of bad re-
41 pute or bad character, apart from his habit for which the com-
42 mitment is made, and that there is reasonable ground for be-
43 lieving that the person, if committed, will be permanently
44 benefited by treatment.

45 5657. If the court orders that the person be confined in a
46 state hospital, the court shall commit the person to the De-
47 partment of Mental Hygiene for placement in a designated
48 hospital for a definite period not to exceed two years, but he
49 may be placed on leave of absence by the medical superin-
50 tendent under the same rules and conditions under which the
51 mentally ill are placed on leave of absence, and the

1 superintendent, on filing his written certificate with
2 the Director of Mental Hygiene, may discharge any
3 person committed under this article when he is satis-
4 fied that the person will not receive substantial benefit
5 from further hospital treatment, with the same power as con-
6 tained in Article 8 (commencing with Section 6725), Chapter
7 1, Part 4, Division 6 of this code. In the event that the person
8 shall have been committed to an industrial farm or industrial
9 road camp or branch of the county jail, as provided in Section
10 5654 or 5656 of this code, he may, after recommendation by the
11 medical director of the county that the person will not receive
12 substantial benefit from further confinement, be paroled by the
13 county board of parole commissioners in the same manner
14 as prisoners in county jails are paroled.

15 5658. If a person ordered committed to a state hospital,
16 or any friend in his behalf, is dissatisfied with the order of the
17 judge committing him, he may, within 10 days after the mak-
18 ing of the order of commitment, demand that the issue be
19 tried by a judge or by a jury in the superior court of the
20 county in which he was committed. Thereupon a trial shall be
21 had in compliance with the provisions of Sections 5272 to
22 5276, inclusive, of this code.

23 Article 7. Inebriates

24 5675. Proceedings for the commitment of a person alleged
25 to be an inebriate shall be instituted and conducted in the
26 manner prescribed in Article 6 (commencing with Section
27 5650) of this chapter. The procedure shall be modified only
28 to the extent necessary to reflect that the person whose com-
29 mitment is sought is alleged to be an inebriate rather than a
30 habit-forming drug addict.

31 5676. Where a rehabilitation center for the care and treat-
32 ment of inebriates is maintained in a branch of the county
33 jail within the county, the judge may, upon the written rec-
34 ommendation of one medical examiner and the written consent
35 of the person charged, order the person confined to such
36 rehabilitation center immediately and without further hearing
37 or examination for a term not exceeding one year. Any person
38 confined pursuant hereto, may, upon written demand filed
39 with the clerk at any time during the period of confinement,
40 request hearing and examination as provided in Article 2
41 (commencing with Section 5550) of this chapter. Upon the
42 filing of any such request, the judge shall by order, fix a time
43 and place for hearing and examination and proceed as in cases
44 where no order of commitment has been made pursuant to the
45 consent of a medical examiner and the person charged.

46 5677. If the judge, after such hearing and examination,
47 believes the person is subject to inebriety in such a degree
48 as to require custodial care and treatment, he shall make
49 an order that the person be committed to the Depart-
50
51

1 ment of Mental Hygiene for placement in a hospital for
2 the care and treatment of the mentally ill designated in such
3 order, or that such person be confined in a regional jail camp
4 maintained by the Department of Corrections or in an indus-
5 trial farm or industrial road camp within the county or, in
6 the event that the county maintains a branch of the county
7 jail at which inmates thereof are required to perform agricul-
8 tural and other out-of-doors labor, in such branch of the county
9 jail.

10 Before a person is committed to a state hospital, however,
11 satisfactory evidence shall be submitted to the trial judge
12 showing that the person to be committed is not of bad reput-
13 or bad character, apart from his habit for which the commit-
14 ment is made, and that there is reasonable ground for believ-
15 ing that the person, if committed, will be permanently bene-
16 fited by treatment.

17 5678. If the court orders that the person be confined in a
18 state hospital, the court shall commit the person to the De-
19 partment of Mental Hygiene for placement in a designated
20 hospital for a definite period not to exceed two years, but he
21 may be placed on leave of absence by the medical su-
22 perintendent under the same rules and conditions under which
23 the mentally ill are placed on leave of absence, and the
24 superintendent, on filing his written certificate with the
25 Director of Mental Hygiene, may discharge any person
26 committed under this article when he is satisfied that the per-
27 son will not receive substantial benefit from further hospital
28 treatment, with the same power as contained in Article 8
29 (commencing with Section 6725), Chapter 1, Part 4, Division
30 6 of this code. In the event that the person shall have been
31 committed to an industrial farm or industrial road camp or
32 branch of the county jail, as provided in Section 5676 or 5677
33 of this code, he may, after recommendation by the medical
34 director of the county that the person will not receive substan-
35 tial benefit from further confinement, be paroled by the county
36 board of parole commissioners in the same manner as pris-
37 oners in county jails are paroled.

38 5679. If the judge, after the hearing and examination, be-
39 lieves the person is subject to inebriety, but that the condition
40 of the person is not such as to require custodial care or treat-
41 ment, the judge may place the person on probation, subject
42 to the supervision of the probation officer, in the same manner
43 in which persons who are mentally disordered but not danger-
44 ous to health, person, or property are placed on probation, and
45 the laws relating to the probation, commitment, or other dis-
46 position of such mentally disordered persons shall apply to
47 and govern the commitment, probation, or disposition of per-
48 sons subject to inebriety in a degree not requiring custodial
49 care or treatment in the same manner and to the same extent
50 as if such persons so subject to inebriety were specifically re-
51 ferred to therein.

Article 8. Mentally Abnormal Sex Offenders

5700. The term "mentally abnormal sex offender" as used in this article means any person who is not mentally ill or mentally defective, and who by an habitual course of misconduct in sexual matters has evidenced an utter lack of power to control his sexual impulses and who, as a result is likely to attack or otherwise inflict injury, loss, pain or other evil upon the objects of his uncontrolled and uncontrollable desires.

5701. A petition alleging that a person named therein is a mentally abnormal sex offender and is in need of supervision, care or treatment and asking that provisions be made for the welfare of such person as provided in this article, may be filed in the superior court of the county in which such person resides only by the following persons:

(a) The parent, spouse or child of such person; or

(b) The person himself.

The petition shall state the petitioner's reasons for believing that the person may be a mentally abnormal sex offender and in need of supervision, care or treatment. The petition shall be accompanied by the written consent of the person himself voluntarily requesting examination and hearing by the court as provided in this article. The petition shall also be accompanied by a written statement of at least one medical examiner, stating that in his opinion the person is a mentally abnormal sex offender as defined in this article and recommending that examination be made of such person in accordance with the provisions of this article.

5702. The court shall fix a time and place for the hearing of the petition. The court shall require due notice of the hearing of the petition to be given to the person.

5703. The person alleged to be a mentally abnormal sex offender shall be taken before a judge of the superior court of said county, and the hearing and examination shall thereafter be had in substantial compliance with the provisions of Sections 5503 to 5511, inclusive, of this code.

5704. If, after examination and hearing, the judge believes that the person is a mentally abnormal sex offender, as defined in this article, he may order that the person be committed to the Department of Mental Hygiene for placement in a state hospital designated by the court for a period of time not to exceed two years for supervision, care and treatment, or the judge may dismiss the petition. The petition, the reports, the court orders and other court documents filed in the court shall not be open to inspection by any other than the parties to the proceeding, the attorneys for the party or parties, and the State Department of Mental Hygiene, except upon the written authority of a judge of the superior court of the county in which the proceedings were had.

5705. Whenever a person is committed to the department and confined in a state hospital under the provisions of this article, the superintendent of the state hospital shall maintain

1 complete records of the supervision, care and treatment given
2 to each such person. Such records shall not be open to the
3 inspection of any person not in the employ of the department
4 or of the state hospital, except that a judge of the superior
5 court may by order permit examination of such records. The
6 superintendent of the state hospital may, at any time after
7 admission, discharge such person, or grant him a leave of
8 absence upon such terms and conditions as he deems proper.
9 5706. Proceedings under this article shall not be brought,
10 and a petition under this article may not be filed, by or in
11 behalf of any person against whom a criminal charge has been
12 made which has not been prosecuted to final judgment.

13 Article 9. Juvenile Court Wards

14
15
16 5725. If the court, after finding that the minor is a person
17 described by Sections 600, 601, or 602, is in doubt concerning
18 the state of mental health or the mental condition of the per-
19 son, the court may continue the hearing and commit the person
20 to the Department of Mental Hygiene for placement in a state
21 hospital or state home for the mentally deficient for an inde-
22 terminate period of not more than 90 days, for observation of
23 the mental health or the mental condition of the person and
24 recommendations concerning his future care, supervision, and
25 treatment. If the Department of Mental Hygiene has desig-
26 nated a particular state institution to receive minors so com-
27 mitted for observation, all commitments shall be made to the
28 department for placement in the institution so designated. The
29 superintendent of the institution to which the minor is so
30 committed shall receive him, unless the institution is already
31 full or the funds available for its support are exhausted, or if,
32 in the opinion of the superintendent, the person is not a suit-
33 able subject for admission. Before such person is conveyed to
34 the institution, it shall be ascertained from the superintendent
35 thereof if the person may be accepted as herein set forth.

36 The medical superintendent or other person in charge of the
37 state hospital or state home for the mentally deficient in which
38 a minor person is placed for observation pursuant to this
39 section shall, as soon as possible and within 90 days, examine
40 the person to determine the state of his mental health or his
41 mental condition, and submit to the juvenile court a report on
42 the state of his mental health or mental condition which shall
43 include a diagnosis of the nature of his mental illness or
44 disability, if any, and recommendations concerning his future
45 care, supervision, and treatment.

46 If the medical superintendent or other person in charge of
47 the state institution in which the minor has been placed for
48 observation reports to the court that the minor is not affected
49 with any mental illness, disorder, or other mental disability
50 for which he might be committed to the Department of Mental
51 Hygiene for placement in any state institution under this
52 chapter, such superintendent or other person in charge of the

1 state institution shall return the minor to the juvenile court
2 within seven days after the date of the report and the court
3 shall proceed with the case in accordance with the provisions
4 of the Juvenile Court Law.

5 When the juvenile court directs the filing in any other court
6 of a petition for the commitment of a minor to the Department
7 of Mental Hygiene for placement in any state institution, the
8 juvenile court shall transmit to the court in which the petition
9 is filed a copy of the report of the medical superintendent or
10 other person in charge of the state institution in which the
11 minor was placed for observation. The court in which the
12 petition for commitment is filed may accept the report of the
13 medical superintendent or other person in charge of the state
14 institution in lieu of the appointment, certificate, and testimony
15 of medical examiners or other expert witnesses appointed by
16 the court, if the laws applicable to such commitment proceed-
17 ings provide for the appointment by court of medical exam-
18 iners or other expert witnesses or may consider the report as
19 evidence in addition to the certificates and testimony of medical
20 examiners or other expert witnesses.

21 The jurisdiction of the juvenile court over the minor shall
22 be suspended during such time as the minor is subject to the
23 jurisdiction of the court in which the petition for commitment
24 is filed or under commitment ordered by that court.

25 CHAPTER 2. EMERGENCY APPREHENSION

26
27
28 5880. When any person becomes so mentally ill as to be
29 likely to cause injury to himself or others and to require im-
30 mediate care, treatment, or restraint, a peace officer, health
31 officer, county physician or assistant county physician, who
32 has reasonable cause to believe that such is the case, may take
33 the person into custody for his best interest and protection
34 and place him as provided in this section. The person believed
35 to be mentally ill may be admitted and detained in the quarters
36 provided in any county hospital or state hospital upon appli-
37 cation of the peace officer, health officer, county physician, or
38 assistant county physician. The application shall be in writing
39 and shall state the circumstances under which the person's
40 condition was called to the officer's or physician's attention
41 and shall also state that the officer or physician believes, as a
42 result of his personal observation, that the person is mentally
43 ill and because of his illness is likely to injure himself or others
44 if not immediately hospitalized.

45 The superintendent or physician in charge of the quarters
46 provided in such county hospital or state hospital may care
47 for and treat the person for a period not to exceed seventy-two
48 (72) hours, excluding Saturdays, Sundays, and holidays.
49 Within said seventy-two (72) hours the person shall be dis-
50 charged from the institution unless a petition of mental illness
51 is presented to a judge of the superior court and the court
52 issues an order for detention of such person, or unless the

1 person is admitted as a patient under any other provision
2 of law.

3
4 CHAPTER 3. ADMISSION ON CERTIFICATION

5
6 Article 1. State Hospitals on Application
7 of Local Health Officer

8
9 6000. This article shall be construed as providing an addi-
10 tional, but not an exclusive, procedure for the admission of
11 mentally ill persons to state hospitals. Except as in this article
12 otherwise expressly provided, nothing in this article shall be
13 construed as repealing any other provision of law providing
14 for the admission of mentally ill persons to state hospitals, or
15 providing for the commitment of mentally ill persons to state
16 hospitals.

17 6001. The superintendent of a state hospital may admit
18 to the hospital any person believed to be mentally ill and in
19 need of supervision, care, or treatment, on application for his
20 admission and certification of his mental illness made pursuant
21 to this article, subject to general rules and regulations pre-
22 scribed by the Department of Mental Hygiene, but the super-
23 intendent shall not admit any person under this article if the
24 person to be admitted, or any relative or friend acting in his
25 behalf, protests against his admission to the superintendent
26 either before or at the time of admission.

27 6002. Application for the admission of a person to a state
28 hospital pursuant to this article shall be made only by the local
29 health officer. As used in this article, "local health officer"
30 means the county, city, or district health officer charged with
31 the preservation of the public health in the county, city, or
32 district.

33 6003. Any relative or friend of a person believed to be
34 mentally ill and in need of supervision, care, or treatment may
35 report that fact to the local health officer, together with the
36 name and place of residence of the person. The local health
37 officer may make or cause to be made such investigations as he
38 deems to be necessary to ascertain the facts. If it appears to
39 the health officer that there is reasonable cause for believing
40 that admission to a state hospital under this article will be
41 for the best interest of the person he may make the application
42 to a state hospital. Proceedings under this article shall be
43 stopped whenever the person believed to be mentally ill or
44 any relative or friend acting in his behalf protests against
45 such proceedings to the investigating health officer or to the
46 examining physicians.

47 Any local health officer or his employee who makes or assists
48 in making an application under this article shall not be ren-
49 dered criminally liable thereby when there is reasonable cause
50 for believing that such application will be for the best interest
51 of the person.

1 6004. Each such application shall be accompanied by cer-
2 tificates, dated not more than seven (7) days prior to the
3 presentation of the application to the superintendent, by each
4 of two physicians certifying that he has examined the person
5 within three (3) days of the date of the certificate and be-
6 lieves the person to be mentally ill and in need of supervision,
7 care, or treatment. Each such physician shall further certify
8 that he holds a valid and unrevoked physician's and surgeon's
9 certificate issued under the provisions of Division 2, Chapter
10 5, of the Business and Professions Code, and that he is not
11 related to the person by blood or marriage and is not con-
12 nected in any way with a state hospital.

13 6005. The department shall prescribe and publish instruc-
14 tions and forms of application, physicians' certificates of
15 mental illness, and all other documents provided for in this
16 article, and may include in them such questions as it deems
17 necessary or useful. Such instructions and forms may be
18 furnished to the health officers of the several counties, cities,
19 and health districts in the state and to any other person
20 applying therefor.

21 6006. If the alleged mentally ill person or the person
22 responsible for his maintenance and support is financially
23 unable to pay the cost of obtaining the physicians' certificates
24 such cost shall be paid by the county in which the health officer
25 is employed; provided, that such health officer shall have, prior
26 to the employment of such examining physicians, approved
27 such employment and that the cost of such physicians' service
28 for such alleged mentally ill person shall not exceed the sum
29 of ten dollars (\$10).

30 6007. No person shall be delivered to a state hospital for
31 admission thereto under this article until the application for
32 his admission has been accepted by the superintendent of the
33 hospital. The superintendent may refuse to accept any appli-
34 cation or to admit any person to the hospital if he believes the
35 person is not mentally ill nor in need of supervision, care or
36 treatment, if there is no room for him in the hospital, or if his
37 admission would violate any rule of the Department of Mental
38 Hygiene.

39 6008. Upon acceptance of the application by the super-
40 intendent of the hospital, the person shall be delivered to the
41 hospital within five (5) days under the direction of the local
42 health officer. No female person shall be taken to a state hos-
43 pital, except by a relative, without the attendance of some
44 woman of good character and mature age. The application for
45 admission and the accompanying certificates shall be delivered
46 to the hospital before or at the time of the delivery of the
47 person to the hospital.

48 1. Every public officer or public employee who delivers or
49 assists in the delivery of a person to a state hospital pursuant
50 to this section shall receive therefor such fees and expenses as
51 are payable to the sheriff for conveyance of patients to state
52 institutions, which shall be paid in the same manner.

1 6009. Any public officer or employee who transports or
2 delivers or assists in transporting or delivering or detains or
3 assists in detaining any person pursuant to this article shall
4 not be rendered criminally liable thereby unless it be shown
5 that such officer or employee acted maliciously or in bad faith
6 or that his negligence resulted in bodily injury to such person.

7 6010. Except as expressly otherwise provided in this article,
8 persons admitted to state hospitals pursuant to this article
9 shall be entitled to the same rights and care, shall be subject
10 to the same rules, and the liability for their support shall be
11 the same, as if such persons had been duly committed thereto
12 by a court of competent jurisdiction, and the laws governing
13 the rights, care, property and support, transfer, leave of ab-
14 sence, and discharge of mentally ill persons committed to state
15 hospitals shall apply to persons admitted to state hospitals
16 pursuant to this article the same as if such persons were ex-
17 pressly mentioned therein.

18 6011. Prior to transporting any person to a state hospital
19 or his admission thereto, pursuant to this article, the local
20 health officer shall cause to be delivered to such person a notice
21 in writing informing the person that application has been
22 made for his admission to a state hospital and of his right to
23 object thereto. At any time after the admission of a person to
24 a state hospital pursuant to this article, the person, or any
25 relative or friend in his behalf, may file with the superin-
26 tendent of the hospital in which the person is confined, a
27 written request for a court hearing to determine whether or
28 not the person is mentally ill and in need of supervision, care,
29 or treatment in the hospital.

30 6012. The department shall make such rules and issue such
31 instructions to hospital personnel as will insure the provision
32 of facilities for making written demand for court hearing to
33 every person admitted to the hospital pursuant to this article
34 upon indication of his desire to make such request, and for the
35 immediate transmission of every such request to the superin-
36 tendent of the hospital. The department shall provide blank
37 forms of such requests for the use of such patients or relatives
38 or friends acting in their behalf.

39 6013. Upon receipt of each written request for a court
40 hearing, the superintendent of the hospital shall notify the
41 Director of Mental Hygiene and the local health officer who
42 made the application for the admission of the person of the
43 request. The superintendent shall immediately send the re-
44 quest for hearing to the superior court of the county from
45 which the application for the admission of the person was
46 made, together with all the following:

47 (a) A true copy of the application for admission of the
48 person to the hospital.

49 (b) A true copy of the certificates which accompanied the
50 application.

51 (c) A report on and diagnosis of the mental condition of the
52 person by the superintendent of the state hospital.

6014. The written request for court hearing, together with the documents specified in Section 6013, shall have the force and effect of a verified petition and of a demand for court hearing under the provisions of Article 2 of Chapter 1 of Part 1.5 of Division 6 of this code, and proceedings thereon shall be had as provided in that article. In such proceedings, however, the court may dispense with the observation period provided for therein, and may accept the report and diagnosis of the superintendent and medical staff of the state hospital in lieu of the appointment, certificates, and testimony of medical examiners. In addition to the notices of time and place of the hearing given to the person or his representative and a relative or friend pursuant to Section 5560, the clerk of the court shall give notice of the time and place of the hearing to the superintendent of the hospital in which the person is confined, by registered mail or otherwise.

6015. Pending the hearing, the person shall be detained in the state hospital to which he was admitted. The superintendent shall cause the person to be delivered by employees of the hospital to the court for the hearing.

If, after hearing, the court commits the person to the Department of Mental Hygiene for placement in a state hospital, the person shall be delivered by state hospital employees to the hospital designated by the court.

6016. Whenever the superintendent of a state hospital to which a person has been admitted pursuant to this article is of the opinion that the person is no longer in need of supervision, care, or treatment in the hospital, he may release the person on leave of absence or discharge him upon any of the grounds provided in this code for the release or discharge of mentally ill persons committed to state hospitals.

6017. Nothing in this article limits the right of any person admitted to a state hospital pursuant to this article to a writ of habeas corpus upon a proper application made at any time by such person or a relative or friend on his behalf.

6018. This article does not authorize any examination as provided in Section 6004 or the admission to a state hospital of any person who is being treated by prayer in the practice of the religion of any well recognized church, sect, denomination or organization, if he, or any relative or friend acting in his behalf, protests against such examination or admission to the local health officer investigating the case.

6019. A local health officer may make application under this article on behalf of a person believed to be mentally ill to a facility of the Veterans Administration within this state upon receipt of a certificate from the Veterans Administration showing that such person is eligible for care or treatment therein. The chief officer of any facility of the Veterans Administration within this state may admit such person under this article and thereupon shall be vested with the same powers and obligations as superintendents of state hospitals have under this article with respect to retention of custody, leave

1 of absence, discharge or notification of court when demanded
2 by the person.

3
4 Article 2. State Hospitals on Certification
5 of Physicians
6

7 6022. The superintendent of a state hospital may admit to
8 the hospital for a period not to exceed ninety (90) days for
9 observation, care or treatment, any person who is believed to
10 be mentally ill and who does not object to such admission or
11 for whom no such objection is made by a member of his family,
12 relative, or friend, upon

13 (a) The written application made on behalf of the person
14 by a member of his family, relative, friend with whom he
15 resides or guardian of the person, a health or welfare officer
16 of the community, or the head of a hospital, sanitarium or
17 other institution in which the person may be, and accom-
18 pained by

19 (b) The certificates of two physicians that they have exam-
20 ined such person and believe him to be mentally ill and in need
21 of observation, care or treatment, and because of his illness
22 lacks sufficient insight or capacity to make responsible applica-
23 tion himself. Each such physician shall be duly licensed in this
24 state and not related to the person by blood or marriage. Each
25 such certificate shall show that such person was examined by
26 the physician not more than ten (10) days prior to the pres-
27 entation of the application and certificates to the superin-
28 tendent.

29 6023. At any time after such person has been admitted to
30 the state hospital, he, or anyone on his behalf, may give notice
31 in writing to the superintendent of his desire to leave the hospi-
32 tal. Such person shall be discharged within fifteen (15) days
33 after receipt of the notice unless the superintendent is of the
34 opinion that the person is mentally ill and in need of further
35 care, treatment or supervision. In such event the superintend-
36 ent shall forthwith in writing inform the patient, and the per-
37 son who gave the notice or who made the written application
38 on behalf of the patient, of such opinion and of the proceedings
39 to follow, and shall retain the patient in the hospital during
40 such fifteen (15) day period.

41 The superintendent may within such fifteen (15) days re-
42 lease the patient on leave of absence if the patient makes
43 written request for the same and if such leave will benefit the
44 patient in the opinion of the superintendent, otherwise he
45 shall within such fifteen (15) days file, in the superior court
46 of the county from which the application was made, the
47 following:

48 (a) A true copy of the notice of desire to leave the hospital.

49 (b) A true copy of the application for admission to the hos-
50 pital.

51 (c) A true copy of the physician's certificate which accom-
52 panied the application.

(d) A report and diagnosis setting forth the opinion of the superintendent concerning the mental condition of the patient.

6024. The documents specified in Section 6023 shall, upon being filed in court, have the force and effect of a verified petition and of a demand for court hearing under the provisions of Article 2 (commencing with Section 5550) of Chapter 1 of this division, and proceedings thereon shall be had as provided in that article. In such proceedings, however, the court may dispense with the observation period provided for therein, and may accept the report and diagnosis of the superintendent and medical staff of the state hospital in lieu of the appointment, certificates, and testimony of medical examiners. In addition to the notices of time and place of the hearing given to the person or his representative and a relative or friend pursuant to Section 5560, the clerk of the court shall give notice of the time and place of the hearing to the superintendent of the hospital in which the person is confined, by registered mail or otherwise.

Pending the hearing, the person shall be detained in the state hospital to which he was admitted. The superintendent shall cause the person to be delivered by employees of the hospital to the court for the hearing.

If, after hearing, the court commits the person to the Department of Mental Hygiene for placement in a state hospital, the person shall be delivered by state hospital employees to the hospital designated by the court.

6025. At any time after such person has been admitted to a state hospital the superintendent may discharge him, or may release him on leave of absence with the patient's written consent, whenever the patient is no longer in need of observation, care or treatment in the hospital. Except as expressly otherwise provided in this article, a person admitted under this article shall be entitled to the same rights and care, shall be subject to the same rules and regulations of the hospital, and the liability for his support shall be the same, as if such person had been duly committed by a court of competent jurisdiction.

6026. At the expiration of ninety (90) days following a person's admission under this article, the superintendent shall discharge him from the hospital if the person has not previously been discharged or released, unless the patient is mentally ill and in need of further hospital care and treatment in the opinion of the superintendent. In such event he shall forthwith give written notice of such opinion and of the proceedings to follow to the patient, to the person who made the application for admission, and to the known spouse, parents or children of the patient residing in this state, and shall retain the patient in the hospital for not more than fifteen (15) additional days. If no relative, friend or other person takes steps in behalf of the patient within the fifteen (15) days, either to care for the person on leave of absence with the person's written consent, or to have him otherwise admitted to a suitable hospital in accordance with law, the superintendent shall file in the su-

1 perior court of the county from which the application was
2 made the documents specified in Section 6023. Thereafter the
3 proceedings in court and pending the court hearing shall be in
4 accordance with the provision of Section 6024.

5 A person who is released under this article on leave of
6 absence from a state hospital shall not be returned to the
7 hospital without his consent. If such person becomes in need
8 of further hospital care or treatment steps may be taken in
9 his behalf to have him otherwise admitted to a suitable hos-
10 pital in accordance with law.

11 6027. The Department of Mental Hygiene shall prescribe
12 and publish instructions, forms of application, physician's cer-
13 tificates, notices and other documents necessary for the proper
14 execution of this article, and may furnish them to the health
15 and welfare officers of the several cities and counties of the
16 state, and to any organization, institution, physician or person
17 requiring them. The Director of Mental Hygiene shall require
18 reports from the state hospital superintendents concerning
19 persons admitted under this article at such times and in such
20 form as he deems advisable.

21 6028. Nothing in this article limits the right of any person
22 admitted to a state hospital pursuant to this article to a writ
23 of habeas corpus upon a proper application made at any time
24 by such person or a relative or friend on his behalf.

25 Article 3. Private Institutions

26
27
28 6030. No person, except one who voluntarily desires and
29 seeks admission as a patient, shall be admitted or taken by
30 any person to a private psychopathic institution, hospital,
31 sanitarium, department, or ward for the care or treatment
32 of persons who are mentally ill or deranged, without a written
33 statement from at least one licensed physician, who has no
34 financial interest in nor membership on the paid regular or
35 consultant staff of such private psychopathic institution, hos-
36 pital, sanitarium, department, or ward, that he has made a
37 mental examination of the patient and that the patient should
38 be admitted to such place for care or treatment.

39 6031. At any time after the admission of a patient to a
40 private institution, hospital, or sanitarium pursuant to the
41 provisions of Section 6030 of this code, the patient, or any
42 relative or friend in his behalf, may file with the person in
43 charge of the institution, hospital, or sanitarium in which the
44 patient is confined, a written request for a court hearing to
45 determine whether or not the person is mentally ill and in
46 need of supervision, care or treatment in such institution,
47 hospital, or sanitarium, and proceedings thereon shall be had
48 as provided in Article 1 of Chapter 3 of this part.

49 6032. No person shall be admitted to such private insti-
50 tution, hospital, or sanitarium pursuant to Section 6030 of this
51 code unless the physician's statement is in certificate form and
52 is presented within three days of the physician's mental ex-

amination, and no person so admitted shall be detained or permitted to remain in such institution, hospital, or sanitarium for a period longer than 90 days, unless during such period he has filed a request to remain in such institution, hospital, or sanitarium as a voluntary patient, or unless during such period a petition has been presented to the superior court under the provisions of Article 2, Chapter 1 of Part 1.5 of Division 6 of this code and an order issued requiring such person to be detained in such institution, hospital, or sanitarium, or unless proceedings are pending under Section 6031 of this code to determine whether or not the patient is mentally ill and the patient has been ordered detained in such institution, hospital, or sanitarium pending the outcome of such hearing, or unless prior to the end of such period such private institution, hospital, or sanitarium has received a written application from a friend or relative of such person to retain such person therein for further care or treatment accompanied by two certificates executed by two physicians as required under Section 6030 and this section.

6033. No physician who shall execute, in good faith, a certificate under this article, and no private institution, hospital, or sanitarium, or its agents, servants, or employees, which shall admit and detain such person, in good faith, upon the authority of such application, or applications, and certificate, or certificates, shall be liable in damages to such person, or to his heirs, executors or administrators, for false imprisonment or otherwise; provided, however, that such physicians, institutions, hospitals, or sanitariums shall not be exempt from liability for negligence in the care or treatment of such persons.

CHAPTER 4. OTHER TYPES OF CONFINEMENT WITHOUT COURT ORDER

Article 1. Voluntary Admissions to State Hospitals

6050. Pursuant to rules and regulations established by the State Department of Mental Hygiene, the superintendent of a state hospital for the mentally ill or mentally deficient may receive and detain in such hospital, as a boarder and patient, any person who is a suitable person for care and treatment in such hospital, upon receipt of a written application for the admission of the person into the hospital for care and treatment made in accordance with the following requirements:

(a) In the case of an adult person, the application shall be made voluntarily by the person, at a time when he is in such condition of mind as to render him competent to make it.

(b) In the case of a minor person, the application shall be made by his parents, or by the parent, guardian, or other person entitled to his custody to any of such mental hospitals as may be designated by the Director of Mental Hygiene to admit minors on voluntary applications.

1 Any such person received and detained in a state hospital
2 shall be deemed a voluntary patient.

3 Upon the admission of a voluntary patient to a state hospital,
4 the superintendent shall immediately forward to the office of
5 the State Department of Mental Hygiene the record of such
6 voluntary patient, showing the name, residence, age, sex, place
7 of birth, occupation, civil condition, date of admission of such
8 patient to such hospital, and such other information as is re-
9 quired by the rules and regulations of the department.

10 The charges for the care and keeping of a mentally ill per-
11 son in a state hospital shall be governed by the provisions of
12 Article 5 (commencing with Section 6650) of Chapter 1 of
13 Part 4 relating to the charges for the care and keeping of men-
14 tally ill persons in state hospitals. The county where a men-
15 tally deficient person resided at the time of admission, as
16 determined by the Department of Mental Hygiene, shall pay
17 the cost to the state of the care of such person as provided by
18 Sections 7009 and 7010 of this code. The responsibility of the
19 mentally deficient patient and his kindred for reimbursement
20 to the county shall be governed by Articles 3 and 4 (com-
21 mencing with Section 2576) of Chapter 2 of Division 4 of this
22 code.

23 No adult person received into a state hospital under such
24 voluntary application shall be detained therein for more than
25 seven days, after having given notice, in writing, to the super-
26 intendent of his desire to leave such hospital unless, within
27 such period, a petition has been filed with the superior court
28 for commitment of such person as a mentally ill person.

29 No minor person received into a state hospital as a voluntary
30 patient shall be detained therein for more than seven days
31 after notice is given, in writing, to the superintendent by the
32 parents, or the parent, guardian, or other person entitled to
33 the custody of the minor, of their desire to remove him from
34 the hospital.

35 No person received into a state hospital as a voluntary
36 patient during his minority shall be detained therein after he
37 reaches the age of majority, but any such person, after attain-
38 ing the age of majority, may apply for admission into the hos-
39 pital for care and treatment in the manner prescribed in this
40 section for applications by adult persons.

41 The department shall establish such rules and regulations
42 as are necessary properly to carry out the provisions of this
43 section.

44 6051. Admissions to the Langley Porter Clinic or to the
45 Neuropsychiatric Institute, U.C.L.A. Medical Center, may be
46 on a voluntary basis after approval by the medical superin-
47 tendent of the clinic or institute, as the case may be.

Article 2. Voluntary Admissions to
Private Institutions

6060. The person in charge of any private institution, hospital, or sanitarium which is conducted for, or includes a department or ward conducted for, the care and treatment of persons who are mentally ill or deranged may receive and detain therein as a voluntary patient any person suffering from mental illness or derangement who is a suitable person for care and treatment in the institution, hospital, or sanitarium, who voluntarily makes a written application to the person in charge for admission into the institution, hospital or sanitarium, and who is at the time of making the application mentally competent to make the application.

After the admission of a voluntary patient to a private institution, hospital, or sanitarium the person in charge shall forward to the office of the State Department of Mental Hygiene a record of the voluntary patient showing such information as may be required by rule by the department.

No voluntary patient in a private institution, hospital, or sanitarium shall be detained therein for more than seven days, after having given notice, in writing, to the person in charge of the institution, hospital, or sanitarium of his desire to leave the institution, hospital, or sanitarium, unless within such period a petition has been filed with the superior court for commitment of such person as a mentally ill person.

Article 3. Voluntary Admissions to County
Psychopathic Hospitals

6070. As used in this article, "county psychopathic hospital" means the hospital, ward, or facility provided by the county pursuant to the provisions of Section 6300.

6071. The superintendent or person in charge of the county psychopathic hospital may receive, care for, or treat in the hospital any person who voluntarily makes a written application to the superintendent or person in charge thereof for admission into the hospital for care, treatment, or observation, and who is a suitable person for care, treatment, or observation, and who in the case of an adult person is in such condition of mind, at the time of making application for admission, as to render him competent to make such application. In the case of a minor person, the application shall be made by his parents, or by the parent, guardian, or other person entitled to his custody.

6072. No adult person received into the county psychopathic hospital under the provisions of Section 6071 of this code shall be detained therein for more than seven days, after having given notice, in writing, to the superintendent or person in charge, of his desire to leave such hospital.

No minor person received into the county psychopathic hospital under the provisions of Section 6071 of this code shall be

1 detained therein for more than seven days, after notice is
2 given, in writing, to the superintendent or person in charge of
3 the hospital by the parents, or the parent, guardian or other
4 person entitled to the custody of the minor, of their desire to
5 remove the minor from the hospital unless, within such period,
6 a petition has been filed with the superior court for commit-
7 ment of such person as a mentally ill person.

8
9 Article 4. Transfers From Other Jurisdictions

10
11 6075. The Department of Mental Hygiene may give writ-
12 ten permission for the return of any resident of this state con-
13 fined in a public institution in another state, corresponding
14 to any state hospital for the mentally ill or to any state home
15 for the mentally deficient of this state. When a resident is re-
16 turned to this state pursuant to this section, he may be de-
17 livered to any institution of the department as designated by
18 the Director of Mental Hygiene. Such person shall be ad-
19 mitted by the superintendent of the institution for care and
20 treatment for a period not exceeding seven days during which
21 time the person shall be released at the earliest possible time
22 or committed in accordance with law.

23 6076. The Department of Mental Hygiene may admit to
24 any state hospital for the mentally ill, if there is room therein,
25 any mentally ill soldier or sailor in the service of the United
26 States on such terms as are agreed upon between the depart-
27 ment and the properly authorized agents, officers, or repre-
28 sentatives of the United States government.

29 SEC. 6. Section 5699 of said code is amended and renum-
30 bered to read:

31 ~~5699.~~

32 6200. As used in this part, "establishment" and "in-
33 stitution" include every hospital, sanitarium, home, or other
34 place receiving or caring for any ~~insane, alleged insane,~~ men-
35 tally ill; or other incompetent person referred to in this di-
36 vision.

37 SEC. 7. Section 5700 of said code is amended and renum-
38 bered to read:

39 ~~5700.~~

40 6201. No person, association, or corporation, shall estab-
41 lish or keep, for compensation or hire, an establishment
42 for the care, custody, or treatment of the ~~insane, alleged in-~~
43 ~~sane,~~ mentally ill; or other incompetent persons referred to in
44 this division without first having obtained a license therefor
45 from the Department of Mental Hygiene, and having paid the
46 license fee provided in this chapter.

47 Any person who carries on, conducts, or attempts to carry
48 on or conduct an establishment for the care or treatment of
49 the ~~insane or alleged insane,~~ mentally ill; or incompetents
50 without first having obtained a license from the Department of
51 Mental Hygiene, as in this chapter provided, is guilty of a
52 misdemeanor and on conviction thereof shall be punished by

1 imprisonment in a county jail not exceeding six months or by
2 a fine not exceeding one thousand dollars (\$1,000), or by both
3 such fine and imprisonment. The managing and executive
4 officers of any corporation violating the provisions of this sec-
5 tion shall be liable under the provisions of this section in the
6 same manner and to the same effect as a private individual
7 violating the same.

8 The provisions of this chapter do not apply to any hospital
9 which maintains and operates organized medical or surgical
10 facilities primarily for the diagnosis, care, and treatment of
11 physical human illness, including convalescence, and including
12 care during and after pregnancy, and to which persons may
13 be admitted for overnight stay or longer, and holds a license
14 in good standing issued under the provisions of Chapter 2 of
15 Division 2 of the Health and Safety Code.

16 Sec. 8. Section 5700.5 of said code is amended and re-
17 numbered to read:

18 ~~5700.5.~~

19 6202. The district attorney of every county shall, upon
20 application by the State Department of Mental Hygiene or its
21 authorized representatives, institute and conduct the prosecu-
22 tion of any action brought for the violation within his county
23 of any of the provisions of this chapter.

24 Sec. 9. Section 5701 of said code is amended and renum-
25 bered to read:

26 ~~5701.~~

27 6203. Every application for a license shall be accompanied
28 by a plan of the premises proposed to be occupied, describing
29 the capacities of the buildings for the uses intended, the extent
30 and location of grounds appurtenant thereto, and the number
31 of patients proposed to be received therein, with such other in-
32 formation, and in such form, as the department requires. The
33 department shall adopt such rules and regulations as are neces-
34 sary to properly enforce and apply the provisions of this code
35 relating to licensed private mental institutions, and may clas-
36 sify the establishments and prescribe minimum standards of
37 safety, sanitation, diagnostic, medical, nursing, therapeutic
38 and other facilities and equipment for each class of establish-
39 ment.

40 The application shall be accompanied by the proper license
41 fee. The amount of the license fee for each fiscal year is that
42 fixed by the following schedule:

43 (a) For establishments licensed to receive not more than
44 ten (10) patients, the fee is twenty dollars (\$20).

45 (b) For establishments licensed to receive more than ten
46 (10) but not more than thirty (30) patients, the fee is forty
47 dollars (\$40).

48 (c) For establishments licensed to receive more than thirty
49 (30) but not more than fifty (50) patients, the fee is seventy-
50 five dollars (\$75).

51 (d) For establishments licensed to receive more than fifty
52 (50) patients, the fee is one hundred dollars (\$100).

1 In case of the issuance of a license on or after the first day
2 of January next succeeding the beginning of the fiscal year,
3 the license fee for the remainder of the fiscal year is one-half
4 the sum fixed for the entire fiscal year. The department shall
5 require a license fee, in situations where licensed establish-
6 ments increase their number of patients during any fiscal
7 year, based upon a pro rata charge under the schedule set
8 forth herein.

9 An additional fee shall be required in accordance with the
10 schedule set forth herein in the event of an application for
11 transfer of a license to another person to operate the same
12 establishment or for the transfer of a license issued in the
13 name of one person to operate an establishment at a certain
14 location where an application is received to transfer that
15 license to the same person to operate an establishment at a
16 different location.

17 SEC. 10. Section 5701.3 of said code is amended and re-
18 numbered to read:

19 ~~5701.3.~~

20 6204. The provisions of this chapter do not apply to pri-
21 vate homes certified for family care of patients ~~paroled or~~ on
22 leave of absence from state hospitals or state homes. The de-
23 partment may dispense with any requirements of this chapter
24 in an establishment licensed to receive not more than three (3)
25 patients. Licenses may be issued without payment of a fee to
26 establishments which do not have the capacity to receive or
27 care for more than six mentally ill or other incompetent per-
28 sons, which establishments are classified as family homes in
29 the regulations of the department.

30 SEC. 11. Section 5701.4 of said code is amended and re-
31 numbered to read:

32 ~~5701.4.~~

33 6205. The provisions of this chapter do not apply to any
34 private institution conducted by and for persons who adhere
35 to the faith of any well recognized church or religious denomi-
36 nation for the purpose of providing facilities for the care or
37 treatment of the sick who rely upon prayer or spiritual means
38 for healing in the practice of the religion of such church or
39 denomination.

40 SEC. 12. Section 5702 of said code is amended and renum-
41 bered to read:

42 ~~5702.~~

43 6206. The department shall not grant any such license un-
44 til it has made an examination of the premises proposed to
45 be licensed, and is satisfied that they are substantially as de-
46 scribed, and are otherwise fit and suitable for the purposes
47 for which they are designed to be used, and that such license
48 should be granted.

49 SEC. 13. Section 5703 of said code is amended and renum-
50 bered to read:

1 ~~6703.~~

2 6207. The department may at any time examine and ascer-
3 tain how far a licensed establishment is conducted in com-
4 pliance with the license therefor. If the interests of the inmates
5 of the establishment so demand, the department may, for just
6 and reasonable cause, suspend or revoke any such license. The
7 proceedings shall be conducted in accordance with Chapter 5
8 of Part 1 of Division 3 of Title 2 of the Government Code, and
9 the department shall have all the powers granted therein.

10 SEC. 14. Section 5704 of said code is amended and renum-
11 bered to read:

12 ~~5704.~~

13 6208. All licenses issued under the provisions of this chap-
14 ter shall expire on the first day of July next succeeding the
15 date of issue. Application for renewal of the license, accom-
16 panied by the necessary fee, shall be filed with the department
17 annually, not less than 10 days prior to its expiration and if
18 application is not so filed, the license shall be automatically
19 canceled.

20 SEC. 15. Section 5705 of said code is amended and renum-
21 bered to read:

22 ~~5705.~~

23 6209. The department may at any time cause any hospital,
24 establishment or home caring for or treating ~~insane, alleged~~
25 ~~insane~~, mentally ill or incompetent persons to be visited and
26 examined.

27 SEC. 16. Section 5706 of said code is amended and renum-
28 bered to read:

29 ~~5706.~~

30 6210. Each such visit may include an inspection of every
31 part of each establishment, and all the outhouses, places, build-
32 ings and grounds used in connection therewith. The repre-
33 sentatives of the department may make an examination of all
34 records, methods of administration, the general and special
35 dietary, the stores and methods of supply, and may cause an
36 examination and diagnosis to be made of any person confined
37 therein.

38 The patients who require it shall be given suitable oppor-
39 tunity to converse with the representatives of the department,
40 apart from the officers and attendants.

41 The representatives of the department may examine the
42 officers, attendants, and other employees, and make such inquir-
43 ies as will determine their fitness for their respective duties.

44 SEC. 17. Section 5707 of said code is amended and renum-
45 bered to read:

46 ~~5707.~~

47 6211. The representatives of the department may, from
48 time to time, at times and places designated by the Depart-
49 ment, meet the managers or responsible authorities of such
50 establishments in conference, and consider in detail all ques-
51 tions of management and improvement of the establishments,

1 and may send to them from time to time, written recommenda-
2 tions in regard thereto.

3 SEC. 18. Section 5708 of said code is amended and renum-
4 bered to read:

5 ~~5708.~~

6 6212. The authorities of each establishment for mentally
7 ill persons or other incompetents shall place on file in the office
8 of the establishment the recommendations made by the depart-
9 ment as a result of such visits, for the purpose of consultation
10 by such authorities, and for reference by the departmental
11 representatives upon their visits.

12 Every private institution, hospital, sanitarium, or establish-
13 ment licensed by the department for the care and treatment
14 of mentally ill or other incompetent persons referred to in this
15 division shall keep records of every person admitted thereto,
16 in the manner and form prescribed by rule and regulation of
17 the department, and shall furnish all or any portion of such
18 records to the department when required.

19 SEC. 19. Section 5709 of said code is amended and renum-
20 bered to read:

21 ~~5709.~~

22 6213. The provisions of this part shall not prevent local
23 authorities of any county, city or city and county, within the
24 reasonable exercise of the police power, from adopting rules
25 and regulations, by ordinance or resolution, prescribing stand-
26 ards of sanitation, health and hygiene for private institutions
27 for the care, custody or treatment of ~~the insane; alleged insane;~~
28 *mentally ill* or other incompetent persons, not in conflict with
29 the provisions of this part, and requiring a certificate by the
30 local health officer, that the local health, sanitation and hygiene
31 laws have been complied with before maintaining or conducting
32 any such institution within such county, city or city and
33 county.

34 SEC. 20. Section 5750 of said code is repealed.

35 ~~5750. No person, except one who voluntarily desires and~~
36 ~~seeks admission as a patient, shall be committed or taken by~~
37 ~~any person to a private psychopathic institution, hospital, sani-~~
38 ~~tarium, department, or ward for the care or treatment of per-~~
39 ~~sons who are mentally ill or deranged, without a written state-~~
40 ~~ment from at least one licensed physician, who has no financial~~
41 ~~interest in nor membership on the paid regular or consultant~~
42 ~~staff of such private psychopathic institution, hospital, sani-~~
43 ~~tarium, department, or ward, that he has made a mental exami-~~
44 ~~nation of the patient and that the patient should be admitted~~
45 ~~to such place for care or treatment.~~

46 SEC. 21. Section 5750.1 of said code is repealed.

47 ~~5750.1. At any time after the admission of a patient to~~
48 ~~a private institution, hospital, or sanitarium pursuant to the~~
49 ~~provisions of Section 5750 of this code, the patient, or any~~
50 ~~relative or friend in his behalf, may file with the person in~~
51 ~~charge of the institution, hospital, or sanitarium in which the~~
52 ~~patient is confined, a written request for a court hearing to~~

1 determine whether or not the person is mentally ill and in need
2 of supervision, care or treatment in such institution, hospital,
3 or sanitarium, and proceedings thereon shall be had as pro-
4 vided in Article 3.5 of Chapter 1 of Part 4 of Division 6 of
5 this code.

6 SEC. 22. Section 5750.2 of said code is repealed.

7 5750.2. No person shall be admitted to such private institu-
8 tion, hospital, or sanitarium pursuant to Section 5750 of this
9 code unless the physician's statement is in certificate form and
10 is presented within three days of the physician's mental exami-
11 nation, and no person so admitted shall be detained or per-
12 mitted to remain in such institution, hospital, or sanitarium
13 for a period longer than 90 days, unless during such period he
14 has filed a request to remain in such institution, hospital, or
15 sanitarium as a voluntary patient, or unless during such period
16 a petition has been presented to the superior court under the
17 provisions of Article 3, Chapter 1 of Part 1 of Division 6 of
18 this code and an order issued requiring such person to be de-
19 tained in such institution, hospital, or sanitarium, or unless
20 proceedings are pending under Section 5750.1 of this code to
21 determine whether or not the patient is mentally ill and the
22 patient has been ordered detained in such institution, hospital,
23 or sanitarium pending the outcome of such hearing, or unless
24 prior to the end of such period such private institution, hos-
25 pital, or sanitarium has received a written application from a
26 friend or relative of such person to retain such person therein
27 for further care or treatment accompanied by two certificates
28 executed by two physicians as required under Section 5750 and
29 this section.

30 SEC. 23. Section 5750.3 of said code is repealed.

31 5750.3. No physician who shall execute, in good faith, a cer-
32 tificate under this chapter, and no private institution, hospital,
33 or sanitarium, or its agents, servants, or employees, which shall
34 admit and detain such person, in good faith, upon the author-
35 ity of such application, or applications, and certificate, or cer-
36 tificates, shall be liable in damages to such person, or to his
37 heirs, executors or administrators, for false imprisonment or
38 otherwise; provided, however, that such physicians, institu-
39 tions, hospitals, or sanitariums shall not be exempt from lia-
40 bility for negligence in the care or treatment of such persons.

41 SEC. 24. Section 5750.5 of said code is repealed.

42 5750.5. The person in charge of any private institution,
43 hospital, or sanitarium which is conducted for, or includes a
44 department or ward conducted for, the care and treatment of
45 persons who are mentally ill or deranged may receive and
46 detain therein as a voluntary patient any person suffering from
47 mental illness or derangement who is a suitable person for
48 care and treatment in the institution, hospital, or sanitarium,
49 who voluntarily makes a written application to the person in
50 charge for admission into the institution, hospital or sani-
51 tarium, and who is at the time of making the application
52 mentally competent to make the application.

1 After the admission of a voluntary patient to a private insti-
2 tution, hospital, or sanitarium the person in charge shall
3 forward to the office of the State Department of Mental Hy-
4 giene a record of the voluntary patient showing such infor-
5 mation as may be required by rule by the department.

6 No voluntary patient in a private institution, hospital, or
7 sanitarium shall be detained therein for more than seven days,
8 after having given notice, in writing, to the person in charge
9 of the institution, hospital, or sanitarium of his desire to leave
10 the institution, hospital, or sanitarium, unless within such
11 period a petition has been filed with the superior court for
12 commitment of such person as a mentally ill person.

13 SEC. 25. Section 5751 of said code is amended and renum-
14 bered to read:

15 ~~5751~~

16 6250. No person in a private institution, hospital, sani-
17 tarium, department, or ward for the care or treatment of the
18 mentally ill shall be restrained from sending written communi-
19 cations of the fact of his detention in such institution to a
20 friend, relative, or other person. The physician in charge of
21 such person and the person in charge of such hospital shall
22 send each such communication to the person to whom it is
23 addressed. If, however, the physician in charge finds it inad-
24 visable to send any such communication because it contains
25 other matter which would do harm to the reputation of, and
26 would later cause mental anguish to, the person detained, or
27 if the physician finds it impossible to send any such communi-
28 cation within 24 hours, then both the physician in charge of
29 the patient and the person in charge of the institution shall
30 give notice of the detention of such patient to the district
31 attorney of the county from which the patient came at time of
32 admission and the district attorney of the county in which
33 the institution is located, and to the Department of Mental
34 Hygiene, giving the name and address of the patient and the
35 names and addresses of the person or persons who arranged
36 for his admission. Such district attorney or district attorneys
37 shall investigate the detention of such patient and advise the
38 patient concerning his legal rights and shall report in full
39 concerning such patient to the Department of Mental Hygiene.
40 The person in charge of the institution may detain a patient
41 only when there has been compliance with the provisions of
42 this section.

43 SEC. 26. Section 5752 of said code is amended and renum-
44 bered to read:

45 ~~5752~~

46 6251. No court proceedings shall be had in relation to the
47 mental condition of a patient in a private institution, hospital,
48 sanitarium, department or ward for the care or treatment of
49 the mentally ill unless the patient is either present or repre-
50 sented by an attorney. The judge of the superior court before
51 whom the proceedings are to be heard shall appoint two li-
52 censed medical examiners who are not connected with any

private psychopathic institution to make a personal examination of the patient and to testify before the judge as to the results of such examination. The provisions of this section shall not be applicable to proceedings for the appointment of a guardian under the Probate Code of this state.

SEC. 27. Section 5753 of said code is amended and renumbered to read:

~~5753~~

6252. Upon proof of the violation of any provision of Part 2 of Division 6 of this code, the license to any person to operate such private institution, hospital, establishment, home, or sanitarium may be suspended or revoked by the Department of Institutions. The proceedings shall be conducted in accordance with Chapter 5 of Part 1 of Division 3 of Title 2 of the Government Code, and the department shall have all the powers granted therein.

SEC. 28. Section 5754 of said code is amended and renumbered to read:

~~5754~~

6253. The Director of Mental Hygiene may bring an action to enjoin the threatened violation, or continued violation of the provisions of this part, including the operation of an establishment or institution without a license, or of any of the regulations promulgated under this part, in the superior court located in the county in which the violation occurred or is about to occur. Any proceeding under the provisions of this section shall conform to the requirements of Chapter 3 (commencing with Section 525) of Title 7 of Part 2 of the Code of Civil Procedure, except that the director shall not be required to allege facts necessary to show or tending to show the lack of an adequate remedy at law or to show or tending to show irreparable damage or loss.

At least 30 days prior to the filing of a complaint against a licensee, the director shall serve the licensee with a written notice specifying each deficiency in the licensed establishment or institution, and of the violation or continued violation by such establishment or institution of this part or any of the regulations promulgated under this part. No restraining order or injunction, either temporary or permanent, shall be granted by the court which would cause a licensed establishment or institution to cease operations or which would seriously impede the continued operation of the establishment or institution, unless the operator thereof has been accorded a prior judicial hearing with respect to whether or not such restraining order or injunction shall issue.

SEC. 29. Section 6000 of said code is amended and renumbered to read:

~~6000.~~

6300. The board of supervisors of each county may maintain in the county hospital or in any other hospital situated within or without the county, suitable facilities and hospital service for the detention, supervision, care, and treatment of

1 persons who are mentally ill, mentally disordered, mentally
2 deficient or retarded, or who are alleged to be such.

3 The county may contract with public or private hospitals
4 for such facilities and hospital service when they are not suit-
5 ably available in any institution or establishment maintained
6 or operated by the county.

7 The facilities and services shall be subject to the approval
8 of the State Department of Mental Hygiene, and each person
9 having charge and control of any such hospital shall allow
10 the department to make such investigations thereof as it
11 deems necessary at any time.

12 Nothing in this chapter means that mentally ill, mentally
13 disordered, mentally deficient or retarded persons may not be
14 detained, supervised, cared for, or treated, subject to the right
15 of inquiry or investigation by the department, in their own
16 homes, or the homes of their relatives or friends, or in a li-
17 censed establishment.

18 SEC. 30. Section 6001 of said code is amended and renum-
19 bered to read:

20 ~~6001~~

21 6301. As used in this chapter "county psychopathic hos-
22 pital" means the hospital, ward, or facility provided by the
23 county pursuant to the provisions of Section ~~6000~~ 6300.

24 SEC. 31. Section 6002 of said code is amended and renum-
25 bered to read:

26 ~~6002~~

27 6302. The superintendent or person in charge of the
28 county psychopathic hospital may receive, detain, supervise,
29 care for or treat in the hospital any person who comes within
30 any of the following descriptions:

31 (a) Who has been placed therein pursuant to a court order
32 or court commitment under the provisions of this code or the
33 Penal Code.

34 (b) Who has been placed therein pursuant to the provisions
35 of Section ~~5050.3~~ 5880 of this code.

36 (c) Who voluntarily makes a written application ~~to the~~
37 ~~superintendent or person in charge thereof for admission into~~
38 ~~the hospital for care, treatment, or observation, and who is a~~
39 ~~suitable person for care, treatment, or observation; and who in~~
40 ~~the case of an adult person is in such condition of mind, at the~~
41 ~~time of making application for admission, as to render him~~
42 ~~competent to make such application. In the case of a minor~~
43 ~~person, the application shall be made by his parents, or by the~~
44 ~~parent, guardian, or other person entitled to his custody as pro-~~
45 ~~vided in Article 2 (commencing with Section 6060) of Chapter~~
46 ~~4 of Part 1.5 of this division.~~

47 SEC. 32. Section 6002.5 of said code is amended and re-
48 numbered to read:

49 ~~6002.5~~

50 6303. Any adult person detained in such hospital, who is
51 in such condition of mind as to render him competent to make
52 such application shall at his request be exempt from medical

1 or psychopathic treatment, upon filing with the superintendent
2 a statement that he depends upon prayer or spiritual means
3 for healing in the practice of the religion of a well-recognized
4 religious church, sect, denomination, or organization. In case
5 of an adult not found to be in such condition of mind, a
6 similar statement may be filed on his behalf by another and
7 thereupon similar exemption shall be granted. Any minor
8 detained in such hospital shall be exempt from medical or
9 psychopathic treatment, if his parent or guardian shall file
10 with said superintendent an affidavit stating that he relies
11 upon prayer or spiritual means for healing in the practice of
12 the religion of a well-recognized religious church, sect, de-
13 nomination, or organization.

14 SEC. 33. Section 6003 of said code is repealed.

15 ~~6003. No adult person received into the county psycho-~~
16 ~~pathic hospital under the provisions of subdivision (c) of Sec-~~
17 ~~tion 6002 of this code shall be detained therein for more than~~
18 ~~seven days, after having given notice, in writing, to the super-~~
19 ~~intendent or person in charge, of his desire to leave such hos-~~
20 ~~pital.~~

21 No minor person received into the county psychopathic hos-
22 pital under the provisions of subdivision (c) of Section 6002
23 of this code shall be detained therein for more than seven days,
24 after notice is given, in writing, to the superintendent or per-
25 son in charge of the hospital by the parents, or the parent,
26 guardian or other person entitled to the custody of the minor,
27 of their desire to remove the minor from the hospital unless,
28 within such period, a petition has been filed with the superior
29 court for commitment of such person as a mentally ill person.

30 SEC. 34. Section 6003.1 of said code is amended and re-
31 numbered to read:

32 ~~6003.1~~

33 6304. A superintendent or person in charge of the county
34 psychopathic hospital may discharge any patient who is not
35 a proper case for treatment therein, or whose discharge, in
36 the judgment of the superintendent or person in charge, will
37 not be detrimental to the public welfare or injurious to the
38 patient.

39 SEC. 35. Section 6003.2 of said code is amended and re-
40 numbered to read:

41 ~~6003.2~~

42 6305. The superior court of the county shall review the
43 cases of all persons held under court commitment in a county
44 psychopathic hospital for a period of six months and shall re-
45 view such cases at six months intervals thereafter. Section
46 5100.5 of this code shall be applicable to such review.

47 SEC. 36. Section 6004 of said code is amended and re-
48 numbered to read:

49 ~~6004~~

50 6306. In case such mental patient or the person legally
51 liable for his maintenance is or becomes the owner of property,
52 real, personal, or mixed, the county furnishing such care,

1 treatment, or observation, shall be reimbursed therefrom for
2 its charges. The board of supervisors of the county shall fix
3 and determine a schedule of charges for the care, treatment,
4 or observation of such mental patients, and reimbursement to
5 the county shall be made upon the basis of the charges so fixed.

6 SEC. 37. Section 6005 of said code is amended and re-
7 numbered to read:

8 ~~6005~~

9 6307. Any superintendent or person in charge of the
10 county psychopathic hospital, and any public officer, public
11 employee, or public physician who either admits, causes to be
12 admitted, delivers, or assists in delivering, detains, cares for, or
13 treats, or assists in detaining, caring for or treating, any per-
14 son pursuant to this chapter shall not be rendered criminally
15 liable thereby.

16 SEC. 38. Article 3.4 (commencing with Section 6605) of
17 Chapter 1 of Part 4 of Division 6 of said code is repealed.

18 SEC. 39. Article 3.5 (commencing with Section 6610) of
19 Chapter 1 of Part 4 of Division 6 of said code is repealed.

20 SEC. 40. This act is an urgency measure necessary for the
21 immediate preservation of the public peace, health or safety
22 within the meaning of Article IV of the Constitution and
23 shall go into immediate effect. The facts constituting such
24 necessity are:

25 This act proposes an extensive nonsubstantive revision of
26 the provisions of the Welfare and Institutions Code relating
27 to the mentally ill, and affects a great many sections of the
28 code. In order that other bills affecting these sections can be
29 directed to the code as revised, thereby eliminating the neces-
30 sity of amending both the old code sections and the proposed
31 new sections, it is essential that this act go into effect im-
32 mediately.

ACKNOWLEDGMENTS

The Office of the Legislative Counsel and particularly the work of Edward K. Purcell, Deputy Legislative Counsel, in preparing special reports, as well as drafts of proposed legislative measures, has rendered a most valuable service to the committee.

The cover for this report was designed by Bernard Stevens, graphic artist, Biostatistics Section, Department of Mental Hygiene.

Dr. A. LaMont Smith, a member of the faculty of the School of Criminology, University of California, Berkeley, acted as special consultant with the responsibility for designing the format and evaluating and selecting testimony to be included within the report. The report, based upon our hearings, was written by Dr. Smith and approved for publication following review by the committee.

110 STATE BUILDING, LOS ANGELES 12

Sacramento, September 19, 1963

MENTAL COMMITMENTS—NO. 1052

The purpose of this memorandum is to indicate and summarize briefly the procedures by which a person suffering from some mental disorder may be admitted to an institution or other place for care and treatment.

A. EMERGENCY DETENTION

Emergency Detention

The law authorizes any peace officer, health officer, county physician, or assistant county physician, who has reasonable cause to believe that a person is so mentally ill as to be likely to cause injury to himself or others and to require immediate care, treatment, or restraint, to take the person into custody and to make application for his admission to a county or state hospital.

The person may be cared for and treated in the hospital for a period not to exceed 72 hours, excluding Saturdays, Sundays, and holidays. He must be discharged within that period unless a petition of mental illness is filed in the superior court and the court issues an order for his detention, or unless he is admitted as a patient under another provision of law. (W. & I.C. Sec. 5050.3.)

B. COMMITMENT OF THE MENTALLY ILL

The basic procedure for the involuntary commitment of a person alleged to be mentally ill appears in Chapter 1 (commencing with Section 5000) of Part 1 of Division 6 of the Welfare and Institutions Code.

Proceedings Are Civil

The proceedings under Chapter 1 are civil in nature, and do not control the commitment of insane persons charged with the commission of public offenses (see W. & I.C. Sec. 5160). It is declared that the chapter shall be liberally construed so that, as far as possible and consistent with the rights of mentally ill persons and others, mentally ill persons shall be treated as sick persons, and not as criminals (W. & I.C. Sec. 5155).

Section 5040 of the Welfare and Institutions Code defines "mentally ill persons" as persons who come within either or both of the following descriptions:

Who Are Mentally Ill Persons

(a) Who are of such mental condition that they are in need of supervision, treatment, care, or restraint.

(b) Who are of such mental condition that they are dangerous to themselves or to the person or property of others, and are in need of supervision, care, or restraint.

Petition

Any person may file a petition in the superior court alleging that there is in the county a person who is mentally ill and asking that examination be made of the mental health of the person and that provision be made for the welfare of the person. The district attorney, if so requested, is required to prepare the petition and all other required forms. (W. & I.C. Sec. 5047.)

The petition must set forth the name and address of the petitioner and his interest therein; the name and other relevant matter concerning the person alleged to be mentally ill; the facts upon which the allegation is based that the person is mentally ill and in need of supervision, care, or treatment; a statement whether, in the opinion of the petitioner, the alleged mental illness of the person is such as to render him in need of supervision, care, or treatment, or to render him dangerous to health, person, or property; the name of every person known or believed by the petitioner to be legally responsible for the care, support, and maintenance of the person and the address of each of those persons if known to the petitioners; and such other information as the court may require (W. & I.C. Sec. 5048).

Exemption From Liability

The law exempts the petitioner from civil and criminal liability if there was probable cause for the petition (W. & I.C. Sec. 5047).

Order for Examination and Detention

If the court is satisfied that the person is sufficiently mentally ill to require an examination, it is required to appoint two medical examiners to make the examination and to issue an order requiring the person to submit to the examination at the time and place designated by the judge. It is declared that the person shall be permitted to remain in his home pending the examination, unless it appears to the judge from a certificate of a physician and surgeon, dated not more than three days before the filing of the petition, that he has examined the person and found that he is likely to injure himself or others if not immediately hospitalized or detained. In such case the judge is authorized to issue an order to a peace officer or counselor in mental health for the detention of the person, pending hearing, in a place designated by the judge. (W. & I.C. Sec. 5050.)

Notice

A copy of the petition, order for examination, and order for detention, if any, must be served by a peace officer or counselor in mental health on the person and his representative personally as promptly as possible, and no later than one day before the time of the examination. Personal service of the documents must also be made on the person's nearest relative unless that relative is the petitioner or is not in the

county. If the relative is not in the county, personal service of the documents must be made on the person with whom the alleged mentally ill person resides, or, in the absence of that person, on a friend of the alleged mentally ill person. (W. & I.C. Sec. 5050.2.)

Right to Hearing

The alleged mentally ill person has the right to a hearing if a demand for the same is made by him or in his behalf within four days from service on him (W. & I.C. Sec. 5050.8).

Procedure in Absence of Demand for Hearing

If no demand for a hearing is made, or if the hearing is waived by the person or his attorney, the judge is authorized to proceed immediately to determine whether the person is mentally ill. The judge must consider the report of two medical examiners, and may require other proof in addition. A personal examination by the medical examiners is a prerequisite to commitment to an institution for the mentally ill. (W. & I.C. Sec. 5050.8.)

If the judge finds the person to be mentally ill, he may order the person committed or cared for in the same manner as is provided where a hearing is held. If it appears that the person is harmless and that his relatives or guardian are willing to care for him properly at some place other than an institution, the judge may order the person placed in the care and custody of his relatives or guardian. (W. & I.C. Sec. 5050.8.)

Notice of Hearing

If a hearing is demanded, notice of the time and place of hearing must be given to each person upon whom were served copies of the petition and order for examination and to such other persons as the court may order. The notice may be given by registered mail. (W. & I.C. Sec. 5050.9.)

Notice must also be given to the same persons in each instance in which the hearing is continued (W. & I.C. Secs. 5051, 5051.1).

Place of Hearing

The hearing may be held at any place within the county suitable to the physical and mental health of the person, unless one of the parties, prior to the hearing, demands that it be held at a regular courtroom. If the hearing is to be held at any place other than a regular courtroom, notice of that fact must be given to the petitioner and the person alleged to be mentally ill at least five days before the hearing, unless waived by the person or his representative. It is declared that the psychiatric ward or unit of a county hospital shall be considered a regular courtroom. (W. & I.C. Sec. 5052.)

Time of Hearing

The court is required to fix the time and place of hearing so as to give reasonable opportunity for the production and examination of witnesses (W. & I.C. Sec. 5050.9).

The court may continue the hearing for 30-day periods upon a sufficient showing that it is for the best interest of the person to do so, but if demand is made during any continuance by the person, his rela-

tives, friends, counsel, or representative, the court must set the hearing at a date not more than five days from the time the demand is made (W. & I.C. Sec. 5051).

Rights of Alleged Mentally Ill Person at Hearing

The person may demand that the hearing be public, and that it be held in a suitable place for attendance by the public (W. & I.C. Sec. 5052).

It is required that the person be present at the hearing, and he is entitled to be represented by counsel. If he requests an attorney, the judge must appoint an attorney to represent him. If the person is financially unable to employ counsel, and the county has no public defender, the county is obligated to pay the attorney fee fixed by the court. If the county has a public defender, the court may order the public defender to represent the person at the hearing. (W. & I.C. Sec. 5054.)

The court is required to issue subpoenas and to compel the attendance of witnesses as requested by the person, but no person need attend as a witness outside the county of his residence or in which he is served, unless the judge, upon affidavit that the testimony of the witness is material and that his attendance is necessary, endorses on the subpoena an order for the attendance of the witness. Witnesses are entitled to the same fees and expenses as in criminal cases. (W. & I.C. Sec. 5053.)

Procedure at Hearing

In addition to the witnesses, the judge is directed to compel the attendance of at least two medical examiners, who must hear the testimony of all witnesses, make a personal examination of the person, and testify before the judge as to the result of their examination and any other pertinent facts within their knowledge. The judge must also cause to be examined before him any person who he has reason to believe has knowledge of the mental condition of the person or of his financial condition or that of the persons liable for the person's maintenance. (W. & I.C. Sec. 5053.)

Commitment

If the judge finds the person to be mentally ill, he may order him committed to a licensed sanitarium or hospital for the mentally ill, to the Department of Mental Hygiene for placement in a state hospital designated by the court, to a community mental health service, or to a facility of the Veterans Administration or other federal agency. He may also order that the person be otherwise cared for until the further order of the court. (W. & I.C. Secs. 5100, 5100.1.)

If the judge orders the person committed to a licensed hospital or sanitarium or that he be otherwise cared for until the further order of the court, the court may subsequently make such further orders for hearing or other disposition concerning the person as it considers necessary and proper. In such case it may accept a written report and recommendation concerning the person made by a physician treating the person, if verified, in lieu of the examination by and testimony of court-appointed physicians and in lieu of the personal appearance in court of the person, but, if a demand is made by or in behalf of the

person, he has the right to a personal appearance in court. The person may not be committed to a state hospital, however, without a hearing and a written report and recommendation by two medical examiners, and he is given the right to a jury trial. (W. & I.C. Sec. 5100.5.)

No case of harmless chronic mental unsoundness may be committed to the Department of Mental Hygiene for placement in a state hospital (W. & I.C. Sec. 5102).

Jury Trial

If a person is committed to a licensed hospital or sanitarium or to a state hospital, either he or any friend in his behalf, may, within 10 days after the making of the order of commitment, demand that the question of his mental illness be tried by a judge or jury. The court must then set the case for trial not less than 5 nor more than 10 days from the date of the demand. (W. & I.C. Sec. 5125.)

The district attorney is required to present the petition and its allegations (W. & I.C. Sec. 5127).

The trial must be held in the same manner as a civil trial, and if tried by a jury, a finding of mental illness requires a three-fourths vote of the jury (W. & I.C. Sec. 5128).

If the judge adjudges or the jury finds the person to be mentally ill, the judge must order the person committed to a licensed hospital or sanitarium or to a state hospital (W. & I.C. Sec. 5128).

Any person aggrieved thereby also has the right to demand a trial, by court or jury, where the court refuses to grant a petition concerning a person alleged to be dangerous to himself or others (W. & I.C. Sec. 5129).

It is provided that the original commitment shall not be stayed pending the trial, except upon order of the judge with provision made for the temporary care and custody of the person (W. & I.C. Sec. 5126).

C. COMMITMENT OF MENTALLY DISORDERED PERSONS

Special provision is made for the commitment of so-called mentally disordered persons in Article 4 (commencing with Section 5075) of Chapter 1 of Division 6 of the Welfare and Institutions Code.

Procedure

The preliminary steps incidental to the commitment of a mentally disordered person are the same as those provided for a mentally ill person; that is, a petition, right to hearing, and the like. The disposition of the case, however, is different.

Commitment

The law provides that if the court, on examination of the person, finds him to be mentally disordered and bordering on mental illness but not dangerously mentally ill, it may commit him to the care and custody of the counselor in mental health and allow him to remain in his home subject to visitation by a counselor in mental health and subject to return to the court for further proceedings whenever such action appears necessary or desirable; or the court may commit him to be placed in a suitable home, sanitarium, or rest haven home, subject to

the supervision of the counselor in mental health and the further order of the court (W. & I.C. Sec. 5076).

Petition to Restore Competency

The person committed, if he has no guardian, or a relative or friend in his behalf, may petition the superior court of the county where the commitment was ordered for an order adjudging that the person is competent. The judge then must set the matter for hearing and it is required that notice be given, in the manner directed by the court, to the counselor in mental health, to the person committed if he is not the petitioner, and to that relative or those relatives of the person residing in the county as the court directs. It is declared that those to whom notice is given shall be given an opportunity to appear and be heard at the hearing.

The hearing must be conducted in the same manner as civil cases, and the petitioner may demand a jury trial. If it is found that the person is competent, the judge is required to make an order declaring him to be competent and discharging his commitment. The order is appealable. If three-fourths of the jury fail to unite in a verdict, or the court or jury decides that the person is not competent, the proceeding must be dismissed, and no new petition to have the person declared competent may be filed for six months thereafter. (W. & I.C. Sec. 5078.)

D. COMMITMENT OF MENTALLY DEFICIENT PERSONS

The law relating to the commitment of mentally deficient persons appears in Chapter 2 (commencing with Section 5250) of Part 1 of Division 6 of the Welfare and Institutions Code.

Who Are the Mentally Deficient

A "mentally deficient person" is defined as one, not psychotic, who is so mentally retarded from infancy or before reaching maturity that he is incapable of managing himself or his affairs independently, with ordinary prudence, or of being taught to do so, and who requires supervision, control, and care for his own welfare or for the welfare of others, or for the welfare of the community (W. & I.C. Sec. 5250).

Residence Requirement

To be eligible for commitment, the person must have resided in the state for one year preceding the presentation of the petition, or, if under one year of age, have been born in this state and be in the custody of a parent who has resided in the state for one year preceding the presentation of the petition (W. & I.C. Sec. 5251).

Petition

Only certain designated persons and agencies may petition to have a mentally deficient person committed to the Department of Mental Hygiene for placement in a state home for the feeble-minded. This right is limited to the parent, guardian, or other person charged with the support of the person; a district attorney for probation officer; the Youth Authority; any person designated for that purpose by the judge of the court; and the Director of Corrections. (W. & I.C. Sec. 5252.)

The petition must state the petitioner's reasons for supposing the person to be eligible for admission to a state home, and must be verified by the affidavit of the petitioner (W. & I.C. Sec. 5252).

Penalties for Improper Petition

A petitioner who files his petition without good cause, and with an improper motive, is subject to certain penalties. If the petition is dismissed, the court, if it considers the petition to have been filed with malicious intent, may order the petitioner to pay the expenses of the proceeding (W. & I.C. Sec. 5262). It is also declared that any person who knowingly contrives to have any person committed, unlawfully or improperly, is guilty of a misdemeanor (W. & I.C. Sec. 5263).

Time and Place of Hearing

The court is required to fix a time and place for hearing, and it is provided that the hearing shall be held at any time and place that the court deems proper and which will give opportunity for the production and examination of witnesses (W. & I.C. Sec. 5253).

Notice

The court must cause due notice of the hearing to be given to the person, and if the petition is filed by a probation officer, district attorney, the Youth Authority or the Director of Corrections, must cause such notice of the hearing as it deems proper to be given to any parent, guardian, or other person charged with the support of the person (W. & I.C. Sec. 5254).

Apprehension and Detention of Person Pending Hearing

The court is authorized, if it considers it necessary or advisable, to cause a warrant to issue for the apprehension and delivery of the person to the court, and to have the warrant executed by any peace officer (W. & I.C. Sec. 5255). Pending the hearing, the person may be left in charge of his parent, guardian, or other suitable person, or he may be placed in the county psychopathic hospital (W. & I.C. Sec. 5256).

Procedure at Hearing

The court must inquire into the condition or status of the person, and, for this purpose, may require the attendance before it of certain designated medical experts to examine the person and testify concerning the person's mentality. It may also require the attendance of such other persons as it deems advisable, to give evidence. (W. & I.C. Sec. 5257.) The law provides for the payment of compensation to the experts and other witnesses (W. & I.C. Sec. 5261).

Commitment

If the court finds that the person is mentally deficient, and that he meets the residence requirements, it may commit him to the Department of Mental Hygiene for placement in the Sonoma State Home or to the Pacific Colony. If the court finds that the person is mentally deficient, but that he does not meet the residence requirements, it may order that he be transported to the state of his legal residence. (W. & I.C. Sec. 5258.)

Refusal by Institution to Accept Person

It should be noted that the superintendent of the institution to which the person is committed is not obligated in all cases to receive him. He need not do so if the institution is full, or the fund for its support is exhausted, or if, in the opinion of the Department of Mental Hygiene, the person is not a suitable subject for admission to the institution. (W. & I.C. Sec. 5258.)

E. COMMITMENT OF EPILEPTICS

While the law contains special provisions relating to the commitment of epileptic persons, which appear in Chapter 2.5 (commencing with Section 5300) of Part 1 of Division 6 of the Welfare and Institutions Code, these provisions, in essence, simply provide that an epileptic person shall be committed in accordance with the procedure applicable to mentally ill persons unless the person is mentally deficient, in which case he shall be committed in accordance with the procedure applicable to mentally deficient persons (see W. & I.C. Secs. 5300, 5301, 5302).

F. COMMITMENT OF NARCOTIC DRUG ADDICTS

The law relating to the commitment of narcotic drug addicts appears in Article 1 (commencing with Section 5350) of Chapter 3 of Part 1 of Division 6 of the Welfare and Institutions Code.

Who Is Narcotic Drug Addict?

A "narcotic drug addict" is defined as one who habitually takes or otherwise uses to the extent of having lost the power of self-control any opium, morphine, cocaine, or other habit-forming drug as defined in Article 1 of Chapter 1 of Division 10 of the Health and Safety Code. The Health and Safety Code article mentioned commences at Section 11000 of that code and sets forth numerous drugs which it classifies as narcotics.

Affidavit

Proceedings for the commitment of a narcotic drug addict are instituted by the filing of an affidavit with any magistrate of the county (W. & I.C. Sec. 5351). The affidavit must be in substantially the same form as a petition for the commitment of a person alleged to be mentally ill (W. & I.C. Sec. 5352).

Apprehension and Detention

If the magistrate finds, on the basis of the affidavit, that the person is a narcotic drug addict, he is required to issue a warrant directing a peace officer to apprehend the person and take him before a judge of the superior court for a hearing and examination. The officer must then apprehend and detain the person until a hearing and examination can be had, and, at the time of apprehension, must serve a copy of the affidavit and warrant on the person. (W. & I.C. Sec. 5351.)

Preliminary Hearing

The person charged must be taken before a judge of the superior court, who must inform him of his rights to make a defense to the charge and to produce witnesses in relation to it (W. & I.C. Sec. 5353).

Time and Place of Formal Hearing

The judge is required to fix a time and place for hearing and examination in open court as will give a reasonable opportunity for the production and examination of witnesses (W. & I.C. Sec. 5353).

Notice

The judge is authorized to cause notice of the apprehension of the person and the hearing to be served on such relatives of the person, who reside in the county, as the judge deems necessary or proper (W. & I.C. Sec. 5353).

Hearing

The hearing and examination must be conducted in substantially the same manner as is provided for persons alleged to be mentally ill (W. & I.C. Sec. 5354).

Commitment

If, after the hearing and examination, the judge finds that the person is a narcotic drug addict, he must commit him to the Department of Mental Hygiene for placement in a designated hospital for an indeterminate period of not less than three months nor more than two years. This is subject to the qualification that the person may not be committed to a state hospital if satisfactory evidence is submitted to the judge showing that the person, apart from his habit, is of bad repute or bad character, and that there is a reasonable ground for believing that the person will not be benefited by treatment. (W. & I.C. Sec. 5355.)

Right to Trial

Any person ordered to be committed, or any friend in his behalf, within 10 days after the making of the order of commitment, may demand that the issue be tried by a judge or jury. If a demand of this nature is made, a trial must be held in the same manner as is provided for a trial of a person alleged to be mentally ill. (W. & I.C. Sec. 5355.5.)

Penalty

It is declared that any person who knowingly and maliciously attempts to have any person adjudged a narcotic drug addict, unlawfully, is guilty of a misdemeanor (W. & I.C. Sec. 5361).

F. COMMITMENT OF DIPSOMANIACS, INEBRIATES, AND HABIT-FORMING DRUG ADDICTS

The procedure for the commitment of dipsomaniacs, inebriates, and habit-forming drug addicts is set forth in Article 2 (commencing with Section 5400) of Chapter 3 of Division 6 of the Welfare and Institutions Code.

Affidavit

Proceedings are instituted by the filing of an affidavit with any magistrate of the county (W. & I.C. Sec. 5400). The affidavit must be substantially in the same form as a petition for the commitment of a person alleged to be mentally ill (W. & I.C. Sec. 5401).

Apprehension and Detention

If it appears to the magistrate, on the basis of the affidavit, that the person is so far addicted to the intemperate use of habit-forming drugs, other than narcotic drugs, as to have lost the power of self-control, or is subject to dipsomania or inebriety, the magistrate is required to issue a warrant to a peace officer directing that the person be apprehended and taken before a judge of the superior court for a hearing and examination. The officer must then apprehend and detain the person until a hearing and examination can be had, and, at the time of apprehending the person, must serve a copy of the affidavit and warrant on him. (W. & I.C. Sec. 5400.)

Preliminary Hearing

The person must be taken immediately before a judge of the superior court, and the judge is required to inform him of the charge against him and of his rights to make a defense and to produce witnesses (W. & I.C. Sec. 5402).

Commitment to Rehabilitation Center

Where a rehabilitation center for the care and treatment of inebriates is maintained in a branch of the county jail, the judge, upon the written recommendation of one medical examiner and the written consent of the person charged, may order the person confined in the center for a term not exceeding one year. Any person so confined may demand, in writing, at any time, a hearing and examination, and the judge is required to fix a time and place for hearing and examination and to proceed as in cases where no order of commitment to a rehabilitation center has been made. (W. & I.C. Sec. 5402.)

In cases where no commitment to a rehabilitation center is made, the judge is required to fix a time and place for a hearing and examination in open court as will give a reasonable opportunity for the production and examination of witnesses (W. & I.C. Sec. 5402).

Notice

The judge is authorized to cause notice of the apprehension of the person and the hearing be given such relatives of the person known to be residing in the county as the court deems necessary or proper (W. & I.C. Sec. 5402).

Hearing

The hearing and examination must be held in the same manner as is provided for persons alleged to be mentally ill (W. & I.C. Sec. 5403).

Commitment

If the judge, after the hearing and examination, finds that the person is so far addicted to the intemperate use of habit-forming drugs so as to have lost the power of self-control, or is subject to dipsomania or inebriety in such a degree as to require custodial care and treatment, he is required to commit the person to the Department of Mental Hygiene for placement in a designated hospital for the mentally ill; to a regional jail camp maintained by the Department of Corrections; to an industrial farm or an industrial road camp within the county; or, in the event the county maintains a branch of the county jail at which in-

mates thereof are required to perform agricultural and other out-of-doors labor, to such branch of the county jail. Before the person may be committed to a state hospital, however, satisfactory evidence must be submitted to the judge showing that the person, apart from his habit, is not of bad repute or bad character, and that there is reasonable ground for believing that the person will be permanently benefited by treatment. (W. & I.C. Sec. 5404.)

Probation

If the judge, after the hearing and examination, finds that the person is subject to dipsomania or inebriety, but that the condition of the person is not such as to require custodial care or treatment, the judge may place the person on probation subject to the supervision of the probation officer. It is declared that a person so placed on probation is subject to the same law relating to probation as relate to mentally disordered persons. (W. & I.C. Sec. 5407.5.)

Right to Trial

A person ordered committed to a state hospital, or any friend in his behalf, within 10 days after the making of the order of commitment, may demand that the issue be tried by a judge or jury. The trial must be held in the same manner as is provided for a trial of a person alleged to be mentally ill. (W. & I.C. Sec. 5406.5.)

G. COMMITMENT OF MENTALLY DISORDERED SEX OFFENDERS

The procedure relating to the commitment of mentally disordered sex offenders is set forth in Chapter 4 (commencing with Section 5500) of Division 6 of the Welfare and Institutions Code.

Who Is a Mentally Disordered Sex Offender?

A "mentally disordered sex offender" is defined as one who by reason of mental defect, disease, or disorder, is predisposed to the commission of sexual offenses to such a degree that he is dangerous to the health or safety of others (W. & I.C. Sec. 5500).

Institution of Proceedings

Proceedings for the commitment of a person as a mentally disordered sex offender may be instituted only in connection with judicial proceedings wherein the person has been convicted of a criminal offense other than one involving a sentence of death or subject to a punishment of death or rendering the person ineligible for probation (W. & I.C. Sec. 5500.5).

If the person is convicted of a criminal offense, whether or not a sex offense, the trial judge, on his own motion or on motion of the prosecuting attorney, or on application by or on behalf of the defendant, showing to the satisfaction of the court that there is probable cause for believing the person to be a mentally disordered sex offender, may adjourn the proceeding or suspend the sentence, and certify the person for hearing and examination by the superior court of the county to determine whether the person is a mentally disordered sex offender. The court must make such a certification where the person is convicted of a sexual offense involving a child if the offense is a felony or if it is a second offense. (W. & I.C. Sec. 5501.)

The affidavit mentioned in the preceding paragraph must be in substantially the same form as prescribed for a petition for the commitment of a person alleged to be mentally ill (W. & I.C. Sec. 5501).

Detention

If the person is before the court or is in custody, the court may order that he be detained in a place of safety. Otherwise, the court may issue and deliver to a peace officer a warrant directing that the person be apprehended and taken before a judge of the superior court for hearing and examination. The officer must then apprehend and detain the person, and serve on him a copy of the affidavit, if any, the certification, and the warrant. (W. & I.C. Sec. 5501.)

Preliminary Hearing

The person must be taken before a judge of the superior court, who must inform him that he is certified or alleged to be a mentally disordered sex offender, and inform him of his rights to make a reply and produce witnesses (W. & I.C. Sec. 5503).

Time and Place of Hearing

The judge is required to fix the time and place for the hearing and examination in open court as will give reasonable opportunity for the filing of a report by the probation officer and for the production and examination of witnesses. If the person is too ill to appear in court, or if his appearance in court would be detrimental to his mental or physical health, the judge is authorized to hold the hearing at his bedside. (W. & I.C. Sec. 5503.)

Notice

The judge must cause notice of the apprehension of the person and the hearing to be served on the district attorney and on such relatives of the person known to be residing in the county as the judge deems necessary or proper (W. & I.C. Sec. 5503).

Witnesses

The probation officer is required to make and file a report on the case, and the judge must appoint not less than two nor more than three qualified psychiatrists to examine the person and file reports as to their findings (W. & I.C. Secs. 5503.5, 5504, 5505). The judge is also authorized to compel the attendance of witnesses from any place in the State, but no witness is obliged to attend a hearing outside of the county in which he resides or is served unless the judge, upon affidavit that the evidence of the witness is material and that his attendance at the hearing is necessary, endorses on the subpoena an order for the attendance of the witness (W. & I.C. Sec. 5510).

Rights of Alleged Mentally Disordered Sex Offender

The person must be present at the hearing, and is entitled to be represented by counsel. If he has no attorney, the judge is authorized to appoint an attorney to represent him, or if he is indigent, the judge may order the public defender to represent him. (W. & I.C. Sec. 5511.)

The person also has the right to examine and cross-examine the psychiatrists appointed by the court, and to produce expert testimony in his own behalf (W. & I.C. Secs. 5506, 5508).

Procedure at Hearing

The psychiatrists appointed by the court are required to hear the testimony of all witnesses, and to testify as to the result of their examinations and any other pertinent facts within their knowledge (W. & I.C. Sec. 5505). The judge must also cause to be examined as a witness any other person whom he believes has knowledge of the mental condition of the person or of the financial condition of the person or of any person liable for his support (W. & I.C. Sec. 5509). The judge is authorized to question the psychiatrists appointed by him, but either party has the right to object to the questions asked and to cross-examine the psychiatrist in relation to those questions (W. & I.C. Sec. 5506).

Return of Person to Original Court

If, upon the hearing, the court finds that the person is not a mentally disordered sex offender, it must return him to the court in which the case originated for such disposition as that court may deem necessary or proper (W. & I.C. Sec. 5511.7).

Commitment for Observation

If the court finds that there is sufficient cause to believe that the person is a mentally disordered sex offender, it may order that the person be placed temporarily in a suitable psychiatric facility maintained by a county or in a state hospital designated by the court for observation and diagnosis for a period not to exceed 90 days. The superintendent of the hospital or person in charge of the facility must report its findings and recommendations to the court within the 90-day period. (W. & I.C. Sec. 5512.)

Disposition of Case

If the report shows that the person is not a mentally disordered sex offender or that he will not benefit by care or treatment in a state hospital and is a menace to the health and safety of others, the committing court must return the person to the court in which the criminal charge was tried. That court is required to resume its proceedings and impose sentence or make such other suitable disposition of the case as it deems necessary, but, if it is satisfied that the person is a mentally disordered sex offender who would not benefit by care or treatment in a state hospital and is a menace to the health and safety of others, it may recertify the person to the superior court. If the superior court, after hearing, reaches the same conclusion, it may commit the person for an indefinite period to the Department of Mental Hygiene for placement in a state institution or institutional unit for the care and treatment of mentally disordered sex offenders. At such hearing the person is entitled to present witnesses in his own behalf, to be represented by counsel, and to cross-examine any witnesses who testify against him. (W. & I.C. Secs. 5512, 5517.)

If the court orders the person committed for an indeterminate period, it may require the superintendent of the state hospital to make periodic reports to the court concerning the person's progress toward recovery from his illness (W. & I.C. Sec. 5512.3). At any time the superintendent

ent may submit a report to the court that the person is no longer a menace to the health and safety of others, whereupon the committing court may return the person to the court in which the criminal charge was tried (W. & I.C. Sec. 5512).

If the report shows that the person is a mentally disordered sex offender and that he could benefit by treatment in a state hospital, the court is required to commit him to the department for placement in a state hospital for an indeterminate period and to cause a copy of its order to be served on the person within five days after the making of the order. The person, within 10 days after receiving the copy of the order, may demand a hearing on the question, and the court must fix a time and place for the hearing. The court, at the hearing, may accept the report in lieu of the examination and testimony by court-appointed psychiatrists, or may consider the report as additional evidence. The court, following the hearing, may commit the person to the department for placement in a designated state hospital for an indeterminate period or may make other suitable disposition of the case. (W. & I.C. Sec. 5512.)

Right to Court Trial

It is declared that persons committed as mentally disordered sex offenders to the department for placement in a state hospital following an observation placement have the same rights to a jury trial as is provided for persons alleged to be mentally ill (W. & I.C. Sec. 5512.5).

H. COMMITMENT OF MENTALLY ABNORMAL SEX OFFENDERS

The law relating to the commitment of mentally abnormal sex offenders appears in Chapter 4.5 (commencing with Section 5600) of Part 1 of Division 6 of the Welfare and Institutions Code.

Who Is a Mentally Abnormal Sex Offender?

A "mentally abnormal sex offender" is defined as one who is not mentally ill or mentally defective, and who by an habitual course of misconduct in sexual matters has evidenced an utter lack of power to control his sexual impulses and who, as a result, is likely to attack or otherwise inflict injury, loss, pain, or other evil upon the objects of his uncontrolled and uncontrollable desires (W. & I.C. Sec. 5600).

Petition

A petition for the commitment of a person alleged to be a mentally abnormal sex offender may be filed in the superior court by the parent, spouse, or child of the person, or by the person himself. It must state the petitioner's reasons for believing that the person may be a mentally abnormal sex offender and in need of supervision, care or treatment. (W. & I.C. Sec. 5601.)

Consent of Person Required

The petition must be accompanied by the written consent of the person voluntarily requesting examination and a hearing by the court (W. & I.C. Sec. 5601).

Statement of Medical Examiner

The petition must also be accompanied by a written statement of a medical examiner, stating that in his opinion the person is a mentally abnormal sex offender, and recommending that examination be made of the person (W. & I.C. Sec. 5601).

Time and Place of Hearing; Notice

The court is required to fix a time and place for hearing, and to require that due notice of the hearing of the petition be given to the person (W. & I.C. Sec. 5602).

Conduct of Hearing

It is declared that the hearing and examination shall be had in substantially the same manner as is provided for mentally disordered sex offenders (W. & I.C. Sec. 5604).

Commitment

If, after examination and hearing, the judge finds that the person is a mentally abnormal sex offender, he has the alternatives of dismissing the petition or committing the person to the Department of Mental Hygiene for placement in a designated state hospital for a period of not to exceed two years for supervision, care, and treatment (W. & I.C. Sec. 5604). After commitment, the superintendent of the hospital may discharge the person at any time or grant him a leave of absence upon such terms and conditions as he deems proper (W. & I.C. Sec. 5605).

Pending Criminal Charge

It is provided that no proceeding for the commitment of a mentally abnormal sex offender may be instituted against a person against whom a criminal charge has been made which has not been prosecuted to final judgment (W. & I.C. Sec. 5607).

I. ADMISSION TO PRIVATE MENTAL INSTITUTIONS**1. Involuntary Admissions****Admission**

A person may be committed to a private institution upon the written statement of a physician, who is not connected in any manner with the institution, that he has made a mental examination of the person and that the person should be admitted to such place for care or treatment (W. & I.C. Sec. 5750).

Right to Hearing

At any time after admission of the person to the institution either he or any relative or friend in his behalf may file with the person in charge of the institution a written request for a court hearing to determine whether or not the person is mentally ill and in need of supervision, care, or treatment in the institution. Proceedings must then be taken for a court hearing in the same manner as is provided for mentally disordered persons. (W. & I.C. Sec. 5750.1.)

Right to Discharge

No person may be retained in the institution for more than 90 days unless he files a request to remain therein as a voluntary patient, a court order is obtained ordering his detention, or a written application is received from a relative or friend of the person to detain him and such application is accompanied by two certificates executed by two physicians attesting that they have examined the person and recommending that he be retained. (W. & I.C. Sec. 5750.2.)

2. Voluntary Admissions

Application

Any person may be admitted to a private institution, who voluntarily makes a written application for admission and who at the time of making the application is mentally competent to make the application (W. & I.C. Sec. 5750.5).

The person may not be detained in the institution for more than seven days after giving written notice of his desire to leave, unless a petition is filed in the superior court for commitment of the person as a mentally ill person (W. & I.C. Sec. 5750.5).

J. ADMISSION TO COUNTY PSYCHOPATHIC HOSPITALS

Emergency Detention

The superintendent or person in charge of a county psychopathic hospital may receive, detain, supervise, care for or treat in the hospital any person who has been placed therein pursuant to court order or court commitment or under emergency commitment (W. & I.C. Sec. 6002).

Voluntary Admission

A person may also voluntarily apply, in writing, for admission to the hospital, if, at the time of application, he is in such condition of mind as to render him competent to make the application. In the case of a minor, the application may be made by his parents or by the parent, guardian, or other person entitled to his custody. (W. & I.C. Sec. 6002.)

Right to Discharge

No adult person may be detained for more than seven days after having given notice, in writing, of his desire to leave the hospital. No minor may be detained for more than seven days after written notice of the desire to remove the minor is given by his parents or the parent, guardian or other person entitled to his custody, unless, within that period, a petition has been filed with the superior court for the commitment of the minor as a mentally ill person (W. & I.C. Sec. 6003).

K. ADMISSION OF SOLDIERS AND SAILORS

Admission

The Department of Mental Hygiene is authorized to admit to any state hospital for the mentally ill, if there is room in the hospital, any insane soldier or sailor, under agreement between the department and

the properly authorized agents, officers, or representatives of the United States Government (W. & I.C. Sec. 6601).

L. VOLUNTARY ADMISSION TO STATE HOSPITALS

Application

A person may be admitted to a state hospital upon written application made by the person, if an adult, or by his parents or his parent, guardian, or other person entitled to his custody, if a minor. If the application is made by an adult, he must be in such condition of mind when making the application as to render him competent to make it. (W. & I.C. Sec. 6602.)

Right to Discharge

No adult person may be detained in the hospital for more than seven days after giving written notice of his desire to leave, unless, within that period, a petition has been filed in the superior court for his commitment as a mentally ill person (W. & I.C. Sec. 6602).

M. TEMPORARY ADMISSION TO STATE HOSPITALS

Admission

A person may be admitted to a state hospital for observation, care, or treatment, if neither he nor any member of his family, relative, or friend objects to his admission, upon:

(a) Written application made by a member of his family, relative, friend with whom he resides, guardian of his person, a health or welfare officer of the community, or the head of a hospital, sanitarium, or other institution in which the person may be, accompanied by:

(b) the certificate of two physicians that they have examined the person and believe him to be mentally ill and in need of observation, care, or treatment, and because of his illness lacks sufficient insight or capacity to make responsible application himself. The physicians must not be related to the person by blood or marriage, and their examination must take place within 10 days prior to the application. (W. & I.C. Sec. 6605.)

Right to Discharge

A person may not be detained for more than 15 days after he, or any person in his behalf, gives written notice of his desire to leave the hospital, unless the superintendent of the hospital applies to the superior court to have the person committed as a mentally ill person (W. & I.C. Sec. 6605.1). It is provided that the court may accept the report and diagnosis of the superintendent in lieu of the appointment, certificates, and testimony of medical examiners, and shall cause notice of the hearing to be given to the superintendent, as well as to the other persons to whom notice must be given under the general commitment procedure. (W. & I.C. Sec. 6605.2.)

A person must also be released from the hospital at the expiration of 90 days following his admission, unless the superintendent finds that he is mentally ill and is in need of further care and treatment, and gives written notice of his findings to the person, to the person who made application for his admission, and to the known spouse.

parents, or children of the person. If such notice is given, the person may be retained in the hospital for an additional 15 days, and longer if no relative, friend, or other person takes steps either to care for him or to have him committed, and the superintendent applies to the superior court to commit the person as a mentally ill person in the manner described in the preceding paragraph. (W. & I.C. Sec. 6605.4.)

N. ADMISSION TO STATE HOSPITALS ON CERTIFICATION

Application

Unless a protest is received from the person or any relative or friend in his behalf, the superintendent of a state hospital is authorized to admit a person to a state hospital on application of a local health officer (W. & I.C. Secs. 6610.1, 6610.2).

Certificates of Physicians

The application must be accompanied by certificates of two physicians, dated not more than seven days prior to the presentation of the application, certifying that they have examined the person and believe him to be mentally ill and in need of supervision, care, or treatment. The certificates must show that the examination took place within three days prior to the date of the certificates, and that the physicians are not related to the person by blood or marriage and are not connected in any way with a state hospital. (W. & I.C. Sec. 6610.4.)

Termination of Proceedings

The proceedings must be stopped whenever the person or any relative or friend in his behalf protests to the health officer or to the examining physicians, and the health officer is required to notify the person of his rights in this regard (W. & I.C. Secs. 6610.3, 6611.1). The superintendent of the hospital is authorized to refuse to accept the application or admit the person if he believes the person is not mentally ill nor in need of supervision, care or treatment; if there is no room in the hospital; or if the admission of the person would violate any rule of the Department of Mental Hygiene (W. & I.C. Sec. 6610.7).

At any time after the admission of the person to the state hospital, either he or any relative or friend in his behalf may file a written request with the superintendent for a court hearing (W. & I.C. Sec. 6611.1). Upon receipt of the request, the superintendent is required to notify the Director of Mental Hygiene and the local health officer, and to transmit the request to the superior court of the county in which the application was made. The court must then proceed as in the case of regular commitment proceedings for an alleged mentally ill person, except that it may accept the report and diagnosis of the superintendent in lieu of the appointment, certificates, and testimony of medical examiners. It must also cause notice of the time and place of hearing to be given to the superintendent of the hospital. (W. & I.C. Secs. 6611.3, 6611.4.)

O. ADMISSION TO FACILITY OF VETERANS ADMINISTRATION

Facilities of Veterans Administration

A local health officer is authorized to make application for admission to a facility of the Veterans Administration of any person believed to

be mentally ill. The procedure is the same as that prescribed for admissions to state hospitals on application of local health officers. (W. & I.C. Sec. 6612.)

P. ADMISSION OF FEEBLE-MINDED PERSONS TO STATE HOSPITALS

Admission

The Department of Mental Hygiene is empowered to authorize the superintendent of each state home for the feeble-minded to admit persons suspected of being feeble-minded to the homes, without commitment, under rules and regulations prescribed by the department, for purposes of observation and diagnosis, to ascertain whether or not they are actually mentally defective and proper cases for care, treatment, and training.

Commitment

If it is found that any person so admitted is feeble-minded and a proper case for care, treatment, and training, application may be made to the superior court for an order of commitment to a home for the feeble-minded. (W. & I.C. 7007.)

Q. COMMITMENT OF CHRONIC INEBRIATES

Who Is a Chronic Inebriate?

A "chronic inebriate" is defined as one who is so far addicted to the use of alcoholic beverages as to be unable or unwilling to abstain from their use; and who has been so addicted for a period of one year or more, and who by reason thereof is rendered unable to transact ordinary business with safety to his estate, or by reason thereof, endangers himself or the person or property of others; or who, by reason thereof, so impoverishes himself as to require charitable aid for the support of himself or of others depending upon him for support; or who, by reason thereof, has become or is in danger of becoming a degrading or detrimental influence upon his family or others (W. & I.C. Sec. 7103).

Commitment

It is declared that whenever one or more state inebriate colonies have been established, a person alleged to be a chronic inebriate shall be committed thereto under the procedure governing the commitment to state hospitals of persons addicted to the intemperate use of stimulants, or subject to dipsomania or inebriety. Commitment to any other type of institution is prohibited. (W. & I.C. Sec. 7104.)

R. ADMISSION TO LANGLEY PORTER CLINIC

Admission

The clinic is conducted and maintained for the purpose of treating incipient and acute mental and nervous cases. Admissions may be either on a voluntary basis, after approval by the medical superintendent, or by transfer from another institution under jurisdiction of the Department of Mental Hygiene, after approval by the Director of Mental Hygiene. No person may be committed either directly to the clinic or to the Department of Mental Hygiene for placement therein. (W. & I.C. Sec. 7302.)

S. ADMISSION TO THE NEUROPSYCHIATRIC INSTITUTE, U.C.L.A. MEDICAL CENTER

Admission

The purpose of the Institute, in part, is to treat patients with organic and functional disorders of the nervous system. It is declared that all admissions to the Institute shall be for observation, teaching, research, diagnosis, and treatment purposes as determined by the superintendent and medical director, and that no person shall be admitted to the Institute or transferred to the Institute from any hospital under the jurisdiction of the Department of Mental Hygiene unless the superintendent and medical director of the Institute approves such admission or transfer. (W. & I.C. Sec. 7406.)

T. ADMISSION TO COMMUNITY MENTAL HEALTH SERVICES

Admission

The law authorizes counties, cities, and local health districts to establish community mental health clinics to provide various services, including care, to persons in need of psychiatric help (W. & I.C. Secs. 9000 et seq.).

U. COMMITMENT OF JUVENILE COURT WARDS

Observation Commitment

If the juvenile court, after finding that a minor is subject to its jurisdiction, is in doubt concerning the state of mental health or the mental condition of the minor, it is authorized to continue the hearing and to commit the minor to the Department of Mental Hygiene for placement in a state hospital or state home for the mentally deficient for an indeterminate period of not more than 90 days, for observation of the mental condition of the minor and recommendations concerning his future care, supervision, and treatment (W. & I.C. Sec. 703).

Commitment

The superintendent or other person in charge of the institution, if he accepts the minor, is required to examine him and report his findings and recommendations to the court within 90 days. If the report shows that the minor is not affected with any mental illness, disorder, or other mental disability for which he might be committed to a state hospital or institution, the minor must be returned to the juvenile court within seven days after the date of the report, and the court is required to proceed with the case. (W. & I.C. Sec. 703.)

If the report shows that the minor is affected with a mental illness, disorder, or other mental disability, the juvenile court must direct that a petition be filed in the superior court for commitment of the minor. It is declared that the court in which the petition for commitment is filed may accept the report of the superintendent or other person in charge of the state institution in lieu of the appointment, certificate, and testimony of medical examiners or other expert witnesses appointed by the court. (W. & I.C. Sec. 703.)

V. COMMITMENT OF YOUTH AUTHORITY WARDS

The Department of Youth Authority is authorized to enter into an agreement with the Department of Mental Hygiene to transfer persons subject to the jurisdiction of the authority to a state hospital or institution for observation, diagnosis, and such treatment as the hospital or institution finds necessary, unless the person is formally committed to the hospital or institution (W. & I.C. Secs. 1753, 1756).

It is declared that whenever the authority finds that any person committed to it is feeble-minded, insane, mentally ill, a sexual psychopath, or a defective or psychopathic delinquent, the authority may return the person to the committing court for discharge from the control of the authority and recommitment in accordance with law to the Department of Mental Hygiene for placement in the appropriate state institution (W. & I.C. Sec. 1756.5).

W. TRANSFERS FROM OTHER STATES

The Department of Mental Hygiene is authorized to give written permission for the return of any resident of the State confined in a public institution in another state, corresponding to a state hospital for the mentally ill or state home for the mentally deficient of this State, and to admit the person to any institution of the department designated by the Director of Mental Hygiene. The person may be cared for and treated for a period not exceeding seven days, during which time he must either be released or committed in accordance with law. (W. & I.C. Sec. 160.)

X. COMMITMENT OF PERSON WHO PLEADS INSANITY IN CRIMINAL PROCEEDINGS

If a person pleads not guilty by reason of insanity in criminal proceedings, the court is required to appoint two alienists, one of whom must be from the medical staff of a state hospital, and is authorized to appoint one additional alienist. The alienists must examine the person and testify as to their findings. They are subject to cross-examination and to questioning by the court, as well as to legal objections normally available against expert witnesses. The defendant may produce expert evidence in his own behalf. (Pen.C. Sec. 1027.)

If the defendant is found to be insane, the court must commit him to a state hospital for the insane, where he must remain until the court which committed him, after notice and hearing, finds that his sanity is restored (Pen.C. Sec. 1026).

Y. COMMITMENT OF PERSON INSANE AT TIME OF JUDGMENT

If a person claims to be insane at the time of judgment, and the court has a reasonable ground for believing this to be the case, the question of insanity must be tried in the manner stated in X above. If the person is found to be insane, he must be committed to a state hospital for the care and treatment of the insane, until he becomes sane. (Pen.C. Sec. 1201.)

Z. COMMITMENT OF PERSON WHO IS INSANE DURING PENDENCY OF CRIMINAL ACTION

If at any time during the pendency of an action and prior to judgment, a doubt arises as to the sanity of the defendant, the court must order the question as to his sanity to be determined by a trial (Pen.C. Sec. 1368).

If the defendant is found to be insane, the court is required to order the trial or judgment suspended until he becomes sane, and to commit him to a state hospital until that time (Pen.C. Sec. 1370).

AA. COMMITMENT OF INSANE PERSON UNDER DEATH SENTENCE

If, after a prisoner is delivered to the warden of a state prison for execution, there is good reason to believe that the person has become insane, the warden is required to call that fact to the attention of the district attorney of the county in which the prison is situated. The district attorney is required to file a petition in the superior court stating the conviction and judgment, the fact that the defendant is believed to be insane, and asking that the question of his sanity be inquired into. The court must cause to be summoned and impaneled a jury of 12 persons to hear the inquiry. (Pen.C. Sec. 3701.)

The district attorney must attend the hearing, and is authorized to produce witnesses (Pen.C. Sec. 3702).

If the defendant is found to be insane, the warden is required to suspend the execution, and the court must commit the defendant to a state hospital for the insane, until his reason is restored (Pen.C. Secs. 3703, 3704).

LETTER OF TRANSMITTAL

SENATE CHAMBER, STATE CAPITOL
SACRAMENTO, December 14, 1964

HONORABLE GLENN M. ANDERSON, *President of the Senate*
Senate Chamber, State Capitol
Sacramento, California

MR. PRESIDENT:

Pursuant to Senate Resolution 56 read and adopted June 21, 1963, at the regular session of the Legislature, the Senate Factfinding Committee on Labor and Welfare submits the following report made to us by the State Department of Public Health on the need for residential care of severely handicapped children and adults of normal mentality.

We wish to acknowledge at this time the fine cooperation extended to the committee by Malcolm H. Merrill, M.D., Director of the Department of Public Health, Harry Howard, M.D., and Leonard Krauss of the Neurological and Sensory Disease Project, Bureau of Chronic Diseases.

Respectfully submitted,

VERNON L. STURGEON, *Chairman*

December 3, 1964

HONORABLE VERNON L. STURGEON, *Chairman*
Senate Factfinding Committee on Labor and Welfare
State Capitol
Sacramento, California

DEAR SENATOR STURGEON:

We are pleased to submit this report on the need for residential care, treatment, and training of severely handicapped persons of normal mentality. It was prepared in response to Senate Resolution No. 56 which was adopted June 21, 1963.

The generous cooperation of many individuals and organizations throughout the state was of considerable help in preparing this report and is greatly appreciated.

The findings and recommendations of this study are presented for consideration by your committee as a possible means for meeting some of the residential needs of mentally normal persons who are not able to care for themselves.

Respectfully submitted,

MALCOLM H. MERRILL, M.D.
Director of Public Health

SENATE RESOLUTION No. 56

By Senators Cobey, Sturgeon, Rattigan, Rodda, and Weingand (at the request of the Senate Fact Finding Committee on Labor and Welfare):

Relating to continuation of a study by the Senate Fact Finding Committee on Labor and Welfare of the need for residential care, treatment, and training of severely handicapped children and adults of normal mentality

WHEREAS, The Rules Committee of the California State Senate referred to the Senate Fact Finding Committee on Labor and Welfare Senate Resolution 155 of the 1961 General Session, which authorized a study of the need for residential care, treatment, and training of severely handicapped children and adults of normal mentality; and

WHEREAS, The Senate Fact Finding Committee on Labor and Welfare has initiated a study to specifically define "severely handicapped children and adults of normal mentality"; to secure the assistance of the California Department of Public Health in conducting a survey to determine the numbers and need for care of persons within this definition; and to identify and evaluate applicable services currently available through federal, state, and local governmental and private sources; and

WHEREAS, The development of such information will permit the Senate Fact Finding Committee on Labor and Welfare to evaluate the necessity, desirability, and financial feasibility of coordinating or revising existing programs and services and establishing pilot projects or other new means to satisfy unmet needs, and to then report to the Senate its findings and recommendations; now, therefore, be it

Resolved by the Senate of the State of California, That the Senate Fact Finding Committee on Labor and Welfare is authorized to continue its study of the need for residential care, treatment, and training of severely handicapped children and adults of normal mentality and report its findings, together with any recommendations for legislation, to the Senate the 30th calendar day of the 1965 General Session of the Legislature.

Resolution read, and referred to Committee on Rules.

—State of California, *Senate Journal*, February 13, 1963, p. 394.

I. SUMMARY

Among the 18 million Californians, a substantial number have very severe physical handicaps. Some are in urgent need of suitable places to live; others are concerned, or cause their families concern, about the future when their parents or other relatives will no longer be able to care for them.

About 20,000 mentally normal, severely handicapped persons under age 65 in this state live outside of hospitals or other institutions. Most have developed satisfactory living arrangements on their own, with their families, or with public assistance. Some, however, are in urgent need of new, long-term residential care services. On the basis of the best information presently available, it appears that there are fewer than 500 such persons. The provision of services through a pilot project could determine the number of persons in urgent need of new, long-term residential care services, and the kinds and amounts of services needed.

Some private facilities exist but their costs are considerably more than most families can afford. Public facilities are generally limited to persons in financial need of public assistance. Very little in the way of services is available to persons who are not indigent but who cannot afford the full costs of private services.

The State of California provides for residential care, treatment and training of physically handicapped persons who are retarded or mentally ill. Comparable services are needed for the severely handicapped who are mentally normal.

The provision of such services by the State of California would alleviate many serious social and psychological problems of the handicapped and their families. It would also probably enable some handicapped persons to achieve partial or complete independence through rehabilitation and training programs, and thereby tend to offset public expenditures required for the care of this group of handicapped persons.

II. RECOMMENDATIONS

To determine accurately the extent of needs of severely handicapped persons of normal mentality for residential care, treatment, and training, and to determine how best to meet these needs, the California State Department of Public Health recommends that:

I. The State Department of Public Health initiate a pilot project that would obtain accurate data by providing necessary medical and social evaluations and coordinated residential care, treatment and training services. These services would encourage and assist handicapped individuals to achieve their maximum potential for independence and personal development.

A. Services would be made available to a handicapped person or his family when such services are needed to alleviate a substantial impairment to the normal functioning of the individual or the family unit.

B. Services would be purchased from private physicians, allied health personnel, and from local governmental and voluntary agencies in accordance with policies and standards of the pilot project. Such services may include medical and social evaluations, homemaker services, attendant care in the home, foster home care, long-term residential care in appropriate facilities, or other services as authorized under the project.

C. Institutional care on a long-term basis would be limited to those persons so severely handicapped that other care or services would be inappropriate. Construction of new residential facilities for this purpose would not be within the scope of the pilot project.

II. The pilot project would determine the extent of the need for various services, the costs, and the benefits to be derived by providing services and by additional investigations and surveys.

III. The pilot project would be carried out by the Department of Public Health as outlined below:

A. The pilot project would be limited to four years' duration.

B. Services would be provided to a caseload in two areas of the state estimated not to exceed 100 handicapped persons at any one time and the project authorized annual expenditures of up to \$100,000 during the first and fourth years and up to \$175,000 during the second and the third year.

1. The California State Department of Public Health will establish standards for and exercise administrative supervision of services provided by the project.

2. The department will provide medical direction to project staff. The project director and other project personnel will cooperate with personnel of local health departments and other appropriate agencies, both official and voluntary.

3. Existing community services, facilities, resources and funds will be utilized whenever possible so as to conserve project funds. The resources of the handicapped individual or his family, such

as health insurance, disability benefits, compensation, or other assistance, will be fully utilized before project resources are used, as in Crippled Children Services. Financially independent individuals or families, for example, may be offered only counseling services if such services are needed and are not otherwise available.

The project will contract with local health or welfare agencies, private physicians, nursing homes, or others to provide necessary additional services. (The pattern of the Crippled Children Services program in establishing standards, medical and financial eligibility, and in the authorization and purchase of needed services will be used as a guide.)

4. The California State Department of Public Health will assume responsibility for establishing eligibility criteria for services. The department will work with the Departments of Social Welfare, Rehabilitation, and with other appropriate agencies and organizations to develop individualized programs of care and rehabilitation and to plan for the future care of each individual in accordance with his needs and potential.

IV. The project shall terminate on June 30, 1969, and the Department of Public Health shall submit a preliminary report on the findings of the pilot project by January 31, 1967, and a final report and its recommendations to the Legislature on or before the 30th day after commencement of the 1969 Regular Session.

III. INTRODUCTION

The California State Senate expressed its concern about the needs and welfare of severely handicapped people of normal mentality in Senate Resolution No. 56 (1963). The latter authorized the Senate Factfinding Committee on Labor and Welfare to continue its study of the need for residential care, treatment, and training of severely handicapped children and adults of normal mentality, and report its findings, together with any recommendations for legislation, to the Senate.

In accordance with this resolution, the Senate committee requested the California State Department of Public Health to assist in determining the numbers and needs for care of such persons. The department was also asked to identify and evaluate the necessity, desirability, and financial feasibility of coordinating or revising existing programs and services and establishing pilot projects or other new means to satisfy unmet needs, and then to report to the Senate its findings and recommendations.

Establishment of an appropriate government-sponsored facility or program has been urged by handicapped individuals themselves, by parents' groups, and by voluntary health agencies for some time. Senate Resolution No. 56 continues the study begun under Senate Resolution No. 155 (1961). This in turn was an outgrowth of Assembly Concurrent Resolution No. 36 of 1947, which was concerned with the treatment, care, and education of "spastic and crippled persons."

To carry out its assignment, the department felt it essential to define "severely handicapped individuals of normal mentality" and the following definition was adopted for purposes of this report:

A severely handicapped child or adult of normal mentality in need of residential care, treatment, and training, is one who, because of his chronic physical handicaps:

must depend upon others for his daily care and well-being,
is below age 65,

does not have mental or emotional problems so severe as to qualify him for services of the Department of Mental Hygiene, and,
whose major handicap is not blindness, deafness, or tuberculosis.

This definition excludes persons with temporary physical handicaps, or persons who are able to care for themselves despite their handicaps. For study purposes a maximum age of 65 was set since persons beyond age 65 may be eligible for various public health and welfare programs. Also it was felt that the Senate committee was more concerned with the problems of persons whose handicaps are other than those associated with the problems of the aged.

The concept of "normal mentality" as expressed in Senate Resolution No. 56 was defined very broadly. It was the opinion of William B. Beach, Jr., M.D., Chief, Bureau of Mental Retardation and Children's Services of the Department of Mental Hygiene, that it would not be feasible to attempt to develop a precise definition of "mentally

normal." Therefore, it was decided to use the above concept, particularly since the Department of Mental Hygiene provides for the residential care, treatment, and training of retarded or mentally ill persons.

Persons whose sole major handicap is blindness, deafness, or tuberculosis were not included, because, although severely handicapped, they are often able to care for themselves, and, in addition, are covered by categorical assistance and residential care programs.

Severely handicapped persons' needs vary greatly. The range of their residential needs may include:

- Residential care unnecessary,
- Future residential care,
- Assistance needed to locate and/or modify a suitable residence,
- Financial assistance only,
- Opportunity for establishing cooperative living arrangements,
- Homemaker services,
- Visiting nurse services,
- Day-care facilities,
- Temporary or short-term residence for special situations,
- Rehabilitation or reorientation residential center ("half-way house")
- Foster-home care,
- Long-term nursing home care, or
- Permanent institutional care

Similarly, there is wide variation among the handicapped individual's needs for medical care, education, vocational training or assistance, employment, recreation, and social work services. These needs and the present or future residential care needs depend in a large part upon the degree to which the individual is or will be able to care for himself. This, in turn, is dependent upon factors such as:

- | | |
|---|--|
| Present age, and age when first handicapped | Social experiences, attitudes and adjustments, |
| Number of handicaps | Financial resources, |
| Kinds and severity of handicaps | Geographical location, and |
| Intelligence | Family situation, attitudes and relationships |
| Educational attainment and needs | |
| Work experience and potential | |

IV. NEEDS FOR RESIDENTIAL CARE, TREATMENT, AND TRAINING

A severely handicapped person under our definition may need residential care for any of the following reasons:

1. There is no one able or willing to accept responsibility for his well-being,
2. The needs and problems of the handicapped individual create an unbearable emotional strain upon himself or an emotional or financial strain upon his family,
3. He needs temporary or part-time residential care to relieve the strain upon his family in order to preserve the family unit,
4. He needs an opportunity to achieve maximum self-development through adequate medical treatment, education, therapy, rehabilitation, vocational training, or through more normal social relationships.

Some of the severely handicapped have an immediate need for residential care because their present accommodations are grossly unsatisfactory or are likely to become so in the near future. Others feel concern about the future, especially when parents or other family members will no longer be able to care for them.

Handicapped individuals have varying needs; there seems to be no single "solution" appropriate to a large portion of the severely handicapped population.

Comprehensive medical evaluations are essential in order to determine each individual's abilities and future potential as well as his disabilities, so as to accurately determine what type of residential care would be most suitable for him.

Furthermore, since the objectives of most medical care or public assistance programs are to improve the condition of the individual and help him toward maximum independence and self-care, segregation of handicapped persons in long-term or permanent institutional care away from nonhandicapped persons is not desirable. This type of care separates an individual from his family and from society and is undesirable for social reasons as well as for its deleterious effect upon rehabilitation efforts.

V. SERVICES AVAILABLE

Some long-term services related to the residential care needs of the severely handicapped are available in varying amounts to certain population groups in California, particularly veterans and indigent persons.

Veterans

Domiciliary care at the U.S. Veterans Center in Los Angeles and at Veterans Home of California in Napa County is available to eligible veterans who, because of their disabilities, are unable to earn a living but who are not in need of nursing services, constant medical supervision or hospitalization.

Inpatient hospital care is provided to eligible veterans in Veterans Administration hospitals and in certain other federal hospitals with priority given for treatment of service-connected injuries or diseases. Outpatient medical treatment is provided for service-connected disabilities.

Disabled veterans may be eligible for disability compensation payments up to \$725 a month, with additional allowances for dependents. They may also be eligible for vocational rehabilitation, education, training, and assistance in buying homes or automobiles.

Indigent Persons

Medical care and hospitalization are provided for indigents through county hospitals and other facilities. Hospital wards for the chronically ill or aged are sometimes used to house severely handicapped persons who may not require hospital care but who have no place else to go.

Handicapped persons may be eligible for low-rent housing in public projects financed by the federal government. Section 203 of the Housing Act of 1964 (PL 88-560) gives handicapped persons and families the same special treatment as the elderly. Because of the recency of this legislation its effect in California cannot be estimated.

Financial assistance under the Aid to Needy Disabled program is available to eligible persons over 18 years of age. According to preliminary figures, in August 1964 there were 50,793 recipients in California and monthly payments, exclusive of Public Assistance Medical Care, averaged \$95.77. Total program expenditures for the month came to \$5,742,685, with the State of California contributing \$3,011,783 and the federal government contributing \$2,330,167.¹

General relief is available to those handicapped persons who meet county eligibility requirements.

Other Than Veterans and/or Indigents

A wide variety of medical, rehabilitation, recreation, and other services are available from public or voluntary health agencies in different parts of California but none include long-term residential care services.

¹ California Department of Social Welfare, *Public Welfare in California, August 1964*, Statistical Series PA 3-59, Tables 1 and 1b.

Persons under 21 years of age with certain physical defects may be eligible for diagnosis, medical and surgical treatment, and hospital and rehabilitation center care provided through Crippled Children Services program administered by the California State Department of Public Health. Residential care is not provided under this program.

Special Education and Training Programs. Physically handicapped children from 3 to 21 years of age who cannot receive full benefit from ordinary educational facilities may be given home or hospital instruction. Children with cerebral palsy and similar handicapping conditions may be diagnosed and evaluated at one of the two special schools established for this purpose. Special classes to meet the education and training needs of handicapped adults are also authorized under state laws.

The California Department of Rehabilitation provides vocational rehabilitation services to handicapped persons 16 years of age or older and cooperates with the Department of Employment in the placement of physically handicapped individuals. Local communities are encouraged to develop sheltered workshops so as to extend opportunities for employment of the disabled.

Disabled workers and their dependents may qualify for social security disability insurance benefits ranging from \$40 to \$254 a month. Disability benefits are also available for persons disabled before the age of 18 whose parent is entitled to social security retirement or disability insurance benefits or was insured at the time of death.

New rental housing for the handicapped was encouraged by the Federal Housing Act of 1964 which makes long-term low-interest loans for construction costs available to nonprofit corporations, cooperatives, or public bodies. Organizations in Ohio and Washington are presently planning the construction of large buildings for handicapped persons with construction costs to be financed under the provisions of this new law.

A wide variety of other services such as homemaker services, visiting nurses' services, foster care homes, day care, sheltered workshops, and transportation and recreation, are provided by voluntary health organizations and by state, local, and federal governments. The availability of services, however, varies considerably from area to area.

Private services such as medical care, attendant care, nursing homes, boarding homes, or private schools, are available to those who can afford them or who have other resources such as workmen's compensation, disability insurance, private insurance or compensation.

VI. NUMBER OF PERSONS IN NEED

To determine the number of persons who need and who would use a social service such as residential care for handicapped persons, the most reliable and economical method is to provide the service on a trial basis through a pilot program. Valid estimates of the overall need could then be made on the basis of number and characteristics of persons applying for and using such services.

Estimates of residential care needs based on the prevalence of particular handicapping conditions usually overstate the number of persons in need of services and are too unreliable to be used in planning expensive public programs.

For example, the 1959 Legislature authorized the California State Department of Public Health to provide diagnostic and treatment services for children with epilepsy on a pilot basis over a three-year period. The 236 children applying for services were considerably fewer than the 1,400 to 1,900 children estimated to have epilepsy in the two counties in which services were provided. This study made it possible to aim at reasonably reliable estimates of the number of children needing and likely to make use of the services and the nature and cost of those services.²

Also pertinent to this problem is the experience of the United Cerebral Palsy Association of Philadelphia and vicinity with Overbrook Hall. After considerable study the Association opened a residential facility for 20 mildly to moderately involved cerebral palsied persons. At no time was this facility fully occupied; it was closed after seven and one-half years. Persons with cerebral palsy and their families who had expressed great interest and immediate need in the preliminary studies did not make use of the residence after its establishment. "They expressed very freely a desire for the existence of a residence as insurance against the time they might need it, but preferred to continue present living arrangements, although these were quite strained in some situations."³

These numbers were obtained from some of the many studies made to estimate how many Californians are covered by certain programs or services. The dates of the studies are different but, beyond this, handicapped individuals may come under more than one program or service so that the total number needing residential care is not the same as the sum of the numbers in each subcategory.

For purposes of estimating the number of Californians in need of residential care services, the following statistics are particularly pertinent:

About 16,000 mentally normal persons between the ages of 18 and 65 were receiving aid to the needy disabled in August 1962.⁴

² California State Department of Public Health, *Children With Epilepsy*, Berkeley, 1963.

³ O'Dwyer, Elizabeth M. "Overbrook Hall." *Cerebral Palsy Review*, July-August 1964, p. 14.

⁴ See Table 1, page 25.

About 3,000 Californians under 65 years of age live in licensed nursing homes and in boarding homes for the aged.⁵

As of June 30, 1964, social security disability benefits were being paid to 75,458 disabled children and adults in California.⁶

The Railroad Retirement Board estimated that in November 1963 about 1,500 of its California annuitants under 65 were totally and permanently disabled.⁷

More than 2,000 mentally normal veterans in California under 65 years of age are rated as 100 percent disabled by service-connected disabilities.⁸

There were an estimated 1,400 residents in veterans' domiciliary care facilities in California in June 1964 who were mentally normal and under 65.⁹

The effect this overlap of different groups of handicapped persons can have on estimates is illustrated in the diagram on page 20. Only three groups are shown in the diagram: rejected applicants for residential care at Pacific State Hospital¹⁰ persons included in a special survey for this report¹¹; and those covered by service programs of government and voluntary agencies. This last group can be subdivided into many separate elements, and these elements will overlap in varying degrees.

Data from the California Health Survey on the number of persons under 65 who cannot get around without help¹² or are confined to the house¹³ indicate that there are about 30,000 severely handicapped persons who live outside hospitals or other institutions. If we exclude those who are blind, deaf, mentally ill or retarded, or disabled by tuberculosis, we have in the neighborhood of 20,000 persons coming under this report's definition of severely handicapped persons of normal mentality.

Of the 20,000 fewer than 500 appear to be in urgent need of new, long-term residential care services. This estimate is based on projections made from data obtained from Pacific State Hospital and from the Survey of Severely Handicapped Children or Adults:

1. Pacific State Hospital, Pomona, is a Department of Mental Hygiene institution for retarded children and adults from southern California. About 31 percent of the state's population lives in the area it serves.

⁵ See Appendix, page 26.

⁶ See Table 2, page 26.

⁷ Information obtained in correspondence with Mr. Samuel Chmell, Director of Research, Railroad Retirement Board, November 21, 1963.

⁸ This estimate assumes that 10 percent of all disabled veterans are in California, that the proportion of veterans under 65 is the same in California as in the United States, and that the degree of service-connected disability is not related to age. The Administrator of Veterans Affairs, *Annual Report, 1962*, Washington, D.C., Government Printing Office, 1962, pp. 175, 238-239, 246-247, showed that as of June 30, 1962, 29,074 veterans were rated as 100 percent disabled by service-connected disabilities (other than tuberculosis or psychiatric and neurological diseases) and that 69.7 percent of all veterans were under 65 years of age.

⁹ This estimate is based on information provided by the Veterans Home of California, Napa County, and by the U.S. Veterans Administration Center, Los Angeles, by phone.

¹⁰ See Appendix, page 24.

¹¹ See Appendix, page 24.

¹² Table 4, page 31.

¹³ Table 5, page 32.

During the 19 months between January 1963 and July 1964, 914 applicants for admission were examined and evaluated. Seventy-four were rejected because they were not retarded. The hospital staff reviewed the case records of the 74 and found that 21 were severely handicapped, mentally normal, and in urgent need of residential care. Their ages ranged from 3 to 35 years and IQ's ranged from 65 to 95, with an average IQ of 77.

If the area served by Pacific State Hospital is representative of the entire state, we can expect an annual statewide total of about 42 persons per year in urgent need of residential care services. Since some handicapped persons or their families do not apply to an institution such as Pacific State because they do not know of it or are not referred there, or because the handicapped person's IQ is too high to even be considered for admission, the estimate should probably be at least doubled to make allowance for this. As a result, we get an annual total of about 80 persons in urgent need of residential care services, or about 400 over a five-year period.

2. A limited "Survey of Severely Handicapped Children or Adults of Normal Mentality in Need of Residential Care, Treatment, or Training" was conducted to learn more about their characteristics and needs. As described on pages ii and iii of the appendix, the questionnaires were distributed mainly in southern California and nearly three-fourths of the completed questionnaires came from that area. Slightly more than half—53 percent—of the completed questionnaires were from residents of Los Angeles County.

Twenty-one of the 172 questionnaires from Los Angeles County indicated an urgent need for residential care. If this is projected according to population, the statewide total would be 56. Because the survey included only persons in contact with one of the co-operating agencies, allowance must be made for persons who are not known to the voluntary health agencies as well as for those who did not submit completed questionnaires. Furthermore, since 76 percent of the replies were from persons with cerebral palsy, it appears that persons with other handicaps were underrepresented in the survey. For these reasons, the statewide estimate of 56 probably represents less than half of all severely handicapped persons of normal mentality in urgent need of residential care services.

The number of persons seeking residential care if it is made available will probably depend in large part upon the kind of care available, awareness by various social agencies, private physicians, and others that such care is available, and upon the responsiveness of individuals and families.

Reliable data on residential care needs can best be obtained through a pilot program which would provide necessary services. The extent to which the services are utilized, and the demand for more or new services, will provide the facts needed for determining the extent to which such services are needed on a continuing basis, the kinds and costs of services needed, and the benefits derived.

ESTIMATES OF NEED FOR RESIDENTIAL CARE

Estimates of the number of persons with health problems can be developed from various sources. Those most useful for estimating the number of severely handicapped persons of normal mentality in need of residential care are discussed below. Such estimates may differ considerably, however, because of different methods and criteria employed, including different concepts of "severely handicapped," "normal mentality," and "in need of residential care, treatment, and training," separately and in combination.

1. *Household interview surveys* in which a sample of the population is questioned about health problems can provide useful data on numbers, characteristics, and needs of persons with certain chronic conditions. Reliability of the data depends in part on the size of the sample and the relative frequency of the conditions. The California Health Survey and the U.S. National Health Survey are most useful and, on the basis of these, we estimate that 34,500 Californians who live outside of institutions are severely limited in their mobility and require long-term care.¹⁴ The survey, however, was not designed to determine how many of these need, want, and would use residential care services.
2. *Medical records and special morbidity studies* may yield estimates of the prevalence of certain severely handicapping conditions. Table 6 on page 33, for example, shows such estimates of cerebral palsy, epilepsy, and certain other neurological and sensory conditions in California. This type of information is not by itself a sufficient basis for estimating a need such as residential care. Persons with only a mild condition, or persons with handicaps who are able to live independently may not need or want special services. Furthermore, because severely handicapped persons often have more than one handicapping condition, the total number of conditions is greater than the number of persons with those conditions. Projections of need that are derived from such prevalence estimates are therefore likely to be less reliable than data from household surveys.
3. "*Educated opinions*" on numbers and needs are even less reliable as a basis upon which to establish a program of services. While there is agreement that services are needed, estimates of the level of services needed often tend to be unrealistically high.
4. Data on the current *caseloads of official or voluntary agencies* providing services to handicapped persons are available and may provide reliable estimates of the numbers of persons seeking the kinds of services provided by the particular programs.
 - a. About 16,000 mentally normal persons between the ages of 18 and 65 were receiving aid to the needy disabled in August 1962.¹⁵ (The total caseload for August 1964 is slightly more

¹⁴ See Table 4, page 31.

¹⁵ California Department of Social Welfare, *Characteristics of Recipients of Aid to the Needy Disabled, August 1962*, Sacramento, August 1963, p. 30.

than double the total caseload for August 1962, and the Department of Social Welfare is presently preparing a detailed analysis of the characteristics of the August 1964 recipients of aid to the needy disabled.)

- b. Records of persons applying for admission to Pacific State Hospital, Pomona, from January 1963 through July 1964 were reviewed by the hospital medical staff. Nine hundred fourteen applicants were evaluated at this state institution for the retarded and 74 were rejected because they were not retarded. Of the 74, 21 were severely handicapped and in urgent need of residential care, treatment, or training.
- c. A small number of mentally normal persons with severe physical handicaps are long-term residents of some county or state hospitals. While these persons need and are receiving residential care, there is no way to determine how many others need similar care.
5. *Special surveys* may be made to determine the need for particular services or facilities. A very extensive, and expensive, survey would be required to obtain valid information on the statewide need for residential care. Furthermore, the reliability of the information may be questionable, particularly when information is sought on the need for services or facilities that do not exist.

The Overbrook Hall experience in Philadelphia illustrates this problem. A residential facility for adults was established after much study and after a community survey to determine need. But many adults with cerebral palsy and their families did not make use of the residence after its establishment even though they had expressed great interest and immediate need in the preliminary studies.¹⁶

A limited survey of residential needs for the mentally normal, severely handicapped in California was conducted during the summer of 1964. The results of this survey are presented in Table 3 on pages 27-28; the questionnaire is on pages 29-30. Questionnaires were distributed in southern California mainly through the Crippled Childrens Society of Los Angeles County and to United Cerebral Palsy Association affiliates throughout the state. Since no casefinding was done, handicapped persons not in contact with one of the cooperating agencies were not reached. About 74 percent of the completed questionnaires came from southern California.

It is interesting to note that, with the full cooperation of the voluntary agencies, of the 4,000 questionnaires requested, fewer than 400 were returned. Thirty-seven indicated an urgent need for residential care.¹⁷

**ESTIMATED NUMBERS OF PERSONS UNDER 65 IN NURSING HOMES
AND BOARDING HOMES FOR THE AGED
California, 1964**

Approximately 2,000 Californians under 65 years are in licensed nursing homes and about 1,000 persons under 65 in licensed boarding homes for the aged.

Nursing Homes

Nursing homes licensed by the State of California had an estimated 36,711 nursing beds on June 1, 1964. A 1961 survey of nursing homes indicated that occupancy was about 85 percent and that 6.2 percent of the patients were under age 65.¹ Applying these proportions to the 1964 data on nursing home beds yields 31,204 patients, including 1,940 under 65 years of age (rounded to 2,000).

Boarding Homes

In May 1964 there were 3,279 boarding homes licensed by the Department of Social Welfare.

In 1954, there were 2,627 facilities with 26,964 residents, 3.7 percent of whom were less than 65 years of age.² By applying these proportions to the 1964 number of homes, we obtain an estimate of 1,240 residents under age 65, or a rounded estimate of 1,000.

Source: Information reported in 326 questionnaires received by the Neurological and Sensory Disease Project of the California State Department of Public Health in July and August 1964. The questionnaires were completed by handicapped persons, relatives, friends, or by private or public agency representatives. Most of the questionnaires were distributed in the Los Angeles area. About 40 percent of the completed questionnaires were submitted by the Continuous Care Committee of the United Cerebral Palsy Association of California which distributed questionnaires to its units throughout the state.

Mental retardation.....	500,000	600,000	700,000
(moderate, severe and profound).....	(50,000)	(60,000)	(70,000)

Note: The estimated numbers apply to conditions rather than persons. Since a person may have more than one of these conditions, an estimate of the total number of persons affected cannot be obtained by adding the numbers of conditions.

The estimates are subject to sampling variation and, in many cases, this variation may be quite large. Except for the estimated numbers of persons with mental retardation, the estimates shown here should be considered only as conservative indications of the order of magnitude of the problem.

The estimates for multiple sclerosis, muscular dystrophy and myasthenia gravis were rounded to the nearest 100; estimates for mental retardation were rounded to the nearest 100,000, with estimates for moderate, severe and profound mental retardation rounded to the nearest 10,000; all other estimates were rounded to the nearest 1,000.

Source: See California State Department of Public Health, *Neurological and Sensory Diseases in California*, Berkeley, 1964, Chapter II, for a discussion of the sources and reliability of the rates used to prepare these estimates. State of California, Department of Finance, Population Estimates prepared March 1962.

OVERBROOK HALL

By ELIZABETH M. O'DWYER, Executive Director,
United Cerebral Palsy Association of Philadelphia and Vicinity

This article is a résumé of the experience of UCPA of Philadelphia and vicinity in maintaining a residence for cerebral palsied adults.

On May 1, 1955, UCPA of Philadelphia and vicinity opened its home for mild to moderately involved adult cerebral palsied persons. Seven and one-half years later, on December 15, 1962, with the departure of the last resident, the home was closed and the agency's program of maintaining a residential facility was discontinued. This did not imply a discontinuance of concern for the provision of long-term residential care, but rather a decision by the board of directors that the problem could be handled more adequately through other means.

The decision to establish a residential facility was taken only after several years of preliminary study. The question was first raised at the June 1951 meeting of the board of directors. The board requested substantiating data on actual need and methods of financing. The director making the proposal was authorized to gather facts and initiate fund-raising activities with the promise that the board would seriously consider the problem if she and her associates were able to raise \$15,000. This specific figure had no significance other than a test of the genuineness of interest in the establishment of a residential facility.

To determine the amount of concern with the problem of long-term residence, three steps were taken:

(1) Questionnaires were sent to all families known to UCPA as having a member who was cerebral palsied. The questionnaire was planned to elicit information about the number of potential residents, the number who would use a residence immediately if established, and the degree of involvement of both these groups.

(2) Expressions of opinion concerning need and feasibility were requested from members of the medical advisory committee.

(3) A conference of representatives from community agencies offering services to the cerebral palsied was held. The agencies included in this group were St. Christopher's Hospital for Children, Children's Hospital, the Shut-In Society, The Creative Workshop of Philadelphia School of Occupational Therapy, the Visiting Nurse Association, and the Health and Welfare Council. The member of the board who initiated the proposal of establishing a residential home and the executive director served with the committee.

From each inquiry, positive statements regarding the need for adequate residential facilities were received. Members of the medical advisory committee pointed out that the greatest need was for persons requiring custodial-type care but warned the agency against undertaking such a program because of the expense that would be involved. The representatives of local agencies questioned the validity of statistics concerning immediate use which had been obtained by the questionnaires to families. They pointed to two areas of special need, (1) for

children with severe physical and mental involvement needing custodial care and (2) for young adults with relatively mild involvement unable to live alone in the community and ineligible for admission to any of the existing facilities. A thorough survey prior to further planning was recommended. In the meantime, the small group of interested parents had raised \$15,000 through sales of merchandise and solicitation of donations. At its October 1952 meeting the board of directors, in accordance with their agreement, appointed a resident care study committee.

The charge to the committee was twofold:

- (1) To study the problem of resident care for the cerebral palsied.
- (2) To recommend positive action to the board of directors regarding the establishment of a resident home.

Serving on the committee were four directors of UCPA, each of whom had some special interest or knowledge to contribute, the director of one of the larger cerebral palsy clinics who is also a member of the professional advisory committee, a consultant of the Health Division of the Health and Welfare Council, a social worker from an interested agency who had worked with both cerebral palsied children and adults, and the executive director. The Eastern Area Division of the Pennsylvania Citizens Association provided a special consultant.

The committee directed its attention to determination of:

- (1) Need for residential facility for cerebral palsied persons.
- (2) The categories of cerebral palsied persons for whom provisions should be made.
- (3) The extent of the need in each category.
- (4) Sources by which the need might be met.
- (5) Possibilities of financial support from public agencies.
- (6) Sources for private funds if public aid was not available.
- (7) Existing facilities, public and private.
- (8) Other studies on this problem.

The question of need was quickly resolved since all of our hospital clinics and schools reinforced the statements of parent and CP adults regarding an almost complete lack of proper residential care facilities in the Philadelphia area. Existing private facilities were studied. It was found that CPs were not acceptable or that rates were far too high for our parents to meet. Public facilities were inadequate. Private foster homes could handle only a very small number. The public authorities agreed with committee members that provision of residential care should be tax-supported, but pointed out that realistic thinking would suggest that UCPA develop a facility with the hope that it would serve as a pilot project to demonstrate the need, to be supported by public funds at some later date.

Categories of CPs requesting residential services were studied. It was admitted that the greatest need was for CPs with severe involvement, requiring custodial care. However, since both our national organization and studies made in other areas advised strongly against the establishment of a custodial-type residence supported by a private

organization, the committee turned its attention to needs of a second category, the mild to moderately involved for whom no facilities existed. In its final report to the board of directors on November 10, 1953, the committee pointed out that in its judgment provision for resident care of the cerebral palsied is a state responsibility and urged pressure by UCPA of Philadelphia and vicinity for the acceptance by the Commonwealth of Pennsylvania of its responsibility under a law already written but poorly implemented. Continued exploration with private institutions regarding the possibility of their making available part of their facilities for resident care of the cerebral palsied was recommended. However, the committee concluded that in light of the facts uncovered in its study there existed no suitable or adequate public or private facilities for the resident care of the cerebral palsied. It was therefore recommended that the board of directors should seriously consider the establishment of a home under its sponsorship and subsidy. Capital outlay was not considered by this committee but there were included in the report prospective annual operational budgets for homes for (a) 10 or (b) 25 moderately handicapped CP adults and (c) 10 or (d) 25 severely handicapped CP adults. It suggested that since precedents for such a program were unknown, a wise course might be to begin with a residence for the group presenting the least number of problems and requiring the least in expenditures. With the experience thus gained, services might be expanded at a later date.

Upon completion of the study, the board of directors approved the establishment of a residence for mild to moderately involved cerebral palsied persons. A real estate committee was appointed to locate a property. Since the group to be served were mild to moderately handicapped persons, many of whom would be able to travel independently, it was agreed that the property should be located in, or very close to, the city limits with good public transportation facilities nearby, to permit the residents to take advantage of the health, recreational, vocational and social opportunities existing in the community.

The building selected seemed ideal in many ways. It was well located, well constructed and in good condition. A small elevator was already installed. Later we were disappointed to learn that the elevator, while approved for a private residence could not be used for an institution, and must be removed. This was typical of a number of problems related to health and safety requirements. Efforts to obtain information from both state and local authorities regarding standards to be met before the home was opened were without success because the program did not meet any of the existing categories of residences or nursing homes under public supervision. However, after the building was in operation we were constantly troubled by fire, health and safety inspectors and fairly frequent and expensive adjustments were required.

Overbrook Hall was opened on May 1, 1955, with two young adult CPs as the first residents. Eligibility requirements included:

- (1) A diagnosis of cerebral palsy.
- (2) Age between 18 and 45 years.
- (3) Ability to handle self-care needs.
- (4) A medical examination by a physician selected by UCPA to insure objectivity.

- (5) Psychological examination to include a statement regarding ability of the individual to adjust to group living.
- (6) With very few exceptions, ability to manage stairs with a railing.

A basic fee of \$100 per month was established as a trial sum, to be adjusted following experience of costs. However, inability to pay was not a deterrent for admission since adjustments down to the \$59.50 monthly allowance for room and board of the Pennsylvania Department of Public Assistance was acceptable. Occasionally there was a need to keep a resident on a free basis temporarily, pending the processing of the application for public assistance support.

We accepted both temporary and long-term residents. For the long-term resident we anticipated lifetime care but reserved the right to request the family to remove the resident should physical or psychological problems develop that made it inadvisable for the person to remain longer in the residence.

After two years of operation a cost analysis was done under the direction of Mr. Sherwood Messner of the national staff. Results indicated that with full occupancy it should be possible to cover operational costs without subsidizing by the agency if the basic fee was established at \$40 per week. This step was taken. However, very few of the residents were able to pay the full fee. Quite a few were supported by public assistance. Others were employed at modest salaries and paid at a rate which they could afford. Gross costs of operation, income and other financial data will be found in the accompanying analyses.

During most of its operation, Overbrook Hall was staffed with an administrator, cook, two maids and a maintenance man. The administrator, one maid and the maintenance man lived in the building. All were employed on a six-day-week basis. The maids were responsible for laundering and mending clothing of the residents as well as for the usual cleaning and dusting, and for substituting for the cook on her day off. At first, bed linens owned by the agency were used but after a short time renting linens proved more economical. A full-time maintenance man was required even though the heat for the building came from a community central heating firm and caring for the furnace was not a requirement.

The residence program was, from the start, without restriction as to race or religion. One of the most popular residents was a young Negro man who was with us for about four years. Accompanying charts show number of residents, sex, age, geographical distribution and other related data.

In addition to the residence, UCPA of Philadelphia and vicinity offered a broad program of services to the cerebral palsied. The residents participated in academic, recreational and social groups. Those who were potentially employable were tested, trained and placed through the vocational services department. For those needing physical, occupational or speech therapy arrangements were made with local hospitals and treatment centers. Churches of several denominations were nearby.

Living quarters for 20 cerebral palsied persons were available at Overbrook Hall. The building was never fully occupied during the 7½ years of operation. Many of the CP adults and their families who

had expressed great interest and immediate need in the preliminary studies did not make use of the residence after its establishment. They expressed very freely a desire for the existence of a residence as insurance against the time when they might need it, but preferred to continue present living arrangements although these were quite strained in some situations. In an effort to interest more persons, notices were sent to all UCPA affiliates informing them of the availability of this residence for cerebral palsied persons. Later a brochure outlining the unique possibilities of a supervised residence plus vocational evaluation were widely distributed. As indicated in the data on geographical distribution, a number of residents did come from areas outside of Philadelphia. Use of the hall as a vacation resource was suggested but not more than one or two persons took advantage of this opportunity. Occasionally adult CPs requested and obtained permission to remain overnight or spend weekends there. Persons from other cities attending the evaluation unit of our vocational services department lived at Overbrook Hall during their eight-week period of testing. Every effort was made through local and national channels to obtain a full quota of residents, but without success.

During the summer of 1959 a pilot project was carried on to determine the feasibility of admitting persons with more severe involvement. Eight young men and women between the ages of 16 and 30, all non-ambulatory and requiring custodial care, were admitted for a six-week period. Three practical nurses were added to the staff and the living and dining rooms changed about so that a small dormitory for men, and one for women, could be set up on the first floor. At the conclusion of the six-week period there was little room for doubt that handling such clients was impractical in the physical facilities available. Also, we had experienced no great rush of applicants. The fact that this was a temporary program was undoubtedly a contributing factor but a large number of contacts were required before eight persons were enrolled. Original plans had called for 10.

In July 1961 a complete review of all the agency's programs was initiated by the board of directors. The assistance of our national staff was requested. Under the leadership of Mr. Messner a very fine program study committee was assembled. In its report on Overbrook Hall the workshop group stated, "It is difficult to justify this outlay of funds for the relatively few persons who presently qualify for admission and the present function of this facility." Possibilities of using the home for training in domestic science and general homemaking skills for nonresident as well as resident clients, or expansion of the services into a nursing or convalescent-type home were suggested as possibilities warranting further study.

The report of the workshop group was an expression of a concern felt by the board of directors for some time. An ad hoc committee on custodial care facilities had been appointed prior to this study but had been relatively inactive while awaiting the workshop group report. The committee had been appointed to:

- (1) Study and consider facilities and services presently provided by city and state for the care of severely involved cerebral palsied persons and take such action, separately or in conjunction with our state asso-

ciation, as may be needed to improve existing services and facilities or to bring about needed additional services and facilities.

(2) Investigate private facilities and services presently or prospectively available for the care of severely involved CPs and take such action as may be needed to implement the use of such facilities by severely involved CPs.

(3) Study, from the standpoint of capital and operational costs, licensing, zoning and other governmental regulations, the feasibility of making such alterations to the resident home as may be necessary in order that it may accommodate a small number, on a pilot or demonstration basis, of severely involved CPs, and report its findings to the board for its decision and action.

In its final report, submitted to the board of directors on May 9, 1962, the committee made several important statements:

1. It had been found, through various recent studies, that parents of cerebral palsied children increasingly tend not to place them away from home permanently until, or unless, there is a family crisis; that it is proving more satisfactory to keep children in their own homes as long as possible; and that this is increasingly possible if supportive services, including the therapies, day care, recreation, sheltered workshops, homemaker services, etc., are supplied by private or public agencies in the community.

2. Parents have great anxiety as to what will become of their handicapped child if something happens to the family. Often they do not know where to turn for help with the problem and are frequently unaware of any resources except the state schools for the retarded. Their information about these schools is limited and sometimes erroneous and they are frequently unaware of changes in philosophy of administration or program which have taken place in recent years.

3. Experience, and the opinion of professional personnel, indicate the number of severely physically handicapped cerebral palsied with a normal or superior IQ is very limited. The bulk of the problem of long-term care away from home will, therefore, be for the physically handicapped retarded.

4. The committee accepted completely the philosophy that provision of long-term care is essentially a public responsibility, not that of a private agency. It was felt the function of a private agency should be to support (but not financially) county and state agencies which provide long-term care, and to expand and improve their services.

5. Any pilot or demonstration project concerned with custodial care of severely handicapped CPs involves the risk that if the program is not successful the persons whom it was intended to benefit may, actually, be harmed. Having undergone an adjustment in entering the project, they will be forced to undergo another adjustment if it fails or if it is not adequate for the individual. Their participation will merely have forestalled working out a permanent plan, to the disservice of both the persons and the agency involved.

An analysis of number of persons in residence, turnover, and per capita costs showed the direct cost of the program to UCPA to be in the vicinity of \$1,000 per occupant per year. While it was recognized

that the group had benefited substantially from residence at Overbrook Hall, the ad hoc committee was unanimous in the view that the residence should not be continued in its present form—it should either be expanded to include a larger number of residents or else should be discontinued.

Careful attention was given to the feasibility of making changes at Overbrook Hall in order that it might accommodate a small number of severely involved CPs on a pilot or demonstration basis. Studies were made regarding expenditures that would be required to alter and equip the building to accommodate between five and eight severely handicapped persons. Although two state departments were interested and encouraged such a development, repeated and persistent efforts were not successful in obtaining a commitment concerning the exact amount of support the state would allow for providing nursing-home care. The committee felt the expenses involved would substantially exceed the reimbursement, particularly if good quality rather than bare minimum services were provided. The committee, therefore, concluded that it would be unsound to embark on any such expansion or demonstration program. It was agreed that the funds currently being spent on Overbrook Hall would be more wisely used, to the benefit of all CPs requiring custodial care, by concentrating UCPA's efforts on locating and making available adequate foster homes, nursing homes and other facilities more suitable for the provision of custodial care. The ad hoc committee on custodial care facilities therefore recommended to the board of directors of UCPA that after adequate provisions had been made for current residents and staff, Overbrook Hall be closed and the property sold.

The problem of long-term residential care would, thereafter, be the responsibility of the social service department. Continued efforts to locate foster homes and other facilities suitable for custodial care of CPs, counseling of parents concerning the placement of CPs needing custodial care, preparation of a directory of facilities available for long-term care away from home, exploration with UCP of Pennsylvania of the possibility of higher grants by the department of public assistance to institutions or foster homes where an individual needs attendant, but not nursing care, development of a plan, jointly, with the Pennsylvania Association for Retarded Children, Mental Health Association, and Pennsylvania Citizens Association, to aid in improving existing conditions in the state schools were further recommendations of the committee to the board.

The board accepted the recommendations of the committee and proceeded to implement them. Satisfactory arrangements for the CPs then residing at Overbrook Hall were made by the social service department. This required several months of quite intensive search and the cooperation of a number of other local agencies. A primary problem was the limited financial resources of the residents.

Overbrook Hall was closed on December 15, 1962, and the property has subsequently been sold.

In the opinion of the board of directors and staff of UCPA, Overbrook Hall served as an interesting demonstration of the value of a noninstitutional type of residence for cerebral palsied persons of mild to moderate disability. It was felt that placement of the last group of

residents in the situations located for them was possible primarily because of the social and emotional adjustments they had made during their period of residence. Overbrook Hall served as a "halfway house" for persons leaving their paternal homes but not ready to move into unsupervised living in the community. For example, one client was more happily acceptable in the home of his mother and stepfather because he had learned to use public transportation and gained a greater degree of self-sufficiency. We feel the basic idea of such a program is good, particularly if, as in Philadelphia, resources for vocational, recreational and health services can be integrated with a residential program but we are convinced that the cost of maintaining such a unit makes this activity impractical for a private agency. The establishment of such residences on a tax-supported basis might well yield gratifying results in salvaging mild to moderately involved cerebral palsied adults from a lifetime of institutional placement.

ANALYSIS OF RESIDENTS

May 1, 1955–December 15, 1962

1. Number individual residents	60	2. Planned length of stay		
Male	34	Permanent		26

LETTER OF TRANSMITTAL

SENATE CHAMBER, STATE CAPITOL
Sacramento, April 5, 1965

HON. GLENN M. ANDERSON,
President of the Senate
Senate Chamber, State Capitol
Sacramento, California

Mr. President:

Pursuant to Rule 12.5 of the Permanent Rules of the Senate and Senate Resolution No. 56 read and adopted June 21, 1963, at the regular session of the Legislature, the Senate Factfinding Committee on Labor and Welfare submits its final report on our study of the needs for residential care of severely handicapped children and adults of normal mentality.

We are indebted to so many individuals, private groups, and governmental agencies for their unstinting cooperation with us in this study that it is impossible to give them here the public acknowledgment that they so richly deserve. We are sure, however, that the enactment of the recommended pilot project by this session of the Legislature would be the most appropriate way to not only meet the great needs herein detailed but would also demonstrate California's deep appreciation to these people.

Respectfully submitted,

VERNON L. STURGEON, *Chairman*
HOWARD WAY, *Vice Chairman*
CLARK L. BRADLEY
JAMES A. COBEY

SUMMARY OF FINDINGS AND RECOMMENDATIONS

1. Of the 20,000 mentally normal, severely physically handicapped persons in California who live outside hospitals and other institutions, 500 or so lack adequate residential care services.
2. The bulk of these handicapped who need more suitable living arrangements are probably young—in their late teens and early twenties, currently being cared for by their parents or siblings, and in need of residential care because their relatives can no longer adequately provide it.
3. The parents of these handicapped children and adults, the communities they live in, and the state generally have no positive, direct means by which to provide even the most urgently needed residential services. The consequent fiscal waste of diverting other resources to meet at least part of these needs is great and the human waste intolerable.
4. The Legislature is therefore urged to establish a pilot project of four years duration to determine more accurately the needs for residential care services, how best to provide them, and to furnish some immediate relief to many of those who now so desperately need assistance (see Senate Bill No. 934, Appendix A, page 17).

COMMITTEE STUDY

For years the Legislature of the State of California has shown consistent concern about many of the problems faced by physically handicapped persons of normal mentality and the concomitant problems of these individuals' parents and communities. Only sporadically, however, has legislative attention been focused on the adequacy of living arrangements.

In 1943 the Legislature adopted Assembly Concurrent Resolution No. 30, which directed the State Department of Public Health to study the unmet needs of the physically handicapped. The department's ensuing report stated that "... severely handicapped persons are more efficiently cared for in institutions separated from mentally defective persons. . . .," and it recommended a statewide program for the care and education of children with cerebral palsy. In 1947 the Legislature requested the department to study the existing programs and facilities for the care, treatment, and training of the physically handicapped (ACR 36) and, again, the department reported, in 1949, a serious problem existed because of the lack of suitable living arrangements for the nonaged physically handicapped.

Bills were introduced in both the 1949 (SB 1033) and 1951 (SB 1434 and AB 3345) sessions of the Legislature to provide for state-run residential care facilities, but none achieved passage. And, as the attention of the Legislature from 1951 to 1959 shifted to other problems of the handicapped, (*e.g.*, educational programs, vocational training, physical rehabilitation, diagnostic services, financial assistance through public welfare) the problems relating to residential care were largely bypassed and all but forgotten.

In 1961, however, Senate Resolution No. 155, requesting a fact-finding committee to study residential care needs specifically, was adopted. Although the Senate's Factfinding Committee on Labor and Welfare received this authorization too late in the 1961-63 interim period to complete and report on such a study, late in 1962 we did begin working with the State Coordinating Council on Programs for Handicapped Children to develop a definition of "severely handicapped children and adults of normal mentality" and with the State Department of Public Health for a new study of this field. The committee also introduced Senate Resolution No. 56 during the 1963 session, which was subsequently adopted, to continue authorization for the study for another two years.

The Neurological and Sensory Disease Project in the State Public Health Department (now called the Neurological and Sensory Disease Control Program) in 1963 implemented a tripurpose study to:

1. Determine the number of severely physically handicapped children and adults of normal mentality with currently unsatisfactory living arrangements;
2. Identify existing sources of residential care; and

3. Offer whatever recommendations it determined were appropriate and necessary to satisfy any unmet needs that were discovered for such care.

The department's report was completed in early December 1964. After reviewing it with the department, the committee submitted it to the Senate, it was published and copies were forwarded to all organizations and individuals who had expressed an interest in this subject. A public hearing was held by the committee on January 27, 1965, in Sacramento, at which all witnesses and persons who submitted written material for the committee's consideration supported the principle of the four-year pilot project proposed by the department (the department's report appears as Appendix B, page 19).

WHAT IS THE PROBLEM?

In defining the group to be studied, the department took the definition developed by the Coordinating Council on Programs for Handicapped Children and modified it slightly. Thus, for the purpose of their study and this report, a "severely handicapped child or adult of normal mentality":

Has a chronic physical handicap;

Is dependent upon others for his daily care and well-being;

Is below age 65;

Does not have mental or emotional problems so severe as to qualify him for services of the State Department of Mental Hygiene; and

Does not have a major handicap of blindness, deafness, or tuberculosis.

This excludes, of course, persons who, in spite of their permanent handicaps, are able to care for themselves and persons with temporary handicaps.

There are currently in California about 20,000 mentally normal, severely physically handicapped persons who would come within the department's definition and who live outside hospitals and other institutions (see Appendix B, page 25). This is a significant increase above the less than 14,000 such individuals reported in the department's 1949 study. Among the current group, the department estimates, are probably fewer than 500 persons in urgent need of long-term residential care services. Some of these individuals are in need because they and their families lack the financial resources with which to purchase needed services. Others lack such services because of the great shortage of appropriate private or public facilities. And many handicapped persons, and their immediate families who are now capable of caring for them at home, are highly anxious about the day when, because of the aging or death of the parents, they too will be in dire need of residential care services.

WHO IS AFFECTED?

Specific data concerning severely handicapped persons of normal mentality, their families, and the impact they have on their local communities and the state are only vaguely known in aggregate. The study by the State Department of Public Health has helped fill this void to some extent. Additionally, the committee has received many accounts of particular cases directly from the handicapped and their families or friends. However, the total numbers of persons affected, their medical diagnoses and residential care needs, and the precise methods by which they are able to be integrated into the community are only dimly suggested shadows.

The handicapped individual

By study definition, the ages of the severely disabled persons range from infancy to 64 years. Responses to the department's questionnaire (giving a median age of 20 years) and records of persons applying unsuccessfully for admission to Pacific State Hospital for the mentally retarded (showing a median age of 15.5 years) would indicate that it is a relatively young population which is in need of more suitable living arrangements. Data from these two sources also suggest that there is probably no significant preponderance of one sex over the other. The principle causes of disability would seem to be cerebral palsy, multiple sclerosis, muscular dystrophy, birth defects, accidents, polio, uncontrolled epilepsy, and in the persons of older age, cardiovascular accidents (strokes).

It would appear that a great preponderance of the severely physically handicapped are living and cared for in the home by parents, firstly, or, secondly, by siblings. The Department of Public Health estimates that in mid-1964 only 2,000 persons under 65 years of age (6.2 percent of the 36,711 total patients) were living in nursing homes and about 1,000 under 65 (3.7 percent of the total residents) in boarding homes (see Appendix B, page 42). Responses to the department's questionnaire indicated that in 303 of 323 cases, the handicapped individual was living at home; 253 with one or both parents (or stepparents), 18 with spouses, 16 with relatives other than parents, and 16 by themselves. And data from the records tabulated by Pacific State Hospital show that of the 21 persons applying for admission who were rejected in spite of their critical need for adequate residential care because they were of normal mentality, 18 were living in noninstitutional settings (12 in their parents' home, two with other relatives, and four in foster homes) and only three were institutionalized.

The causes generating the need for residential care of the severely handicapped person can be numerous and are probably interrelated. There may be no one in the home who is capable or willing to furnish the services needed. There may be a lack of funds with which to purchase out of the home care or, more likely, there may be a lack of facilities offering care appropriate to the person's age and needs.

There may be lacking the opportunity to achieve maximum self-development or self-care through medical, educational, therapeutic, rehabilitative, and vocational services or training. There may be, particularly on the part of the young adult handicapped person, the natural compulsion to "get out on his own" as much as possible; a drive which in itself is often upsetting to parents and their maturing children who haven't the unusual dependency problems as are faced by the severely handicapped. Or there may be other emotional problems caused or accentuated by the dependency of the stricken individual.

Again, however, only educated guesses—only a working from the known specifics in a few cases to the unknown generalities for a majority of cases—can currently be made as to the causes of the need for more satisfactory and adequate residential care. Much yet remains to be learned.

The parents of handicapped individuals

It is probable that a majority of the severely handicapped children and adults of normal mentality are given residential care by their parents (or other relatives) and it seems highly likely, from the data discussed above, that most of those handicapped individuals who are now in urgent need of more appropriate care are living with their parents. If these assumptions are substantially accurate, the parents of the severely disabled person are intimately involved and affected by his residential care problems. In fact, it would often seem that the parents' inability to continue furnishing such care, either because of their death, their inability to handle the physical work involved, or their buckling under the unrelenting emotional strain of the situation, is the prime cause leading to the need for new living arrangements.

Further, as the department's report emphasizes, parents normally feel great concern about the future of their handicapped child, especially that time when they will no longer be capable of providing him the necessary care. This reaction has been rather firmly confirmed, in the department's view, by the Overbrook Hall experience of the United Cerebral Palsy Association of Philadelphia. After operating this residential facility for $7\frac{1}{2}$ years, the association closed it due to underutilization because "They (the cerebral palsied and their families) expressed very freely a desire for the existence of a residence as insurance against the time they might need it, but preferred to continue present living arrangements, although these were quite strained in some situations" (Appendix B, page 54).

Generally, if sketchy information about the needs of the handicapped person is known in overall terms, even less is known about their parents.

The community

Local communities, voluntary health and welfare bodies, and city, county, and special district agencies are immediately affected by the overall problems of the severely physically handicapped. In the fields

of medical care and hospitalization, income maintenance and social service programs, physical and vocational, rehabilitation, recreational activities, basic education, sheltered workshops, day care centers, and homemaker and visiting nurses services, the communities of California are daily working with many of the handicapped individuals to assist them in meeting their needs. Little if anything is being done, however, to meet head-on the problem of residential care.

As a result, county hospital geriatric wards and boarding and nursing homes for the aging become the permanent residences of disabled youths in their teens and twenties; residential educational facilities keep the handicapped long past the time required for profitable educational purposes; daycare facilities are used when only full-time residential services would meet the need; specialized residential institutions in the few places they exist are prohibitively overburdened with admission requests or inadequate budgets. Thus existing community resources are diverted from their main, their most efficient, and their usually heavily demanded purposes simply because more appropriate alternative sources of residential care services do not exist. The costs of doing so, on both humane and fiscal bases, is undoubtedly extravagant.

The State

To some lesser extent, the residential care needs of the physically handicapped affect state government as they do the local community. The state's only major program incorporating residential care (excluding the penal programs)—the hospital system for the mentally ill and retarded—has constant demands placed on it to provide care for the physically but non-mentally handicapped. The two state schools for cerebral palsied, which provide residential care necessary only to their prime functions of educational, treatment, and diagnostic services, are subject to the same pressures. And increasingly the Aid to the Totally Disabled public assistance program is being brought face to face with the residential care needs of its recipients although the most it can currently offer is income maintenance and some social casework counseling.

The greatest problem for the state, however, is the one which has consistently been allowed to slip from our clear focus, to slide from our firm grasp: the primordial responsibility of the state for the health and welfare of its citizens. There has been no indication that the handicapped persons themselves or their parents and families or the local communities have been or are desirous of evading their responsibilities. The meeting of its duty by the state, however, is still very much at issue.

WHAT IS THE SOLUTION?

Initially, the State Department of Public Health has cautioned, "Handicapped individuals have varying needs; there seems to be no single 'solution' appropriate to a large portion of the severely handicapped population" (see Appendix B, page 30). This warning must

be considered in weighing each of the possible solutions listed below to remedy the needs for residential care services required by handicapped persons.

Do nothing

Doing nothing, of course, could hardly be classified as a "solution" to the problem. Such a continued lack of action on the state's part, considering the pressure for additional services from a multitude of deserving sources coupled with the grave shortage of funds with which to finance already existing programs, constitutes a very real, perhaps likely possibility. Furthermore, the difficulty of "building a case" for the relatively tiny group of 400 to 500 individuals who are estimated to be in immediate need of residential services only confirms this possibility.

Counterbalancing, and in the committee's judgment outweighing the route on inaction, however, is the hard, cold fact that an agonizing and costly problem exists which the individual handicapped person, his family, and his local community are victims of and are powerless to solve. Counterbalancing and outweighing the route of inaction is the probability that the numbers of those individuals, families, and communities will grow, both in absolute numbers and in proportion to the total population, as the science of medicine adds years to the lives of the handicapped but cannot unaided add life to those years. Above all, counterbalancing and outweighing the route of inaction must be the basic integrity of our form of government; a system which is neither mob rule, motivated solely by the hue and cry of the many, nor is despotic, activated only by the will and for the good of the few; but rather a system in which our policies must be responsive as well as responsible, our representatives leaders as well as followers, our programs just as well as expedient.

Build new facilities

At the other end of the scale from doing nothing would be the construction of a facility or facilities by the state for the long-term residential care of the severely physically handicapped. This possible solution, likewise, is fraught with problems and possibly would create more than it would solve. Initially such an approach would present a most inflexible solution in terms of the geographic location of the centers of residential care and the estimated localities where the handicapped and their families live. Such a facility even if built to the most functional design for and humane operation of an institution, would be capable of rendering only a relatively limited type of residential care. For these reasons alone, the concept of institutionalization is being discarded in many other fields as mental health, foster care, and even acute and chronic hospitalization. Furthermore, institutions would require the most profligate use of personnel and of funds for both capital and operational purposes. Lastly, from the viewpoint of the vast majority of the handicapped and their families, institutionalization is probably unnecessary and

undesirable. It is unnecessary because many of the handicapped can live with their families, friends, or even independently if they are provided the particular care they need. It is undesirable because institutionalization often can produce emotional side effects which deter self-care rehabilitation.

Convert existing facilities

Tentative proposals were made to the committee suggesting the conversion of or additions to the Schools for Cerebral Palsied Children in Northern and Southern California (San Francisco and Los Angeles) so that long-term residential care could be offered in addition to the educational, diagnostic, and treatment services already provided. If needed residential care services could best be furnished through an institution-type facility for at least a significant number of handicapped, this proposal would appear superior to that requiring the construction of an entirely new facility. As emphasized above, however, there is currently little demonstrated need specifically for institutional-type care. This with the inherent weaknesses of institutionalism makes the alteration of existing facilities an inappropriate solution.

Expand the ATD program

It would be possible, as a solution, to expand the Aid to the Totally Disabled program to provide recipients with more money with which to purchase residential care services from private sources. Firstly, there is no assurance that such care in suitable facilities or through appropriate means is available at all. In fact, it would seem that the lack of money to purchase care is not as much a problem as is the shortage of the sources of services themselves. Secondly, this possible solution would also present the problem of a high degree of inflexibility. Once the statutes governing ATD were amended, it is probable such a change would be enduring whether it met the problem of residential care needs or not. Too little is known about these needs to warrant such a permanent change in the ATD program. Thirdly, although the inclusion of money for residential care under ATD would be very costly—about \$1,100,000 cost to the state and \$190,000 cost to the counties on a yearly basis as estimated by the State Department of Social Welfare—no help could be provided nonindigent persons through this source.

Pilot project

The State Department of Public Health has recommended the establishment of a pilot project for four years to, first, more accurately determine the extent of need of severely handicapped persons of normal mentality for residential care services and second, to determine how best to meet those needs. The department contends, and the committee agrees, that such a limited project would: provide reliable information on the number of persons who need residential care services, what kinds of services are needed, and what those services cost; flexibly

meet the differing needs of individuals; effectively utilize the individual's resources and the services and facilities already available in his community; and permit differing approaches and the changing of such methods in meeting residential care needs.

The pilot project proposal would be limited in size—an estimated maximum caseload at any one time of 100 cases, in location—two areas of the state, and in financial resources—a four-year total of \$550,000 for administration and purchase of services. Under it, however, the department would be authorized to provide necessary medical and social evaluations and to purchase services from private physicians and allied health personnel, homemaker services, attendant care in the home, foster home care, and residential care in other appropriate facilities. The project would be directed to cooperate with local health departments and other community agencies and with the State Departments of Rehabilitation and Social Welfare. Furthermore, the project would be required to utilize existing family and community resources to provide needed services, as the department does in the Crippled Children's program, before using project funds. Lastly, the project would terminate on June 30, 1969, and the department would be required to submit to the Legislature a preliminary report by January 31, 1967, and its final report by the 30th calendar day after the commencement of the 1969 Regular Session of the Legislature.

In spite of the shortcomings of such a pilot project as far as providing long-term assistance on a universal basis and in spite of the **current** extraordinarily difficult fiscal position of state government, the committee urges the prompt adoption of Senate Bill No. 934 (see Appendix A page 17) by the Legislature. This bill is being introduced to implement the recommendations initially proposed by the State Department of Public Health; recommendations which were supported in principle by all witnesses who testified to the committee. Through the passage of SB 934 the Legislature will not only be enabled more surely to evaluate the needs for and best means of providing residential care services, but we will also furnish immediate relief to many of those who now so desperately need assistance.

APPENDIX A

SENATE BILL NO. 934

Introduced by Senators Sturgeon, Way, Bradley, Cobey, Rodda,
and Weingand

(Senate Factfinding Committee on Labor and Welfare)

An act to add Article 3.3 (commencing with Section 310) to Chapter 2, Part 1, Division 1 of the Health and Safety Code, relating to a handicapped persons pilot project, and making an appropriation therefor.

The people of the State of California do enact as follows:

SECTION 1. Article 3.3 (commencing with Section 310) is added to Chapter 2, Part 1, Division 1 of the Health and Safety Code, to read:

Article 3.3. Handicapped Persons Pilot Project

310. The State Department of Public Health shall initiate and carry out a pilot project in two areas of the state for the purpose of determining the extent of the needs of severely handicapped persons of normal mentality for residential care and to determine how best to meet these needs.

310.1. In conducting the pilot project, the state department shall provide necessary medical and social evaluations and coordinated residential care, treatment and training services, which will encourage and assist handicapped individuals to achieve their maximum potential for independence and personal development.

The services may include, but shall not be limited to, medical and social evaluations, homemaker services, attendant care in the home, foster home care, and residential care in appropriate facilities. Institutional care shall, however, be limited to care of persons so severely handicapped that other care or services would be inappropriate.

310.2. The state department shall make the services available to a handicapped person or his family if the services are needed to alleviate a substantial impairment to the normal functioning of the individual or the family unit.

310.3. The services shall be purchased from private physicians, allied health personnel and from local governmental and volunteer agencies in accordance with policies and standards established by the state department. New residential facilities for the care of handicapped individuals shall not be constructed with any of the state funds which are made available to the state department for the pilot project.

310.4. The state department shall determine from the pilot project the extent of the need for the various services, the costs of providing the

necessary services, and the benefits which would be derived from providing the services to handicapped persons.

310.5. The pilot project shall be limited to a period of four years. Services shall be provided as a part of the project to caseloads in the two areas of the state selected by the state department for the project.

310.6. The state department shall establish such policies and standards for the pilot project as it determines are necessary to carry out the purposes of the pilot project and it shall exercise administrative supervision of the services which are provided as a part of the project.

310.7. The state department shall provide medical and administrative direction to the project staff. The project director and other project personnel shall cooperate with personnel of local health departments and other appropriate agencies, both public and voluntary.

310.8. Existing community services, facilities, resources, and funds shall be utilized whenever possible in carrying out the pilot project in order to conserve the state funds which are made available for the project. The resources of the handicapped individual or his family, such as income and savings, health insurance, disability benefits, workmen's compensation, or other assistance, shall be fully utilized before state funds which are made available for the project are used.

310.9. The pattern of the physically handicapped children services programs shall be used by the state department as a guide in establishing standards, medical and financial eligibility, and in the authorization and purchase of necessary services and supplies.

311. The state department shall establish such eligibility criteria for the services which are provided by the pilot project as it determines are necessary to carry out the purposes of the project. It shall work with the Department of Social Welfare, the Department of Rehabilitation, and other appropriate governmental and private agencies and organizations to develop individual programs of care and rehabilitation and to plan for the future care of each individual for whom services are rendered as a part of the field project in accordance with such person's needs and potential.

311.1. The pilot project shall terminate June 30, 1969. The state department shall submit a preliminary report on the findings of the pilot project to the Legislature by January 31, 1967, and a final report and its recommendations to the Legislature on or before the 30th calendar day after the commencement of the 1969 Regular Session of the Legislature.

SEC. 2. The sum of \$550,000 is hereby appropriated from the General Fund to the State Department of Public Health for expenditure, without regard to fiscal years, for the pilot project which the department is required to initiate and carry out by Article 3.3 (commencing with Section 310), Chapter 2, Part 1, Division 1 of the Health and Safety Code. The sum appropriated by this section shall, however, be reduced by the amount of any appropriation which the Federal Government may make to the state for the pilot project authorized under such article.

APPENDIX B

**NEED FOR RESIDENTIAL CARE OF
SEVERELY HANDICAPPED CHILDREN AND ADULTS
OF NORMAL MENTALITY**

REPORT TO THE
SENATE FACTFINDING COMMITTEE ON
LABOR AND WELFARE

by

Bureau of Chronic Diseases
State Department of Public Health

DEPARTMENT OF PUBLIC HEALTH

December 3, 1964

HON. VERNON L. STURGEON, *Chairman*
Senate Factfinding Committee on Labor and Welfare
State Capitol, Sacramento

DEAR SENATOR STURGEON:

We are pleased to submit this report on the need for residential care, treatment, and training of severely handicapped persons of normal mentality. It was prepared in response to Senate Resolution No. 56 which was adopted June 21, 1963.

The generous cooperation of many individuals and organizations throughout the state was of considerable help in preparing this report and is greatly appreciated.

The findings and recommendations of this study are presented for consideration by your committee as a possible means for meeting some of the residential needs of mentally normal persons who are not able to care for themselves.

Respectfully submitted,

MALCOLM H. MERRILL, M.D.
Director of Public Health

SENATE RESOLUTION No. 56

By Senators Cobey, Sturgeon, Rattigan, Rodda, and Weingand (at the request of the Senate Fact Finding Committee on Labor and Welfare):

Relating to continuation of a study by the Senate Fact Finding Committee on Labor and Welfare of the need for residential care, treatment, and training of severely handicapped children and adults of normal mentality

WHEREAS, The Rules Committee of the California State Senate referred to the Senate Fact Finding Committee on Labor and Welfare Senate Resolution 155 of the 1961 General Session, which authorized a study of the need for residential care, treatment, and training of severely handicapped children and adults of normal mentality; and

WHEREAS, The Senate Fact Finding Committee on Labor and Welfare has initiated a study to specifically define "severely handicapped children and adults of normal mentality"; to secure the assistance of the California Department of Public Health in conducting a survey to determine the numbers and need for care of persons within this definition; and to identify and evaluate applicable services currently available through federal, state, and local governmental and private sources; and

WHEREAS, The development of such information will permit the Senate Fact Finding Committee on Labor and Welfare to evaluate the necessity, desirability, and financial feasibility of coordinating or revising existing programs and services and establishing pilot projects or other new means to satisfy unmet needs, and to then report to the Senate its findings and recommendations; now, therefore, be it

Resolved by the Senate of the State of California, That the Senate Fact Finding Committee on Labor and Welfare is authorized to continue its study of the need for residential care, treatment, and training of severely handicapped children and adults of normal mentality and report its findings, together with any recommendations for legislation, to the Senate the 30th calendar day of the 1965 General Session of the Legislature.

Resolution read, and referred to Committee on Rules.

—State of California, *Senate Journal*, February 13, 1963, p. 394.

I. SUMMARY

Among the 18 million Californians, a substantial number have very severe physical handicaps. Some are in urgent need of suitable places to live; others are concerned, or cause their families concern, about the future when their parents or other relatives will no longer be able to care for them.

About 20,000 mentally normal, severely handicapped persons under age 65 in this state live outside of hospitals or other institutions. Most have developed satisfactory living arrangements on their own, with their families, or with public assistance. Some, however, are in urgent need of new, long-term residential care services. On the basis of the best information presently available, it appears that there are fewer than 500 such persons. The provision of services through a pilot project could determine the number of persons in urgent need of new, long-term residential care services, and the kinds and amounts of services needed.

Some private facilities exist but their costs are considerably more than most families can afford. Public facilities are generally limited to persons in financial need of public assistance. Very little in the way of services is available to persons who are not indigent but who cannot afford the full costs of private services.

The State of California provides for residential care, treatment and training of physically handicapped persons who are retarded or mentally ill. Comparable services are needed for the severely handicapped who are mentally normal.

The provision of such services by the State of California would alleviate many serious social and psychological problems of the handicapped and their families. It would also probably enable some handicapped persons to achieve partial or complete independence through rehabilitation and training programs, and thereby tend to offset public expenditures required for the care of this group of handicapped persons.

II. RECOMMENDATIONS

To determine accurately the extent of needs of severely handicapped persons of normal mentality for residential care, treatment, and training, and to determine how best to meet these needs, the California State Department of Public Health recommends that:

I. The State Department of Public Health initiate a pilot project that would obtain accurate data by providing necessary medical and social evaluations and coordinated residential care, treatment and training services. These services would encourage and assist handicapped individuals to achieve their maximum potential for independence and personal development.

A. Services would be made available to a handicapped person or his family when such services are needed to alleviate a substantial impairment to the normal functioning of the individual or the family unit.

B. Services would be purchased from private physicians, allied health personnel, and from local governmental and voluntary agencies in accordance with policies and standards of the pilot project. Such services may include medical and social evaluations, homemaker services, attendant care in the home, foster home care, long-term residential care in appropriate facilities, or other services as authorized under the project.

C. Institutional care on a long-term basis would be limited to those persons so severely handicapped that other care or services would be inappropriate. Construction of new residential facilities for this purpose would not be within the scope of the pilot project.

II. The pilot project would determine the extent of the need for various services, the costs, and the benefits to be derived by providing services and by additional investigations and surveys.

III. The pilot project would be carried out by the Department of Public Health as outlined below:

A. The pilot project would be limited to four years' duration.

B. Services would be provided to a caseload in two areas of the state estimated not to exceed 100 handicapped persons at any one time and the project authorized annual expenditures of up to \$100,000 during the first and fourth years and up to \$175,000 during the second and the third year.

1. The California State Department of Public Health will establish standards for and exercise administrative supervision of services provided by the project.

2. The department will provide medical direction to project staff. The project director and other project personnel will cooperate with personnel of local health departments and other appropriate agencies, both official and voluntary.

3. Existing community services, facilities, resources and funds will be utilized whenever possible so as to conserve project funds. The resources of the handicapped individual or his family, such as health insurance, disability benefits, compensation, or other assistance, will be fully utilized before project resources are used, as in Crippled Children Services. Financially independent individuals or families, for example, may be offered only counseling services if such services are needed and are not otherwise available.

The project will contract with local health or welfare agencies, private physicians, nursing homes, or others to provide necessary additional services. (The pattern of the Crippled Children Services program in establishing standards, medical and financial eligibility, and in the authorization and purchase of needed services will be used as a guide.)

4. The California State Department of Public Health will assume responsibility for establishing eligibility criteria for services. The department will work with the Departments of Social Welfare, Rehabilitation, and with other appropriate agencies and organizations to develop individualized programs of care and rehabilitation and to plan for the future care of each individual in accordance with his needs and potential.

IV. The project shall terminate on June 30, 1969, and the Department of Public Health shall submit a preliminary report on the findings of the pilot project by January 31, 1967, and a final report and its recommendations to the Legislature on or before the 30th day after commencement of the 1969 Regular Session.

III. INTRODUCTION

The California State Senate expressed its concern about the needs and welfare of severely handicapped people of normal mentality in Senate Resolution No. 56 (1963). The latter authorized the Senate Factfinding Committee on Labor and Welfare to continue its study of the need for residential care, treatment, and training of severely handicapped children and adults of normal mentality, and report its findings, together with any recommendations for legislation, to the Senate.

In accordance with this resolution, the Senate committee requested the California State Department of Public Health to assist in determining the numbers and needs for care of such persons. The department was also asked to identify and evaluate the necessity, desirability, and financial feasibility of coordinating or revising existing programs and services and establishing pilot projects or other new means to satisfy unmet needs, and then to report to the Senate its findings and recommendations.

Establishment of an appropriate government-sponsored facility or program has been urged by handicapped individuals themselves, by parents' groups, and by voluntary health agencies for some time. Senate Resolution No. 56 continues the study begun under Senate Resolution No. 155 (1961). This in turn was an outgrowth of Assembly Concurrent Resolution No. 26 of 1947, which was concerned with the treatment, care, and education of "spastic and crippled persons."

To carry out its assignment, the department felt it essential to define "severely handicapped individuals of normal mentality" and the following definition was adopted for purposes of this report:

A severely handicapped child or adult of normal mentality in need of residential care, treatment, and training, is one who, because of his chronic physical handicaps:

must depend upon others for his daily care and well-being,
is below age 65,

does not have mental or emotional problems so severe as to qualify him for services of the Department of Mental Hygiene, and,
whose major handicap is not blindness, deafness, or tuberculosis.

This definition excludes persons with temporary physical handicaps, or persons who are able to care for themselves despite their handicaps. For study purposes a maximum age of 65 was set since persons beyond age 65 may be eligible for various public health and welfare programs. Also it was felt that the Senate committee was more concerned with the problems of persons whose handicaps are other than those associated with the problems of the aged.

The concept of "normal mentality" as expressed in Senate Resolution No. 56 was defined very broadly. It was the opinion of William B. Beach, Jr., M.D., Chief, Bureau of Mental Retardation and Children's Services of the Department of Mental Hygiene, that it would not be feasible to attempt to develop a precise definition of "mentally

normal." Therefore, it was decided to use the above concept, particularly since the Department of Mental Hygiene provides for the residential care, treatment, and training of retarded or mentally ill persons.

Persons whose sole major handicap is blindness, deafness, or tuberculosis were not included, because, although severely handicapped, they are often able to care for themselves, and, in addition, are covered by categorical assistance and residential care programs.

Severely handicapped persons' needs vary greatly. The range of their residential needs may include:

- Residential care unnecessary,
- Future residential care,
- Assistance needed to locate and/or modify a suitable residence,
- Financial assistance only,
- Opportunity for establishing cooperative living arrangements,
- Homemaker services,
- Visiting nurse services,
- Day-care facilities,
- Temporary or short-term residence for special situations,
- Rehabilitation or reorientation residential center ("half-way house")
- Foster-home care,
- Long-term nursing home care, or
- Permanent institutional care

Similarly, there is wide variation among the handicapped individual's needs for medical care, education, vocational training or assistance, employment, recreation, and social work services. These needs and the present or future residential care needs depend in a large part upon the degree to which the individual is or will be able to care for himself. This, in turn, is dependent upon factors such as:

- | | |
|---|--|
| Present age, and age when first handicapped | Social experiences, attitudes and adjustments, |
| Number of handicaps | Financial resources, |
| Kinds and severity of handicaps | Geographical location, and |
| Intelligence | Family situation, attitudes and relationships |
| Educational attainment and needs | |
| Work experience and potential | |

IV. NEEDS FOR RESIDENTIAL CARE, TREATMENT, AND TRAINING

A severely handicapped person under our definition may need residential care for any of the following reasons:

1. There is no one able or willing to accept responsibility for his well-being,
2. The needs and problems of the handicapped individual create an unbearable emotional strain upon himself or an emotional or financial strain upon his family,
3. He needs temporary or part-time residential care to relieve the strain upon his family in order to preserve the family unit,
4. He needs an opportunity to achieve maximum self-development through adequate medical treatment, education, therapy, rehabilitation, vocational training, or through more normal social relationships.

Some of the severely handicapped have an immediate need for residential care because their present accommodations are grossly unsatisfactory or are likely to become so in the near future. Others feel concern about the future, especially when parents or other family members will no longer be able to care for them.

Handicapped individuals have varying needs; there seems to be no single "solution" appropriate to a large portion of the severely handicapped population.

Comprehensive medical evaluations are essential in order to determine each individual's abilities and future potential as well as his disabilities, so as to accurately determine what type of residential care would be most suitable for him.

Furthermore, since the objectives of most medical care or public assistance programs are to improve the condition of the individual and help him toward maximum independence and self-care, segregation of handicapped persons in long-term or permanent institutional care away from nonhandicapped persons is not desirable. This type of care separates an individual from his family and from society and is undesirable for social reasons as well as for its deleterious effect upon rehabilitation efforts.

V. SERVICES AVAILABLE

Some long-term services related to the residential care needs of the severely handicapped are available in varying amounts to certain population groups in California, particularly veterans and indigent persons.

Veterans

Domiciliary care at the U.S. Veterans Center in Los Angeles and at Veterans Home of California in Napa County is available to eligible veterans who, because of their disabilities, are unable to earn a living but who are not in need of nursing services, constant medical supervision or hospitalization.

Inpatient hospital care is provided to eligible veterans in Veterans Administration hospitals and in certain other federal hospitals with priority given for treatment of service-connected injuries or diseases. Outpatient medical treatment is provided for service-connected disabilities.

Disabled veterans may be eligible for disability compensation payments up to \$725 a month, with additional allowances for dependents. They may also be eligible for vocational rehabilitation, education, training, and assistance in buying homes or automobiles.

Indigent Persons

Medical care and hospitalization are provided for indigents through county hospitals and other facilities. Hospital wards for the chronically ill or aged are sometimes used to house severely handicapped persons who may not require hospital care but who have no place else to go.

Handicapped persons may be eligible for low-rent housing in public projects financed by the federal government. Section 203 of the Housing Act of 1964 (PL 88-560) gives handicapped persons and families the same special treatment as the elderly. Because of the recency of this legislation its effect in California cannot be estimated.

Financial assistance under the Aid to Needy Disabled program is available to eligible persons over 18 years of age. According to preliminary figures, in August 1964 there were 50,793 recipients in California and monthly payments, exclusive of Public Assistance Medical Care, averaged \$95.77. Total program expenditures for the month came to \$5,742,685, with the State of California contributing \$3,011,783 and the federal government contributing \$2,330,167.¹

General relief is available to those handicapped persons who meet county eligibility requirements.

Other Than Veterans and/or Indigents

A wide variety of medical, rehabilitation, recreation, and other services are available from public or voluntary health agencies in different parts of California but none include long-term residential care services.

¹ California Department of Social Welfare, *Public Welfare in California, August 1964*, Statistical Series PA 3-59, Tables 1 and 1b.

Persons under 21 years of age with certain physical defects may be eligible for diagnosis, medical and surgical treatment, and hospital and rehabilitation center care provided through Crippled Children Services program administered by the California State Department of Public Health. Residential care is not provided under this program.

Special Education and Training Programs. Physically handicapped children from 3 to 21 years of age who cannot receive full benefit from ordinary educational facilities may be given home or hospital instruction. Children with cerebral palsy and similar handicapping conditions may be diagnosed and evaluated at one of the two special schools established for this purpose. Special classes to meet the education and training needs of handicapped adults are also authorized under state laws.

The California Department of Rehabilitation provides vocational rehabilitation services to handicapped persons 16 years of age or older and cooperates with the Department of Employment in the placement of physically handicapped individuals. Local communities are encouraged to develop sheltered workshops so as to extend opportunities for employment of the disabled.

Disabled workers and their dependents may qualify for social security disability insurance benefits ranging from \$40 to \$254 a month. Disability benefits are also available for persons disabled before the age of 18 whose parent is entitled to social security retirement or disability insurance benefits or was insured at the time of death.

New rental housing for the handicapped was encouraged by the Federal Housing Act of 1964 which makes long-term low-interest loans for construction costs available to nonprofit corporations, cooperatives, or public bodies. Organizations in Ohio and Washington are presently planning the construction of large buildings for handicapped persons with construction costs to be financed under the provisions of this new law.

A wide variety of other services such as homemaker services, visiting nurses' services, foster care homes, day care, sheltered workshops, and transportation and recreation, are provided by voluntary health organizations and by state, local, and federal governments. The availability of services, however, varies considerably from area to area.

Private services such as medical care, attendant care, nursing homes, boarding homes, or private schools, are available to those who can afford them or who have other resources such as workmen's compensation, disability insurance, private insurance or compensation.

VI. NUMBER OF PERSONS IN NEED

To determine the number of persons who need and who would use a social service such as residential care for handicapped persons, the most reliable and economical method is to provide the service on a trial basis through a pilot program. Valid estimates of the overall need could then be made on the basis of number and characteristics of persons applying for and using such services.

Estimates of residential care needs based on the prevalence of particular handicapping conditions usually overstate the number of persons in need of services and are too unreliable to be used in planning expensive public programs.

For example, the 1959 Legislature authorized the California State Department of Public Health to provide diagnostic and treatment services for children with epilepsy on a pilot basis over a three-year period. The 236 children applying for services were considerably fewer than the 1,400 to 1,900 children estimated to have epilepsy in the two counties in which services were provided. This study made it possible to aim at reasonably reliable estimates of the number of children needing and likely to make use of the services and the nature and cost of those services.²

Also pertinent to this problem is the experience of the United Cerebral Palsy Association of Philadelphia and vicinity with Overbrook Hall. After considerable study the Association opened a residential facility for 20 mildly to moderately involved cerebral palsied persons. At no time was this facility fully occupied; it was closed after seven and one-half years. Persons with cerebral palsy and their families who had expressed great interest and immediate need in the preliminary studies did not make use of the residence after its establishment. "They expressed very freely a desire for the existence of a residence as insurance against the time they might need it, but preferred to continue present living arrangements, although these were quite strained in some situations."³

These numbers were obtained from some of the many studies made to estimate how many Californians are covered by certain programs or services. The dates of the studies are different but, beyond this, handicapped individuals may come under more than one program or service so that the total number needing residential care is not the same as the sum of the numbers in each subcategory.

For purposes of estimating the number of Californians in need of residential care services, the following statistics are particularly pertinent:

About 16,000 mentally normal persons between the ages of 18 and 65 were receiving aid to the needy disabled in August 1962.⁴

² California State Department of Public Health, *Children With Epilepsy*, Berkeley, 1963.

³ O'Dwyer, Elizabeth M. "Overbrook Hall." *Cerebral Palsy Review*, July-August 1964, p. 14.

⁴ See Table 1, page 41.

About 3,000 Californians under 65 years of age live in licensed nursing homes and in boarding homes for the aged.⁵

As of June 30, 1964, social security disability benefits were being paid to 75,458 disabled children and adults in California.⁶

The Railroad Retirement Board estimated that in November 1963 about 1,500 of its California annuitants under 65 were totally and permanently disabled.⁷

More than 2,000 mentally normal veterans in California under 65 years of age are rated as 100 percent disabled by service-connected disabilities.⁸

There were an estimated 1,400 residents in veterans' domiciliary care facilities in California in June 1964 who were mentally normal and under 65.⁹

The effect this overlap of different groups of handicapped persons can have on estimates is illustrated in the diagram on page 36. Only three groups are shown in the diagram: rejected applicants for residential care at Pacific State Hospital¹⁰; persons included in a special survey for this report¹¹; and those covered by service programs of government and voluntary agencies. This last group can be subdivided into many separate elements, and these elements will overlap in varying degrees.

Data from the California Health Survey on the number of persons under 65 who cannot get around without help¹² or are confined to the house¹³ indicate that there are about 30,000 severely handicapped persons who live outside hospitals or other institutions. If we exclude those who are blind, deaf, mentally ill or retarded, or disabled by tuberculosis, we have in the neighborhood of 20,000 persons coming under this report's definition of severely handicapped persons of normal mentality.

Of the 20,000 fewer than 500 appear to be in urgent need of new, long-term residential care services. This estimate is based on projections made from data obtained from Pacific State Hospital and from the Survey of Severely Handicapped Children or Adults:

1. Pacific State Hospital, Pomona, is a Department of Mental Hygiene institution for retarded children and adults from southern California. About 31 percent of the state's population lives in the area it serves.

⁵ See Appendix, page 42.

⁶ See Table 2, page 42.

⁷ Information obtained in correspondence with Mr. Samuel Chmell, Director of Research, Railroad Retirement Board, November 21, 1963.

⁸ This estimate assumes that 10 percent of all disabled veterans are in California, that the proportion of veterans under 65 is the same in California as in the United States, and that the degree of service-connected disability is not related to age. The Administrator of Veterans Affairs, *Annual Report, 1962*, Washington, D.C., Government Printing Office, 1962, pp. 175, 238-239, 246-247, showed that as of June 30, 1962, 29,074 veterans were rated as 100 percent disabled by service-connected disabilities (other than tuberculosis or psychiatric and neurological diseases) and that 69.7 percent of all veterans were under 65 years of age.

⁹ This estimate is based on information provided by the Veterans Home of California, Napa County, and by the U.S. Veterans Administration Center, Los Angeles, by phone.

¹⁰ See Appendix, page 40.

¹¹ See Appendix, page 40.

¹² Table 4, page 47.

¹³ Table 5, page 48.

During the 19 months between January 1963 and July 1964, 914 applicants for admission were examined and evaluated. Seventy-four were rejected because they were not retarded. The hospital staff reviewed the case records of the 74 and found that 21 were severely handicapped, mentally normal, and in urgent need of residential care. Their ages ranged from 3 to 35 years and IQ's ranged from 65 to 95, with an average IQ of 77.

If the area served by Pacific State Hospital is representative of the entire state, we can expect an annual statewide total of about 42 persons per year in urgent need of residential care services. Since some handicapped persons or their families do not apply to an institution such as Pacific State because they do not know of it or are not referred there, or because the handicapped person's IQ is too high to even be considered for admission, the estimate should probably be at least doubled to make allowance for this. As a result, we get an annual total of about 80 persons in urgent need of residential care services, or about 400 over a five-year period.

2. A limited "Survey of Severely Handicapped Children or Adults of Normal Mentality in Need of Residential Care, Treatment, or Training" was conducted to learn more about their characteristics and needs. As described on page 40 of the appendix, the questionnaires were distributed mainly in southern California and nearly three-fourths of the completed questionnaires came from that area. Slightly more than half—53 percent—of the completed questionnaires were from residents of Los Angeles County.

Twenty-one of the 172 questionnaires from Los Angeles County indicated an urgent need for residential care. If this is projected according to population, the statewide total would be 56. Because the survey included only persons in contact with one of the co-operating agencies, allowance must be made for persons who are not known to the voluntary health agencies as well as for those who did not submit completed questionnaires. Furthermore, since 76 percent of the replies were from persons with cerebral palsy, it appears that persons with other handicaps were underrepresented in the survey. For these reasons, the statewide estimate of 56 probably represents less than half of all severely handicapped persons of normal mentality in urgent need of residential care services.

The number of persons seeking residential care if it is made available will probably depend in large part upon the kind of care available, awareness by various social agencies, private physicians, and others that such care is available, and upon the responsiveness of individuals and families.

Reliable data on residential care needs can best be obtained through a pilot program which would provide necessary services. The extent to which the services are utilized, and the demand for more or new services, will provide the facts needed for determining the extent to which such services are needed on a continuing basis, the kinds and costs of services needed, and the benefits derived.

ESTIMATES OF NEED FOR RESIDENTIAL CARE

Estimates of the number of persons with health problems can be developed from various sources. Those most useful for estimating the number of severely handicapped persons of normal mentality in need of residential care are discussed below. Such estimates may differ considerably, however, because of different methods and criteria employed, including different concepts of "severely handicapped," "normal mentality," and "in need of residential care, treatment, and training," separately and in combination.

1. *Household interview surveys* in which a sample of the population is questioned about health problems can provide useful data on numbers, characteristics, and needs of persons with certain chronic conditions. Reliability of the data depends in part on the size of the sample and the relative frequency of the conditions. The California Health Survey and the U.S. National Health Survey are most useful and, on the basis of these, we estimate that 34,500 Californians who live outside of institutions are severely limited in their mobility and require long-term care.¹⁴ The survey, however, was not designed to determine how many of these need, want, and would use residential care services.
2. *Medical records and special morbidity studies* may yield estimates of the prevalence of certain severely handicapping conditions. Table 6 on page 49, for example, shows such estimates of cerebral palsy, epilepsy, and certain other neurological and sensory conditions in California. This type of information is not by itself a sufficient basis for estimating a need such as residential care. Persons with only a mild condition, or persons with handicaps who are able to live independently may not need or want special services. Furthermore, because severely handicapped persons often have more than one handicapping condition, the total number of conditions is greater than the number of persons with those conditions. Projections of need that are derived from such prevalence estimates are therefore likely to be less reliable than data from household surveys.
3. "*Educated opinions*" on numbers and needs are even less reliable as a basis upon which to establish a program of services. While there is agreement that services are needed, estimates of the level of services needed often tend to be unrealistically high.
4. Data on the current *caseloads of official or voluntary agencies* providing services to handicapped persons are available and may provide reliable estimates of the numbers of persons seeking the kinds of services provided by the particular programs.
 - a. About 16,000 mentally normal persons between the ages of 18 and 65 were receiving aid to the needy disabled in August 1962.¹⁵ (The total caseload for August 1964 is slightly more

¹⁴ See Table 4, page 44.

¹⁵ California Department of Social Welfare, *Characteristics of Recipients of Aid to the Needy Disabled, August 1962*, Sacramento, August 1963, p. 30.

than double the total caseload for August 1962, and the Department of Social Welfare is presently preparing a detailed analysis of the characteristics of the August 1964 recipients of aid to the needy disabled.)

- b. Records of persons applying for admission to Pacific State Hospital, Pomona, from January 1963 through July 1964 were reviewed by the hospital medical staff. Nine hundred fourteen applicants were evaluated at this state institution for the retarded and 74 were rejected because they were not retarded. Of the 74, 21 were severely handicapped and in urgent need of residential care, treatment, or training.
 - c. A small number of mentally normal persons with severe physical handicaps are long-term residents of some county or state hospitals. While these persons need and are receiving residential care, there is no way to determine how many others need similar care.
5. *Special surveys* may be made to determine the need for particular services or facilities. A very extensive, and expensive, survey would be required to obtain valid information on the statewide need for residential care. Furthermore, the reliability of the information may be questionable, particularly when information is sought on the need for services or facilities that do not exist.

The Overbrook Hall experience in Philadelphia illustrates this problem. A residential facility for adults was established after much study and after a community survey to determine need. But many adults with cerebral palsy and their families did not make use of the residence after its establishment even though they had expressed great interest and immediate need in the preliminary studies.¹⁶

A limited survey of residential needs for the mentally normal, severely handicapped in California was conducted during the summer of 1964. The results of this survey are presented in Table 3 on pages 43-44; the questionnaire is on pages 45-46. Questionnaires were distributed in Southern California mainly through the Crippled Childrens Society of Los Angeles County and to United Cerebral Palsy Association affiliates throughout the state. Since no casefinding was done, handicapped persons not in contact with one of the cooperating agencies were not reached. About 74 percent of the completed questionnaires came from southern California.

It is interesting to note that, with the full cooperation of the voluntary agencies, of the 4,000 questionnaires requested, fewer than 400 were returned. Thirty-seven indicated an urgent need for residential care.¹⁷

ESTIMATED NUMBERS OF PERSONS UNDER 65 IN NURSING HOMES AND BOARDING HOMES FOR THE AGED California, 1964

Approximately 2,000 Californians under 65 years are in licensed nursing homes and about 1,000 persons under 65 in licensed boarding homes for the aged.

Nursing Homes

Nursing homes licensed by the State of California had an estimated 36,711 nursing beds on June 1, 1964. A 1961 survey of nursing homes indicated that occupancy was about 85 percent and that 6.2 percent of the patients were under age 65.¹ Applying these proportions to the 1964 data on nursing home beds yields 31,204 patients, including 1,940 under 65 years of age (rounded to 2,000).

Boarding Homes

In May 1964 there were 3,279 boarding homes licensed by the Department of Social Welfare.

In 1954, there were 2,627 facilities with 26,964 residents, 3.7 percent of whom were less than 65 years of age.² By applying these proportions to the 1964 number of homes, we obtain an estimate of 1,240 residents under age 65, or a rounded estimate of 1,000.

Source: Information reported in 326 questionnaires received by the Neurological and Sensory Disease Project of the California State Department of Public Health in July and August 1964. The questionnaires were completed by handicapped persons, relatives, friends, or by private or public agency representatives. Most of the questionnaires were distributed in the Los Angeles area. About 40 percent of the completed questionnaires were submitted by the Continuous Care Committee of the United Cerebral Palsy Association of California which distributed questionnaires to its units throughout the state.

(deaf).....	(10,000)	(11,000)	(15,000)
Speech defects.....	91,000	107,000	143,000
Visual impairments.....	316,000	370,000	482,000
severe.....	89,000	104,000	134,000
(blind).....	(29,000)	(35,000)	(46,000)
All others.....	227,000	266,000	348,000
Mental retardation.....	500,000	600,000	700,000
(moderate, severe and profound).....	(50,000)	(60,000)	(70,000)

Note: The estimated numbers apply to conditions rather than persons. Since a person may have more than one of these conditions, an estimate of the total number of persons affected cannot be obtained by adding the numbers of conditions.

The estimates are subject to sampling variation and, in many cases, this variation may be quite large. Except for the estimated numbers of persons with mental retardation, the estimates shown here should be considered only as conservative indications of the order of magnitude of the problem.

The estimates for multiple sclerosis, muscular dystrophy and myasthenia gravis were rounded to the nearest 100; estimates for mental retardation were rounded to the nearest 100,000, with estimates for moderate, severe and profound mental retardation rounded to the nearest 10,000; all other estimates were rounded to the nearest 1,000.

OVERBROOK HALL

By ELIZABETH M. O'DWYER, Executive Director,
United Cerebral Palsy Association of Philadelphia and Vicinity

This article is a résumé of the experience of UCPA of Philadelphia and vicinity in maintaining a residence for cerebral palsied adults.

On May 1, 1955, UCPA of Philadelphia and vicinity opened its home for mild to moderately involved adult cerebral palsied persons. Seven and one-half years later, on December 15, 1962, with the departure of the last resident, the home was closed and the agency's program of maintaining a residential facility was discontinued. This did not imply a discontinuance of concern for the provision of long-term residential care, but rather a decision by the board of directors that the problem could be handled more adequately through other means.

The decision to establish a residential facility was taken only after several years of preliminary study. The question was first raised at the June 1951 meeting of the board of directors. The board requested substantiating data on actual need and methods of financing. The director making the proposal was authorized to gather facts and initiate fund-raising activities with the promise that the board would seriously consider the problem if she and her associates were able to raise \$15,000. This specific figure had no significance other than a test of the genuineness of interest in the establishment of a residential facility.

To determine the amount of concern with the problem of long-term residence, three steps were taken:

(1) Questionnaires were sent to all families known to UCPA as having a member who was cerebral palsied. The questionnaire was planned to elicit information about the number of potential residents, the number who would use a residence immediately if established, and the degree of involvement of both these groups.

(2) Expressions of opinion concerning need and feasibility were requested from members of the medical advisory committee.

(3) A conference of representatives from community agencies offering services to the cerebral palsied was held. The agencies included in this group were St. Christopher's Hospital for Children, Children's Hospital, the Shut-In Society, The Curative Workshop of Philadelphia School of Occupational Therapy, the Visiting Nurse Association, and the Health and Welfare Council. The member of the board who initiated the proposal of establishing a residential home and the executive director served with the committee.

From each inquiry, positive statements regarding the need for adequate residential facilities were received. Members of the medical advisory committee pointed out that the greatest need was for persons requiring custodial-type care but warned the agency against undertaking such a program because of the expense that would be involved. The representatives of local agencies questioned the validity of statistics concerning immediate use which had been obtained by the questionnaires to families. They pointed to two areas of special need, (1) for

children with severe physical and mental involvement needing custodial care and (2) for young adults with relatively mild involvement unable to live alone in the community and ineligible for admission to any of the existing facilities. A thorough survey prior to further planning was recommended. In the meantime, the small group of interested parents had raised \$15,000 through sales of merchandise and solicitation of donations. At its October 1952 meeting the board of directors, in accordance with their agreement, appointed a resident care study committee.

The charge to the committee was twofold:

- (1) To study the problem of resident care for the cerebral palsied.
- (2) To recommend positive action to the board of directors regarding the establishment of a resident home.

Serving on the committee were four directors of UCPA, each of whom had some special interest or knowledge to contribute, the director of one of the larger cerebral palsy clinics who is also a member of the professional advisory committee, a consultant of the Health Division of the Health and Welfare Council, a social worker from an interested agency who had worked with both cerebral palsied children and adults, and the executive director. The Eastern Area Division of the Pennsylvania Citizens Association provided a special consultant.

The committee directed its attention to determination of:

- (1) Need for residential facility for cerebral palsied persons.
- (2) The categories of cerebral palsied persons for whom provisions should be made.
- (3) The extent of the need in each category.
- (4) Sources by which the need might be met.
- (5) Possibilities of financial support from public agencies.
- (6) Sources for private funds if public aid was not available.
- (7) Existing facilities, public and private.
- (8) Other studies on this problem.

The question of need was quickly resolved since all of our hospital clinics and schools reinforced the statements of parent and CP adults regarding an almost complete lack of proper residential care facilities in the Philadelphia area. Existing private facilities were studied. It was found that CPs were not acceptable or that rates were far too high for our parents to meet. Public facilities were inadequate. Private foster homes could handle only a very small number. The public authorities agreed with committee members that provision of residential care should be tax-supported, but pointed out that realistic thinking would suggest that UCPA develop a facility with the hope that it would serve as a pilot project to demonstrate the need, to be supported by public funds at some later date.

Categories of CPs requesting residential services were studied. It was admitted that the greatest need was for CPs with severe involvement, requiring custodial care. However, since both our national organization and studies made in other areas advised strongly against the establishment of a custodial-type residence supported by a private

organization, the committee turned its attention to needs of a second category, the mild to moderately involved for whom no facilities existed. In its final report to the board of directors on November 10, 1953, the committee pointed out that in its judgment provision for resident care of the cerebral palsied is a state responsibility and urged pressure by UCPA of Philadelphia and vicinity for the acceptance by the Commonwealth of Pennsylvania of its responsibility under a law already written but poorly implemented. Continued exploration with private institutions regarding the possibility of their making available part of their facilities for resident care of the cerebral palsied was recommended. However, the committee concluded that in light of the facts uncovered in its study there existed no suitable or adequate public or private facilities for the resident care of the cerebral palsied. It was therefore recommended that the board of directors should seriously consider the establishment of a home under its sponsorship and subsidy. Capital outlay was not considered by this committee but there were included in the report prospective annual operational budgets for homes for (a) 10 or (b) 25 moderately handicapped CP adults and (c) 10 or (d) 25 severely handicapped CP adults. It suggested that since precedents for such a program were unknown, a wise course might be to begin with a residence for the group presenting the least number of problems and requiring the least in expenditures. With the experience thus gained, services might be expanded at a later date.

Upon completion of the study, the board of directors approved the establishment of a residence for mild to moderately involved cerebral palsied persons. A real estate committee was appointed to locate a property. Since the group to be served were mild to moderately handicapped persons, many of whom would be able to travel independently, it was agreed that the property should be located in, or very close to, the city limits with good public transportation facilities nearby, to permit the residents to take advantage of the health, recreational, vocational and social opportunities existing in the community.

The building selected seemed ideal in many ways. It was well located, well constructed and in good condition. A small elevator was already installed. Later we were disappointed to learn that the elevator, while approved for a private residence could not be used for an institution, and must be removed. This was typical of a number of problems related to health and safety requirements. Efforts to obtain information from both state and local authorities regarding standards to be met before the home was opened were without success because the program did not meet any of the existing categories of residences or nursing homes under public supervision. However, after the building was in operation we were constantly troubled by fire, health and safety inspectors and fairly frequent and expensive adjustments were required.

Overbrook Hall was opened on May 1, 1955, with two young adult CPs as the first residents. Eligibility requirements included:

- (1) A diagnosis of cerebral palsy.
- (2) Age between 18 and 45 years.
- (3) Ability to handle self-care needs.
- (4) A medical examination by a physician selected by UCPA to insure objectivity.

- (5) Psychological examination to include a statement regarding ability of the individual to adjust to group living.
- (6) With very few exceptions, ability to manage stairs with a railing.

A basic fee of \$100 per month was established as a trial sum, to be adjusted following experience of costs. However, inability to pay was not a deterrent for admission since adjustments down to the \$59.50 monthly allowance for room and board of the Pennsylvania Department of Public Assistance was acceptable. Occasionally there was a need to keep a resident on a free basis temporarily, pending the processing of the application for public assistance support.

We accepted both temporary and long-term residents. For the long-term resident we anticipated lifetime care but reserved the right to request the family to remove the resident should physical or psychological problems develop that made it inadvisable for the person to remain longer in the residence.

After two years of operation a cost analysis was done under the direction of Mr. Sherwood Messner of the national staff. Results indicated that with full occupancy it should be possible to cover operational costs without subsidizing by the agency if the basic fee was established at \$40 per week. This step was taken. However, very few of the residents were able to pay the full fee. Quite a few were supported by public assistance. Others were employed at modest salaries and paid at a rate which they could afford. Gross costs of operation, income and other financial data will be found in the accompanying analyses.

During most of its operation, Overbrook Hall was staffed with an administrator, cook, two maids and a maintenance man. The administrator, one maid and the maintenance man lived in the building. All were employed on a six-day-week basis. The maids were responsible for laundering and mending clothing of the residents as well as for the usual cleaning and dusting, and for substituting for the cook on her day off. At first, bed linens owned by the agency were used but after a short time renting linens proved more economical. A full-time maintenance man was required even though the heat for the building came from a community central heating firm and caring for the furnace was not a requirement.

The residence program was, from the start, without restriction as to race or religion. One of the most popular residents was a young Negro man who was with us for about four years. Accompanying charts show number of residents, sex, age, geographical distribution and other related data.

In addition to the residence, UCPA of Philadelphia and vicinity offered a broad program of services to the cerebral palsied. The residents participated in academic, recreational and social groups. Those who were potentially employable were tested, trained and placed through the vocational services department. For those needing physical, occupational or speech therapy arrangements were made with local hospitals and treatment centers. Churches of several denominations were nearby.

Living quarters for 20 cerebral palsied persons were available at Overbrook Hall. The building was never fully occupied during the 7½ years of operation. Many of the CP adults and their families who

had expressed great interest and immediate need in the preliminary studies did not make use of the residence after its establishment. They expressed very freely a desire for the existence of a residence as insurance against the time when they might need it, but preferred to continue present living arrangements although these were quite strained in some situations. In an effort to interest more persons, notices were sent to all UCPA affiliates informing them of the availability of this residence for cerebral palsied persons. Later a brochure outlining the unique possibilities of a supervised residence plus vocational evaluation were widely distributed. As indicated in the data on geographical distribution, a number of residents did come from areas outside of Philadelphia. Use of the hall as a vacation resource was suggested but not more than one or two persons took advantage of this opportunity. Occasionally adult CPs requested and obtained permission to remain overnight or spend weekends there. Persons from other cities attending the evaluation unit of our vocational services department lived at Overbrook Hall during their eight-week period of testing. Every effort was made through local and national channels to obtain a full quota of residents, but without success.

During the summer of 1959 a pilot project was carried on to determine the feasibility of admitting persons with more severe involvement. Eight young men and women between the ages of 16 and 30, all non-ambulatory and requiring custodial care, were admitted for a six-week period. Three practical nurses were added to the staff and the living and dining rooms changed about so that a small dormitory for men, and one for women, could be set up on the first floor. At the conclusion of the six-week period there was little room for doubt that handling such clients was impractical in the physical facilities available. Also, we had experienced no great rush of applicants. The fact that this was a temporary program was undoubtedly a contributing factor but a large number of contacts were required before eight persons were enrolled. Original plans had called for 10.

In July 1961 a complete review of all the agency's programs was initiated by the board of directors. The assistance of our national staff was requested. Under the leadership of Mr. Messner a very fine program study committee was assembled. In its report on Overbrook Hall the workshop group stated, "It is difficult to justify this outlay of funds for the relatively few persons who presently qualify for admission and the present function of this facility." Possibilities of using the home for training in domestic science and general homemaking skills for nonresident as well as resident clients, or expansion of the services into a nursing or convalescent-type home were suggested as possibilities warranting further study.

The report of the workshop group was an expression of a concern felt by the board of directors for some time. An ad hoc committee on custodial care facilities had been appointed prior to this study but had been relatively inactive while awaiting the workshop group report. The committee had been appointed to:

(1) Study and consider facilities and services presently provided by city and state for the care of severely involved cerebral palsied persons and take such action, separately or in conjunction with our state asso-

ciation, as may be needed to improve existing services and facilities or to bring about needed additional services and facilities.

(2) Investigate private facilities and services presently or prospectively available for the care of severely involved CPs and take such action as may be needed to implement the use of such facilities by severely involved CPs.

(3) Study, from the standpoint of capital and operational costs, licensing, zoning and other governmental regulations, the feasibility of making such alterations to the resident home as may be necessary in order that it may accommodate a small number, on a pilot or demonstration basis, of severely involved CPs, and report its findings to the board for its decision and action.

In its final report, submitted to the board of directors on May 9, 1962, the committee made several important statements:

1. It had been found, through various recent studies, that parents of cerebral palsied children increasingly tend not to place them away from home permanently until, or unless, there is a family crisis; that it is proving more satisfactory to keep children in their own homes as long as possible; and that this is increasingly possible if supportive services, including the therapies, day care, recreation, sheltered workshops, homemaker services, etc., are supplied by private or public agencies in the community.

2. Parents have great anxiety as to what will become of their handicapped child if something happens to the family. Often they do not know where to turn for help with the problem and are frequently unaware of any resources except the state schools for the retarded. Their information about these schools is limited and sometimes erroneous and they are frequently unaware of changes in philosophy of administration or program which have taken place in recent years.

3. Experience, and the opinion of professional personnel, indicate the number of severely physically handicapped cerebral palsied with a normal or superior IQ is very limited. The bulk of the problem of long-term care away from home will, therefore, be for the physically handicapped retarded.

4. The committee accepted completely the philosophy that provision of long-term care is essentially a public responsibility, not that of a private agency. It was felt the function of a private agency should be to support (but not financially) county and state agencies which provide long-term care, and to expand and improve their services.

5. Any pilot or demonstration project concerned with custodial care of severely handicapped CPs involves the risk that if the program is not successful the persons whom it was intended to benefit may, actually, be harmed. Having undergone an adjustment in entering the project, they will be forced to undergo another adjustment if it fails or if it is not adequate for the individual. Their participation will merely have forestalled working out a permanent plan, to the disservice of both the persons and the agency involved.

An analysis of number of persons in residence, turnover, and per capita costs showed the direct cost of the program to UCPA to be in the vicinity of \$1.000 per occupant per year. While it was recognized

that the group had benefited substantially from residence at Overbrook Hall, the ad hoc committee was unanimous in the view that the residence should not be continued in its present form—it should either be expanded to include a larger number of residents or else should be discontinued.

Careful attention was given to the feasibility of making changes at Overbrook Hall in order that it might accommodate a small number of severely involved CPs on a pilot or demonstration basis. Studies were made regarding expenditures that would be required to alter and equip the building to accommodate between five and eight severely handicapped persons. Although two state departments were interested and encouraged such a development, repeated and persistent efforts were not successful in obtaining a commitment concerning the exact amount of support the state would allow for providing nursing-home care. The committee felt the expenses involved would substantially exceed the reimbursement, particularly if good quality rather than bare minimum services were provided. The committee, therefore, concluded that it would be unsound to embark on any such expansion or demonstration program. It was agreed that the funds currently being spent on Overbrook Hall would be more wisely used, to the benefit of all CPs requiring custodial care, by concentrating UCPA's efforts on locating and making available adequate foster homes, nursing homes and other facilities more suitable for the provision of custodial care. The ad hoc committee on custodial care facilities therefore recommended to the board of directors of UCPA that after adequate provisions had been made for current residents and staff, Overbrook Hall be closed and the property sold.

The problem of long-term residential care would, thereafter, be the responsibility of the social service department. Continued efforts to locate foster homes and other facilities suitable for custodial care of CPs, counseling of parents concerning the placement of CPs needing custodial care, preparation of a directory of facilities available for long-term care away from home, exploration with UCP of Pennsylvania of the possibility of higher grants by the department of public assistance to institutions or foster homes where an individual needs attendant, but not nursing care, development of a plan, jointly, with the Pennsylvania Association for Retarded Children, Mental Health Association, and Pennsylvania Citizens Association, to aid in improving existing conditions in the state schools were further recommendations of the committee to the board.

The board accepted the recommendations of the committee and proceeded to implement them. Satisfactory arrangements for the CPs then residing at Overbrook Hall were made by the social service department. This required several months of quite intensive search and the cooperation of a number of other local agencies. A primary problem was the limited financial resources of the residents.

Overbrook Hall was closed on December 15, 1962, and the property has subsequently been sold.

In the opinion of the board of directors and staff of UCPA, Overbrook Hall served as an interesting demonstration of the value of a noninstitutional type of residence for cerebral palsied persons of mild to moderate disability. It was felt that placement of the last group of

residents in the situations located for them was possible primarily because of the social and emotional adjustments they had made during their period of residence. Overbrook Hall served as a "halfway house" for persons leaving their paternal homes but not ready to move into unsupervised living in the community. For example, one client was more happily acceptable in the home of his mother and stepfather because he had learned to use public transportation and gained a greater degree of self-sufficiency. We feel the basic idea of such a program is good, particularly if, as in Philadelphia, resources for vocational, recreational and health services can be integrated with a residential program but we are convinced that the cost of maintaining such a unit makes this activity impractical for a private agency. The establishment of such residences on a tax-supported basis might well yield gratifying results in salvaging mild to moderately involved cerebral palsied adults from a lifetime of institutional placement.

ANALYSIS OF RESIDENTS

May 1, 1955—December 15, 1962

LETTER OF TRANSMITTAL

SENATE CHAMBER, STATE CAPITOL
Sacramento, California, January 28, 1965

HON. GLENN M. ANDERSON
President of the Senate
Senate Chamber, State Capitol
Sacramento, California

Mr. President:

Pursuant to Rule 12.5 of the Permanent Rules of the Senate and Senate Resolution No. 270, read and adopted June 21, 1963, at the regular session of the Legislature, the Senate Factfinding Committee on Labor and Welfare submits this report on the proposal to create a state veterans' home in southern California.

It is particularly appropriate that the committee formally acknowledge its debt to the California Department of Veterans Affairs, the United States Veterans Administration, the California Association of County Service Officers, and the many private veterans' organizations who have so significantly contributed to this study and report.

Respectfully submitted,

VERNON L. STURGEON, *Chairman*
HOWARD WAY, *Vice Chairman*
CLARK L. BRADLEY
JAMES A. COBEY
ALBERT S. RODDA

SUMMARY OF FINDINGS AND RECOMMENDATIONS

1. Although the welfare of all of its needy citizens is a principal responsibility of state government, the care of veterans as a separate and distinct group is the duty of the federal government rather than the state.

2. Essentially the same level of services are available to veterans living in southern California from the U.S. Veterans Administration as are available to veterans living in northern California from the Veterans Administration and the State Veterans' Home.

3. Because of the approximate equality in the services currently available from all sources to veterans in northern and southern California, and because of the federal government's paramount responsibility for furnishing veteran care, it is recommended that no action be taken by the Legislature to establish a state veterans' home in southern California.

4. On the basis of total beds provided, an average level of overall services is accorded veterans who reside in California by the U.S. Veterans Administration when compared to the services provided veterans who live elsewhere. Nevertheless, these services in California lag significantly behind the growing veteran population and its demand for services.

5. There is a shockingly critical shortage of psychiatric beds operated by the Veterans Administration in California as measured by the demand for such beds, when compared to the psychiatric beds provided to each of the other seven states with the greatest veteran population, and as compared to the national average.

6. It is recommended that the Congress and the U.S. Veterans Administration be memorialized by the Legislature to promptly provide, at least as a **minimum, an average number of psychiatric facilities** in California (see SJR No. 14 and SJR No. 15, Appendix D, page 46).

STATE VETERANS' HOME IN SOUTHERN CALIFORNIA

I. BACKGROUND TO COMMITTEE'S STUDY

Requests to expand to southern California the custodial and medical care already furnished by state government to California veterans at the Yountville, Napa County, Veterans' Home have not newly arisen. Since 1933, the California Department of the American Legion has formally been on record and has been working for a second state veterans' facility located in the South.¹ In 1960 the California Association of County Service Officers, representing the veteran service officers of 54 of the state's 58 counties, also unanimously endorsed the establishment of such a facility.² Other veteran groups and organizations subsequently added their voices and efforts to this proposal for obtaining more adequate and convenient care for the veterans who reside in the South.

During the 1963 Regular Session of the Legislature two bills were introduced which would have created a southern California veterans' home. SB 605—1963, introduced by Senator Aaron Quick, Imperial County, was referred to and heard in the Senate Standing Committee on Military and Veterans Affairs and was ordered to interim study³ (see Appendix B, page 37, for text of this bill). The Senate Factfinding Committee on Labor and Welfare was assigned this measure and subject matter for study. On January 15, 1964, the committee held a one-day public hearing in San Bernardino at which 21 persons, representing groups or speaking as individuals, testified or submitted material for the record (see Appendix C, page 44, for list of witnesses).

Assembly Bill 2984 by Assemblyman Charles Meyers of San Francisco, identical to SB 605, was referred to and heard by the Assembly Standing Committee on Military and Veterans Affairs. It also was sent to interim study. The Assembly interim committee devoted portions of two days of public hearing to the subject.⁴

This report will delineate the facts and opinions amassed by the Senate Factfinding Committee on Labor and Welfare as follows: The history of state and federally provided domiciliary and medical care for veterans; existing and planned facilities providing care for veterans in southern California; the current demands for care made upon veteran facilities; other sources of care; and the responsibilities of federal and state governments for providing care for veterans.

IIA. HISTORY OF GOVERNMENTALLY PROVIDED CARE FOR VETERANS⁵

As with so many of our conventions in the New World, the roots of governmental provision of custodial and medical services to war vet-

erans go back to policies initially established in the Old World. Almost two centuries before the United States became a nation, the 1592-93 session of Parliament enacted a statute for the "reliefe of Souldiors" (including mariners) who had served in the year of the Armada (1588) or who would serve later. This act, financed from local tax funds, was principally a pension; and although the provision of medical care was not to take place for nearly one hundred years, this act did formally acknowledge England's obligations to disabled veterans.

In 1681, King Charles II authorized the establishment of Chelsea Hospital for the custodial care and ancillary medical needs of soldiers who had become lame or infirm while in the service of the Crown. Fundamentally this "hospital" was a shelter, in the archaic sense of the word, but inpatient medical care was rendered to resident veterans. Pensions, but not medical care, were also provided the "outpensioners" who had been precluded from admittance into Chelsea Hospital because of its limited capacity. By 1776, it has been estimated, there were 14,000 of these outpensioners in England in addition to the nearly 500 veterans in Chelsea.

With this heritage, it was logical that the English colonists in America should also provide for disabled, needy veterans. Plymouth Colony, in 1636, was the first to do so; followed by Virginia in 1664; Maryland in 1678; New York in 1691; and Rhode Island in 1718. A common requirement in these colonial laws was that a wound or injury must have resulted in indigency and the incapability of earning a living. Again, direct medical services per se were not furnished.

The first national veterans' law enacted in the United States resulted from a study ordered by the Continental Congress. This occurred prior to the signing of the Declaration of Independence. The recommendations made as a result of the study were enacted on August 26, 1776. Pensions were to be given to any officer, soldier, or sailor disabled while in the military service to an extent which made him incapable of earning a livelihood. The states were requested to execute this law and to make payments on account of the United States. The federal government, after its establishment under the Constitution, was authorized by Congress (Ch. 24, 1 Stat. 95) to continue these pensions for a period of one year. There were subsequent one-year extensions, and eventually an indefinite extension during the life of the pensioners. Whatever direct medical and hospital care were given to veterans in the post-Revolutionary War period, however, were provided by the individual states or communities.

The first domiciliary (or custodial) care furnished veterans by the United States government was authorized by the Congress in 1811 (Ch. 26, 2 Stat. 650) with the establishment of the U.S. Naval Home in Philadelphia. Some medical needs of the home's residents were met on an incidental basis until 1868 when the Naval Hospital in Philadelphia was constructed. In 1851, another congressional enactment (Ch. 25, 9 Stat. 595) established the U.S. Soldiers' Home in Washington, D.C. Outside of these facilities, however, medical, hospital, and domiciliary care were left to the lower levels of government until the Civil War. With the advent of the War Between the States, a crisis arose. There was no system for giving necessary care to men who were being discharged from military duty because of service-connected wounds or

disabilities. The Sanitary Commission, organized in 1861 to study the medical and hospital problems of the Union Armies, set up 25 domiciliary and hospital facilities along the Union lines to furnish needed care to discharged soldiers until they were physically able to return to their homes. The average length of stay in these facilities was short—about three days—and the facilities themselves left untouched the more serious problem of assisting men whose chronic needs for domiciliary and medical care resulted from military service. The commission's recommendation for a national system of sanatoria was initially rejected by the Congress in favor of a hometown-care approach of absorbing such disabled veterans in local facilities.

The length and the casualty rates of the Civil War proved too massive for the hometown programs, and Congress, in 1866, established the National Home for Disabled Volunteer Soldiers (Ch. 21, 14 Stat. 10; originally called "asylum" instead of "home"). Authorized care ran from strictly domiciliary through medical and hospital treatment for all injuries and diseases whether of service origin or not. Successive amendments opened the national home to veterans of other wars and campaigns and to sailors and marines.

By 1887, the national home had five branches covering the eastern half of the nation: facilities for 1,600 veterans in Togus, Maine; 2,000 in Hampton, Virginia; 6,000 in Dayton, Ohio; 1,500 in Milwaukee, Wisconsin; and the not yet completed branch in Leavenworth, Kansas. No branch had been established in the West, however, and pressures rapidly mounted on the Congress to authorize one in that area.

Actions to provide for the needs of veterans following the Civil War were not limited to those of the federal government. Throughout the country, state and local governments and private groups had moved to meet the challenges posed by over 2,000,000 Union veterans. In California in 1881 a benevolent and charitable organization was jointly formed by the Associated Veterans of the Mexican War and the Encampment of the Department of California, Grand Army of the Republic (Union veterans of the Civil War) for the purpose of obtaining ". . . a lease or grant from the Board of Supervisors of the City and County of San Francisco, State of California, of Block number One hundred and sixty (160) outside lands and in connection therewith erect and establish thereon suitable buildings to suitably furnish the same as a home for and maintain and support therein worthy, aged, indigent, and maimed veterans. . . ." ⁶

The Veterans' Home Association of California, thusly formed, reincorporated a year later with the somewhat altered intent of ". . . the founding of a home for the relief and support of worthy officers, soldiers, marines, and sailors who honorably served in the army or navy of the United States during the war with Mexico, or of the Rebellion, or in any other war, and who are in indigent circumstances, and by reason of age, infirmity or wounds received in service, are incapable of self support. . . ." ⁷

From its inception, then, as these articles of incorporation indicate, the purpose of what was to become the California Veterans' Home was

⁶ Articles of Incorporation, Veterans' Home Association of California, filed in the office of the Secretary of State, April 13, 1881.

⁷ Articles of Incorporation, Veterans' Home Association of California, filed in the office of the Secretary of State, March 10, 1882.

principally that of providing a home for veterans and medical and hospital care were incidental to this chief function.

In the same year, 1882, property was purchased by the association near Yountville, Napa County, and the construction of the home was begun. The first occupants entered in 1884, and soon the home was filled to capacity. However, the Veterans' Home Association had been experiencing serious financial difficulties and prevailed upon the 1883 Session of the Legislature to assist in maintaining and operating the home. The Legislature responded by enacting an appropriation measure to provide \$150 per year for each veteran residing in the Veterans' Home, not to exceed a total of \$15,000 a year (Ch. 31, Stats. 1883). In the calendar year 1884, \$2,105—about 23 percent of the home's operating expense—was received from the State of California. \$10,721 was paid by the state in 1885—83 percent of the total operating costs, and \$8,086—71 percent in 1886.

Although much of the burden had been lifted from the Veterans' Home Association, both the remainder of the maintenance and operating costs not paid by state government and the mounting pressures to enlarge the home led the association to resort to two possible ways out of its continuing precarious financial position. The first was to seek an increase in state funds. The second was to completely relinquish the home to either the federal or the state government.

In 1886, the association again went to the Legislature and was successful in increasing the appropriation ceiling for veterans' care to \$30,000 per year (Ch. 10, Stats. 1886) and in obtaining the first state appropriation for capital outlay, an amount of \$10,000 for a new residence cottage and other facility improvements (Ch. 12, Stats. 1886).

The main thrust of the association's efforts to resolve its chronic fiscal dilemma, however, was its attempt to have the responsibility for the home taken over by the National Home for Disabled Volunteer Soldiers.

In 1887 the Congress finally authorized the establishment of the Pacific branch of the national home on an unspecified site (Ch. 316, 24 Stat. 444). The association had anticipated Congress' action:

"We hope to have the institution transferred to the United States within a few months, and if that hope should be realized, the State will be entirely relieved of this burden, while the old veterans will be better cared for than at present. . . . It is apparent, from an examination of the liberal (congressional) appropriations made in past years, and from an investigation as to the management of the various (Branch) Homes (for Disabled Volunteer Soldiers), that the (Federal) Government can do much better for the veterans than any single State corporation, or even any State can do. . . . We have already tendered the property (of the State Home) to the Board of Managers of the National Home. . . . It may, however, take several months for the Board of Managers to decide upon the location. If they should not accept our property, we can give it to the State."⁸

After visiting the state home, the board of managers did, in fact, reject the offer of this institution and instead selected a location near

⁸ *Report of the President, etc., 1886, op. cit., James A. Waymire, president, pp. 8-10; parenthetical material added.*

Glendale, Los Angeles County. The resulting facility is still in operation today as the U.S. Veterans Administration Center (or, as it is commonly referred to, "Sawtelle").

Having failed in their first attempt, the Veterans' Home Association turned toward giving the Yountville home to the State of California. In 1888 the Congress enacted further veteran care legislation which provided yearly payments of \$100 for each disabled veteran cared for in homes established by the states or territories (Ch. 914, 25 Stat. 450). In order to qualify for this subvention as well as furthering their surrender of the Veterans' Home to the state, the association sponsored legislation which was enacted by the 1889 Session of the Legislature declaring the home to be a state facility (Ch. 268, Stats. 1889).⁹ Although there was still strong sentiment that the care of veterans was a federal rather than a state responsibility,¹⁰ the State of California assumed full responsibility for the home in 1897 (Ch. 101, Stats. 1897).

At the federal governmental level, the provision of domiciliary care and ancillary medical services to veterans remained the exclusive function of the national home until 1917, and new branches were established in Marion and Danville, Illinois; Johnson City, Tennessee; Hot Springs, South Dakota; and Bath, New York.¹¹ With the passage of amendments to the War Risk Insurance Act in that year, however, direct medical, surgical, and hospital care were provided veterans by the Bureau of War Risk Insurance (Ch. 105, 40 Stat. 398). The bureau, not possessing the necessary medical staff and facilities, arranged for the use of those under the Public Health Service and as the need for additional beds grew, money was appropriated to the Public Health Service for the construction of many new veteran hospitals and sanitarium. By the end of World War I, this loose system of caring for veterans began to disintegrate under the pressure of the vast number of disabled veterans and the breakdown of interagency operations involving the national home, the Bureau of War Risk Insurance, and the Public Health Service. A presidential commission appointed in 1921 to study the problem recommended unifying the powers, functions, and duties of these agencies, and the Congress immediately responded by establishing the United States Veterans Bureau (Ch. 57, 42 Stat. 147) to effect partial consolidation. In 1930, the final merging of divided federal administrative responsibilities for domiciliary, medical, and hospital care was effected by the Congress' authorizing the President to consolidate governmental activities affecting veterans (Ch. 863, 46 Stat. 1016) and

⁹ Although nominally proclaimed a "state home," the property of the Veterans' Home remained vested in the Veterans' Home Association and the existing board of directors of the association was merely constituted as a state body for purposes of managing the facility. Further, the state, through the office of the Governor, although given the authority to replace for cause any member of the board, was not responsible for the initial selection of the board's members.

¹⁰ "The recent action of Congress in making liberal provisions in aid of State Homes has given rise to the suggestion that, as a matter of justice the United States Government ought to take charge of and support all the State Homes exclusively. The argument in favor of such a policy is, that all the men who require the assistance of Soldiers' Homes were in the service of the general government, not of the States, . . . and consequently the general government should bear the expense of caring for them in their old age. Another argument is that the revenue of the general government is now so great that it can afford to be more liberal in this direction than the State can." *Report of the President, etc., 1889, op. cit., James A. Waymire, president, p. 7.*

¹¹ A minor exception was the furnishing of artificial limbs to veterans of all services under a program administered by the Surgeon General of the Army.

the President's Executive Order of July 21, 1930, creating the United States Veterans Administration followed.

Since 1930, the VA has operated what has now become the largest organized medical system in the country—169 hospitals, 18 domiciliarys, and 217 outpatient clinics as of June 30, 1963. This hospital system accounts for over 7 percent of both the nation's hospital beds and the average daily hospital patient load in the country.¹²

IIB. ELIGIBILITY REQUIREMENTS FOR CARE

To be eligible for admission to the Veterans' Home of California, a veteran, by state law, must have served in the armed forces of the United States during a period of war; have received a discharge from that service under conditions other than dishonorable; be disabled to such an extent that he cannot pursue a gainful occupation¹³; be in need of care or treatment or domiciliation which he cannot financially provide for himself; have been a bona fide resident of California for five years immediately preceding the date of application; and be eligible for admission to a United States Veterans Administration facility.¹⁴

Eligibility requirements for admission to a federal VA institution vary somewhat depending on whether medical care or domiciliary care is to be provided. To be admitted for medical treatment, an applicant is required to be :

1. A veteran of any war for a service-connected disability incurred or aggravated during a period of war, or for any other disability for such a veteran.

2. A veteran whose discharge or release from the active service was for a disability incurred or aggravated in line of duty; and

A person who is in receipt of, or, but for the receipt of retirement pay would be entitled to, disability compensation.

3. A veteran of any war, having no service-connected disabilities, if the veteran certifies he is unable to defray the expenses for the necessary care and a bed is available.

4. A veteran of peacetime service only who has a service-connected disability incurred or aggravated during his period of service, or for any other disability if the service-connected disability is rated to a compensable degree.

To be admitted for domiciliary care, an applicant is required to be either a veteran who was discharged or released from active service for a disability incurred or aggravated in line of duty, or who is in receipt of disability compensation when he is suffering from a permanent disability and is incapacitated from earning a living and has no adequate means of support; or a veteran of any war who swears he is unable to defray the expense of domiciliary care and who is suffering from a chronic disease which is producing disablement of such a degree

¹² *Annual Report, 1963, Administrator of Veterans Administration, U.S. Government Printing Office, Washington, 1963, p. 16.*

¹³ No distinction is made in state law between service- and non-service-connected disability.

and probable persistency that he will be incapacitated from earning a living. In either case, the applicant must be able to maintain a minimum level of independence, such as being able to dress himself with little assistance, proceed to and from the dining area without aid, feed himself, and make rational decisions as to his desire to remain or leave the facility.¹⁵

III. EXISTING AND PLANNED VETERAN FACILITIES

A. CALIFORNIA

The fundamental purpose of the California Veterans' Home from its inception has been to provide a place of residence for disabled and aged war veterans who have resided in California and are indigent. However, and likewise from its inception, the California Veterans' Home has been intimately involved in providing nursing and hospital care to its residents.

"... (M)any of our men have been taken from city and county hospitals, where they have been under treatment for chronic diseases for years. . . ." ¹⁶

In 1886, of a total of 210 residents of the home during the year, 44 needed hospitalization and only eight required no medical attention. Within six years after its opening on April 1, 1884, the home was provided with its first building constructed specifically for furnishing hospital services.

This same pattern has been carried on down to the present time.

"... (T)he hospital at the Veterans' Home was designed primarily to provide care for those members of the home who lived in the domiciliary units. From the time it began nearly 80 years ago this was the purpose of the hospital. We have nevertheless tried, because of the dire need, to make it available whenever beds are vacant for the use of California veterans at large who are not members of the home. . . ." ¹⁷

The great bulk of admittances to the hospital, notwithstanding, are from within the home. In the fiscal year 1963-64, a total of 875 veterans was admitted to the home's hospital; 828 admissions were from within the home—94.6 percent. Of the 47 nonresidents who were admitted to the hospital, 25 were taken from the hospital waiting list of eligible veterans—2.9 percent of the total admissions; 15 were on an emergency basis; and seven were actually readmitted as transfers from U.S. Veterans Administration hospitals to which they had been sent originally as acute, temporary patients. It is clearly evident that the hospital facilities were and are almost exclusively used for the care of the Veterans' Home residents.

¹⁵ 38 U.S.C.A. 601, 610, and 612. Also see 38 C.F.R. 17.30, 17.35, 17.45, 17.46, 17.47, 17.48, 17.49, 17.50, and 17.100.

¹⁶ *Report of the President*, etc., 1886, *op. cit.*, W. B. Lovett, M.D., commandant and medical director, p. 17.

¹⁷ *Transcript*, January 15, 1964, hearing, Larry E. Gould, M.D., medical deputy director and acting commandant, Veterans' Home of California, State Department of Veterans Affairs, p. 48.

Currently, the California Veterans' Home has the following care facilities:

<i>Facility</i>	<i>Capacity</i>
Hospital	450
Intermediate (nursing care)	415
Domiciliary	1,515
Men	1,462
Women	53
Total	2,380

Regarding additions to the home, in 1964 the Legislature provided a total of \$415,600 to construct and equip an intermediate care ward of 28 beds for women veterans.¹⁸ Another request for fund authorizations in the amount of \$1,629,150, however, for construction of an additional wing to the hospital and for conversion of one vacant domiciliary care barrack to an intermediate care facility was refused passage by the Legislature.¹⁹

B. OTHER STATES

Excluding California, a total of 27 other states operated veteran facilities during 1962-63. These homes, as shown in Table 1, had a total average daily occupancy of 7,348 veterans. Massachusetts, New Jersey, and the State of Washington each had two veterans' homes and Oklahoma operated three. The largest of the state facilities, again excluding California, were those administered by Massachusetts whose two homes had a joint average occupancy of 836 veterans. California's State Veterans' Home, however, was by far the largest single

state home, and its 1,813 residents actually comprised 19.8 percent of all veterans residing in state-operated veteran homes.

C. FEDERAL

As previously mentioned, the United States Veterans Administration administers the largest organized medical care system in the country, comprising 169 hospitals, 18 domiciliaries, and 27 outpatient clinics as of June 30, 1963. As these figures indicate, the chief emphasis of the VA facilities is the provision of medical rather than custodial or domiciliary care with only 16,770 beds—or 13.9 percent—of the VA's total of 120,304 beds devoted to principally nonmedical care cases.

The 169 VA hospitals are typed on the basis of the predominant kinds of care furnished. One hundred thirty were general hospitals (with 41,160 medical beds and 20,124 surgical beds—a total of 61,284) and 39 psychiatric hospitals (with 59,021 beds). There were VA hospitals operating in 48 of the 50 states in 1963, with only Hawaii and Alaska without facilities.²⁰

The 18 federally operated domiciles were located in 17 states. State-operated but federally subvented domiciliary facilities were found in 28 states (as indicated in Table 1); 19 of these states had no VA-operated domicile.

In California, the United States Veterans Administration operates the following facilities:

TABLE 2

* Southern California defined as comprising Imperial, Inyo, Kern, Los Angeles, Orange, Riverside, San Bernardino, San Diego, San Luis Obispo, Santa Barbara, and Ventura Counties. Northern California is the balance—47 of the state's counties.

† Total VA beds and breakdown from *Annual Report, Administrator of Veterans Affairs*, 1963, Table 5, pp. 196-201. The beds in southern California as shown are 57 more than for January 1, 1964, as detailed by L. C. Like, director, Veterans Administration Center, Los Angeles, *Transcript*, January 15, 1964, Table 2, p. 37. This represents a 0.6 percent differential. For comparability of figures, data for both northern and southern California were taken, therefore, from the *Annual Report*.

Source: As indicated above.

²⁰ *Annual Report, 1963, Administrator of Veterans Administration, op. cit.*, pp. 16-18. and Table 5, pp. 196-201.

Excluded from these data is the new VA hospital of 498 beds in Martinez which opened in August 1963. Upon its opening, however, the 697-bed facility in Oakland was closed, with a resulting net decrease of 199 beds in northern California.

The Veterans Administration recently announced plans to build two new hospitals in California: one in Hazard Park, Los Angeles, with construction to begin in 1965 and completion due in 1967 or 1968; the other in San Diego, to be started in 1966 and to be completed in 1968 or 1969. Each will have approximately 1,040 beds, 240 of which will be for neuropsychiatric patients and 800 to meet general medical and surgical needs.²¹

IV. CURRENT DEMANDS FOR SERVICES

The demands for services at the State Veterans' Home and the various Veterans Administration facilities in California are generated principally by this state's 2,361,000 veterans.²² These veterans represent 13.4 percent of California's total population²³ and 11.2 percent of the veterans in the nation.²⁴ Inasmuch as Californians account for 9.4 percent of the country's total population²⁵, it is evident California has an above-average incident of veterans in its population. Within California, 61.2 percent of the veterans reside in the southernmost counties.²⁶

California's veterans are comprised of 40.3 percent (951,000) who served only in World War II, 28.8 percent (679,000) who served in both World War II and Korea, 21.1 percent (499,000) who served only in the Korean conflict, 9.1 percent (215,000) in World War I, and 0.7 percent (17,000) in the Spanish-American War, Indian Wars, or in the Regular Establishment (peacetime).²⁷

The average age of World War II veterans, including those who served in Korea, was 44.0 years for the United States as a whole on June 30, 1963, 31.9 years for "Korea only" veterans, 69.1 years for the World War I veterans, and 44.2 years for the balance.²⁸ Thus the average of all veterans in California was about 43.7 years at the end of June 1963, or approximately one-half a year younger than the national average of 44.2 years.

²¹ Los Angeles Times, July 19, 1964, p. 17J, and San Diego Union, November 19, 1964, p. A11.

²² Annual Report, *op. cit.*, Table 3, p. 193, estimated as of June 30, 1963. Although the state's home requires five years' residence in California, there is no required period of residence for admittance to the federal facilities. Thus some, although probably not a significant number, of the patients in and applicants for the VA facilities are not Californians.

²⁸ Ibid., Table 1, p. 191.

A. STATE VETERANS' HOME

Information given to the committee at its public hearing in January 1964 indicated the following relative to the demand for services at the State Veterans' Home:²⁹

<i>Type of care</i>	<i>Capacity</i>	<i>Vacancies</i>	<i>Waiting list</i>
Hospital -----	452	None	114
Intermediate -----	415	None	27
Domiciliary			
Men -----	1,462	520	None
Women -----	53	None	21

The latest figures available show that as of November 30, 1964, there were waiting lists of 168 veterans for hospital care, 56 for intermediate care, and 10 women veterans for domiciliary care and that vacancies in the men's domiciliary units had increased to 617.

The State Department of Veterans Affairs emphasized the long-term trend in the demand for services at the State Veterans' Home:

"Because of economic conditions such as the advent of social security, the number of applications for domiciliary care are rapidly declining. At the same time applications for nursing home type care and hospitalization are rising because the veterans do not have sufficient funds to pay for this more costly type care."³⁰

This analysis was generally agreed to by other witnesses who appeared before the committee, although it was pointed out that the waiting lists are not absolute measures of demand for services as many veterans probably do not apply for admission because of the well-known shortages of intermediate and hospital beds.³¹

Concurrent with the increasing need for nursing and acute hospital care among the noninstitutionalized veterans' population is the great demand for these services among those veterans who are residents of the state home. During the January 15 hearing, Senator Bradley asked Dr. Larry E. Gould, Medical Deputy Director of the Veterans' Home of California:

"As a matter of fact do you not have veterans who, by continuing old age, graduate, I might say, from domiciliary to intermediate and from intermediate into hospitalization right there on the facility?"

Dr. Gould replied:

"Very definitely. In fact, that is the very thing that keeps our hospital filled all the time. These individuals, we cannot turn them to someone else. We must provide care for them, and this is the source of our admissions primarily."³²

²⁹ *Transcript*, January 15, 1964, hearing, John Handsaker, administrative deputy director, State Department of Veterans Affairs, p. 10.

³⁰ *Ibid.*

³¹ *Ibid.*, W. Keith Garrison, director, Ventura County Veterans' Service Bureau, representing the California Association of County Service Officers, p. 60; Allen J. Martin, state senior vice commander, Veterans of Foreign Wars, p. 85; and Thomas G. Goetz, director, San Diego County Veterans Service Department, p. 101. That there is an increasing need for domiciliary beds, however, was the contention of R. Pete Ostrander, Imperial County veterans service officer and chairman, Special Committee for Southern California Veterans' Home and Hospital, California Department of the American Legion, pp. 73-4.

³² *Ibid.*, p. 52.

Over the last 17-month period (July 1963 through November 1964), 95.5 percent of the total admissions to the hospital wards at the state home was made from within the institution—1,124 out of 1,177. Of the remaining 53 admissions (4.5 percent), 31 were from the waiting list, 15 on emergency basis, and 7 were readmissions from VA facilities.³³

As might be expected, the overwhelming majority of residents and applicants for the State Veterans' Home since its inception has been from northern California.³⁴ In 1886 it was reported that of the first 219 veterans admitted to the home, 201 (95 percent) were from northern California, 14 from southern California, and 4 from out-of-state.³⁵ During the calendar year 1963, only 8.7 percent (55 of 628) of the veterans admitted to the home were from the South.³⁶ And the State Department of Veterans Affairs' official waiting lists for the home as of July 1, 1964, show that: 5 veterans of 160 waiting hospitalization, 5 of 68 waiting for intermediate care, and 4 of 14 women pending placement for domiciliary care—an aggregate of 5.8 percent—were from southern California.

Thus 90 to 95 percent of the demands for care in the state home come from veterans who reside in northern California although the majority of California veterans live in the southern area. The reasons given for this ranged from the distances involved, the inability of relatives and friends to visit, the reluctance of veterans to leave their home communities, the inability of the state to pay the costs of transportation necessary in moving to the home, to the change from one climate to another.³⁷ It was even suggested that "... we do not get the same consideration of our veterans from the South that they do in the North . . ." ³⁸, although no evidence was submitted to substantiate the charge and none has been discovered by the committee.

It would be expected that the average age of the veterans residing in the state home would be high and that the degree of medical care needed would increase with advancing age. Although the committee could not obtain the ages of members of the home, it did secure the ages of applicants who were eligible for admission and were on the waiting lists.³⁹ These data show that the average age of male applicants for intermediate or nursing care was 64.9 years, of male applicants for hospital care was 67.1 years and of women for domiciliary care was 69.1 years. There was no waiting list, of course, for the men's domiciliary unit. The average of all veterans on the lists was 66.6 years.

CONCLUSIONS

In summary, the state's policy regarding the care of veterans has remained basically unchanged since it assumed full responsibility for the Veterans' Home in 1897; that the home's chief function would be a residence for qualified veterans; that although veterans would

be admitted directly into the hospital and intermediate care wards if vacancies otherwise existed, members of the home would have first priority on the ancillary medical care provided in these facilities. Thus in spite of the outside demands for hospitalization and nursing care which have so completely overwhelmed the home's capacity, expansion of these medical units has been authorized only to meet the needs of the home's members as these needs have increased.

There appear to be no reasons for not assuming that the demands for male domiciliary care will not continue to decrease over the short run, unless eligibility requirements are significantly changed. The high wave of applications to be expected from World War I veterans seems to be cresting now. The home's hospital facilities, however, while not being inundated by members, is being completely utilized and, together with the intermediate care unit, has scant margin for satisfying increased demands from within the home. And it seems inevitable that such demands will be increasing in the home as they have for the general population.⁴⁰ Just as the medical sciences have extended the life span, they have increased the demands on chronic and acute care facilities.

In the long run, as the massive numbers of World War II veterans approach their sixties, demands on the state home's domiciliary unit will probably increase and may well exceed its existing capacity. This new wave will be felt in significance in 10 to 15 years and will assume tsunamilike proportions as far as intermediate and hospital care demands are concerned.

The foregoing estimates are based on the expectation that veterans residing in southern California will continue, by and large, to bypass the opportunity to apply for domiciliary care in the home. This anticipation could be upset by several factors, however, such as whether the Veterans Administration expands its facilities in California and whether the federal government changes its attitude toward the provision of domiciliary care to veterans. The VA has established rehabilitation centers at Hines, Illinois, and East Orange, New Jersey, to "... restore disabled patients who have attained maximum hospital benefits and may be returned to community living within a reasonable time."⁴¹ This program has been interpreted by some as an indication that the VA could be seeking a way out from providing domiciliary care.⁴²

In any case, however, it appears certain that a new state veterans' home in southern California, such as the 1,150-bed facility proposed in the detailed statement submitted by the California Department of the American Legion, would be fully utilized.⁴³ The current waiting lists for domiciliary and medical care in the southern California VA facilities attest to this (see page 22). Nevertheless, the decision as to the state's providing such a facility must be made in context with the

⁴⁰ It is difficult to assess the possible effects of a medical care extension of the old age, survivors and disability insurance program ("social security medicare") on such demands, particularly since so little is currently known of the effects of the medical assistance for the aged and the aid to the totally disabled programs on the veteran population.

responsibility of the federal government and a discussion of this begins on page 33.

B. VETERANS ADMINISTRATION FACILITIES

Information collected by the committee regarding the demand for services in the VA's facilities covered only those in southern California. The care in greatest demand is psychiatric, and veterans waiting admission to VA psychiatric beds comprise 70.7 percent of all waiting lists as of January 1964.⁴⁴ There were no waiting lists for only one type of care—tuberculosis. Table 3 gives a complete breakdown of the VA facilities in southern California by hospital, type of care, number of beds, and current waiting lists.

⁴ Includes 10 surgical beds for females.

Source: *Transcript, op. cit.*, Like, p. 38.

Again, caution must be used in equating the formal waiting lists for the VA's facilities, as with the State Veterans' Home, as an absolute measure of the demands for medical and custodial services.

"The figures above do not necessarily reflect the total actual need for hospital beds or domiciliary beds for veterans in southern California. Such events, for example, as redefining the criteria

⁴⁴ Most of these veterans are currently in non-VA hospitals, principally state mental hospitals, receiving care. See *Transcript, op. cit.*, Like, pp. 24-25 and 28.

of 'ability to pay' in the past year or so, with the attendant publicity given to the revised policy, may have inhibited the flow of applications. Additionally, an awareness of the tight situation generally prevailing in our southern California hospitals, may also act as a deterrent to filing applications for hospital or domiciliary care."⁴⁵

Another relative measure of the demands for VA-supplied services is the number of applications which are rejected. Many of the 23,693 applicants for admissions in southern California VA hospitals rejected nominally for medical reasons during 1963 (a rejection rate of 43 of every 100 applicants) had non-service-connected medical needs, but because of the lack of beds and their low priority of need, were rejected forthwith rather than being placed on a waiting list with no practical hope of being admitted. Nevertheless, no one with service-connected disabilities was rejected in this manner.⁴⁶ Both the waiting lists and the rejection data are useful, however, as relative indicators of demands for care, demands which are significantly overtaxing the VA's existing facilities.

As in the case with the State Veterans' Home, the committee could not obtain information on the county of residence of patients in the Veterans Administration's southern California facilities nor on the specific ages of these patients. A statistical analysis of selected waiting lists by county of residence and age groupings was presented, however, for the domiciliary unit at the VA's Center in Los Angeles (Sawtelle), and for the medical and surgical hospitals in Los Angeles (Wadsworth) and Long Beach.⁴⁷ These data indicate that the vast majority of demands for service on the VA's southern California facilities come from that area. Of the total of 555 veterans on the waiting lists for these three facilities, 92.8 percent (515) lived in southern California, 3.6 percent (20) was from out of state, and 3.6 percent (20) resided in the northern part of the state. The average age of all veterans waiting admission approximated 59.8 years, those seeking domiciliary care was about 57.1 years, and medical and surgical, 60.9 years.⁴⁸

Lowell C. Like, director of the U.S. Veterans Administration Center in Los Angeles, reported that the short-run trend in the demand for hospital beds has been relatively stable⁴⁹—that is, massive waiting lists and rejections of applications for psychiatric and general medical and surgical care, demands for domiciliary care somewhat in excess of the supply of beds, and such a lack of demand for TB care that many of these beds have been converted to medical and surgical care.

Nationally, the Veterans Administration has emphasized that the major trends in their veteran-patient load are significant increases

⁴⁵ *Transcript, op. cit.*, Like, p. 39.

⁴⁶ *Ibid.*, pp. 32, 34, and 39.

⁴⁷ *Ibid.*, pp. 40-1.

⁴⁸ The average age figures are not comparable to those for the State Veterans' Home and are, in fact, only estimates. The data on age, as submitted, were grouped rather than on a person-by-person basis. The average age in each group was, therefore, multiplied by the number of persons in that group, such totals were added together and then divided by the total number of veterans. As 10 of the 12 age groupings, which included 98.5 percent of the total veterans in the sample, were spans of only five years, the resulting averages should be fairly accurate.

⁴⁹ *Transcript, op. cit.*, p. 31.

in both their elderly and psychiatric patients.⁵⁰ The average age of the veterans who were patients in VA and non-VA hospitals in 1953 was 47.9 years; in 1962 it was 53.2 years. Nearly one of three of all patients in 1962 was 65 years of age or older, and the chronic conditions associated with aging, especially psychiatric conditions, were becoming more prominent. The older patient, regardless of his disability, requires longer periods of hospital care than a younger patient for similar conditions. For instance, in 1962 medical and surgical patients under 35 years of age had a median stay of 13.2 days; those of 75 and over, 22 days. The long range effects of the aging trend is in itself eloquent. Coupled with the trend of increasing numbers with psychiatric conditions, it is for California highly disturbing! For only California among the other states with the largest veteran populations is losing ground in meeting the growing demand for VA supplied psychiatric care (see Table 5, page 27).

Nationally, psychiatric patients comprised 55 percent of the VA's patient census in 1962, a jump from 53 percent in 1955. Although syphilis-caused psychotic cases decreased about 1,250 during these seven years, psychosis from other organic causes increased by 2,700 cases (37.5 percent) and neurological diseases climbed 1,500 (27 percent). These psychiatric patients, as the aged patients, require extended periods of treatment. Whereas the median length of stay of all veterans admitted to VA hospitals during 1962 was 21 days, veterans admitted for psychiatric conditions other than psychosis had a median stay of 27.4 days, those with neurological conditions required 28.8 days of care, and veterans treated for psychosis had a median stay of 76.1 days. Of the 47,700 patients in VA hospitals in 1962 who had been continuously under VA care for more than one year, 87.6 percent (41,800) were being treated for psychotic disorders.

In summary, the significance of "bed freezing" caused by the increasing numbers of elderly and psychiatric veteran patients is compounding the already insufficient number of VA beds available to the hard-pressed veteran population of California.

But how does the situation in California compare to that in other states with large veteran populations and in the nation as a whole? For it is only through an answer to this question that judgment can be made as to the relative equity with which the California veteran is treated by the Veterans Administration. Table 4 gives the ratios for 1959 and 1963 of the veteran population to the total number of VA hospital and domiciliary beds in the eight states with the largest number of veterans and for the country as a whole. It also shows the percentage of veterans cared for in their state of residence. These data do not include planned or announced changes in the VA's facilities in either California, the other seven major states, or the country as a whole.

⁵⁰ This, and the following data, are contained in the *Annual Report—1963, op. cit.*, pp. 26-29.

CONCLUSIONS--CALIFORNIA IN TOTO

Certain initial conclusions can be drawn from the data in Table 4:

1. There are more veterans in California than in any other state.
2. The number of veterans in California is increasing (up 16.7 percent between 1959 and 1963) although it is decreasing in five of the other top seven states and in the nation as a whole.

3. The total number of Veteran Administration beds in California increased between 1959 and 1963 (up 3.3 percent) as it had for four other states in the top eight. The nation's total of VA beds, including those in three of the top eight states, had decreased during the same period.
4. The increase in the total number of VA beds in California (3.3 percent), however, had not been enough to stay even with the increase in California's veteran population (16.7 percent).
5. Thus the ratio of veterans to each VA bed in California rose from one bed to each 162 veterans (1:162) in 1959 to 1:182 in 1963. Conversely, however, the veterans-to-bed ratios for the average of all eight major states (including California) and for the country as a whole has fallen—1:186 to 1:184 for the eight states, and 1:188 to 1:184 for the country.
6. In spite of this trend, the most current ratio of veterans to beds in California (1:182) is still slightly higher than those for the top eight states and the nation (both 1:184).
7. There was a small increase in the percentage of hospitalized California veterans who were cared for in-state as there was for three other states in the top eight and for the entire country.
8. California's high percentage of veterans cared for in-state (94.6 percent as compared to 77.9 percent nationally and 87.5 percent as the average of the top eight states) is probably due to this state's great distance from other large centers of population concentration.

From these initial conclusions, then, it seems evident that on the basis of total beds provided, there is currently no inequity in the overall services operated by the U.S. Veterans Administration to meet the demands of veterans who live in California. However, the trend, such as it has been since 1959, shows that the VA in California is quite rapidly losing ground in keeping even an average number of beds available. It is presumed that the recent announcements by the Veterans Administration of future construction of 2,080 hospital beds in California⁵¹ is evidence of the VA's awareness of this trend and its resolution to counteract it. The Veterans Administration is, therefore, commended. Simultaneously, however, the VA is respectfully urged to keep its level of service in this state (i.e., beds) at, as a minimum, the national average to meet the growing demands of the veterans who live in, or are dependent upon, its facilities in California.

From this generalized review of California's situation compared to that in other states with large veteran populations and the entire aggregate of the 50 states, our position seems average, even if no longer excellent. There is deeper in these data, however, one inescapable conclusion which, as has already been stated, is highly disturbing: California is alone among the eight states with the largest veteran populations in losing ground in meeting the rising demands for VA-supplied psychiatric care. Not only has the ratio of veterans to psychiatric beds

⁵¹ See footnote 21, page 18.

increased solely in California among the top eight states (1:481 in 1951, 1:515 in 1963), but:

1. The ratio in California is the very highest among these states (which together contain over 50 percent of the nation's veterans);
2. It is even higher, more significantly, than the average across the country (1:375);
3. And it runs counter to the average all-state trend of receding ratios of veterans to psychiatric beds (1:390 in 1959, 1:375 in 1963).

These are the conclusions which are evident in Table 5.

TABLE 5
Ratio of VA Psychiatric Beds to Number of Veterans for 8 States

Source: Extracted from Table 4.

It is difficult to ascribe with absolute certainty the reasons for the inordinate scarcity of Veterans Administration psychiatric beds in California. That this state has a large and growing veterans population is irrefutable. That spiraling demands for psychiatric care are and will continue to be made is the VA's own analysis of the future. That nearly 71 percent of all veterans on waiting lists for admission to the VA's facilities in southern California are seeking psychiatric care although psychiatric beds represent only 30 percent of the total beds; this has been the Veterans Administration's own testimony (see Table 3, page 22).

It seems possible, perhaps even likely, that the Veterans Administration may be taking advantage of California's own hospitals and clinics for the mentally ill. These facilities, administered by the State Department of Mental Hygiene and city and county governments, comprise a system that is uniquely high in quality and uncommonly available in numbers and location relative to any other in the country.

During the 1963-64 fiscal year,⁵² 3,651 veterans were admitted into the state's mental hospitals. This comprised 11.2 percent of all hospital admissions that year. The Veterans Administration, however, would make full payment for the care of only about 59 of the veterans on an average, approximately 1.6 percent of the total admitted. These payments by the VA resulted in the receipt by the state of \$244,884 during 1963-64. As soon as psychiatric beds are vacated in the VA's

⁵² Data relating to the State Department of Mental Hygiene have been obtained from unpublished materials.

hospitals, such patients are transferred from the state hospitals into them.

The principal reason for the Veterans Administration's extremely limited payment for psychiatric care furnished veterans in state mental hospitals is the requirement that such mental disabilities must be service connected. Although this same "service-connected" requirement also applies to physical disabilities, it is more difficult to establish for mental illnesses, particularly as the time of the veteran's initial point of hospitalization becomes further removed from his active war-time service.

Thus the vast majority of veterans whose psychiatric conditions are not definitely established as service connected cannot, as a practical matter, be treated in a VA hospital because of the inordinate psychiatric bed shortage, and cannot be treated in the state mental hospitals or clinics at VA expense. The State Department of Mental Hygiene in certain instances can receive partial reimbursement from the veterans' pensions in the form of care and maintenance or institutional awards, but such funds indirectly furnished to the state by the VA amounted to only slightly over \$200,000 for approximately 3,600 veterans in 1963-64.

The level of psychiatric services available to veterans in California could be increased either by an authorization of the Congress to increase the number of allocated VA beds or by administrative action initiated by the Veterans Administration.

This committee, therefore, recommends that the State Legislature memorialize both the Congress and the U.S. Veterans Administration to promptly increase to at least the national average the level of the VA's psychiatric services available to veterans who reside in California (see Senate Joint Resolutions 14 and 15, Appendix D, page 46).

CONCLUSIONS—SOUTHERN AS COMPARED TO NORTHERN CALIFORNIA

Table 6 shows the U.S. Veterans Administration's facilities in California broken down regionally. The data in this table demonstrate that although northern California has an estimated 38.8 percent of the state's veteran population, it has only 29.4 percent of the VA-operated beds. Thus the ratios of veterans to beds show a disparity of 1:241 for northern California as compared to 1:158 for southern California.

One of the reasons cited to establish the need for a new state veterans' home in southern California is the current inequality of northern California's having one while the southern region did not.⁶³ This inequality, however, is almost totally compensated for by the number of VA beds in southern California. When comparing the total number of state and federal beds available to veterans in northern California (6,184) to those in southern California, the north's share is 40.4 percent of beds relative to its 38.8 percent of the veteran population. The ratios of veterans to beds, in turn, becomes 1:148 for northern California to 1:158 for southern California. Thus the obvious inequity in the regional availability of veteran beds operated by the state is largely adjusted by the inequity in the regional availability of beds operated by the federal government. Furthermore, what difference

⁶³ *Transcript, op. cit.*, Garrison, p. 61.

still remains favoring northern California will be eliminated by the completion in 1967 of the first of the two new 1,010 bed VA hospitals planned for southern California.

* Southern California defined as comprising Imperial, Inyo, Kern, Los Angeles, Orange, Riverside, San Bernardino, San Diego, San Luis Obispo, Santa Barbara, and Ventura counties. Northern California is the balance—47 of the state's counties.

† Total VA beds and breakdown taken from *Annual Report, Administrator of Veterans Affairs*, 1963, Table 5, pp. 196-201. The beds in southern California as shown are 57 more than for January 1, 1964 as detailed by L. C. Like, director, Veterans Administration Center, Los Angeles, *Transcript*, January 15, 1964, Table 2, p. 37. This represents a 0.6 percent differential. For comparability of figures, data for both northern and southern California were taken, therefore, from the *Annual Report*.

‡ Extracted from U. S. Census data for veteran and total population, April 1, 1960, and *California Population, 1963*, Financial and Population Research Section, State Department of Finance, Table 13, p. 23, as follows: 4-1-60 population of southern California = 0.59873; 4-1-60 veteran population of southern California = 0.60773; 7-1-63 population of southern California = 0.60338; therefore 7-1-63 veteran population of southern California = 0.61238. State veteran population as of 6-30-63 taken from *Annual Report, Administrator of Veterans Affairs*, 1963, Table 3, p. 193.

Sources: As indicated above.

V. ALTERNATIVE SOURCES OF CARE

Veterans in California comprise one group among many who are potentially eligible for a comprehensive range of income maintenance, medical care, and social service programs. Some of these programs are nationwide in scope, such as old age, survivors, and disability insurance (commonly referred to as "social security"). Others have been established by various units of local government such as county hospitals, local mental health clinics, and county indigent aid (general home relief). Most, however, have state government as the principal

policy making and administering or supervising body. These programs run an impressive gamut:

Workmen's compensation and disability insurance, which are required in most employment situations in the state;

The income maintenance and social service features of old age security, aid to the blind and aid to the potentially self-supporting blind, and aid to the disabled, in addition to the availability of extra funds through these public welfare programs to purchase in-the-home attendant care and boarding home (i.e., domiciliary) care;

The preventative medical services available through the prevention of blindness and crippled children programs (although this latter would be utilized principally by the minor dependents of veterans and others);

The availability of medical and dental services and drugs on an outpatient basis to public welfare recipients through the public assistance medical care program;

The acute and chronic hospitalization and nursing home services furnished by the medical assistance to the aged program; and

The specialized programs established to render services to individuals afflicted by certain diseases, as the system of state hospitals and clinics for the mentally ill and the retarded, the State Department of Public Health's programs for the treatment of alcoholism and tuberculosis, and the State Department of Correction's rehabilitation program for narcotic addicts.⁵⁴

All of these programs have, of course, certain eligibility requirements which generally relate to a person's age, length of residence in California, personal and real property holdings, income, needs, physical or mental disabilities, and so forth. It is generally held, nevertheless, that the liberality of such requirements together with the generous entitled benefits furnished, make California's extensive package of welfare, health, and social insurance programs unequalled elsewhere in the country. As an example, in November 1964, 896,711 Californians (about 5 percent of the state's population) were recipients of \$70,-249,939 in income and health care assistance administered through the public welfare programs alone.⁵⁵

⁵⁴ For more specific information on the programs mentioned above see: "What You Should Know About Workmen's Compensation," State Compensation Insurance Fund, California State Department of Industrial Relations, Sacramento, 1962-63. "Disability Insurance Provisions—State Plan (DE 2515)," California State Department of Employment, Sacramento, January 1965 (Rev. 18). "Public Assistance and Welfare Services in California," State Department of Social Welfare, Sacramento, February 1964. (OAS, AB, APSB, ATD, PAMC, MAA, and Prevention of Blindness programs.) "Programs and Services for Handicapped Children in California," California Coordinating Council on Programs for Handicapped Children, Sacramento, 1962-63. "Patterns of Progress," 1962, and "Progress Report," 1964, State Department of Mental Hygiene, Sacramento. "Progress for Educationable Mentally Retarded in the Public Schools of California," State Department of Education, Sacramento, 1965. "Alcoholism: California Faces the Problem," 1960 and "Directory of California Alcoholic Recovery Houses," 1962, Division of Alcoholic Rehabilitation, California State Department of Public Health, Berkeley. "Inventory of Hospitals and Related Facilities as of March 31, 1963," Bureau of Hospitals, State Department of Public Health, Sacramento (tuberculosis). "Treatment and Control of Narcotic Addicts," Ronald W. Wood, Superintendent, California Rehabilitation Center (Corona), State Department of Corrections, Sacramento, 1964.

⁵⁵ "Public Assistance Caseloads and Expenditures, November 1964," State Department of Social Welfare, December 18, 1964, a one-page summary of the month's activities.

These alternative sources of care are available to all Californians, veteran and nonveteran alike. This fact, from the veteran organizations' point of view is more of a liability than an asset.

"Our county hospital here is a charitable institution as I presume it is in most counties. The treatment is excellent. The medical facilities are good, the plant is almost a 95 percent new plant which has only been open the last two or three years. They are getting excellent treatment, but these men who served their country should not be charity objects in a county institution."⁵⁶

"Allowing veterans who are struck down by some longterm chronic conditions to languish as nonentities in some inadequate nursing home or other such facility is a breach of faith."⁵⁷

"Furthermore, it is not believed that the members of our State Legislature, or the citizens of California want to see the time come when its former defenders in time of national emergency are forced to depend on the various relief agencies for assistance. Their faith and confidence in the Legislature and the public in general is that they will see to it that California's former war veterans who are now ill and become chronically ill, unemployed and in need of care will receive it in a manner they can maintain their dignity which they so richly deserve."⁵⁸

CONCLUSIONS

The sentiments expressed above are understandable and were sympathetically received by all of the committee members, a majority of whom are themselves veterans. We must point out, nevertheless, that the special treatment of veterans in need of domiciliary and medical care has been fully and carefully considered in the legislative halls of Sacramento and Washington. At the national level the decision has been that the country should assume complete responsibility for the care and treatment of veterans' service-connected disabilities, whereas non-service-connected disabilities should be treated only to the extent possible in existing facilities and only in those cases where the veteran cannot defray the costs himself. And at the state level, the Legislature has concluded that domiciliary care, with such ancillary medical services as are required by the state home's members, should be provided only to those veterans who are disabled to such an extent that they cannot pursue a gainful occupation and, additionally, who do not have the means to provide such care for themselves.⁵⁹

It is the committee's deep-seated conviction that these have been equitable decisions and that we would be derelict in our policy and fiscal responsibility, not only to California's veterans but to all of our state's citizens, if we were to ignore the alternative sources of service available to veteran and nonveteran alike.

⁵⁹ See page 14.

The rich multitude of aid has not been begrudgingly authorized by the Legislature; its receipt is not reviled by the vast majority of our citizens.⁶⁰ It is offered with and it is received in dignity, with a common understanding of our moral obligation and of our compassionate desire to help those who cannot help themselves.

VI. PROPOSED SOUTHERN CALIFORNIA STATE VETERANS' HOME

Although there were some minor differences among the specific proposals submitted to the committee for the creation of a state veterans' home in southern California⁶¹, that of the Special Committee for Southern California Veterans' Home, California Department of American Legion, was widely supported:

"It is our opinion that the minimum number of beds provided by initial construction of a Veteran Home in Southern California should be 1,150, broken down as follows:

"250 General Medical and Surgical Hospital

"400 Intermediate type care

"500 Domiciliary

"We are firm in our opinion that the minimum care provided for eligible war veterans in a Veteran Home of Southern California should be the same as that offered at the Veteran Home of Northern California, which would include general hospital care, intermediate care (sometimes referred to as nursing and attendant care), and domiciliary care. The designs and plans for such a project should also include adequate facilities for various types of therapy (such as physio- and occupational therapy)

"In considering a location the proximity of a local fire department should be considered, as well as sewage and water. Transportation and easy access to the Home should also be considered and the amount of interest shown by local people, as well as Veterans, to having such a home built in their neighborhood. Also it has been suggested that the Home and Hospital be built near a Medical College and an already established hospital staff.

"Our Committee would like to suggest the location for a Home and Hospital in Southern California be located near the present Loma Linda Seventh Day Adventist facilities in the town of Loma Linda, which lies just off the new freeway between Redlands and Colton, and just a few miles from San Bernardino and Riverside. All of the above named requirements can easily be met at this site, including the services of competent medical consultants and attending physicians from the Loma Linda University School of Medicine."⁶²

⁶⁰ E.g., Welfare and Institutions Code, Section 13: "The purpose of this code is to provide for protection, care, and assistance to the people of the state in need thereof, and to promote the welfare and happiness of all of the people of the state by providing appropriate public assistance and service to all of its needy and distressed. It is the legislative intent that assistance shall be administered and services provided promptly and humanely, with due regard for the preservation of family life, and without discrimination on account of race, religion, or political affiliation; and that assistance shall be so administered and services so provided as to encourage self-respect, self-reliance, and the desire to be a good citizen, useful to society."

⁶¹ See footnote 31, page 19.

⁶² *Transcript, op. cit.*, Ostrander, pp. 69-70.

The construction and equipment costs of such a facility, excluding land acquisition, was variously estimated at \$11,550,000⁶³ to \$15,832,060.⁶⁴ Annual operating expenses would probably run around \$7,750,000 gross⁶⁵, less approximately \$1,050,000 received from the U.S. Veterans Administration on the basis of their subvention of \$2.50 per day per home member.

In this context, the gross operating costs of the State Home at Yountville for 1963-64 was estimated at \$5,117,927, of which \$1,656,047 was received from the federal government.⁶⁶ Additionally, during the fiscal year 1962-63 the U.S. Veterans Administration expended \$104,081,039 for the operation and maintenance of its facilities in California.⁶⁷

There was universal agreement that the existing facilities of the Veterans Administration in southern California were insufficient to meet the total demand for services emanating from that area.⁶⁸ The committee agrees that all of the information submitted and collected supports this contention. Yet we must emphasize again that, as the previously discussed data reveal, the veterans of this area—and this state—are not apparently receiving less than average care in quantity or quality from the Veterans Administration with the notable exception of psychiatric care.

There was, however, a dichotomy of opinion as to the responsibility of state government to meet the need for additional facilities devoted exclusively to veteran care. It is this debate which is examined and resolved, at least as far as this committee is concerned, in the next, and concluding, section.

VII. FEDERAL VS. STATE RESPONSIBILITY FOR VETERANS' CARE

Proponents of the creation of a new state facility for veterans in southern California contend that the care of needy veterans is the joint responsibility of the state and federal governments; that if the U.S. Veterans Administration is unable or unwilling to furnish care in amounts adequate to meet the needs of veterans who reside in California it then becomes incumbent upon the state to provide that care which is lacking.⁶⁹

This view is also held by the State Department of Veterans Affairs:

" . . . (The care of veterans) is basically the responsibility of the federal government. If the State has the funds, we certainly wouldn't object to it (the proposed southern California facility). We wouldn't oppose it. . . . Basically the veterans were called into service by the federal government and that is the reason why we feel that it is primarily their responsibility. As Mr. Farber (Joseph M. Farber, Director, State Department of Veterans Affairs) mentioned in his communication to you, if the federal gov-

ernment is unable to furnish the necessary facilities, then it is probably the responsibility of the states to take care of their own veterans." ⁷⁰

The state's administration, however, opposed the notion that California has any responsibility to resident veterans other than to supplement federally granted benefits:

"Our opposition to the establishment of a second Veterans' Home is based on the position that the federal government is already responsible for the basic care and welfare of veterans. It is true, of course, that the State of California has undertaken to provide veterans' benefits in addition to those covered by the federal government--in some cases even more generously (for example, the Cal-Vet Home Loan Program and the Veterans' Home). However, the California veterans' program was not intended to replace or relieve the federal government of its responsibility, but rather to augment and provide supplemental benefits. . . . We must request your committee to urge the federal government to meet their responsibility for hospital care for veterans, rather than attempt to divert existing funds from the present home, or from other critical needs which cannot be met from other sources." ⁷¹

The committee believes that there is no basic responsibility of state governments to assist needy veterans in any way significantly different from the methods employed in assisting any other residents needing aid. The veteran is a veteran of the armed forces of the *United States of America*, not of the State of California or of any other specific state. Thus it is the exclusive duty of the government of the United States to meet such needs as are indigenous to veterans as a distinguishable group.

History has shown that the State of California, together with other states, became involved in providing residential care and ancillary medical services to veterans simply because the federal government failed to do so. Nationwide, this lack of federal action has been long remedied. Locally, the federal government has equitably met the demands for care of veterans residing in California, with the glaring exception, of course, of psychiatric services. This committee, therefore, sees no compelling reason for the state's construction of new facilities exclusively for the care of veterans.

By no means, however, should this policy position be interpreted as detracting from the necessity for immediate action to solve the critical problems relating to psychiatric care and for responsive alertness to guarantee fair, equitable, and sufficient treatment of veterans who live in California in relation to that received by veterans residing in other states. That these needs and problems exist has been eloquently attested. Their fulfillment and resolution is, however, a test of the national government's responsiveness.

APPENDIX A

RULE 12.5 OF THE PERMANENT STANDING RULES OF THE SENATE

12.5. Thirteen Senate Permanent Fact Finding Committees herein-after described are hereby created pursuant to Section 37 of Article IV of the California Constitution.

Whenever the Senate or a standing committee thereof recommends that the subject matter of a bill be referred to a fact finding committee for interim study, or a Member of the Senate requests in writing that a study be made, the Committee on Rules may assign such study to the Permanent Fact Finding Committee to which the general subject matter involved in the study has been allocated by this rule. The Permanent Fact Finding Committee to which such an assignment is made is authorized and directed to ascertain, study and analyze all facts relating to or bearing upon the subject so assigned including, but not limited to, the operation, effect, administration, enforcement and needed revision of any and all laws in any way bearing upon or relating thereto, and to report thereon to the Senate, including in its reports its recommendations for appropriate legislation. When a specific study has been assigned as herein provided, the Committee on Rules may, in writing, authorize the extension of the study to any closely related subject which the Committee on Rules deems to be sufficiently connected with the matter originally assigned.

Each such committee shall consist of the number of Members of the Senate determined and appointed by the Senate Committee on Rules. The chairman and vice chairman of each committee shall be appointed by the Committee on Rules, except that the President pro Tempore of the Senate shall be chairman of the General Research Committee. After the first appointments are made, new appointments shall be made at the close of each subsequent general session. Vacancies occurring in the membership of each committee shall be filled by the appointing power.

Each such committee has continuous existence until such time as its existence is terminated by resolution adopted by the Senate, and each such committee is authorized to act both during and between sessions of the Legislature, including any recess.

Each such committee shall file a final report with the Senate by not later than the thirtieth calendar day of each general session.

Each such committee and its members shall have and exercise all of the rights, duties and powers conferred upon investigating committees and their members by the provisions of the Joint Rules of the Senate and Assembly and of the Standing Rules of the Senate, which provisions are incorporated herein and made applicable to said committees and their members. Except for the General Research Committee a majority of the members appointed to each committee shall constitute a

quorum of the committee, and except for the General Research Committee no subcommittee shall be appointed consisting of less than a quorum of the committee.

Each such committee has the following additional powers and duties:

(a) To contract with such other agencies, public or private, as it deems necessary for the rendition and affording of such services, facilities, studies and reports to the committee as will best assist it to carry out the purposes for which it is created.

(b) To co-operate with and secure the co-operation of county, city, city and county, and other local law enforcement agencies in investigating any matter within the scope of this resolution and to direct the sheriff of any county to serve subpoenas, orders and other process issued by the committee.

(c) To meet and act at any place within the State of California and, when authorized to do so in writing by the Senate Committee on Rules, to meet and act outside the State carrying out its duties.

(d) To report its findings and recommendations to the Legislature and to the people from time to time and at any time, not later than herein provided.

(e) To do any and all other things necessary or convenient to enable it fully and adequately to exercise its powers, perform its duties, and accomplish the objects and purposes of this resolution.

The committees created by this resolution and the subjects allocated to them are: . . .

(6) The Fact Finding Committee on Labor and Welfare is allocated the subject matter embraced in the Labor Code, the Military and Veterans Code, and uncodified legislation on these subjects, as well as problems and proposed legislation relating to the Department of Social Welfare, aid to the aged, to the blind, to children, to the indigent and to other public assistance. . . .

APPENDIX B

SENATE BILL

No. 605

Introduced by Senator Quick

February 6, 1963

REFERRED TO COMMITTEE ON MILITARY AND VETERANS AFFAIRS

An act to amend the heading of Chapter 1 (commencing with Section 1010) of Division 5 of, and Sections 1010, 1011, 1012, 1012.1, 1013, 1014, 1018, 1019, 1023, 1024, 1025, 1026, 1030, 1030.1, 1031, 1032, 1033, 1034, 1035, 1035.1, 1036, 1037, 1038, 1039, 1041, 1042.1, 1043, 1045, 1046, 1047, 1048, 1049 of, the Military and Veterans Code, relating to California veterans' homes, and making an appropriation therefor.

The people of the State of California do enact as follows:

SECTION 1. The heading of Chapter 1 (commencing with Section 1010) of Division 5 of the Military and Veterans Code is amended to read:

CHAPTER 1. CALIFORNIA VETERANS' ~~HOME~~ HOMES
OF CALIFORNIA

SEC. 2. Section 1010 of said code is amended to read:
1010. As used in this chapter:

(a) "Home" means the Northern California Veterans' Home of California or the Southern California Veterans' Home.

(b) "Department" means the Department of Veterans Affairs.

(c) "Veteran" means a member of ~~the~~ a home provided for by this chapter.

1 SEC. 3. Section 1011 of said code is amended to read:

2 1011. There is in the Department of Veterans Affairs a
3 *Northern California Veterans' Home of California*, which is
4 situated at Veterans' Home, Napa County, and a *Southern*
5 *California Veterans' Home, which is situated at Veterans'*
6 *Home, ----- County.*

7 SEC. 4. Section 1012 of said code is amended to read:

8 1012. The ~~home~~ *is homes are* for aged and disabled persons
9 who served in the armed forces of the United States during
10 a war period as defined by law; who were discharged under
11 honorable conditions from such service, and who are eligible
12 for hospitalization or domiciliary care in a veterans' facility
13 in accordance with the rules and regulations of the United
14 States Veterans Administration, and who have been bona fide
15 residents of this state for 10 years immediately preceding the
16 date of application. The property of the ~~home~~ *homes* shall be
17 used for this purpose. The provisions of this section shall not
18 be retroactive.

19 SEC. 5. Section 1012.1 of said code is amended to read:

20 1012.1. Prior to the admission of a veteran as a member of
21 ~~the a home~~, and at any time during which a veteran is a mem-
22 ber of ~~the a~~ home, the department may investigate the veter-
23 an's financial status to insure that the veteran is unable to
24 pay for necessary hospital or domiciliary care outside of the
25 home. The department may contract with any other state
26 agency to conduct such an investigation in its behalf.

27 SEC. 6. Section 1013 of said code is amended to read:

28 1013. All property conveyed to and accepted by the state
29 under the provisions of Chapter 101, Statutes of 1897, and
30 any other property convey to an accepted for ~~the a~~ home
31 shall be the property of the home the same as though the de-
32 scription of such property and acceptance thereof were herein
33 set forth.

34 SEC. 7. Section 1014 of said code is amended to read:

35 1014. The ~~home~~ *homes* shall be under the management and
36 control of the department and, subject to the policies adopted
37 by the California Veterans Board and the direction of the
38 Director of Veterans Affairs, shall be administered by the
39 Commandant, Veterans' ~~Home~~ *Homes* of California, known
40 as the Manager of the Division of Veterans Homes.

41 SEC. 8. Section 1018 of said code is amended to read:

42 1018. The commandant, executive officer, chief surgeon,
43 quartermaster or supply officer, adjutant, chaplain, physicians
44 and surgeons, dental officers, hospital administrative officer,
45 and the utilities officer in office shall remain in office as pro-
46 vided in the State Civil Service Act. Thereafter the comman-
47 dant shall appoint, subject to civil service, qualified persons to
48 fill such offices. *The commandant shall also appoint deputy*
49 *commandants and deputy executive officers to administer the*
50 *homes and shall appoint, subject to civil service, such other*
51 *qualified persons necessary to administer the homes.*

1 SEC. 9. Section 1019 of said code is amended to read:

2 1019. Officers of the ~~home~~ *homes* shall take the oath of office
3 required of state officers, shall file a bond in form and amount
4 approved by the department, and shall reside at the ~~home~~
5 *homes* providing quarters are available. Officers may be re-
6 moved by the Director of Veterans Affairs for cause as pro-
7 vided in the State Civil Service Act.

8 SEC. 10. Section 1023 of said code is amended to read:

9 1023. The department may sue and be sued in any of the
10 courts of this State. All property held by the department
11 shall be held in trust for the State and for the use and benefit
12 of the ~~home~~ *homes*. The commandant shall manage the ~~home~~
13 *homes*, and administer ~~its~~ *their* affairs, and subject to the
14 direction of the Director of Veterans Affairs adopt rules and
15 regulations for the government of the ~~home~~ *homes*, in con-
16 formity as nearly as possible, to the rules and regulations of
17 the United States Veterans Administration for their facilities.

18 SEC. 11. Section 1024 of said code is amended to read:

19 1024. The department may conduct such investigation as
20 may be required to determine the total value of the property
21 and assets of any veteran applying for admission to ~~the a~~
22 *home*, and may contract with any other state agency to con-
23 duct such an investigation in its behalf.

24 SEC. 12. Section 1025 of said code is amended to read:

25 1025. The ~~home~~ *homes* shall be open at any time to the
26 inspection of the Director of the United States Veterans Ad-
27 ministration or his authorized representative.

28 SEC. 13. Section 1026 of said code is amended to read:

29 1026. The records, reports, and accounts kept by the ~~home~~
30 *homes* shall conform, as nearly as possible to the requirements
31 of the United States Veterans Administration.

32 SEC. 14. Section 1030 of said code is amended to read:

33 1030. The department shall report to the Governor before
34 the 1st day of January of each year stating all receipts and
35 expenditures, the condition of the ~~home~~ *homes*, the number of
36 veterans received and discharged during the preceding fiscal
37 year, and such other matters touching upon the management,
38 conduct, and interest of the ~~home~~ *homes* as the department
39 deems proper, or as are required by the Governor.

40 The department shall also make any other reports which the
41 Governor requires. All reports shall be verified by the Director
42 of Veterans Affairs and shall be certified by the commandant.

43 SEC. 15. Section 1030.1 of said code is amended to read:

44 1030.1. The department may enter into contracts with the
45 United States or any agency thereof, any governmental agency,
46 any person, or any corporation for the performance of services
47 or manufacture of articles by disabled members of the ~~home~~
48 *homes*. The proceeds of any such contract, less the actual op-
49 erating expenses, shall be paid to the individual disabled vet-
50 erans who perform the services or labor.

1 SEC. 16. Section 1031 of said code is amended to read:

2 1031. All moneys received by the state from the United
3 States for the use of the ~~home~~ homes shall be placed to the
4 credit of and shall augment the current appropriation for the
5 support of the ~~home~~ homes.

6 SEC. 17. Section 1032 of said code is amended to read:

7 1032. The department shall fix a schedule of wages for
8 veterans who are employed at the ~~home~~ homes, subject to the
9 approval of the Director of Finance.

10 SEC. 18. Section 1033 of said code is amended to read:

11 1033. All bills and charges against the ~~home~~ homes for sup-
12 plies, salaries, or other expenses, from state appropriations
13 shall be prepared and audited in the manner provided by law
14 and warrants therefor shall be paid out of any money available
15 for such purposes according to the directions of the comman-
16 dant approved by the Department of Finance.

17 SEC. 19. Section 1034 of said code is amended to read:

18 1034. Except money received from this state for disburse-
19 ment, all moneys received by the ~~home~~ homes, or by any offi-
20 cer of the ~~home~~ homes, including pension and other moneys
21 belonging to veterans and other trust moneys, shall be im-
22 mediately paid to the executive officer of the ~~home~~ homes. On
23 or before the 10th day of each month the executive officer of
24 the ~~home~~ homes shall forward to the State Treasurer all moneys
25 in his possession, except pension and other moneys belonging to
26 veterans, trust moneys, the post funds, and the emergency
27 fund, hereinafter mentioned, together with a statement of the
28 sources from which the same have been received. The moneys
29 shall be deposited by the State Treasurer to the credit of the
30 General Fund of the State; provided, however, that abate-
31 ments of support expenditures shall be credited to the support
32 appropriation current at the time of collection.

33 SEC. 20. Section 1035 of said code is amended to read:

34 1035. Any balance of moneys of any veteran held by the
35 ~~home~~ homes, or by its ~~their~~ authority, shall, upon the death of
36 the veteran, where undisposed of by will, executed prior to the
37 date of the veteran's admission to ~~the a~~ home, be held as a trust
38 fund to be paid by the ~~home~~ homes upon proof deemed to be
39 proper to the commandant, directly and without probate, to
40 the spouse, dependent children, or dependent father or mother
41 of the veteran; provided, that the commandant is hereby em-
42 powered to disburse funds of any deceased veteran for pay-
43 ment of such funeral expenses.

44 If no spouse, dependent children, or dependent father or
45 mother are discovered within five years after the death of
46 the veteran, or if the spouse, dependent children, or dependent
47 father or mother discovered within such time are not entitled
48 to the whole thereof, the moneys not paid to the spouse, de-
49 pendent children, or dependent father or mother, and undis-
50 posed of by will executed prior to the date of the veteran's
51 admission to ~~the a~~ home or by will executed thereafter, leaving
52 such property to the spouse, dependent children, or dependent

1 father or mother, shall be paid to the post fund of the ~~home~~
2 ~~homes~~ which fund shall be used for the common benefit of
3 the veterans under the direction of the commandant.

4 SEC. 21. Section 1035.1 of said code is amended to read:

5 1035.1. If any member of ~~the a~~ home dies, any balance of
6 money or personal property held by the home shall be dis-
7 tributed in the manner prescribed in this chapter, and any
8 will executed subsequent to the date of the veteran's admission
9 to the home shall not be valid as it relates to money or personal
10 property held by the home, except to the extent that such will
11 disposes of the money or property to the spouse, dependent
12 children, or dependent father or mother of the veteran.

13 SEC. 22. Section 1036 of said code is amended to read:

14 1036. The veterans may voluntarily deposit money with
15 ~~the a~~ home, which the home shall receive and keep without
16 charge as a trust fund.

17 SEC. 23. Section 1037 of said code is amended to read:

18 1037. The money belonging to a veteran and voluntarily
19 deposited with ~~the a~~ home may be withdrawn, in whole or
20 in part, at the will of the veteran. Any balance remaining
21 upon his death, undisposed by will, executed prior to the
22 veteran's admission to the home, and not paid to his spouse,
23 dependent children, or dependent father or mother pursuant
24 to a will or within the time and in the manner hereinbefore
25 provided, shall be paid to the post fund.

26 SEC. 24. Section 1038 of said code is amended to read:

27 1038. All money deposited with ~~the a~~ home for a veteran
28 shall be paid to him on demand, upon his discharge from or
29 voluntary leaving the home. If such money is not so demanded
30 at the time of discharge or leaving or within a period of five
31 years thereafter, or demanded by the spouse, dependent chil-
32 dren, dependent father or mother, devisees, or legatees in case
33 of his decease after his discharge or voluntary leaving, the
34 same shall be paid to the post fund.

35 SEC. 25. Section 1039 of said code is amended to read:

36 1039. All moneys received by ~~the a~~ home under specific
37 trust agreements shall be paid into the post fund five years
38 after the trust agreement terminates if not claimed by the
39 spouse, dependent children, dependent father or mother, de-
40 visees, or legatees of the veteran as hereinabove provided.

41 SEC. 26. Section 1041 of said code is amended to read:

42 1041. If the personal property of a veteran is unclaimed
43 for a period of one year after the date of his death or the date
44 of his discharge or voluntary departure from ~~the a~~ home, the
45 commandant ~~of the home~~ may proceed by public auction or
46 private sale to sell the property. The sale shall take place at
47 a public place in the home, and notice of sale shall be posted
48 in such place at least 10 days previous to the date of sale. The
49 proceeds of sale shall be credited to the post fund.

50 SEC. 27. Section 1042.1 of said code is amended to read:

51 1042.1. If any check is drawn upon any trust fund of ~~the~~
52 ~~a~~ home and remains unclaimed, or is not cashed, for a period

1 of one year, it shall be canceled and the amount thereof shall
2 be turned over to the executive officer and be deposited to the
3 credit of the post fund and used for the common benefit of the
4 members of the home.

5 SEC. 28. Section 1043 of said code is amended to read :

6 1043. With the exception of officers and employees and
7 their families, no person shall be admitted to reside in ~~the~~ a
8 home, who is not eligible under Section 1012.

9 SEC. 29. Section 1045 of said code is amended to read :

10 1045. Nothing in this chapter shall prevent the State from
11 transferring the property and management of the ~~home~~ homes
12 to the United States for a home of similar character.

13 SEC. 30. Section 1046 of said code is amended to read :

14 1046. If it appears necessary or proper that a guardian of
15 the estate of a veteran be appointed, the court in its discretion
16 may, upon application of the commandant, acting through his
17 designated officer, appoint ~~the~~ a home as guardian of such es-
18 tate and cause letters of guardianship of such estate to be is-
19 sued to the home.

20 For the purposes of this chapter, the ~~home~~ is homes are
21 made ~~a corporation~~ corporations and, acting through an officer
22 designated by the commandant, may act as guardian of es-
23 tates, assignee, receiver, depository or trustee, under appoint-
24 ment of any court or by authority of any law of this State,
25 and transact business in such capacity in like manner as an
26 individual, and for this purpose may sue and be sued in any
27 of the courts of this state.

28 The ~~home~~ homes shall be appointed as guardian, assignee,
29 receiver, depository or trustee without bond. The officer desig-
30 nated by the commandant shall be required to give a surety
31 bond in such amount as may be deemed necessary from time
32 to time by the commandant, but in no event shall the initial
33 bond be less than ten thousand dollars (\$10,000) which bond
34 shall be for the joint benefit of the several estates, the com-
35 mandant, and the State of California. The ~~home~~ homes shall
36 receive such reasonable fees as shall be allowable for its ex-
37 penses for filing fees, attorneys' fees, and bond premiums. The
38 court shall allow to ~~the~~ a home at the time of its appointment
39 as guardian of an estate an amount which the court estimates
40 would be the bond premium for the estate if a separate bond
41 were required for the estate. The fees paid to the home may
42 be used as a trust account from which may be drawn expenses
43 for filing fees, attorneys' fees and bond premiums in all es-
44 tates it undertakes to administer. Whenever the balance re-
45 maining in such trust account shall exceed a sum deemed
46 necessary by the commandant for the payment of the filing
47 fees, attorneys' fees and bond premiums incurred in the vari-
48 ous estates, such excess shall be paid annually into the post
49 fund of the ~~home~~ homes .

50 The ~~home~~ homes when acting as guardian of a veteran may
51 deposit the funds of the estate in the special deposit fund of
52 the ~~home~~ homes , and may invest and reinvest such funds in

1 securities which are legal investments for savings banks in
2 this state.

3 SEC. 31. Section 1047 of said code is amended to read:

4 1047. The commandant shall maintain a post fund which
5 shall be used, at the discretion of the commandant subject to
6 the approval of the Director of Veterans Affairs, to provide
7 for the general welfare of the ~~home~~ *homes* and ~~its~~ *their* mem-
8 bers to include but not limited to providing for operations of
9 the post ~~exchange~~ *motion picture theater, library, band ex-*
10 *changes, motion picture theaters, libraries, bands*, and to pay
11 for newspapers, chapel expenses, welfare and entertainment
12 expenses, sport activities, celebrations, and to pay for any
13 necessary insurance to protect property of the fund or the
14 post ~~exchange~~ *exchanges*, or any other activity for the benefit
15 of the ~~home~~ *homes* or ~~its~~ *their* members.

16 SEC. 32. Section 1048 of said code is amended to read:

17 1048. The post fund shall include any profits from opera-
18 tions of the post ~~exchange~~ *exchanges*, all donations to the
19 fund, and any money from the estates of deceased members
20 which have been held for five years and unclaimed by the
21 heirs.

22 SEC. 33. Section 1049 of said code is amended to read:

23 1049. The post fund may be used to establish or operate a
24 post ~~exchange~~ *exchanges* which may conduct any lawful en-
25 deavor which in the judgment of the commandant will benefit
26 the members of ~~the~~ *a* home. The commandant may establish
27 the post ~~exchange~~ *exchanges* to operate at a profit.

28 SEC. 34. The sum of _____ (\$_____) is hereby ap-
29 propriated out of any moneys in the State Treasury in the
30 General Fund to the Department of Veterans Affairs to con-
31 struct the Southern California Veterans Home.

World War I, Alhambra

APPENDIX D

SENATE JOINT RESOLUTION NO. 14

Relating to increasing psychiatric services available through the U.S. Veterans Administration to veterans who reside in California

WHEREAS, Nationally and in California there are increasing demands on the United States Veterans Administration for psychiatric care and this trend will continue and be intensified in the future; and

WHEREAS, California has the largest number of veterans of any state in the union, and its veteran population is continuing to grow although the nation's total number of veterans is decreasing; and

WHEREAS, the ratio of veterans residing in California to Veterans Administration-furnished psychiatric beds in this state has risen from 481 veterans per bed in 1959 to 515 veterans per bed in 1963; and

WHEREAS, Among the eight states with largest veteran populations, California has the highest ratio of veterans per Veterans Administration psychiatric bed and is the only state in which this ratio has risen; and

WHEREAS, The psychiatric beds allocated by the Veterans Administration to California have increasingly fallen behind the national average number and trend of 390 veterans per bed in 1959 and 375 veterans per bed in 1963; now, therefore, be it

Resolved by the Senate and the Assembly of the State of California, jointly, That the Congress of the United States is respectfully memorialized to promptly authorize and direct the United States Veterans Administration to provide and maintain in California, at least as a minimum, the nation's average ratio of psychiatric beds to veterans; and be it further

Resolved, That the Secretary of the Senate be hereby directed to transmit copies of this resolution to the President pro Tempore of the United States Senate, the Speaker of the House of Representatives, and to each Senator and Representative in this state's delegation to the Congress of the United States.

SENATE JOINT RESOLUTION NO. 15

Relating to increasing psychiatric services available through the U.S. Veterans Administration to veterans who reside in California

WHEREAS, Nationally and in California there are increasing demands on the United States Veterans Administration for psychiatric care and this trend will continue and be intensified in the future; and

WHEREAS, California has the largest number of veterans of any state in the union, and its veteran population is continuing to grow although the nation's total number of veterans is decreasing; and

WHEREAS, The ratio of veterans residing in California to Veterans Administration-furnished psychiatric beds in this state has risen from 481 veterans per bed in 1959 to 515 veterans per bed in 1963; and

WHEREAS, Among the eight states with largest veteran populations, California has the highest ratio of veterans per Veterans Administration psychiatric bed and is the only state in which this ratio has risen; and

WHEREAS, The psychiatric beds allocated by the Veterans Administration to California have increasingly fallen behind the national average number and trend of 390 veterans per bed in 1959 and 375 veterans per bed in 1963; now, therefore, be it

Resolved by the Senate and the Assembly of the State of California, jointly, That the United States Veterans Administration is memorialized to promptly take such administrative action as may be necessary to provide and maintain in California, at least as a minimum, the nation's average ratio of psychiatric beds to veterans and be it further

Resolved, That the Secretary of the Senate be hereby directed to transmit copies of this resolution to the President and the Vice President of the United States and to the Administrator of the United States Veterans Administration.

LETTER OF TRANSMITTAL

SENATE CHAMBER, STATE CAPITOL
SACRAMENTO, CALIFORNIA, JUNE 17, 1965

HON. GLENN M. ANDERSON
President of the Senate
Senate Chamber, State Capitol
Sacramento, California

Mr. President:

Pursuant to Rule 12.5 of the Permanent Rules of the Senate and Senate Resolution No. 270 read and adopted June 21, 1963, the Senate Fact Finding Committee on Labor and Welfare submits its report and recommendations on California's public assistance programs.

Respectfully submitted,

VERNON L. STURGEON, *Chairman*
HOWARD WAY, *Vice Chairman*

PREFACE

It is not often that a legislative investigating body will introduce as many as 29 measures covering as broad a subject matter as this committee has. But then, few are the fields as complex, as costly, as intimately involved with hard practical realities and lofty aspirations of people's lives as our public assistance programs. Few are the fields in which a greater and more critical need for reform exists than in public welfare.

This committee, in its 1961 report, warned:

"We wish to emphasize, however, that these (recommendations) do not purport to be a panacea for problems plaguing the program."

The same warning is appropriate for the 29 measures authored by the committee this session, four years later.

If anything, the problems in public assistance have become more entangled, intermeshed, insoluble. This crisis has been half consciously and half inadvertently born.

A convenience marriage of state administration's total preoccupation with "improving" the size of welfare (rather than its quality) to California county government's concern with replacing local tax funds with those expropriated by state or federal jurisdictions has taken place.

The resultant muddle of confused policy, fiscal responsibilities, and objectives which permeate public assistance is being compounded by newer and more "stylish" attacks on the poverty problem—the Economic Opportunities Act, the Manpower Development and Training Act, and so on. Most of these new thrusts avoid the now mundane, even lackluster, channels of present public assistance methods in a simultaneous effort to sell a new product and to avoid errors which three decades of commitment have ground into the system.

Nevertheless, the public assistance caseworker, administrator, and educator have been caught up in the search for "prevention" and "rehabilitation." They clamor for a change in role. They are no longer satisfied with being "bottom of the barrel," "end of the road," the last source of formalized aid and assistance.

Thus, "solving" the problems of public assistance is growing progressively more difficult when these problems are viewed in context with the flow of bureaucratic and political life which surrounds them. This overall view has not been pursued in depth nor to specific conclusions and recommendations. The committee has, however, closely inspected the public assistance programs.

Although all categories of assistance were reviewed by the committee, primary emphasis has been placed on the Aid to Families with Dependent Children (AFDC) program. The so-called "adult" categories—Old Age Security, Aid to the Blind, Aid to the Totally Disabled, and Medical Assistance for the Aged—have been programs dealing princi-

pally with people who have very minute, if any, potential for self support. The aged, the blind, the severely disabled are by definition persons who generally cannot be expected to reassume productive roles in the economy. The emphasis in working with them has to be limited to assisting them to live comfortable, dignified, integrated lives. It is within the AFDC program that the greatest potential and, conversely, the greatest problems exist.

The greatest flaw in AFDC is its isolation from moral standards of the public. This is a conscious—even self-proclaimed—detachment. In the pre-Social Security Act period, eligibility for welfare was largely limited to those who were considered “worthy” of assistance. The Social Security Act changed the “worthy poor” approach and used, instead, the criterion of aid applicant’s “needs.”

The frame of reference of the judgmental process in public welfare shifted from an evaluation of the applicant’s worthiness for assistance to an evaluation of only his need for aid.

Furthermore, the agents who made such judgments were also changed by the Social Security Act. Before the mid-1930’s the individual caseworker and the individual local agency and its director were the principal judgment-making parties. With the entry of the federal government into the public welfare field and the greater reliance upon state welfare plans, individual judgments were supplanted by those of the majority of the community as represented by laws passed by federal and state legislative bodies.

These changes, by themselves, have been highly desirable, have led to greater equity, and have, in fact, followed advances in moral concepts of our communities. In this process, however, the public welfare worker, supervisor, administrator, and educator, in their desire to avoid being judgmental, have denied the existence of any criteria (even the community’s standard of morality) except “needs.”

Every community of man has had its own body of common-law morality, a code of ethics, discernible standards of behavior and responsibility. These mores have been essential not only to the growth and strength of man’s societies but also to the individual himself. They keynote man collectively and individually. They are the bootstraps man possesses by which he hauls himself closer to the image of what he might be.

When public assistance merely feeds, clothes, and houses families without placing reasonable expectations upon them—expectations relative to their behavior, to their responsibility to care for themselves, their families, their fellow man—it not only illy prepares them for independent life, it strips from them the essence of human life. They would continue to exist, of course. But the ghetto of unaccountability is no more a fitting place for man to live than are the secret slums of our cities.

If the dependent are to be led out of their house of bondage, California’s public assistance programs must help them live within the moral fabric of society, not, as currently, live outside of it. Our public assistance programs must be concerned with the obligations of aid recipients as well as with their rights. Our public assistance programs must reflect that as surely as being poor is in itself not wrong, the creation of separate standards for the poor is fallacious.

SUMMARY OF RECOMMENDATIONS REQUIRING LEGISLATION AFFECTING PUBLIC ASSISTANCE PROGRAMS AND ADMINISTRATION

THE AID TO FAMILIES WITH DEPENDENT CHILDREN PROGRAM (AFDC)

1. Aid should be paid to families in behalf of children up to 21 years of age, instead of 18, if such children are regularly attending school or are enrolled in and attending job training programs (SB 785, page 65).
2. Aid on the basis of the unemployment of the parent (Aid to Families with Dependent Children—Unemployed) (AFDC—U) should not be paid in California after July 1, 1967, unless the federal law is extended to permit financial participation in such aid (SB 786, page 67).
3. Legislative intent should specify that AFDC—U is to assist children of unemployed parents who are unable to meet their obligation to support, who cannot procure any employment, and who have no other source of aid. An applicant for AFDC—U should be required to obtain certificates from the local employment service office and the farm labor office of the State Department of Employment, issued within the previous week, to be submitted simultaneously with his application for aid. These certificates should be issued on the basis that the applicant has registered for employment and, considering only his physical and mental capacity, that no part- or full-time work exists to which he could be referred. An AFDC—U recipient should be required to obtain an identical recertification semimonthly. The period for which eligibility is established should be the same as the period prescribed for the payment of aid (SB 787, page 68).
4. Aid should not be granted if the parent is unemployed because of a bona fide labor dispute. If a parent voluntarily terminates his employment he should not be eligible for AFDC—U for three months following such termination (SB 788, page 70).
5. An unemployed parent, whose children are receiving AFDC—U, should be presumed to have failed to support his children for purposes for prosecution under Section 270 of the Penal Code if he refuses without good cause to accept an offer of employment (SB 789, page 72).
6. County welfare departments should be permitted to pay for AFDC work or training project supervisors from other governmental agencies. The state should pay one-half of special needs, not to exceed \$12.50 monthly, of the recipient who is otherwise receiving the maximum grant when such needs are caused by his participation in a work or training project. Aid grants should be reduced in an

amount equal to the assigned dollar value of work missed because of unauthorized absences from work or job training projects (SB 790, page 73).

7. Federal law should permit private employers to establish and maintain job training projects for AFDC recipients (SJR 33, page 76).
8. The "good causes" for refusing offers of employment should be the same for regular Aid to Families with Dependent Children—Family Group (AFDC—FG) parents as those currently used for unemployed (AFDC—U) recipients, and the referral of mentally competent and physically able AFDC—FG parents to the Department of Employment to register for work should be required rather than permitted (SB 791, page 78).
9. The state's medical and welfare programs should furnish family planning information, services, drugs, and materials to all persons who voluntarily seek them. Medical and social work personnel should be free to volunteer information regarding the availability of such services (SCR 47, page 80).
10. Federal law should permit youths receiving AFDC to keep for their own personal, unrestricted use up to 50 percent of their earnings, rather than requiring all of such earnings to be subtracted from the aid paid (SJR 34, page 82).

MULTIPROGRAM PROBLEMS

1. Claims should be taken on the real property of aid recipients of all programs as a condition of granting aid. Such claims should not be enforced during the lifetime of the recipient, his spouse, if any, or during the minority of his children, if any. No interest should be charged (SB 792, page 84).
2. Counties should be permitted, rather than required, to pay aid on the basis of presumed eligibility pending completion of thorough eligibility checks (SB 793, page 86).
3. The dollar amounts of earned income currently permitted under federal law to be exempted from consideration in computing aged and blind aid should be specified in state law rather than granting such exemptions by a carte blanche reference to whatever federal law will permit. State law should also permit youths under 18 years receiving AFDC to keep 50 percent of their earnings for their personal unrestricted use and this amount should be exempt from the personal property limitations together with earned income saved by the youths for their future educational or job training needs (SB 794, page 87).

THE MEDICAL ASSISTANCE FOR THE AGED PROGRAM (MAA)

1. The fee schedule for nursing home care should be established on a cost reimbursable basis, averaging all homes in each area of the state, and should be determined by industry-financed cost audits (SB 795, page 89).
2. State law should permit the concurrent receipt of MAA and Old Age Security (OAS) during the same month (SB 796, page 90).

3. Federal law should also permit the concurrent receipt of MAA and Old Age Assistance during the same month (SJR 35, page 92).
4. The liability and scale of required contributions currently in force in the Old Age Security program regarding the responsibility of adult children to support their dependent parents should also apply to MAA program (SB 797, page 94).

**THE AID TO THE TOTALLY DISABLED (ATD)
AND
AID TO THE BLIND PROGRAMS (AB)**

1. The definitions of "needy disabled person," "permanently impaired," and "totally disabled" as currently (February 1, 1965) used in the State Department of Social Welfare's regulations should be frozen into state law (SB 798, page 95).
2. The State Department of Social Welfare should be permitted, when feasible, to delegate to county welfare departments the responsibility of determining medical eligibility of ATD applicants (SB 799, page 97).
3. Federal regulations also should permit the states to delegate medical eligibility determinations in the ATD and AB programs (SJR 36, page 98).
4. Federal law should permit the payment of ATD to an interested person when the recipient, because of alcoholism, drug addiction, or mental problems, is unable to use his grant to his own benefit and best self-interest (SJR 37, page 100).
5. Persons blinded or disabled while residents of other states should, after moving to California, be in residence here five years before becoming eligible for AB or ATD (SB 800, page 102).

THE ADMINISTRATION OF PUBLIC ASSISTANCE

1. County welfare administrative projects which would safeguard funds by the detection of fraud and improving the accuracy of eligibility determinations should be eligible for subventions from the state under the County Demonstration Projects Act (SB 801, page 104).
2. The regulations, orders, and standards adopted or issued by the State Department of Social Welfare should be published in the California Administrative Code (SB 802, page 106).
3. Federal regulations should minimize rigid caseload and supervisory standards and emphasize, instead, the results achieved through public assistance programs (SJR 38, page 107).
4. Federal law should entitle the states, their political subdivisions, and welfare recipients to secure judicial review of administrative decisions affecting public assistance made by the U.S. Department of Health, Education, and Welfare (SJR 39, page 109).
5. A systems analysis of public assistance administration by the state and counties should be undertaken immediately under contract with California's business and technological industries (SCR 48, page 111).

6. Comprehensive study should be undertaken by the Legislature during 1965-67 of public assistance costs, cost-sharing ratios, and state administration. No action should be taken on these interrelated subjects until such a study is completed (see SR 108, page 112).
7. Further study should be undertaken by the Legislature during 1965-67 of child care centers, Welfare and Institutions Code revision and simplification, one unified adult category of aid, and flat grants (see SR 109, page 112).

INTRODUCTION

The Senate Fact Finding Committee on Labor and Welfare has approached the subjects embraced in California's public assistance programs from three directions. The first has been through the Medical Assistance for the Aged program, with particular emphasis given to the rates paid to medical facilities for care furnished recipients. The second approach has been through a study of the provisions embodied in Assembly Bill 59 which was passed by the 1963 Regular Session of the Legislature and which affected every category of public assistance. The third has been an appraisal of the effect and success of the implementation in California of the "services amendments" to the Social Security Act (PL 87-543) through State Department of Social Welfare Bulletin No. 629.

MEDICAL ASSISTANCE FOR THE AGED ¹

Prior to 1957 medical services for the aged were, in general, considered a local responsibility. The needy aged received medical services either from county facilities at county expense, local private charities, or through the generosity of the medical professions. If they had to pay for medical care from their own resources, it was generally at the expense of some other necessity. However, about one-third of the aged on welfare were eligible to get some special needs allowances for medical care.

The 1957 Legislature passed California's first statewide medical care program for public assistance recipients (Chapter 1068, Statutes of 1957). Effective October 1, 1957, this vendor-payment, pooled-fund program provided limited outpatient care such as doctor's visits, x-ray and drugs. In its original form, this new Public Assistance Medical Care program (PAMC) was financed from \$3 of federal and \$3 of state funds per adult recipient per month. The federal funds had become available due to amendments to the Federal Social Security Act in 1956. The 1959 Legislature passed legislation which resulted in an increase in the total amount available from \$6 to \$8.51, and 1960 amendments to the Federal Social Security Act provided additional federal funds which increased the average monthly amount per adult category recipient to \$15.

These same 1960 amendments, known as the Kerr-Mills Act (PL 86-778), also established the Medical Assistance for the Aged program. The intended purpose of the new MAA program was to encourage states to establish comprehensive medical care services for aged persons who were financially able to support themselves, but unable to pay for their medical needs. California implemented the Medical Assistance for the Aged program by passing the Rattigan-Burton Act (Chapter 1227, Statutes of 1961) which became effective January 1, 1962. It

¹ Based, in part, on testimony submitted to the committee by Milton E. B. Von Damm, Associate Administrative Analyst, Joint Legislative Budget Committee, *Transcript*, October 24, 1963, pp. 7-19.

initially provided payment for long term care in hospitals and nursing homes after the first 30 days of confinement for persons 65 years of age and over.

The program is financed by 50 percent federal, 25 percent state, and 25 percent county funds. Additionally, counties are responsible for providing up to \$15 per month for beneficiaries' incidental expenses. Eligibility requirements are the same as for Old Age Security recipients, except that there is no residence requirement. In addition to hospital and nursing home care, MAA beneficiaries are entitled to outpatient services up to 12 months from the date of discharge.

Beginning May 21, 1963, aged persons, who were otherwise qualified, became eligible to receive hospitalization benefits from the first day of their confinement, instead of the 31st day, if they utilized county or county-contract hospitals. The cost of the first 30 days of care is paid 50 percent from federal funds and 50 percent from county funds (AB 59, Chapter 49, Statutes of 1963). Previously, counties assumed the entire cost of care for the first 30 days of confinement in most instances.

Also effective May 21, 1963, otherwise eligible aged persons were entitled to MAA benefits from the day of admission into a nursing home if they were transferred from a county hospital. Other potential recipients of aid in noncounty hospitals and those admitted directly into a nursing home from their private homes, however, were not eligible until the first of the month following their admission or from the day their cost of care exceeded \$2,000 (AB 59, *op. cit.*, and SB 497, Chapter 2166, Statutes of 1963).

The enactment of these provisions, chiefly motivated by a desire to ease the cost burden of public assistance programs placed on property-owning taxpayers at the county level, proved to be highly inequitable. They differentiated between types of facilities, not on the basis of care provided or any other reasonable basis, but on the basis of giving fiscal advantage to the operators of some of the facilities, thus denying equal benefits to all facilities and all applicants. Additionally, these changes unjustifiably discriminated between applicants for aid, not on the basis of their need, but rather on the type of facility into which they had been admitted.

These changes, as noted, were made by AB 59. Other unforeseen inequities which developed will be discussed elsewhere in our report.

The State Department of Social Welfare is responsible for establishing rules and regulations governing the Medical Assistance for the Aged program. Late in 1961, by executive order, the Governor granted the Department of Finance authority to establish all medical care rates and fees. This order applies to medical care services offered by all state agencies. The purpose is to create uniform fee schedules and rates for identical services.

Prior to the implementation of the MAA program, the State Social Welfare Board had to determine how much should be paid for nursing home care. As a temporary expedient, the rates for nursing homes were frozen at the level of those actually charged by a home or group of homes as of October 1 of the previous year. These rates were a result of negotiations between the homes and the county welfare department under whose jurisdiction they fell. To provide a more substantial basis for future determination of rates, the State Department of Social Wel-

fare made a survey of costs in 80 nursing homes during the last three months of 1962. Based on this study, the Department of Finance then prepared a schedule of maximum allowances which became effective February 1, and mandatory May 1, 1963. This schedule established maximum allowances for basic and extensive care in northern counties (called the northern region) and in southern counties (southern region), costs being slightly higher for both basic and extensive care in the north. The new maximum allowances set an upper limit of \$272 for extensive care and \$219 for basic care. Provision was also made for higher rates in exceptional circumstances. Effective May 1, 1963, the Department of Finance provided for higher maximum allowances in homes with high wage costs or capital investments.

The nursing home industry and various counties, especially those in the bay area, raised strong objections to the maximum allowances prescribed by the Department of Finance. They complained that rates were too low to cover costs and provide adequate profit. Two specific points of dissatisfaction were that some nursing homes would be paid less than previously and that only a small percentage of the MAA nursing home patients would be eligible to receive extensive care.

Senate Concurrent Resolution No. 19, 1963 (see Appendix A, page 117) stated that State Department of Social Welfare regulations have the effect of limiting the exercise of free choice of facilities and that such regulations be amended. It requested the State Departments of Finance, Social Welfare, and Public Health to thoroughly study the maximum allowances in effect on May 1, 1963.

Another principal area of controversy involves the question of whether friends and/or relatives of nursing home recipients *can* supplement welfare payments to obtain a better quality of care without causing a corresponding reduction in the public contribution. In *Straus and Shea v. The State Social Welfare Board*, Superior Court Judge William F. Traverso concluded that the State Social Welfare Board was granted the authority by the Rattigan-Burton Act to set maximum allowances and that the term "maximum allowance" meant the total amount to be paid for care rather than the maximum amount of the state's participation, and supplementation was therefore an offset. Aside from the legal issue, the important philosophical or ideological issue of whether relatives and/or friends *should* be permitted to supplement established maximum rates still exists.

The degree of concern by the nursing home industry regarding rates and supplementation are brought into focus more sharply when it is realized that approximately 55 percent of all private nursing home beds in California are occupied by MAA recipients. Thus, the MAA program has a major influence on the whole industry.

Effective November 1, 1963, rates for both basic and extensive care were increased slightly to accommodate wage increases necessitated under increases in the national minimum wage (PL 87-30) and the north-south regional rates were abolished. Since then there have been no changes in the specific rates paid to nursing homes nor in the system under which such payments are made.

The Medical Assistance for the Aged program marks California's first attempt to provide a comprehensive statewide hospital care pro-

gram for the elderly. As mentioned, the primary group of aged persons for whom this program has been established are those over 65 who are able to support themselves, but unable to pay for major medical expenses. Thus, Old Age Security recipients, by federal law, are not eligible for MAA. However, only 23.8 percent of the MAA applicants for both hospital and nursing home care approved during the calendar year 1962 had not been either recipients or transferees from Old Age Security or other public assistance programs. Of the total amount expended for hospital care, between 90 and 95 percent was paid to county hospitals. The balance went to private and district hospitals.

Hospital rates paid under California's MAA program vary according to the type of hospital. Rates are established, as in the case of nursing home maximum allowances, with the final determination being made by the Department of Finance. There is a legal limit, however, to the maximum monthly average amount paid for care under the present program. It is currently \$380 (Section 4750, W. & I. Code).

There are four types of hospitals, two public and two private. Public hospitals consist of county and district hospitals, and private facilities are either voluntary or proprietary. Voluntary hospitals are nonprofit hospitals such as those constructed by community donations or operated by specific organizations such as churches. Proprietary hospitals are profitmaking institutions.

Temporary rates for both public and private hospitals were put into effect at the start of the MAA program in January 1962. County hospitals were initially reimbursed at their actual per diem hospital rates in effect as of October 1, 1961. This was referred to as the "frozen rate." Effective October 1, 1962, county hospitals were permitted to go onto a cost reimbursable system if they adhered to the cost accounting system devised by the California Hospital System. This permissive fee structure was made mandatory as of July 1, 1964.

Rates for district hospitals are negotiated individually with the welfare department of the county in which they are located. There are specific maximum all-inclusive per diem rates established by the State Department of Public Health and approved by the Department of Finance. Any negotiated per diem rates can not exceed these maximums. Ancillary services billed separately by district hospitals are discounted 25 percent because of certain tax and purchase advantages which apply to this category of public hospitals.

Private hospital rates, including those of both voluntary and proprietary types, are also negotiated on an individual hospital basis with county welfare departments within the above stated regional maximums. Ancillary services are billed separately but are not discounted.

Effective November 1, 1964, MAA rates being paid under a negotiated rate or under the regional maximum to all noncounty and county-contract hospitals were increased up to 15 percent. All of these hospitals, however, which were operating under a Crippled Children Services program schedule of rates were paid on the basis of the CCS schedule for their MAA patients.

The committee devoted two full days of public hearings to problems in the Medical Assistance to the Aged program, October 24, 1963, in San Francisco and December 12, 1963, in Los Angeles. Thirty-three persons testified or submitted statements. Additionally, the afternoon

of Thursday, December 10, 1964, was devoted to the specific subject of the payment of exceptional rates to nursing homes under MAA, at which four witnesses testified. The committee's detailed examination and recommendations bearing on this program begin on page 46 of this report.

All through the hearing on AB 59 the subject of Medical Assistance to the Aged appeared.

ASSEMBLY BILL 59—1963

The second route used by the committee to evaluate California's public assistance programs was to carefully weigh the provisions of AB 59—1963. This was one of the most complex measures to be passed by the Legislature in recent years.

In the first place, AB 59 was complex because it was dealing with public welfare. California's welfare programs, and state and federal statutes governing them, and the tripartite administrative responsibilities involving county, state, and federal governmental agencies, all combine to make welfare a normally intricate field. Secondly, AB 59 was not a normal bill sizewise. The chaptered version was 22 pages long and it changed state law by adding 40 new sections to the Welfare and Institutions Code, amending 16 sections, and repealing 27 sections. Thirdly, this was a complex measure because it attempted to neutralize the highly polarized opinions and desires of several divergent groups by giving each something it wanted. Fourthly, AB 59, like Topsy, just grew—and it grew rapidly. With dispatch and in an apparently extemporaneous fashion, what was at first a measure of relatively minor meaning became a momentous landmark in public welfare. Lastly, and perhaps most importantly, AB 59 was complex because of the confusion which surrounded, and still envelop, the reasons for its enactment and the way in which it was enacted.

At the committee's first public hearing on it in May 1964, in San Luis Obispo, John M. Wedemeyer, Director of the State Department of Social Welfare, said that AB 59 “. . . was primarily a means of providing assistance to the poor, and not a revenue measure geared to solve all the property tax problems of local government. . . .”² This view ignores the fact that AB 59 was explained, supported, and approved chiefly as an instrument of local tax relief. Although the bill received support from several groups, that given it by the staff of the County Supervisors Association of California was most important.³ The bill itself and many of the substantive provisions it contained, undoubtedly would not have been adopted without the supervisors association's strong pleadings. This support was motivated not by an evaluation of the policy changes proposed by the bill, but rather by the financial savings that supposedly would accrue to county governments. AB 59 was accepted by the supervisors association and, at its urging, by the Legislature because of its purported fiscal effect, not because of its public welfare policy changes.

The way in which AB 59 was advanced through the Legislature, and particularly the Senate, also explains the complexity of the measure's provisions and the flaws in many of them.

² *Transcript*, Vol. I, May 26, 1964, p. 4.

³ *Ibid.*, May 27, 1964, pp. 322–324.

As introduced, it was a minor measure, providing only that, to the extent permitted under federal law, aid recipients' earned income and interest on savings accounts would not be considered resources and would not be deducted from their grants. After a hearing devoted to a discussion of some technical amendments, the bill was reported out of the Assembly Committee on Social Welfare under the date of March 18, with an "amend and do pass as amended" recommendation.

These technical author's amendments were put into the bill on March 19, 1963, and the measure was sent from the Assembly floor to the Committee on Ways and Means. Here the author proposed amendments which removed everything from the bill that would have required a two-thirds vote of approval on the Assembly floor (54 "yes" votes) instead of a simple majority (41 "yes" votes). On April 2, the bill was favorably reported out of the Ways and Means Committee with these amendments incorporated.

On April 5, AB 59 was voted on by the Assembly and passed by a 48-to-4 rollcall vote.⁴

When the bill was received by the Senate, it was referred for policy consideration to the Senate Committee on Governmental Efficiency. At the first hearing before this committee, on April 10, the author proposed substantive amendments to the measure, and the committee ordered that the bill be reprinted and heard in its amended form the following week.

The author's amendments, inserted under date of April 11, added to AB 59:

1. The "presumptive eligibility" provisions and the change in the regular starting date of aid for all programs;
2. The 12-month exemption of regular limits on income and personal property for the Aid to the Blind;
3. The major elements of the Aid to the Disabled liberalizations; and
4. The basic elements of the Medical Assistance for the Aged package.

There was no public objection to the bill in its new form and, in fact, it was supported by the County Supervisors Association of California and contained the State Welfare Study Commission's recommendations regarding presumptive eligibility and the disabled program. Consequently, it was given a "do pass" recommendation and re-referred to the Senate Committee on Finance for consideration of its fiscal impact.

Just before its first hearing in the Senate Finance Committee, AB 59 was added to again by author's amendments on April 22. These amendments put into the bill the prohibition on personal property liens in the adult aid programs, required that general relief be paid at a level equal to Old Age Security to discharged MAA patients until they received their OAS assistance, and permitted blind recipients who seemed eligible for aid under the disabled program to receive, without transferring, attendant care.

At the hearing on April 25 before the Senate Finance Committee more amendments were proposed by the author. These were accepted by the committee after his explanation; the committee heard testimony

⁴ *Assembly Journal*, April 5, 1963, p. 1867.

supporting the amended bill from the supervisors association; the bill was given an "amend and do pass as amended" recommendation, and was sent to the Senate floor. On April 30, however, before the Senate had ordered the bill amended, a motion was made from the floor to re-refer the bill to the finance committee so that the latest amendments could be reviewed more thoroughly. The Senate so ordered.⁵

Upon receipt of the bill, the Senate Finance Committee appointed a subcommittee to review the fiscal details of the proposed amendments with AB 59's author, the Administrator of the Governor's Health and Welfare Agency, representatives of the County Supervisors Association of California, and the State Department of Social Welfare.

The compromises agreed upon by this group and the majority of the subcommittee members were those which were added into AB 59 on May 3. They provided the Aid to Families with Dependent Children program be extended to families where the breadwinner is unemployed or underemployed, and for some MAA changes, including repeal of the responsible relatives' provision.

The full finance committee held a hearing on the measure on May 7. During the course of this hearing, several amendments were proposed and adopted by the committee members. The only major change in the bill's provisions was the amendment which made the cost-of-living adjustment factor in the grants of the adult aid programs effective downward as well as upward. This and other changes which were technical were amended into the bill on May 8. The committee, after hearing the support offered by the supervisors association and the testimony of the bill's opponents (the California Taxpayers' Association and the County Taxpayers' League of Sacramento), gave it an "amend and do pass as amended" recommendation.

AB 59 was made a special order of business in the Senate for 4 p.m., May 15, 1963. The first action was taken on a series of amendments offered from the floor. By a 9-to-29 vote the Senate refused to adopt these changes which would have deleted the AFDC—U extension from the bill.⁶ Then on votes of 37 to 1 and 30 to 9, respectively, the Senate adopted the urgency clause and passed the bill.⁷

Assembly approval of the urgency clause and the Senate's amendments had to be obtained; therefore, AB 59 was returned to that House for further consideration. Because of the substantive nature of these amendments, an attempt was made on the Assembly Floor on May 20, to rerefer the bill to the Social Welfare Committee. This motion was defeated by a 48-to-24 vote.⁸ The urgency clause was approved by a 54-to-19 rollcall vote, and the Senate's amendments were concurred in by a 56-to-19 vote.⁹

Finally, the Governor, on May 21, signed AB 59 into law as Chapter 510 of the 1963 Statutes.

It is obvious that in following this course through the Legislature, the author of AB 59 successfully avoided a hearing before the policy committees of either House on the full provisions of the Bill.¹⁰

⁵ *Senate Journal*, April 30, 1963, p. 2113.

⁶ *Ibid.*, May 15, 1963, p. 2621.

⁷ *Ibid.*

⁸ *Assembly Journal*, May 20, 1963, p. 3647.

⁹ *Ibid.*, p. 3648.

¹⁰ The Senate's and, on the return of the bill for concurrence, the Assembly's tolerance of this lack of policy consideration lends added evidence that AB 59 was thought of as a tax relief rather than a public assistance measure.

Now the significance of the problems caused by AB 59's enactment and of the methods used in accomplishing such enactment are clear. It indicates the necessity of avoiding confusion over a measure's—any measure's—fiscal effects with its policy implications, and that there are inherent and inexorable disadvantages in significantly sidestepping the time-proven committee system.

STATE DEPARTMENT OF SOCIAL WELFARE BULLETIN NO. 629

The third approach used by this fact finding committee in evaluating California's public assistance programs has been to review the administration of them, beginning with the requirements imposed by the 1962 "services amendments" to the Social Security Act (PL 87-543). The federal mandates on the states have, in turn, been made requirements of California's county welfare departments by State Department of Social Welfare Bulletin No. 629.

The ensuing "services program" has had no direct relationship to AB 59 or the MAA program. Its effects, however, which have been significant on the administration of public welfare in California, have been intermeshed with the effects of the provisions of AB 59 and MAA, and in many instances it has been impossible to determine where one stops and the others begin.

The most noteworthy aspect of Bulletin No. 629 is that, in spite of the momentous changes to which it has committed the state and counties, it was considered and adopted with no consultation with, at a minimum, or prior approval of, at the optimum, the Legislature. It is true that the federal requirements regarding public welfare administration are mandatory on the states, currently only in part; eventually (July 1, 1967), in whole. Nevertheless, such significant changes in the staffing requirements and in program services should in the committee's judgment have been authorized by the Legislature either as a budgetary request or as a specific enabling bill before they had been translated from a mere federal requirement into formal state policies and mandates.

The committee conducted six days of public hearings on the combined subjects of AB 59 and Bulletin No. 629—May 26, 27, and 28, 1964 in San Luis Obispo and December 9, 10, and 11, 1964 in San Diego. A total of 126 individuals presented verbal testimony or submitted prepared statements. Among these were 55 of California's 58 counties. Because of the tremendous policy and fiscal changes implemented in AB 59 and Bulletin No. 629 and because of wide-spread county dissatisfaction with some of these changes, the committee sent out a questionnaire to all boards of supervisors prior to its May hearings (see Appendix B, page 118). All but three county boards responded and the data submitted has been of invaluable assistance to us in our task.

In view of the vast scope of material considered by the committee and the large number of recommendations submitted to us, this report will be organized on a program-by-program basis, and appropriate cross references will be made to subject matters which cut across program demarcations. Also, only those recommendations and suggestions will

be discussed which were either proposed by a significant number of witnesses or which were of significant merit or feasibility. A summary of all recommendations made to the committee, keyed to witnesses and transcript page numbers, however, appears in Appendix C, beginning on page 119.

AID TO FAMILIES WITH DEPENDENT CHILDREN

BACKGROUND

Before the passage of AB 59, a needy family was eligible for Aid to Families with Dependent Children (AFDC) when the loss of parental support or care was caused by death, physical or mental incapacity, or continued absence from the home because of divorce, desertion, separation, incarceration, or deportation. These cases were, and are, known as Family Group (AFDC-FG) cases. One of the most important changes made by AB 59 was to extend AFDC to families whose need was caused by the unemployment or underemployment of the parents (AFDC-U). The AFDC-U provisions went into effect February 1, 1964, and since that date the following number of cases and individuals on a monthly basis has been assisted ¹¹:

February	1964—	6,517 cases with unknown persons
March	1964—	10,262 cases with unknown persons
April	1964—	12,411 cases with 72,402 persons
May	1964—	12,056 cases with 70,358 persons
June	1964—	9,418 cases with 55,359 persons
July	1964—	8,693 cases with 50,387 persons
August	1964—	8,213 cases with 47,974 persons
September	1964—	7,621 cases with 44,313 persons
October	1964—	7,910 cases with 45,851 persons
November	1964—	9,318 cases with 53,883 persons
December	1964—	12,702 cases with 73,868 persons
January	1965—	16,115 cases with 92,299 persons
February	1965—	17,777 cases with 102,532 persons

Total aid costs, including county supplementation, for AFDC-U for the first 11 months it was in effect (February through December 1964) have run to \$22,395,438, with \$19,315,093 from the federal government, \$7,969,675 from the state, and \$4,020,770 from the counties. Aid costs for the 1963-64 fiscal year (actually only five months because of the February 1 effective date), with the State Department of Social Welfare's previous estimates shown in brackets, ran to a total \$11,031,923 (\$18,564,700), with the federal share at \$4,953,578 (\$10,332,700), state share \$4,045,116 (\$5,071,200), and counties share \$2,033,229 (\$3,160,800).¹² The department's cost estimates were considerably over actual expenditures for the first five months principally because they had overestimated the number of cases which would apply and receive aid. This overestimate occurred chiefly because of the very mild winter experienced during 1963-64 which permitted higher employment than is normally possible in such industries as logging, farm work, and construction.

Concomitant with the initiation of the AFDC-U program, a tremendous increase took place in the regular AFDC-FG program. For ex-

¹¹ Statistical Summary, PA 2-53 through 65, Bureau of Research and Statistics, California Department of Social Welfare.

¹² *Ibid.*, PA 3-63, and letter of July 12, 1963 to Senator James A. Cobey, Chairman, Senate Fact Finding Committee on Labor and Welfare, from Tom Moore, Assistant to the Director, California Department of Social Welfare, enclosing cost estimates on AB 59 as corrected July 1, 1963.

ample, in February 1962, about 87,900 cases involving 318,300 persons were receiving AFDC-FG. In February 1963, 88,200 cases with 338,700 persons were on aid. In February 1964, however, 101,000 cases with 389,300 persons were receiving aid, and in February 1965, 116,600 cases involving 454,100 parents and children were getting AFDC-FG.¹³ This represents an increase of 15.4 percent in cases and an increase of 16.7 percent in individuals between February 1964 and the same month in 1965, and an increase of 32.7 percent in cases and 42.5 percent in individual family group recipients between February 1962 and February 1965.

The state's employment and unemployment figures for the months of February 1962 through 1965 show a trend, however, of increasing employment and decreasing unemployment. During the four years from February 1962 through February 1965, civilian employment in California rose by 611,000, an increase of 10.2 percent. Unemployment dropped 7,000, a decrease of 1.6 percent. The employment rate, as a percentage of the total civilian labor force, went from 7.6 percent in February 1962, to 6.9 percent in the same month in 1965. Moreover, these have been steady, nonfluctuating trends for the last four Februaries. Total civilian employment has continued to rise and the total number, and the percent, of unemployment has steadily fallen.¹⁴

The sizeable increases in the AFDC-FG caseload, particularly during the period when the AFDC-U program became operative and the general employment situation on the upturn, do not seem particularly logical. However, the State Department of Social Welfare argues that periods of sustained high (above 4 percent) unemployment causes the AFDC-FG caseload to increase. In fact, they have submitted data which would indicate that the AFDC-FG caseload has, over the long-run, equaled about 24 percent of the number of unemployed (see Figure 1).¹⁵ In the AFDC-FG program, of course, a high sustained level of unemployment would affect not only a mother's ability to obtain employment or stay employed, but it would also directly affect the absent father's ability to support his family. In both instances, according to the department, the only source of assistance to many persons is public welfare.¹⁶ Also it is emphasized, and apparently correctly, the AFDC-FG recipient (adult head of family) is, because of lack of education, job skills, and vocational training, together with other causes such as racial prejudice, low motivation, and mental health problems, the last to be hired and the first to be fired. Finally, it is surmised, the widespread publicity accompanying the passage of AB 59, particularly the AFDC-U program, together with the active "recruitment" of prospective recipients by such groups as the Community Service Organization, the Citizens for Farm Labor, and some labor unions, caused the extraordinarily large number of requests for aid.

One specific factor is not generally mentioned for the unusual and completely unexpected increase in AFDC-FG cases. This is the requirement that when unemployed persons apply for aid and are determined eligible, their need be ascribed to anything other than unemployment

Department of Social Welfare

although such unemployment may be the instigating cause of dependency or the reason, in the family's mind, why application was made.¹⁷ It is, thus, highly probable that a substantial number of cases which eventually have shown up as being aided on the AFDC-FG program, and have helped swell this category so unexpectedly, had initially sought aid on the basis of their unemployment! One of the implications of these requirements is, of course, that of understating the true costs and caseload size of the new program (AFDC-U). Also distorted by these regulations is the need for assistance caused by unemployment and underemployment.

On the one hand, although its admitted costs have been great, its actual costs even greater, and its eventual costs astronomical, very little support has been lent to the cause of repealing the AFDC-U program. Certainly it has not deterred fathers from deserting their families—one of the "reasons" given for its enactment—as the burgeoning AFDC-FG caseload amply demonstrates. On the other hand, it has raised serious difficulties relative to problems which should be handled through minimum wage and unemployment insurance,¹⁸ undue administrative complexities,¹⁹ maligners,²⁰ the government's role in labor disputes,²¹ and the inadequacy in many instances of other child aid benefits.²²

The granting of aid, however, because of the unemployment of basically employable persons is a proper acknowledgment that we no longer live in a society and an economy where anyone who wants to work can always obtain employment or stay employed. AFDC-U also is an acknowledged improvement on the abysmally low aid standards of some county General Relief programs, the only source of public assistance before its enactment. Finally, AFDC-U has not only helped needy families, but, to some extent, it has assisted many counties in replacing tax dollars raised from property taxes with state and federal moneys (generally accruing from sales, income, and business taxes).

In summary, then, it is this committee's finding that the granting of aid on the basis of the unemployment of the family's breadwinner was a proper and generally desirable extension of the AFDC program. Although there are many aspects of AFDC-U that need improvement and refinement, principally because of the lack of policy consideration when AB 59 was before the Legislature, it is our belief that these can be made within the context of the existing statutes and we, therefore, recommend no action by the Legislature to repeal the program.

UNEMPLOYMENT INSURANCE FOR FARM WORKERS

There were during 1964 about 93,500 year-round hired farm workers and a maximum of 160,800 seasonally hired domestic farm workers

¹⁷ "Deprivation is to be based on unemployment only when no other reason applies." SDSW Regulation No. C-160. Also see *Handbook of Public Assistance Administration*, U.S. Department of Health, Education, and Welfare, Part IV, Sec. 3424.21.

¹⁸ See pages 25-30.

¹⁹ See pages 129-130.

²⁰ See pages 34-36.

²¹ See page 35.

²² See page 120.

in California.²³ Few, if any, of these hired employees are covered by the economic protection afforded by unemployment insurance and they constitute the second largest noncovered employee group in California, exceeded only by a larger number of noncovered state and local governmental employees.²⁴ Yet farm workers experience extraordinary rates of unemployment and underemployment which, combined with their generally low wage rates (averaging only \$1.36 per hour²⁵), have made them prime candidates for public assistance.²⁶

Before the passage of AB 59, General Relief (or general assistance) was the principal source of economic aid to unemployed farm workers. Unless the worker was 65 years of age or older, blind or otherwise permanently disabled, or left home and did not support his family, he (or his family in the last case) was not qualified to receive aid from the categorical assistance programs (*i.e.*, Old Age Security, Aid to the Blind, Aid to the Totally Disabled, or Aid to Families with Dependent Children). General Relief, however, as a significant source of assistance, was full of practical limitations. Many counties required one year's county residence before they would grant GR benefits. Likewise, it was common for extreme limits to be placed upon the length of time able-bodied, unemployed men and their families could receive aid. Finally, the amount of the General Relief grant in California's 48 nonurban counties²⁷ was usually inadequate to meet even the most basic needs of the unemployed workers and their families. In April 1962, General Relief was granted to 4,011 family cases and 3,086 one-person cases in these 48 counties. The average aid payment for that month was \$40.32 *per family* and \$39.44 *per one-person case*. Only 27 percent of the aid, furthermore, was in cash; the balance was given in-kind.²⁸

The yearly farm work cycle of many of these people, comprised of two or three months of unrelenting work opportunity, six months of underemployment, and three to four months of unemployment, together with their inadequate earnings and submarginal assistance through General Relief, has extracted a costly toll:

"Mr. Rible: We are finding among these unemployed families (on AFDC-U), a rather substantial group, 20 or possibly 30 families (out of a monthly average of 200 AFDC-U cases during February, March, and April) who are not primarily unemployed but unemployable. They are real bottom of the barrel people. They have been worn down you might say for years and years through malnutrition and poor housing to the extent that they are in poor shape to work for anybody. They are badly in need of (physical) rehabilitation. . . .

"Senator Weingand: Mr. Rible, were those 20 or 30 families on relief in the county before this program developed?

²³ *Economic Report of the Governor*, March 8, 1965, p. 80.

²⁴ *California's Farm Labor Problems, Part II*, report of the Senate Fact Finding Committee on Labor and Welfare, January 28, 1963, p. 18.

²⁵ *Farm Labor Report*, April 9, 1965, U.S. Department of Agriculture, composite hourly wage rate paid in California as of April 1, 1965.

²⁶ *California's Farm Labor Problems, Part II, op. cit.*, pp. 18-19.

²⁷ Alameda, Contra Costa, Los Angeles, Marin, Orange, Sacramento, San Diego, San Francisco, San Mateo, and Santa Clara Counties are regarded here as urban counties and are excluded from consideration.

²⁸ *Statistical Summary*, PA 3-21, *op. cit.*

"Mr. Rible: Some years they have been on the General Relief program, the emergency winter relief we have had for many years.

"Senator Weingand: Am I to infer that the General Relief program in Kings County was not sufficient to keep these people on a minimal level, that they were not only deprived of adequate housing, but also were not properly fed?

"Mr. Rible: I think as far as the food component during the winter months on our General Relief program, this probably has been more generous in terms of calories of food and variety than you would find in their diet that they have had during their underemployment period. Many of these families when they have been off our General Relief program—we only give General Relief to employable families during winter months when there is no cotton and other activities . . . during the eight months of the year that they have been employed in agriculture, they haven't been properly fed because they have been underemployed." ²⁹

Under these circumstances, it is not surprising that approximately one-quarter of the AFDC-U recipients indicated that their usual occupation is farm work.³⁰ Some of the problems referred to above will be heightened if not completely resolved by the inclusion of unemployed as well as underemployed farm laborers on the higher relief standards of the AFDC program. But this inclusion also raises a problem which was obviated by the usual General Relief program: Are levels of assistance higher in AFDC-U than the level of income a person can reasonably expect to earn by doing farm work? If so, will a significant number of potential farm workers be tempted to try to stay on aid even though such work is available?

In brief, the answer to both questions would appear to be "yes." A study done for the State Social Welfare Board by Earl Raab, Consultant for the Survey Research Center, University of California at Berkeley, indicates that 35 percent of the AFDC-U families could "earn" more on aid than they could gross doing farm work even when more than one member of the family is working. If only one family member worked, 60 percent of AFDC-U families would have higher "earnings" from aid than from actual employment.³¹ Another study, this authored by Fred H. Schmidt, research specialist at the Institute of Industrial Relations, University of California at Los Angeles, found that nearly half of those interviewed who were recipients of public assistance said they would not voluntarily do farm work.³² Schmidt points out that:

"Without trying to resolve at this point whether this is a situation where welfare payments are too high or farm wages too low, it would appear that, if the description of the situation is accurate, the person on welfare realistically cannot be criticized for

²⁹ *Transcript*, Vol. I, May 28, 1964, Henry Rible, Director, Kings County Welfare Department, pp. 467-70, parenthetical material added.

³⁰ *Ibid.*, pp. 48-49.

³¹ *First Annual Report*, *op. cit.*, p. 12.

³² *After the Bracero*, "An Inquiry into the Problems of Farm Labor Recruitment," by Fred H. Schmidt, U.C.L.A., October 1964, p. 72.

the choice he makes. It is largely an economic choice made between the possibilities." ³³

The point at hand is whether the situation described above is found in other industries and if it is not, what should be done to tackle the problem of farm wage rates (or earnings) *v.* welfare benefits which Schmidt so conveniently sidesteps.

According to Raab, 98 percent of the skilled blue-collar employees now on AFDC-U, 100 percent of the semiskilled operatives, 60 percent of the service workers, and 90 percent of the unskilled (nonfarm) laborers on AFDC-U received less in aid than they could receive in earnings from their usual occupations. The only occupational exception, then, to the apparent economic disadvantage in receiving AFDC-U is that of farm work. ³⁴

There is no debate that the entitlement of farm workers to unemployment insurance benefits would not necessarily reduce their number on AFDC-U. ³⁵ It would generally, however, reduce the amount of General Fund expenditures ³⁶ for such cases as outside income, such as U.I. benefits, is deducted from the welfare grant unless the family has recognized special needs. In those instances where special needs do exist, the addition of unemployment insurance benefits to the welfare grant would provide a more adequate level of living to the family. Additionally, workers usually employed in other industries covered by unemployment insurance might, when unemployed, not be so reluctant to do agricultural work because, as they do now, they would not jeopardize their coverage under U.I. if agriculture were also a covered industry. Again, assistance costs could be reduced. From a public assistance viewpoint, then, the extension of unemployment insurance benefits to agricultural employment could have some desirable effects.

Undesirable effects, however, could also arise from such an extension. Many unskilled or partially disabled persons, unemployable in other labor markets, can and do earn part if not all of their living in agriculture. Their earnings in farm work are low principally because their productivity is low. They are doing farm work because they are "poor" rather than being made "poor" because they are farm workers. The continued hiring of such marginally productive workers even at piece rates would be increasingly difficult, and probably impossible, if farm employers were taxed for unemployment insurance for them. Denied the opportunity of even partial self-support, these persons would become fully dependent upon public assistance, swelling even more the burgeoning welfare rolls.

From the farm labor market point of view ³⁷ the inclusion of agricultural employment under U.I. could also have several advantages as well as disadvantages. As pointed out above, a greater flow of labor would

³³ *Ibid.*, p. 55.

³⁴ *First Annual Report, op. cit.*, p. 11.

³⁵ An unemployed person receiving U.I. is not disqualified from receiving AFDC-U.

³⁶ These General Fund expenditures for welfare grants are actually another subsidy to farm employers. Such expenditures, in part, are in lieu of unemployment insurance benefits, benefits which are financed by an employer tax.

³⁷ *California's Farm Labor Problems, Part II, op. cit.*, pp. 17-21.

result between agriculture and covered industries if credits toward U.I. were earnable in farm work. Further, the higher annual "earnings" which would result from the addition of unemployment insurance benefits to earned income would attract to and retain in the farm labor market a more competent, qualified, and stable work force. And thirdly, the payment of unemployment insurance payroll tax by farm employers would be another incentive for them to minimize as much as possible their demands for seasonal labor through such means as increased mechanization and crop diversification, and utilize more efficiently the seasonal labor they must have. From this perspective, also, the extension of unemployment insurance would seem to have some beneficial effects.

There would also be a concomitant disadvantage if U.I. coverage were granted to farm wage workers. A significant proportion of those who toil in the fields are "quota workers." They establish earning quotas for themselves for the month, the week, and even the day. When the quota is reached, in spite of the need for their services or the potential for additional earnings, they quit. It is, therefore, highly probable that the receipt of U.I. benefits by these workers would result in their working less and a diminishing of the farm labor supply would occur.

From the agricultural industry's viewpoint, the rationalization of demands for labor and the stabilization of the labor supply that could result from the coverage under unemployment insurance of work on the farm would be a great asset. Liabilities of a significant nature arise, however, when one examines the ability of agriculture to successfully bear the costs of such coverage. In fact, it is highly likely that the lack of any opposition from the agricultural interests to the creation of the AFDC-U program arose from this fear of the costs of unemployment insurance. Under the AFDC-U program, the farm workers are provided for during the period when no work is available at no direct cost to the employer.³⁸ The State Department of Employment has estimated that the payroll tax on farm employers for unemployment insurance would amount to \$17,600,000 a year.³⁹ Agriculture's ability to handle such increased costs is severely limited by the "cost-price squeeze" of which it is a victim; that is, the input costs which agriculture has to pay, and over which it exercises little control, have increased much more rapidly than the prices farm products bring, and over which it also exercises little control.⁴⁰

Furthermore, California's farmers market a great volume of their crops in the large population centers of the East and Middle West where they are already at a competitive disadvantage with growers from lower labor-cost areas. The costs of unemployment insurance enacted at the state level would merely compound this disadvantage.

Lastly, from the generalized industry's point of view, unemployment insurance for farm workers would be a mixed economic blessing.

³⁸ Other, that is, than necessary increases in sales taxes, property taxes, income taxes, *et al.*, which are borne not by the employer alone, but by the total community.

³⁹ *After the Bracero, op. cit.* AB 2926—1965 proposes extending unemployment insurance coverage to farm workers who had earnings of at least \$50 in each of three calendar quarters of the base period. Additionally the contribution tax required of all employers would be increased from 0.5 percent to 1.1 percent. Benefits to farm workers would reach about \$48,000,000 a year on a full-year basis with farm employers paying about \$24,000,000 as estimated by the California Department of Employment in Report 439 C No. 6.

⁴⁰ *California's Farm Labor Problems, Part I*, report of the Senate Fact Finding Committee on Labor and Welfare, June 15, 1961, pp. 33-40.

It is estimated that employers in other industries would have to make up a \$48.8 million deficit between benefits payable to farm workers (\$66.0 million per year) and the yield of the payroll tax paid by farm employers (\$17.6 million per annum).⁴¹ This is a significant amount to ask other industries to bear, and their opposition to such a request (or requirement) would be understandable, at least on the surface of the argument. It would be expected, however, that this amount would decrease as agriculture lessens its seasonal demands for labor through increased mechanization, crop diversification, and efficiency in labor utilization. Furthermore, such a subsidy by all of industry to a specific industry and its employees is not unusual. Almost one of every five (19.5 percent) industrial accounts in California's unemployment compensation system was rated in 1964 as negative reserve; that is, they were exactly in the same position as agriculture would be subsidized by the positive reserve industries. These negative reserve industries include motion picture production, meat products, public warehousing, logging camps and logging contractors, and canning and preserving fruits and vegetables.⁴²

Such a subsidy to agriculture, however, could have a positive effect not only on the industries providing it, but also on the economy of the whole state.

"It has been estimated that for each person employed on the farm in California, at least 2.61 jobs are created in industries such as fertilizer, agricultural equipment, container manufacturing, transportation, and wholesale trade industries, retailers and suppliers selling to farmers, and the financial institutions that supply farmers with credit."⁴³

To a significant degree, the economic health of agriculture in California is a key indicator of and an important causative factor on the economic health of the state as a whole. Conversely, the supply and the adequacy of domestic farm workers is a chief element in agriculture's health, particularly since the supply of foreign farm labor has been dried up. Thus, to the extent to which unemployment insurance beneficially influences domestic farm labor in the long run, it would also benefit the whole agricultural industry and that, in turn, would be of salutary effect on the entire state, and the degree of adverse effect to agriculture would also be immediately felt by the state's entire economy.

Because there would appear to be no clear-cut advantage to be gained by the extension at the state level of unemployment insurance benefits to farm workers from the points of view of public assistance, the farm labor market, the agricultural economy, or the state's economy, and because of its many unresolved technical and fiscal problems, this committee cannot recommend such an extension at this time.

MAXIMUM AGE OF CHILDREN RECEIVING AID

California's AFDC program currently provides that aid can be granted to children up to their 18th birthday. In order to be eligible for assistance, however, a needy youth between 16 and 18 years of age must:

- (a) Be regularly attending school or a training program; or
- (b) Be physically or mentally disabled; or
- (c) Be employed and contributing to the family or applying his earnings to an approved plan for his future educational or vocational needs.⁴⁴

Under these provisions there are great pressures from many families of the 18-year-olds who have just become ineligible for aid to earn whatever they can, whether they are thereby forced to drop out of school or job training or not. This is particularly a danger when the youngster involved is the youngest child and the entire family unit is made ineligible for assistance because of his age. Furthermore, many families on aid do not particularly value education and except for the requirement that now makes the receipt of assistance for the 16- and 17-year-olds contingent upon their regular school attendance, even this level of education would be sacrificed to parental pressures to seek employment. In these families the chances of continuing schooling past the 18th birthday and beyond the period for which aid can now be paid are nil.

In 1964, the Social Security Act was amended to provide federal sharing in the aid and administration costs of furnishing assistance to youths from 18 up to 21 years.⁴⁵ If California were to take advantage of this liberalized federal provision, we would have at our disposal a major tool with which to break the circle of poverty that has trapped many AFDC families for generations. By enabling and encouraging these young people to finish their schooling or job training, we would be giving them that much more of an opportunity to lead productive, normal lives. And we would be decreasing the probability that in the future they would have to apply for public welfare because of their lack of education or job skills.

The State Department of Social Welfare in a bill estimate has indicated the total aid costs of extending the age under which children can remain eligible for AFDC from 18 to 21 years would be about \$1,248,000 on a full year basis. \$691,000 would be paid by the federal government, \$390,000 by the state, and \$167,000 by the counties. An estimated 1,635 children in families already being aided would qualify for this additional assistance as well as 570 families with one child, which under present law would be discontinued, would continue to be eligible.

This committee feels quite strongly that generally services and assistance to persons already receiving public welfare must be vastly improved before additional persons are brought into these programs. Nevertheless, extending aid to the 18-, 19-, and 20-year-olds who are in school or job training would appear to have a most desirable effect

⁴⁴ Welfare and Institutions Code Sections 1500 and 1500.2.

⁴⁵ PL 88-641.

on the future of these youths. Furthermore, there seems little doubt that by expending the additional amount of funds required to implement this preventative extension now, society will probably be saved from having to expend larger sums for curative purposes.

We recommend, therefore that California's statutes be amended to provide that aid be paid to families in behalf of children up to 21 years of age, instead of 18, if such children are regularly attending school or are enrolled in and attending job training programs (see SB 785, page 65).

CUTOFF DATE FOR AFDC-U

The federal law which established the Aid to Families with Dependent Children-Unemployed Parents program, and which authorizes federal sharing in the grant and administrative costs of such state programs, now contains an effective date through June 30, 1967.⁴⁶ It is not likely that the Congress will let this "unemployed parent" program expire. If it should, however, such cases would continue to remain eligible for AFDC under California's laws with aid and administrative costs borne entirely by state and county funds. We would lose federal sharing in the aid costs, approximately 46 percent of the total, which, based on the February 1965 caseload in AFDC-U, runs about \$1,900,000 per month. California would also lose what is currently a 69 percent federal subvention of state and county administrative expenses.

Because of the fiscal impact of losing such federal moneys, state law must provide a safety valve so that AFDC would not be paid on the basis of the unemployment of a parent after July 1, 1967, unless the federal law permitting federal financial participation in the payment of such aid is extended. It would be desirable to continue unabated our unemployed parent program if the federal program is extended. If the federal program is not extended, however, then California's AFDC-U program should automatically terminate and the Legislature should have the opportunity to consider whether to reinitiate it using only state and county funds.

It is therefore recommended that aid on the basis of the unemployment of a parent should not be paid in California after July 1, 1967, unless the federal law is extended so as to permit federal financial participation in such aid (see SB 786, page 67).

LEGISLATIVE INTENT RE: AFDC-U

By specific requirements and by inference, the Welfare and Institutions Code already expresses the intent of the Legislature that AFDC shall be granted to unemployed parents and their families only when they have exhausted other sources of assistance. For instance, rather rigorous limits are placed on the maximum amount of personal property a family may own in order to be qualified for aid—\$600.⁴⁷ A family is expected to utilize its savings before it comes to the welfare department for help. An unemployed parent on aid is required to ac-

⁴⁶ 42 USCA 606 (a) (2).

⁴⁷ Welfare and Institutions Code Section 1521.

cept any "part-time, full-time, temporary or permanent employment without reference to his customary occupation or skill."⁴⁸ The Legislature has also directed that the AFDC program be administered in an "effective, humane, and economical" way.⁴⁹ The responsibility of the parents to support their families is also detailed in the law.⁵⁰

Such expressions of legislative intent are, however, scattered throughout the AFDC statutory provisions. They need to be consolidated and concisely expressed regarding AFDC-U as unequivocal guides to the program's administrators and expressed mandates for the courts to follow.

It is recommended that the legislative intent should specify that Aid to Families with Dependent Children-Unemployed is to assist children of unemployed parents who are unable to meet their obligation to support, who cannot procure any employment, and who have no other source of aid (see SB 787, page 68).

SEEKING EMPLOYMENT

Currently there are neither legal nor administrative requirements that an unemployed or underemployed parent look for work before applying for public welfare. Just as society has a responsibility to assist families who are in need because of unemployment, the parent has the responsibility to actively seek work before asking society to support him and his family. An equitable means must be established to insure the public that the unemployed and underemployed parent is meeting this responsibility.

Further, the same criteria must be established for seeking work before an unemployed parent and his family are granted aid as is now used after assistance has been given; that is, the parent must be considered a suitable candidate for any job he is physically and mentally capable of doing without reference to his normal occupation or acquired skills.

Lastly, once on aid, the unemployed or underemployed parent should be required to continue to actively seek employment. The existing statutory provision that he "seek and . . . keep himself currently available for employment" has been undercut by the rulings of the State Department of Social Welfare.⁵¹ The principal means of securing employment available to all communities and all persons is the employment service and farm labor offices maintained by the California State Department of Employment. Regulation C-172 (2) adopted by the State Department of Social Welfare requires:

"Registering with the California State Employment Service and Farm Labor Office, when indicated, at the time of application for aid and keeping the registration current while in receipt of aid."

This regulation was interpreted by the state department in Circular Letter No. 1546 (AFDC) issued under date of November 12, 1964.

⁴⁸ *Ibid.*, Section 1523.7.

⁴⁹ *Ibid.*, Section 1503.

⁵⁰ *Ibid.*, Sections 1570, *et seq.*

⁵¹ *Ibid.*, Section 1523.7.

"A person should not be expected to report to CSES (California State Employment Service) more frequently than CSES requires in order to keep his registration current."

The Department of Employment requires a person to check in at their offices only once every 8 to 11 weeks to keep his registration current, depending upon when during the month initial registration took place. The State Welfare Department requires as little from the unemployed parent as possible. It is equally obvious that requiring such a parent to physically go to the employment department once every two months cannot be considered requiring a very diligent search for work on his part.

Therefore it is recommended that an applicant for AFDC—U be required to obtain certificates from the local employment service office and the farm labor office of the State Department of Employment, issued within the previous week, to be submitted simultaneously with his application for aid. These certificates should be issued on the basis that the applicant has registered for employment and, considering only his physical and mental capacity, that no part- or full-time work exists to which he could be referred. The AFDC—U recipient should also be required to obtain an identical recertification semimonthly (see SB 787, page 68).

PERIOD OF ELIGIBILITY FOR ASSISTANCE

Under existing statutory provisions, AFDC must be paid "at periods most nearly consistent with prevailing patterns for wages in local industry."⁵² Under this requirement aid is usually paid semimonthly. However, another requirement of the code stipulates "If on the first day of the month a child is eligible for aid, aid for the entire month shall be paid."⁵³ These two provisions are, therefore, in conflict.

It is recommended that the period for which eligibility is established should be the same as the period prescribed for the payment or aid (see SB 787, page 68).

VOLUNTARY QUILTS

The State Department of Social Welfare holds that, for purposes of eligibility for the Aid to Families with Dependent Children-Unemployed program, the reasons for a person's unemployment are immaterial. The fact that need exists, regardless of how need was caused, is the only valid criterion, according to the department. As the statutes are currently silent on this subject, two specific areas are open to exploitation by applicants who, in spite of the department's position, should not be eligible for assistance. The first area is that of the person who voluntarily terminates his employment and then applies for AFDC-U for himself and his family on the basis of his unemployment. That this is a practical, rather than a theoretical, problem is attested to in the department's bill analysis which estimates during the period September 1965 through June 1966, 2,000 AFDC—U cases will be

⁵² *Ibid.*, Section 1552.4.

⁵³ *Ibid.*, Section 1552.3.

come eligible for aid because the breadwinner voluntarily left his job. Yet there is no method prescribed by law or regulations to either discourage this practice or to temporarily deny aid to those cases involving even the most flagrant abuses.

Therefore, it is recommended that if a parent voluntarily terminates his employment, he should not be eligible for AFDC—U for three months following such termination (see SB 738, page 70).

STRIKE BENEFITS

The second problem area caused by the law's and regulations' silence on the reasons for unemployment is that of loss of work caused by labor disputes. The payment of aid in such cases really constitutes "strike benefits," and it is clearly evident that the receipt of public assistance strengthens the economic position of one of the parties engaged in such a dispute. It is equally evident that through the payment of this aid government—county, state, and federal—and society—the public—vacate their historic and necessary position of neutrality in labor disputes.

Currently in the AFDC—U program, government is forbidden from forcing unemployed parents to be strikebreakers or scab labor. The statutes specify that an unemployed parent has good cause for refusing a job which "is available because of a bona fide labor dispute, the existence of which has been established by the State Department of Employment."⁵⁴ This provision protects the striking employees in a dispute from "government-furnished" strikebreakers. There is now, however, no counterbalancing provision protecting the employer in a dispute from government-provided strike benefits strengthening the employees' bargaining position.

It is recommended that California statutes be amended to provide that aid should not be granted if the parent is unemployed because of a bona fide labor dispute (see SB 788, page 70).

REFUSAL TO ACCEPT EMPLOYMENT WITHOUT GOOD CAUSE

Existing law already provides that when an unemployed parent who is receiving Aid to Families with Dependent Children on the basis of his unemployment refuses or fails to accept a bona fide offer of employment without good cause, that parent and his family *shall* be denied aid.⁵⁵ Exactly 1,100 AFDC—U cases were discontinued assistance because of the failure of the breadwinner to accept employment during the first 11 months of the program's operation in California.⁵⁶

This is an appropriate and a just requirement in many cases. In some instances, however, the enforcement of this statutory mandate causes real hardship to the family, especially the children. These children become victims, as it were, of their parents' lack of responsibility—their

⁵⁴ *Ibid.*, Section 1523.7(b)(2).

⁵⁵ *Ibid.*, Section 1523.7(b). For statutory definition of "good cause" see W. & I.C. Sec. 1523.7(b)(1)–(4).

⁵⁶ "Unemployed-Parent Segment of Aid to Families with Dependent Children," February 1964 through January 1965, Division of Program Statistics and Analysis, Bureau of Family Services, U.S. Department of Health, Education, and Welfare.

parents' willingness to let the public support their families rather than doing it themselves when they can. Welfare departments, however, are authorized to follow no alternative course of action.

Therefore, it is recommended that an unemployed parent, whose children are receiving AFDC-U, should be presumed to have failed to support his children for purposes of prosecution under Penal Code Section 270 ("failure to provide") if he refuses without good cause to accept an offer of employment (see SB 789, page 72).

SUPERVISORS OF JOB TRAINING AND WORK EXPERIENCE PROJECTS

A number of specific problems have arisen around the job training and work experience projects county welfare departments are required, when feasible, to establish for adult recipients of Aid to Families with Dependent Children. One of these is the supervision of such projects.

Currently, supervisors of specific projects are normally supplied and paid by the governmental agency which, in cooperation with the county welfare department, has established the project. Such an agency may be the county public works department, a school district, or a city park department. Occasionally such agencies which could cooperate are hesitant to establish projects for AFDC parents because of the supervisory costs involved.

County welfare departments, therefore, should be authorized to pay for AFDC work or training project supervisors who are employed by other governmental agencies (see SB 790, page 73).

SPECIAL NEEDS CAUSED BY WORK PROJECT PARTICIPATION

Pursuant to federal and state regulations,⁵⁷ a \$25 a month special needs allowance is paid in California to AFDC parents who are participating in job training and work experience projects. This "grooming fee," as it is often called, is paid to cover the parent's extra needs for travel, clothes, special tools, etc., caused by his participation in the project. If the family is not receiving the maximum AFDC grant, the costs of the grooming fee is shared by state and county governments in the same proportion as the regular grant (*i.e.*, 67.5 percent state and 32.5 percent county). However, when the family is receiving the maximum grant, the \$25 must be paid entirely from county funds.

This situation, of course, is inequitable to the counties. Federal sharing in these costs is not possible because the AFDC grant in California is far in excess of the maximum participating base established for such federal sharing. The state, however, could share in the grooming fee, at a cost estimated in a bill analysis by the State Department of Social Welfare to be about \$383,000 a year. Since these county costs are directly caused by federal and state requirements, it seems justified, on the basis of equity, that the state, at least, pay its own fair share.

⁵⁷ 42 USCA 409(1)(D) and C-204(3)(b), AFDC Manual, California Department of Social Welfare.

It is recommended that the state should pay one-half of special needs, not to exceed \$12.50 monthly, of the recipient who is otherwise receiving the maximum grant when such needs are caused by his participation in a work or training project (see SB 790, page 73).

UNAUTHORIZED ABSENCES FROM JOB TRAINING PROJECTS

California's AFDC statutes currently provide that a parent, and his family, shall be denied aid if he willfully fails to report to a job training or work experience project.⁵⁸ In AFDC-U in California from February 1964 through January 1965, nearly 1,000 families were denied assistance because a parent refused an assignment or failed to report to such a project.⁵⁹

In some instances, the use of this full penalty is more than justified. In other cases, however, complete denial of aid is not warranted and is not in the best interests of the family or of the community. Yet no other deterrent to unauthorized absences exists.

The committee recommends, therefore, that AFDC aid grants be reduced in an amount equal to the assigned dollar value of work missed because of unauthorized absences from work or job training projects (see SB 790, page 73).

WORK PROJECTS ESTABLISHED BY PRIVATE EMPLOYERS

The provisions of the federal Social Security Act have been interpreted by the United States Department of Health, Education, and Welfare as limiting the sponsorship of job training projects for AFDC recipients to those established and maintained by governmental agencies.⁶⁰ This limitation seriously restricts the type of training recipients can obtain and, in turn, deters their employment potential in private enterprise. There are many occupations and jobs in private industry for which there are no equivalent positions or training opportunities in government.

In public welfare, most recipients by-and-large are limited in their employment potential. Most AFDC recipients are not prime candidates for such sophisticated training as is offered through the apprenticeship programs or the Manpower Development and Training Act (MDTA).

For instance, nearly half of all AFDC-U parents have less than an eighth grade education and only 17 percent have graduated from high school. In the regular AFDC-FG program, the average mother has had only 9.2 years of schooling—she is basically a junior high school graduate. Additionally, the vast majority of AFDC-FG and -U parents also have few job skills. They are basically unskilled laborers in experience and in potential.

In addition to these "natural" deterrents to the average AFDC parent's becoming employed or employable, a significant and unnatural barrier has been erected by the Congress to the practical training many

⁵⁸ Welfare and Institutions Code Section 1523.9.

⁵⁹ "Unemployment-Parent Segment . . ." *op. cit.*

⁶⁰ 42 USCA 409(a)(1) and Part IV, Section 3462.41 *Handbook of Public Assistance Administration*, U.S. Department of Health, Education, and Welfare.

of these persons could receive through private-employer established job training projects.

There is ample precedent for utilizing private employers in governmental job training projects. The MDTA, the Area Redevelopment Act, and the Trade Expansion Act all provide—even encourage—the private sector of the economy to do its share in offering training programs.⁶¹ It would seem only equitable that welfare recipients be offered the same opportunity to develop new skills as are other more fortunate persons among our unemployed and displaced workers.

It is recommended that the Congress be memorialized to amend federal law so as to permit private employers to establish and maintain job training projects for AFDC recipients (see SJR 33, page 76).

REFERRAL TO, AND GOOD CAUSES FOR REFUSING, EMPLOYMENT

Currently the State Departments of Social Welfare and Employment have too much discretion granted them by statute to exempt AFDC-FG parents from being required to register for employment, and from casework and employment services which could lead to employment and self-support. The governing W. & I.C. provision, Section 1523.6, is based on the principle that such parents are not available for employment unless their availability is established. Moreover, the denial of aid when a FG parent refuses to accept suitable employment is permissive (may) rather than mandatory (shall).

It is essential that the state welfare and employment departments be impressed with the Legislature's expectation that all-out and continuing efforts must be undertaken to assist all parents of needy children to obtain employment.

It is recommended, therefore, that the "good causes" for refusing offers of employment should be the same for regular AFDC-FG parents as those currently used for unemployed recipients (AFDC-U) and the referral of mentally competent and physically able AFDC-FG parents to the Department of Employment to register for work should be required rather than permitted (see SB 791, page 78).

BIRTH CONTROL INFORMATION AND SERVICES

No federal or state law now prohibits social workers from providing information regarding public health and other agencies where family planning services may be obtained to those who voluntarily seek such information. Yet these agencies have been reluctant to include such services without an expression of approval by the Legislature.

The state has a great responsibility to help provide education and services, within the broad framework of adequate medical care, for low income families who must rely on public health and public assistance agencies for this care.

Responsible parenthood not only cuts taxes and welfare costs, but more importantly, it prevents much human misery. Family planning

⁶¹ 42 USCA 2571, 42 USCA 2501, and 19 USCA 1301, respectively.

is a proper part of good medical care. No one should be denied such counseling and services simply because of ignorance or a lack of money.

Children who are brought into the world unwanted and, too often, unloved, face tremendous odds against becoming responsible and productive citizens in our complex society. All levels of government are striving to break the tragic cycle of poverty by improving opportunities for education, housing, and health. New ways must be found to rescue those who are trapped in conditions of poverty. New methods must be devised to improve opportunities for education, housing, and health.

A most essential part of breaking this cycle of poverty should be properly planned families. However, at present, in most localities family planning services are not only unavailable to the persons needing them most, but even where such services are available, medical and social workers do not feel free to offer assistance to those who could benefit from professional medical counseling.

The person on relief whose need often is the greatest in regard to family limitation and planning, too often finds it difficult to get birth control information.

Substantial strides have been made throughout California at the local governmental level in establishing family planning clinics. Today public birth control clinics are *not* causing a general uproar of indignation. Five public health officers recently told the Conference of Local Health Officers in San Francisco that the clinics are accepted by the general public. "These programs will not be as controversial as you might think now," Gordon Cumming, Administrator of Sacramento County Hospital advised.⁶²

A recent memo by the Bureau of Maternal and Child Health, State Department of Public Health, reveals that 34 counties and cities have established family planning programs through their own clinics, private hospitals, or by referral to interested citizen groups.⁶³ These counties and cities include San Francisco, Sacramento, Los Angeles, San Diego, San Mateo, Alameda, and Contra Costa.

To argue that government does not have a responsibility is to set up a strawman. Local government has taken positive action; the state must have a voluntary program of its own.

The current AFDC statewide average grant per month per child is \$61.20. The average cost from birth to 18 years for the first child on AFDC is \$13,400. In December 1964, 517,000 persons were on AFDC. During 1965-66 an estimated average of 588,000 persons will receive aid each month. State costs for 1965-66 will be \$143,000,000. An estimated 10,000 babies born last year are now on AFDC.⁶⁴

According to a recent report of the Santa Barbara County Anti-poverty Committee, following studies in the community of Guadalupe, 46 percent of the population of 2,614 were under the age of 20. In 1962, there were 149 births, or 60 per 1,000. This compares with the U.S. rate of 25. Fifty percent of the families qualified for poverty requirements and the report states "The community has a young *dependent* population with huge families, a high infant mortality.

⁶² Speech to the California Conference of Local Health Officers, April 1, 1965, as reported in the *San Francisco Chronicle*, 4-2-65.

⁶³ Memo to Local Health Officers, *et al.*, from Leslie Corsa, Jr., M.D., Chief, Bureau of Maternal and Child Health, dated February 24, 1965.

⁶⁴ Memo to State Senator Alvin C. Weingand from Philip E. Keller, Chief, Bureau of Research, California Department of Social Welfare, dated February 15, 1965.

percentage of violent deaths, alcoholism, drug addiction, and tuberculosis.⁶⁵

It is incumbent upon the Legislature, in attempting to alleviate poverty, to find new approaches that do not indelibly place upon the poor the badge of their poverty. The poor must have in their health care programs the same access to family planning aids as the more fortunate sectors of society. The lack of this information is merely one more in a series of disadvantages which constantly face low-income families, either on or off aid.

In providing such information and services, however, it is essential that such a program will not violate the religious principles or conscience of either public employees or public health and welfare recipients. No coercion can be tolerated.

Therefore, this committee recommends the adoption of a formal legislative expression of the desirability of the state's medical and welfare programs furnishing family planning information, services, drugs, and materials to all persons who voluntarily seek them and that medical and social worker personnel be free to volunteer information regarding the availability of such services (see SCR 47, page 80).

EXEMPT EARNED INCOME

Unlike its treatment of recipients of other programs, federal law permits no unqualified exemption of income earned by children receiving Aid to Families with Dependent Children. The only earnings not automatically subtracted from the grant are those which are set aside under a specific plan for the child's education, employment, or other needs in the future.

Either a minute number of AFDC youths are working or there is widespread failure to report their employment and earnings. According to a State Department of Social Welfare bill analysis only 1.4 percent of the AFDC family group cases and 0.4 percent of the unemployed parent cases contain one or more employed children. Obviously these youngsters are being brought up in family environments and under welfare program provisions that expect and exact little of them in terms of employment and which provide no motivation to them to seek or take work.

What better motivation could be provided than allowing working youngsters to keep half of their earnings to spend or to save as they choose? What better way to learn responsibility—and the success of satisfying ones duties—than to have the other half of their earnings go to the support of their families? Exempting in federal law 50 percent of the AFDC youth's earned income would serve well both of these goals. It would provide one of the strongest incentives to get more youngsters working. As more AFDC youths become employed, the amount of money contributed to families on assistance would increase, thus reducing net aid costs.

It is recommended that Congress be memorialized to amend federal law to permit youths receiving AFDC to keep for their own personal, unrestricted use up to 50 percent of their earned income, rather than require all such earnings to be subtracted from the aid paid (see SJR 34, page 82 and discussion of SB 794, page 87).

⁶⁵ Lompoc, California, *Record*, "Courthouse Notes" by Dick Praul, 3-2-65.

MULTIPROGRAM PROBLEMS

CLAIM ON REAL PROPERTY

Although California is the only major industrial state which does not require that a claim or lien be taken on the real property owned by recipients of public assistance, our statutory limitations on the amount of real property which may be owned are very liberal.

State law permits recipients of Old Age Security, Aid to the Blind, Aid to the Totally Disabled, and Medical Assistance for the Aged—the “adult categories”—to own property of *any* value if it is being used as a home.⁶⁶ Additional real property may also be retained if the income it produces is used for the recipient's support and it has an *assessed* value not greater than \$5,000—that is, a *market* value in the neighborhood of \$25,000.⁶⁷ AFDC recipients are permitted real property used as a home so long as it does not exceed \$5,000 *net assessed* value—that is, a home owned free and clear of about \$25,000 market value. Any encumbrances of record are subtracted from the *assessed* value.⁶⁸

*Old Age Security*⁶⁹—As of June 1962, the State Department of Social Welfare reports that nearly 72,000 recipients, over one-quarter of all OAS recipients, had property considered a home. The *average* assessed value of these homes is \$1,464—or of an approximate market value of \$7,300.⁷⁰ However, over 20 percent of all homes owned by OAS recipients were assessed at or in excess of \$2,000, that is, \$10,000 or more in market value.

In addition to those recipients owning real property used as a home, 7,127 OAS recipients (3 percent of the caseload) owned income producing real property not used as a home. The average assessed value of this property was \$1,190, or nearly \$6,000 market value.

*Aid to the Blind*⁷¹—As of August 1962, 2,925 Aid to the Blind recipients owned property considered a home. This was 23.7 percent of all blind recipients, nearly one out of four. The average assessed value of these homes was \$1,566 or about \$7,800 market value. Nearly three of every ten homes owned by blind recipients, however, were assessed at \$2,000 or more; they were worth \$10,000 or more on the market.

Furthermore, 249 blind recipients (2 percent of the caseload) owned income producing real property not used as a home. The average assessed value of this property was \$1,023, or about \$5,100 market value. Since 1962, however, state and federal laws have been changed to permit recipients of blind aid to own real property other than a

⁷⁰ The Board of Equalization has advised that residences are usually assessed at about 20 percent of the market value. Therefore, assessed values have been multiplied by 5 and have been rounded to the lowest \$100.

⁷¹ *Characteristics of Recipients of Aid to the Blind*, August 1962, Research Series Report No. 19, California Department of Social Welfare, Tables 13, 14, and 15.

home of any value.⁷² Specifically how this may have changed the figures above is not known.

*Aid to the Totally Disabled*⁷³—As of August 1962, 2,886 ATD recipients owned property considered a home. This was approximately one out of every eight recipients (12.2 percent of the total caseload). The average assessed value of these homes was \$1,325, indicating an average market value of \$6,000. Of these homes 17.7 percent were assessed at \$2,000 and above.

Additionally, 442 ATD recipients (1.9 percent of the caseload) had income-producing real property which had an average assessed value of \$1,546, or about \$7,700 market value.

*Medical Assistance for the Aged*⁷⁴—The State Department of Social Welfare has no data on the property owned by MAA recipients used as residences. It would seem a logical assumption, however, to estimate the percentage of the caseload with such holdings as being at least equal to the percentage in the aged and blind programs—that is, about 25 percent (4,200 recipients)—and that the average value of such property would be at least equal to that held by OAS and AB recipients—of about \$1,500 assessed value or about \$7,500 market value.

Data supplied to the committee in October 1963, showed that during 1962 about 7 percent of the MAA caseload (1,184 recipients) had income-producing real property which averaged about \$1,500 assessed value or \$7,500 market value.⁷⁵

*Aid to Families with Dependent Children*⁷⁶—About one of every twelve AFDC cases during 1965-66 will have real property (8 percent of the caseload), as estimated by the State Social Welfare Department. By category, 9,700 AFDC-FG cases will own real property used as a home, the average assessed value being \$2,239, and an average market value of \$10,130. An average encumbrance of \$5,400 is estimated to be on each of these homes.

In AFDC-U, 1,550 cases will own real property. The average assessed valuation is \$1,788, indicating an average market value of \$8,100. The average encumbrance is about \$5,700.

In summary, the real property owned by all aid recipients who would be affected by a claim provision would total to a conservative estimate of \$766,000,000 in market value owned by approximately 85,000 recipients (see Figure 2). Because of the anticipated increase of 58 percent in the caseloads in 1965-66 over the 1962 cases, the real property in question may currently be worth closer to \$1 billion in market value.

There is precedent for the State of California to adopt such a recovery provision. California is currently one of only 18 states without such a provision in the Old Age Assistance program according to the 1964 report of the Advisory Commission on Inter-governmental Relations.⁷⁷ Seven of the 18 states that do not have a real property claim

⁷³ *Characteristics of Recipients of Aid to the Needy Disabled*, August 1962, Research Series Report No. 21, California Department of Social Welfare, Tables 13, 14, and 15.

⁷⁴ About 57 percent of MAA recipients in 1962 had previously been on other categorical aids (OAS and AB). The balance, 43 percent, had not been on public assistance until they became ill. They would be expected to have, on the average, greater resources, including real property, than recipients of OAS or AB.

⁷⁵ *Transcript*, October 24, 1963, Table 14, p. 120.

procedure are southern states. Of the 15 states with the highest percentage of aged residents on aid in 1963—and California was the only populous industrial state among the group—in 13th place—only two had recovery provisions. Conversely, of the 15 states with the lowest aged recipient rates—including such states as Michigan, Illinois, Pennsylvania, New York, and New Jersey—only one, Delaware, did not have a recovery provision (see Figure 3).

TOTALS

93,261 recipients owned property used as a home.

9,002 recipients owned income-producing real property.

\$766,078,400=total market value of all real property.

The committee recommends that claims should be taken on real property of aid recipients of all programs as a condition of granting aid. Such claims should not be enforceable during the lifetime of the recipient, his spouse, if any, or during the minority of his children, if any. No interest should be chargeable (see SB 792, page 84).

PRESUMPTIVE ELIGIBILITY

Under existing statutory provisions, when an applicant for any category of aid is in immediate need of assistance and he *appears* to be eligible, aid must be granted to him at once even though the thoroughgoing eligibility investigation has not been begun or completed.⁷⁸

In some instances the immediate payment of aid, based on presumed eligibility, is desirable. The applicant may be well-known to the county welfare department. His eligibility may be clearly evident during the initial interview; and his need may be immediately critical.

In other instances, however, and for equally valid reasons, the social worker may wish to withhold the instantaneous payment of public funds to the applicant. Such reasons might include the desirability of a complete eligibility check even though on initial appearance the applicant seems eligible or the detrimental effect the immediate payment of aid could have on the applicant's achieving self-support. The social worker

¹ Of nonfederal share of assistance costs, state pays \$5 per recipient from special fund. Of balance, state 50 percent, local 50 percent.

² For cases without local settlement state pays 100 percent of nonfederal share.

³ State pays 30 percent of total cost, county pays remainder less federal share.

⁴ Of total costs, state 75 percent less federal share, local 25 percent.

⁵ County pays 16 $\frac{2}{3}$ percent of total costs.

⁶ State pays 100 percent of cost for cases with residence in state less than 1 year.

⁷ The local share for institutional cases is 50 percent.

⁸ Denotes states in which there are statutory provisions without income scale for determining ability of relative or where there is only general support legislation not specifically applying to OAA. There is reason to believe that the relative support provisions are not as effectively administered as in those states listed with a nonqualified "Yes."

X denotes no participation.

is now precluded from legally implementing her own best judgment in these instances.

Not only do social workers need an added degree of flexibility in administering the payment of aid on presumed eligibility, but there must be a reduction in the number of cases in which aid is mistakenly paid under this provision. The State Department of Social Welfare estimates in a bill analysis that about 5,000 AFDC cases and 1,300 ATD cases, together with lesser numbers of blind and aged cases were erroneously granted assistance on presumptive eligibility during 1964. In such cases the aid paid and administrative costs are not shared in by the federal government and all cost must be borne by the state and counties.

The committee recommends, therefore, that the counties should be permitted, rather than required to pay aid on the basis of presumed eligibility pending completion of thorough eligibility checks (see SB 793, page 86).

EXEMPT EARNED INCOME

Recipients of Old Age Security and Aid to the Blind are permitted under existing state law to keep, without being subtracted from their grants, whatever earned income the federal law permits.⁷⁹ It is questionable whether the Legislature should permit such a *carte blanche* acceptance of *anything* permitted by the federal government. It is the Legislature's responsibility, both policywise and fiscally, to determine eligibility requirements for and benefits payable under California's public assistance programs. Although the principle of allowing employed recipients of the aged and blind programs to retain part of their earnings is desirable, the specific dollar amounts or percentage should be decided by the state Legislature rather than relinquishing this responsibility to the Congress.

A full discussion of the advantages to be gained in allowing youngsters receiving AFDC to retain part of their earned income is discussed on page 40.

It is recommended that the dollar amounts of the recipient's earned income currently permitted under federal law to be exempted from consideration in computing aged and blind aid should be specified in state law rather than granting such exemptions by a *carte blanche* reference to whatever federal law permits.

State law should also permit youths under 18 years receiving AFDC to keep 50 percent of their earnings for their personal, unrestricted use and this amount should be exempt from the personal property limitations together with earned income saved by the youths for the future educational or job training needs (see SB 794, page 87).

⁷⁹ *Ibid.*, Section 443.

MEDICAL ASSISTANCE FOR THE AGED

RATES PAYABLE TO NURSING HOMES

When the Medical Assistance for the Aged program became operative, on January 1, 1962, the rates payable to nursing homes were frozen at the level which the individual counties had paid as of October 1, 1961. This frozen rate continued until May 1, 1963, when the current fee schedule became mandatory. The existing schedule of maximum rates was based on a cost accounting survey of 80 nursing homes in the state and reimburses homes at the *average* level of costs of these 80 homes for two levels of care—basic care and intensive care. A small additional supplement can also be paid to those facilities that have extraordinarily high investment or wage costs, but only if there is a shortage of lower cost beds in the county.

The current schedule of maximum rates has many serious drawbacks. These inherent weaknesses in the rate system have been summarized by the State Department of Social Welfare:

“The industry states the rate system does not recognize the variances in costs of care, different patient care requirements, compensation for high expenses inherent in different regions. The county welfare departments claim the rate is not flexible enough to allow them the latitude in placement that will assure a patient adequate services. There are numerous homes that will not accept ‘basic care’ patients or a state patient at all, and the county’s as well as the private physician’s ability to recommend adequate placement is greatly limited.

“Former methods of rate determination have been inadequate and resulted in the following:

“1. Overcompensation to homes that provide a minimum range of services with better quality.

“2. Failure to create an incentive to upgrade and increase services or to develop meaningful and effective restorative care programs.

“3. Planning directed toward fiscal aspects of the program rather than the patient’s needs or levels of services provided.

“4. Opportunity for the less scrupulous operators to exploit the patient and the program.

“5. The department forced to find loopholes in its own regulations (exception clause) to meet patient need and to set precedents that are not defensible, thus leaving the program open to criticism.”⁸⁰

Evidence submitted to the committee at its hearings on the Medical Assistance for the Aged program emphasizes that the problem lies not

⁸⁰ “A Recommendation for a Cost and Service Survey of Nursing and Convalescent Homes to Implement an Effective Long Range Payment Method,” Division of Medical Care, California Department of Social Welfare, 1965, pp. 6-7.

so much in what is being paid for nursing home care, but rests upon the system by which payments are made. The need for a more valid method of making nursing home payments is paramount.

This new system must, initially, allow a reasonable profit for operators of privately owned homes. Secondly, it must be based on the costs (*e.g.*, wage rates, land values, food costs, etc.). Yet the new system must avoid the extremes of a "cost plus" schedule for each facility and the averaging of all costs of all homes on a statewide basis (as the current method does). Thirdly, the price paid for care must be directly related to the care needed by and furnished to patients. And lastly, there is no reason why the nursing home industry should not bear the costs of the audits necessary to develop and implement a new, cost-related method of payment.

The committee recommends, therefore, that the fee schedule for nursing home care should be established on a cost reimbursable basis, averaging all homes in each area of the state, and should be determined by industry-financed cost audits (see SB 795, page 89).

CONCURRENT RECEIPT OF MAA AND OAS

One unforeseen problem which developed in implementing AB 59 to significantly decrease the amounts of new federal moneys received by the counties is the federal and state prohibition against the concurrent receipt of Medical Assistance for the Aged and Old Age Security.⁸¹

A hypothetical case, for example, receives his OAS check on the 1st of April for the entire month. On the 5th of April he becomes ill and has to be admitted to the county hospital. Under existing law, he is automatically precluded from eligibility for MAA during the balance of April even though his needs are much greater. Under these circumstances, the ill, aged person must pay as best he can the additional costs with his personal resources, if any, until May 1, and the county, medical practitioners, or medical facility must make up the difference.

A similar problem exists when an MAA patient is discharged from a medical care facility in the middle of the month. He is precluded from receiving OAS during the balance of the month because of his receipt of MAA. He does, under state law, however, become eligible for county General Relief paid at the same level as OAS, but such costs are shared only by the state and county.⁸² There is no federal sharing as there would be if he received OAS itself.

Although there are these restrictions on the concurrent receipt of OAS and MAA, both federal and state law do not prohibit concurrent receipt of MAA and Aid to the Blind or Aid to the Totally Disabled. Thus an unjustified inequity exists between aged, ill recipients of these three programs.

It is, therefore, recommended that state law be amended to permit the concurrent receipt of MAA and Old Age Security (see SB 796, page 90).

⁸¹ 42 USCA 301(b) and Welfare and Institutions Code Section 4701(b)4.

⁸² Welfare and Institutions Code Section 4737.

Additionally, it also is recommended that the Congress be memorialized to amend federal law so as to permit the concurrent receipt of MAA and OAS (see SJR 35, page 92).

RELATIVES' SUPPORT LIABILITY

Under existing state law there is no legal responsibility for adult children to support, or to contribute to the support of, their ill aged parents who apply for or receive MAA.⁸³ There are, however, compelling fiscal and policy reasons for reestablishing such a legal duty.⁸⁴

If the same support contributions and system were to be used in MAA as are currently applicable in OAS pursuant to W. & I.C. Section 2181, an adult son's income from the following sources would be considered in determining his liability:

1. His own earnings;
2. His separate income from property, pensions, or any other source; and
3. All community income except earnings of his wife.

If the responsible relative is a married daughter, only her own earnings and her separate (not community property) income from other sources are taken into consideration.

Section 2181 contains what is referred to as a "relatives' contribution scale," a copy of which appears as Figure 4. This scale measures the relative's ability to support by two criteria: the number of persons dependent on the relative's income, and the NET monthly income. In computing net income, Section 2181 specifies that net income equals the gross income less a flat 25 percent deduction to meet the costs of income, disability, and social insurance taxes, and other expenses necessary to produce the income, such as transportation costs, meals eaten at work, union dues, and costs of tools, equipment, and uniforms.

Examining Figure 4, it becomes evident that an adult child with only himself to support would not be required to contribute to his aged, ill mother or father if he were grossing less than \$534.67 a month. At \$534.67 gross income a month his *net* income, after deducting the 25 percent, would be \$401 and he would be required to contribute \$5 monthly. At the other end of the scale, a single adult child who grossed \$1,501.34 per month would have a *net* income, as per the scale, of \$1,126 and would, therefore, be required to contribute \$90 monthly to his parent on MAA.

Using a family of six as an example—the adult son, his wife, and their four children—a minimum gross income of \$1,601.33 a month would have to be earned before the son would be required to contribute \$5 monthly.

In addition to these already most generously defined requirements, if the adult child has major and unusual expenses which limit his ability to contribute, he may request and be granted a waiver, to permit even lower contributions.

Thus the amount of money received by MAA recipients from their responsible relatives would constitute a relatively minor savings to the

⁸³ *Ibid.*, Section 4735.

⁸⁴ AB 59 repealed from the MAA program such a legal support liability in 1963.

SOURCE: *Handbook for Old Age Security*, State Department of Social Welfare, Section A-153.4.

state. The Legislative Analyst's office estimates that approximately \$175,000 would be received by recipients from relatives.

There would be additional savings, however, in those instances where the mere existence of the relatives' responsibility requirement would deter would-be applicants. Such a deterrent effect would usually result from either the adult child's reluctance to reveal his financial status to the welfare department, and his assumption of the entire costs of care, or from the would-be applicant's reluctance to ask for his or her child's help. In this latter instance, it is extremely doubtful whether a person who was really in need of financial assistance to cover medical costs would hesitate too long in applying for aid because of the \$5 or \$10 that might be required from his adult children. The responsible relative's requirement in MAA would only deter from aid those people who, if needy at all, already have other sources of assistance. The Legislative Analyst estimates these additional savings could vary, based on 0.2 percent to 2.4 percent reduction in caseload, between \$454,000 to \$3,554,000.

In addition to its desirable fiscal effects, AB 797 is also urgently needed because of its policy implications. In our society adult children are expected, as far as possible, to care for and support their dependent parents just as parents are expected, as far as possible, to care for and support their dependent children. These are responsibilities of the most basic, fundamental type. These duties cut across all economic groups — adherence to them is expected of the rich as well as of the poor. These responsibilities are an integral part of what is commonly

referred to as the "moral fiber" of our society; or as a sociologist might say, the mores of our community.

When the adult child is not capable of furnishing complete help for his aged parents, or when the parent is not able to adequately support his young children, it becomes society's—government's—responsibility to help. Society's duty is, however, secondary; the principal obligation is that of the individual members of the family for the other family members.

The statutory provisions of the Medical Assistance for the Aged program, however, does not currently reflect these expectations, these responsibilities. And it seems to the committee that there is no valid reason for its not doing so.

It could be argued that a relative's responsibility provision might cause unpleasantness between the aged parent and his adult child. No assurance can be given that anyone's responsibilities in life will be pleasant. It is regrettable if they are not. A person's feelings about his duties cannot alter the fact that they are, just the same, duties.

It could be argued that a parent might have deserted his children and it is not just to require them to help him in his old age. In response, it could be inquired whether two wrongs make a right.

Or, it could be argued that the administrative costs would make relatives' responsibility undesirable. Firstly, this does not seem to be the case as estimated by the State Department of Social Welfare or the Legislative Analyst. Secondly, federal regulations require that all relatives of applicants must be queried as to whether they are or intend to give support. Thirdly, this argument does not invalidate or cancel the duties involved any more than unpleasantness does.

It is recommended that the liability and scale of required contributions currently in force in the Old Age Security program regarding the responsibility of adult children to support their dependent parents should be applied to the MAA program (see SB 797, page 94).

AID TO THE TOTALLY DISABLED AND AID TO THE BLIND PROGRAMS

DEFINITION OF "NEEDY DISABLED PERSON"

The existing statutory definition of "needy disabled person," "permanently impaired," and "totally disabled" is loosely and inexplicitly drawn.⁸⁵ It is as wide open as a barn door to virtually any administrative definition the State Department of Social Welfare would wish to make through regulations. The department is, therefore, currently free to significantly expand these definitions without being required to obtain prior approval of the Legislature on either the policy or the fiscal implications.

Among the specific disabilities which are not now granted aid under departmental regulations, but which could be under state law, are:

- (1) Alcoholics who have no demonstrable physical disease or other mental disability;
- (2) Persons with personality disorders but no other medically verifiable impairment, and other addictions; and
- (3) Homemakers who live by themselves.

The point at issue is not whether aid should be granted to these currently excluded persons; it is whether the department should be required to obtain legislative approval before granting them aid.

This blank check should be withdrawn from the department and it should be required to present the policy and fiscal implications to the Legislature before it can enlarge the scope of the program.

The committee recommends that the definitions of "needy disabled person," "permanently impaired," and "totally disabled" as currently (February 1, 1965) used in the State Department of Social Welfare's regulations should be frozen into state law (see SB 798, page 95).

DETERMINATION OF MEDICAL ELIGIBILITY

Under existing federal regulatory and state statutory provisions, the State Department of Social Welfare must make the determinations of medical eligibility of applicants for Aid to the Totally Disabled.⁸⁶ This eligibility determination is a paper determination; the state department's teams seldom see the applicant face to face. The resulting flow of paper is heavy; the administration of ATD is made more complex; the time lost to the applicant and the county agency is often great.

The counties now make other types of eligibility determinations and, generally, do so as efficiently and equitably as the state agency could. Furthermore, such determinations are under regulations and criteria

⁸⁵ Welfare and Institutions Code Section 4000.

⁸⁶ Part IV, Section 3830(4), *Handbook of Public Assistance Administration* and Welfare and Institutions Code Sections 4135 and 4181.5.

developed and enforced by the state department and are subject to both state and federal audits.

Regarding medical determinations, many of the smaller counties that would lack sufficient caseload or necessary medically trained staff would not have to be delegated such responsibilities by the state.

Therefore it is recommended that state law be amended to permit the State Department of Social Welfare, when feasible, to delegate to county welfare departments the responsibility of determining medical eligibility of ATD applicants (see SB 799, page 97).

It is also recommended that the U.S. Department of Health, Education, and Welfare be memorialized to amend its regulations to permit the states to delegate medical eligibility determinations in the ATD and AB programs (see SJR 36, page 98).

PROTECTIVE PAYMENTS OF ATD

The federal Social Security Act requires that aid granted in behalf of a disabled person either be paid directly to him or to his court-appointed guardian or conservator.⁸⁷ In the ATD program a significant number of recipients are unable, because of alcoholism or their mental condition (*e.g.*, senility, retardation) to manage a direct grant to their own benefit and best self-interest. In fact, state law already provides that in such cases, aid may be paid to a responsible person designated in accordance with the state department's regulations.⁸⁸

Normally the costs of aid paid to such cases would not be shared by the federal government. During the calendar year 1965, however, the Department of Health, Education, and Welfare has approved federal sharing under the authority granted it by 42 USCA 1315 permitting the establishment of pilot projects. It is apparent, nevertheless, that assistance must be continued in behalf of these individuals who are now receiving "protective payments" of aid even if federal sharing is stopped. It would, therefore, be in the best interests of state and county governments to secure permanent federal approval of ATD payments made on the protective basis.

The system of protective payment of aid has been used in California and other states in the AFDC program for several years as permitted by and shared in by the federal government.⁸⁹ Complete controls have been established in both federal and state regulations to govern when and how aid may be paid on this basis to insure protection of recipients. The experience has been most satisfactory to all parties concerned.

We recommend, therefore, that the Congress be memorialized to amend federal law to permit the payment of ATD to an interested person in behalf of the recipient who, because of alcoholism, drug addiction, or mental problems, is unable to use his grant to his own benefit and best self-interest (see SJR 37, page 100).

RESIDENCE REQUIREMENTS

Policywise, one of the most significant changes made in 1963 by AB 59 was the elimination of durational residence requirements in the

⁸⁷ 42 USCA 1355.

⁸⁸ Welfare and Institutions Code Section 4183.

⁸⁹ 42 USCA 606(b)(2).

Aid to the Blind program and the sharp reduction of such provisions in the Aid to the Totally Disabled program. For several years California permitted immediate eligibility to any state resident who became blind, but required persons who became blinded while a resident of another state to wait until they had lived in California five of the previous nine years, including the year immediately preceding application. Now anyone who is a resident, regardless of where or when he became blinded, immediately is eligible.⁹⁰ In ATD prior to the passage of AB 59, five years' residence in California out of the last nine, including the year immediately preceding application was required. Changes made by AB 59 affecting residence stipulated that no period of residence is required if the applicant becomes disabled while a resident. If the person is disabled while a resident of another state, he must live in California three of the last nine years, including the year immediately preceding application, unless there is a reciprocal agreement regarding immediate eligibility with his original state of reference.⁹¹

These liberalizations have raised three major problems. The first is the immediate fiscal effect on state, county, and federal governments. It was estimated at the time of AB 59's passage by the State Department of Social Welfare that there would be a total cost of \$1,047,000 during 1964-65 for these liberalizations of residence requirements.⁹² Costs during 1965-66 would, of course, be even higher as the ATD amendment did not go into effect until the last half of the 1964-65 fiscal year.

The second problem raised by liberalizing the ATD and AB residence requirements is its "whip-saw" effect on the Old Age Security program. In OAS, the five-out-of-the-last-nine-year residence requirement is still in force.⁹³ Because of the inequity between AB and ATD applicants, on the one hand, and applicants for OAS, on the other, great pressures will be exerted to reduce or eliminate the durational residence requirement in OAS. This change would be extremely expensive to all levels of government.

The third problem relates more to the policy rather than the fiscal effects of eliminating or significantly reducing requirements relating to state residence. California is a very desirable place to live. Our public assistance grants are among the highest in the 50 states, and our eligibility requirements already are among the least restrictive. These public assistance programs have been established, and in bulk are financed, by Californians for Californians. Our responsibilities in public assistance run to the state's borders and no further. To permit residents of other states who become dependent in other states to move to California and become immediately eligible for public assistance would be the height of irresponsibility.

The committee recommends that persons blinded or disabled while residents of other states should, after moving to California, be in residence here five years becoming eligible for Aid to the Blind or Aid to the Disabled (see SB 800, page 102).

THE ADMINISTRATION OF PUBLIC ASSISTANCE

ADMINISTRATIVE PROJECTS SAFEGUARDING PUBLIC FUNDS

In 1961, the Legislature authorized the State Department of Social Welfare to subvene demonstration projects undertaken by county welfare department which would improve the administration of public assistance.⁹⁴ Generally, the county welfare department meets the cost of equipment, supplies, and facilities required, while the state, for the length of the project, picks up the costs of the project staff.

Welfare and Institutions Code Section 403 specifies the types of projects for which such subventions can be made. It has been suggested to the committee that projects which would safeguard public funds by the detection of fraud and improve the accuracy of eligibility determination be added to this authorization.

The subjects of welfare fraud and eligibility can be emotionally discussed and distorted in importance. It is important to emphasize, therefore, there is *nothing* the committee has discovered which would tend to claim, much less prove, that California's counties are not doing a very creditable job in minimizing these problems. As in all fields of human endeavor, however, the possibility of improvement exists. The public will have the assurances it is entitled to—that every reasonable effort is being made to control abuses—by encouraging and making possible improvements in the safeguarding of public funds through demonstration project programs (just as improvements in the administration of and the services offered through public welfare programs in other problem areas).

It is recommended county welfare administrative projects which would safeguard funds by the detection of fraud and improving the accuracy of eligibility determinations should be eligible for subventions from the state under the County Demonstration Projects Act (see SB 801, page 104).

PUBLICATION OF STATE DEPARTMENT OF SOCIAL WELFARE'S REGULATIONS

The only state agency exempt from the requirement that all administrative regulations be published in the Register of the Administrative Code is the State Department of Social Welfare. This exemption has been the root of innumerable policy and administrative problems.

One of the greatest problems—in fact, perhaps the most serious administrative problem—is the amount, types, and purposes of regulatory material which pours out of the State Department of Social Welfare to cascade unendingly upon the caseworkers at the county level.

The analysis of the 1965-66 Budget by the office of the Legislative Analyst points out this grave problem and states that, "Since Septem-

⁹⁴ *Ibid.*, Sections 400 *et seq.*

ber 1964 (through January 1965—less than half a year), the department has revised 51 sheets in its procedure manual. In the past 18 months, the department has issued 188 circular letters, 259 pages of information relating to departmental bulletins, 57 procedure memorandums, and has made 1,655 revisions in nine programs and activity manuals. Copies of the 22 bound procedure and program manuals and record handbooks extend approximately five feet in length.”⁹⁵

At the committee's public hearings in May 1964, Yolo County reported that *each* month their welfare department had to submit 180 reports to the state. They said, in relation to this load:

“If the constructive goals of the Legislature are to be achieved, the job of caseworker should not be destroyed or effectiveness mitigated by excess paperwork, and the job of the county welfare director should be protected from intrusions by overemphasis on paperwork as is now required.”⁹⁶

Yolo County's experience, opinions, and plea were repeated by every county that testified or submitted statements to the committee—and we heard from 55 of the 58 counties. Furthermore, the situation has steadily become worse, rather than better.

During the 1963 Session of the Legislature, the Senate Fact Finding Committee on Labor and Welfare authored and achieved passage of SB 1117. This measure changed the role of the State Social Welfare Board and made the Director of the State Department of Social Welfare the regulation-promulgating agent of the department rather than the board. The committee authored this bill, in part, with the hope that the director and his staff would aggressively seize this new opportunity to bring order out of chaos. Unfortunately, this has not happened. Whereas in 1963 we recommended that requiring the publication of the department's regulatory material in the Administrative Procedure Code and Registry be deferred, in 1965 we can no longer do so.

The flood of regulations and interpretative materials from the state department gushed forth from three headwaters—the federal agency, the state department itself, and the counties.

Realistically, there is little California can do to stem the tide of federal regulations and reporting requirements. We will undoubtedly have to continue to endure them at both the state and county levels.

The material pouring forth at the behest of the State Department of Social Welfare is twofold in purpose. The first function is that of interpretation of statutory policy and requirements. This is the supervisory aspect. The second function is that of assisting individual county caseworkers to fulfill the state staff's concept of their duties. This is the indoctrination and training aspect. Although we agree with the supervisory nature of these materials, we reject the idea that you can or that you should indoctrinate and train social workers in some sort of subliminal fashion through regulations. This rejection of the “training material” aspect of the department's regulations is particularly warranted because of the increased ability of the department to carry forth training in a direct way under the provisions of W. & I.C. Sections 119, 120.6, and 120.65 relating to training courses and staff serv-

⁹⁵ Pages 615-616.

⁹⁶ *Transcript*, Vol. I, May 26, 1964, p. 252.

ices and Section 300 relating to leaves of absence for educational purposes. The department itself is asking for nearly \$1,000,000 in the 1965-66 budget for these activities and the counties are likewise spending large amounts of money.

County welfare departments are the third source of complex and constantly shifting regulatory material. What the county welfare director fears most is the constant threat of having a recipient of aid appeal to the state department from a county action and having the state sustain the recipient. These appeal cases involve large amounts of money, staff time, and effort. Losing them jeopardizes the trust of the state department, the faith of the county board of supervisors, and morale within the county department, and perhaps even the self-confidence of the county director. County welfare directors, then, are caught between their desire for simplicity and conciseness in regulations and their desire for explicit, all-encompassing regulations as a protection from adverse appeal decisions. To resolve this very real problem, the fact finding committee sponsored legislation in 1963 *requiring* the state department to digest appeal decisions.⁹⁷ Such an explicit guide of welfare "case law" could help not only the counties, but also the departmental appeals' staff itself. This staff is often ignorant of the precedent-setting decisions rendered in the past. Other than hiring another attorney, however, the state department has done nothing to publish this legally required appeals digest.

Four criteria exist by which to measure the effectiveness of the department's regulations.

(a) The role of the State Department of Social Welfare in public assistance in California is not that of an administering agency. The state department supervises the *county* administration of these programs. The regulatory materials the state department issues, therefore, have the function of implementing, interpreting, and making specific for *county* administrators the state's laws governing public welfare.

One criterion, then, for measuring the effectiveness of state regulatory materials is the reaction to them by these county administrators. Every county which testified or submitted statements on this subject complained about the initial vast amounts, the subsequent wholesale amending, and the overall hairsplitting details of the state department's regulations.

(b) The caseworkers' job in public assistance is twofold, making sure each eligible case receives the correct amount of money aid and then evaluating, diagnosing, and treating each case so that the recipient can be assisted in assuming the most self-sufficient productive life possible. This latter function is one which requires resourcefulness, self-reliance, and much time in personal consultation with the recipient.

The second criterion of the regulations' success, then, is the assistance they provide caseworkers in these duties. The current form and function of the department's regulatory material, however, cause the social workers' dependence on rules rather than resourcefulness; cause inconsistent administration rather than remedying it; cause unreasonable amounts of paperwork rather than promoting maximum recipient contacts.

⁹⁷ Welfare and Institutions Code Section 445.14.

(c) The regulatory materials of any governmental agency must be adopted and enforced in a manner which gives the affected parties and the general public a maximum degree of protection from illegal actions or abuses of discretion on the agency's part.

This is the third criterion by which to judge the department's regulations. The Administrative Procedure Act has this protection as its prime objective. The Department of Social Welfare comes under the provisions of this Act with the exception, of course, of the publication of its regulations, standards, and orders in the Administrative Code. This exception in itself lessens the protection afforded recipients of aid, county welfare department personnel, and the general public. The department's regulatory material currently is not a part of the official document which is universally consulted for administrative rulings.

Further, the department has not adhered to this principle of protection. A Legislative Counsel's opinion, which the committee requested, holds that two of the department's circular letters submitted, and by inference most of the 188 circular letters issued in the last 18 months, are invalid because they were adopted illegally.⁹⁸ Moreover, in the past the department has argued that the counties had no right to appeal to the courts from decisions it rendered in appeal cases.

(d) At issue here is state government's most expensive program. It is also a program dealing with hundreds of thousands of people. Over one billion dollars of governmental funds are now being expended on a yearly basis for public assistance in California. In excess of one million recipients of aid a year are involved. Furthermore, a force of nearly 14,000 persons has been marshalled in county welfare departments, and in excess of 900 people in the state department to administer and supervise the public assistance programs. The cost of doing this job is humanely, as efficiently, and as equitably as possible are costs which are not only *well* expended, but which *must* be spent.

In summary, requiring the publication of the department's regulatory material in the Administrative Code would:

1. Reduce the initial amount of regulatory materials adopted by the State Department of Social Welfare;
2. Reduce the amount of unnecessary revisions of such materials;
3. Provide needed assistance to the department by experts in the Division of Administrative Procedure as to form and format used for regulations;
4. Improve rehabilitative services to welfare recipients by permitting and encouraging resourceful caseworkers and by decreasing the paper blizzard;
5. Give greater protection to recipients, counties, and the general public from illegal or unreasonable agency rulings; and
6. Make our great investment of money and staff in public welfare that much more capable of bearing high returns.

⁹⁸ See Appendix D for Legislative Counsel's Opinion No. 19938, April 29, 1965, and departmental materials submitted.

This requirement would be of immense benefit not only to the internal administration of public assistance in California, but also to the overall efficiency and equity of state government.

We therefore recommend that the regulations, orders, and standards adopted or issued by the State Department of Social Welfare be published in the California Administrative Code (see SB 802, page 106).

FEDERAL CASELOAD AND SUPERVISORY STANDARDS

Perhaps the greatest complaint of county boards of supervisors and county welfare directors during the past two years, other than that registered about the "paperwork blizzard," has been over the standards adopted by the U.S. Secretary of Health, Education, and Welfare governing caseload sizes and caseworker-supervisor ratios.

The preponderance of evidence collected by the committee definitely established that, although in many instances it is necessary to reduce the number of cases carried by county caseworkers, the new federal staffing standards are not only too rigid, but also fail completely to evaluate the results achieved through public assistance.

If these caseload and supervisory standards were relaxed, greater administrative flexibility—which is essential to an effective service program—would be possible. Additionally, the federal agency (and the State Department of Social Welfare as well) must place emphasis on results achieved through the granting of public assistance rather than on adherence to rigid procedural requirements.

It is recommended that U.S. Department of Health, Education, and Welfare be memorialized to amend federal regulations to minimize rigid caseload and supervisory standards and emphasize, instead, the results achieved through public assistance programs (see SJR 38, page 107).

JUDICIAL REVIEW OF DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE'S DECISIONS

Under existing federal law, the U.S. Department of Health, Education, and Welfare is the final judge of the validity of its own regulations, requirements, and decisions. There is currently no entitlement of a state, a county administering categorical aids, or a recipient of aid to seek and obtain a court hearing and decision on the legality or reasonableness of the federal department's administrative actions relating to public assistance.

This inequity has been previously recognized by this committee and the California Legislature. In 1963, Senate Joint Resolution No. 13, which embodied a request that the Congress expressly entitle states, their political subdivisions, and public assistance recipients to judicial review of HEW's rulings, passed both houses without dissent.

We therefore again recommend that the Congress be memorialized to amend federal law to entitle the states, their political subdivisions, and welfare recipients to secure judicial review of administrative decisions affecting public assistance which have been made

by the U.S. Department of Health, Education, and Welfare (see SJR 39, page 109).

SYSTEMS ANALYSIS OF PUBLIC ASSISTANCE ADMINISTRATION

It has become increasingly clear that to get and keep welfare recipients off aid, assistance must comprise more than the mere giving of money. Because the administration of public assistance has been growing increasingly complex and cumbersome, today it stands as a major deterrent to the effectiveness of our rehabilitation efforts.

On one hand, legislative studies can be only of a highly selective scope. On the other hand, it is often difficult for persons within a particular field to develop fresh thinking and new methods when making a study of their own administrative practices. What is needed, and needed desperately, is a wide-sweeping, yet in-depth analysis of the job to be done in public assistance and how best to do it; a systems analysis conducted in a thorough, evaluative, and yet disinterested manner.

The Governor has proposed contracting for such an analysis conducted by a private, outside agency which can bring the vast array of computerized skills to bear on these problems. Recently he submitted a \$100,000 budget augmentation request to the Legislature to finance such a study.

The one-billion-dollar-a-year mark in public assistance expenditures in California has been exceeded. In excess of one million persons a year are now receiving funds and services through these programs. We can well afford to take a long, hard look at what is to be done and how best to do it. In fact, we cannot afford not to do so.

It is recommended that a systems analysis of public assistance administration by the state and counties should be undertaken immediately under contract with California's business and technological industries (see SCR 48, page 111).

PUBLIC ASSISTANCE COSTS, COST SHARING RATIOS, AND STATE ADMINISTRATION

During the committee's 1963-65 study of California's public assistance programs, the existence of serious long-lived problems relating to costs, cost sharing ratios, and the feasibility of state administration was reconfirmed.

Figures 5 and 6 show increased public assistance costs in California from 1959-60 to 1965-66. In 1959-60 total aid and administrative costs were just over \$500,000,000 and an average of nearly 613,000 recipients drew aid each month. It is anticipated that during 1965-66, just six years later, \$1,166,000,000 will be expended for public assistance aid and administration, and will be given to a monthly average of 1,018,000 recipients. This is an astronomical increase in both expenditures and numbers of persons affected and is unparalleled in any other field of governmental activity in the state.

Figure 7 shows a comparison of increased expenditures of state funds only between education and public assistance from 1960-61 to 1965-66.

While education still captures the largest single amount of state funds, its rate of growth has been about half that of public assistance. What was approximately a \$5 to education *v.* \$1 to welfare ratio in 1960-61 has changed to a \$4 *v.* \$1 proportion in 1965-66—a five-year span. During this five years California has had a relatively vibrant economy coupled with a tremendous increase in the number of school aged children. Every indication would logically point to a higher relative increase in educational costs than in those associated with poverty. But the facts of what has happened fly in the face of logic.

Regarding the sharing of welfare costs, particularly between the state and county levels of government, many individual counties and the County Supervisors Association of California have increasingly pressed for what they call "cost sharing" but which in reality is cost shifting.

"At our Annual Meeting in Palm Springs on November 20, 1964, the County Supervisors Association of California adopted the following resolution on cost sharing:

"Whereas, California's great unfinished business in the social welfare field is the adoption of a state-county cost-sharing formula which will bring relief to hard-hit counties; and

"Whereas, a new County Supervisors Association of California cost-sharing study, completed as recently as October 1964, has again dramatically documented the plight of the counties by spotlighting a "Revenue Gap" and "Burden Gap" in the state's favor; and

"Whereas, cost-sharing is, and must be the number one goal of County Supervisors Association of California at the 1965 Legislature insofar as welfare legislation is concerned;

"Now, therefore, be it resolved that the State Administration and the Legislature are urged to take immediate steps toward the adoption in early 1965 of a state-county welfare cost-sharing formula which

"(1) Alters present ratios to adjust for the more rapid growth in the state tax base;

"(2) Creates a uniform ratio for all categorical aid programs and administrative costs;

"(3) Places no county in a less favorable cost position than that which it presently faces;

"(4) Has a graduated cost-sharing scale to mitigate the burden for high-cost counties.' " 99

Using state and county data shown in Figure 5, the state's cost for aid and administration have increased between 1959-60 and 1965-66 about 119 percent and 128 percent, respectively, while the counties' costs have risen 187 percent for aid and 108 percent for administration. Because of their relatively higher increase in aid costs—and aid costs comprise 88.6 percent of total welfare expenditures—the counties seem justified in their request for some adjustments, even though much of the pressure to expand welfare benefits over this period has come from these same counties.

The academic question of whether the state should assume full responsibility for welfare administration from the counties in California—and the practical question of whether this is not actually occurring—overlap both issues of welfare costs and cost shifting.

“Mr. Bowhay: . . . (T)he problem here I am trying to get at is the tax base has determined the attitude and determined the

policy and also often becomes . . . the overriding question as to what the policy is

"Senator Bradley: . . . Would you clarify that? Are you saying that you prefer to have the state take over the welfare administration and financing completely, take it completely out of the county's hands?

"Mr. Bowhay: . . . I suggest this is an area for serious consideration in interim study by this committee because there is no responsibility, and if a taxpayer has difficulty in assigning responsibility . . . how do you go about getting something corrected . . . ? This has happened in AB 59 where a number of supervisors still are concerned that they are blamed for the passage of 59, although they endorsed it, and yet when the public goes to get an answer, the local tax association or the ordinary man in the street, the tendency is to pass the buck because nobody is really responsible. Everybody's got a piece of the financing; everybody's got a piece of the control; but today and in the last three or four years the state control down to the very details of paper work, to the details of staffing, is such that there is virtually no local control except with the county welfare director who has the technical knowledge to exercise it. The boards of supervisors do not specifically have control over welfare because it is simply complex enough a matter that they can't exercise it.

"Senator Bradley: Well, would you say that because the federal government contributes about 12½ billion dollars a year that, then, to avoid the conflict that might exist between the federal government and various states, the federal government ought to take over, eventually, the whole thing?

"Mr. Bowhay: No; but the federal government doesn't exercise anywhere near the detailed control that the state has over the past three or four years exercised over the counties. And the question, of course, is if the state is going to exercise detailed control, they might pay detailed expenses or leave it up to the counties, and this is an issue that I think gradually AB 59 is moving into. In the area of subsidies, and the counties have been tending this way because of pressures on the property tax base, they are in effect giving away home rule and the issue ought to be faced squarely and studied, and studied directly, rather than backed into because of fiscal pressures and ad hoc and expedient measures and the pressures of a legislative session.

"Senator Bradley: Why wouldn't it be better to reduce the power of the state and return it to the county? The county one time had practically full control over welfare programs and why wouldn't that be a better approach?

"Mr. Bowhay: Well, it may and this is what I suggest in the end of this testimony, that the matter be studied seriously . . . but this bears on who pays for it and whether you have cost-sharing or cost shifting."

¹⁰⁰ *Transcript*, December 9, 1964, James Bowhay, Assistant Legislative Counselor, California Taxpayers Association, pp. 67-68.

Thus all three subjects of public assistance's spiraling costs, unsatisfactory cost-sharing arrangements, and who shall administer and control California's public assistance programs are so interrelated that any change made in one area will have immediate repercussions in the other two. The data submitted to and collected by the committee on each of the three subjects insufficiently takes into account this inherent relationship. Further, proposals for specific changes were made only in general terms and all lacked a recognition of, or sufficient correlation to the inexorable changes that would result in the overall scope of administrative and fiscal problems.

Therefore, this committee recommends that a comprehensive study should be undertaken by the Legislature during 1965-67 of public assistance costs, cost-sharing ratios, and state administration. No action should be taken on these interrelated subjects until such a study is completed (see SR 108, page 112).

OTHER UNANSWERED PROBLEMS

Several other critical problems were brought to the committee's attention during the course of our inquiry. These problems include the dire need for child care facilities (to enable more mothers receiving public assistance to secure adequate care for their children so they could become employed or undergo job training); the need for technical and substantive code revisions (in order to permit simplified welfare administration); the advantages of combining into one category the OAS, AB, ATD, and MAA programs; and the advantages of changing from a "special needs" to a "flat grant" concept in paying financial assistance in public welfare.

The committee lacked the time, staff, and budget to pursue these issues to factual and satisfactory conclusions, however.

It is recommended, therefore, that further study should be undertaken by the Legislature during 1965-67 of child care centers, Welfare and Institutions Code revision and simplification, one unified adult category of aid and flat grants (see SR 109, page 112).

LEGISLATION PROPOSED BY COMMITTEE

SENATE BILL

No. 785

Introduced by Senators Sturgeon, Way, Weingand, Rodda,
Bradley, and Cobey

(On behalf of the Senate Fact Finding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

An act to amend Sections 1500, 1500.2, and 1522 of the Welfare and Institutions Code, relating to aid to families with dependent children.

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 1500 of the Welfare and Institutions
- 2 Code is amended to read:
- 3 1500. Aid, services, or both, shall be granted under the pro-
- 4 visions of this chapter, and subject to the regulations of the
- 5 state department, to families with related children under the
- 6 age of 18 21 years, in need thereof because they have been
- 7 deprived of parental support or care due to:
- 8 (a) The death, physical or mental incapacity, or incarceration
- 9 tion of a parent; or
- 10 (b) The divorce, separation or desertion of his parent or
- 11 parents and resultant continued absence of a parent from
- 12 the home for these or other reasons; or
- 13 (c) The unemployment of his parent or parents.

LEGISLATIVE COUNSEL'S DIGEST

SB 785, as introduced, Sturgeon (Soc. Wel.). Aid to needy children.

Amends Secs. 1500, 1500.2, 1522, W. & I.C.

Provides that aid to families with dependent children may be paid to families with children up to 21 years of age, instead of 18 years of age.

Limits payment of aid on behalf of children 16 or 17 years of age to children who are either physically or mentally disabled, who are employed and contributing to the family, or applying earnings to a plan approved by the county for further education or preparation for future employment. Requires that children over such age be regularly attending school or be enrolled in and attending a job training program.

SB 785

— 2 —

1 SEC. 2. Section 1500.2 of said code is amended to read:
2 1500.2. Aid may not be granted under the provisions of
3 this chapter to or in behalf of any child over the age of 16
4 unless *he is regularly attending school or is enrolled in and*
5 *attending a job training program. Aid may also be granted to*
6 *or in behalf of a child over 16, but not more than 17 years of*
7 *age if:*

8 ~~(a) He is regularly attending school, or a training program,~~
9 ~~or~~

10 (a) ~~(b)~~ He is physically or mentally disabled, or
11 (b) ~~(c)~~ He is employed and contributing to the family, or
12 applying his earnings to a plan approved by the county de-
13 partment for his further education or preparation for future
14 employment.

15 SEC. 3. Section 1522 of said code is amended to read:

16 1522. Except as provided in ~~Section~~ *Sections 1500.2 and*
17 *1552.3*, no child over the age of 18 years is a needy child
18 within the meaning of this chapter.

SENATE BILL

No. 786

Introduced by **Senators Sturgeon, Way, Weingand, Rodda,
Bradley, Schrader, and Cobey**
(On behalf of the Senate Fact Finding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

*An act to add Section 1501.6 to the Welfare and Institutions
Code, relating to aid to families with dependent children.*

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 1501.6 is added to the Welfare and
2 Institutions Code, to read:
3 1501.6. Aid shall not be granted to families on the basis of
4 the unemployment of a parent after July 1, 1967, unless the
5 federal law is amended to permit federal financial participa-
6 tion in the payment of such aid.

LEGISLATIVE COUNSEL'S DIGEST

SB 786, as introduced, Sturgeon (Soc. Wel.). Aid to needy children.

Adds Sec. 1501.6, W. & I.C.

Provides that aid shall not be granted to families on the basis of the unemployment of the parent after July 1, 1967, unless federal law is amended to permit financial participation in the payment of such aid.

SENATE BILL

No. 787

Introduced by **Senators Sturgeon, Way, Weingand, Rodda,
Bradley, Schrade, and Cobey**
(On behalf of the Senate Fact Finding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

An act to amend Sections 1503 and 1552.3 of, and to add Section 1500.5 to, the Welfare and Institutions Code, relating to aid to families with dependent children.

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 1500.5 is added to said code, to read:
2 1500.5. When a child's parent, as defined in subdivision
3 (a) of Section 1500.4 of this code, wishes to make an applica-
4 tion for aid, he shall simultaneously submit with his applica-
5 tion, certificates from the local employment service and farm
6 labor office of the California Department of Employment, is-
7 sued within one week of the date of his application. Each
8 certificate shall certify that the applicant has registered for
9 employment and the office has no order for an opening for
10 part-time, full-time, temporary, or permanent work of any
11 kind to which the applicant could be referred, taking into con-
12 sideration only his physical and mental capacity without refer-
13 ence to his customary occupation or acquired skill.

LEGISLATIVE COUNSEL'S DIGEST

SB 787, as introduced, Sturgeon (Soc. Wel.). Aid to needy children.

Amends Secs. 1503, 1552.3, adds Sec. 1500.5, W. & I.C.

Declares that one of the objects of the aid to families with dependent children program is to aid children of unemployed parents who are unable to meet their parental obligation to support, who cannot procure any employment, and who have no other source of aid.

Requires unemployed parent to submit semimonthly certificates from local employment service and farm labor office showing that he has registered for employment and that no employment is available.

Provides that eligibility period shall be determined on the same basis as period prescribed for payment of aid.

SB 787

— 2 —

1 In order to establish his continuing eligibility for aid under
2 this chapter, an unemployed parent shall continue to show his
3 availability for employment by securing and filing, at least
4 once each semimonthly period, new certificates of the type re-
5 quired above from the local employment service and farm
6 labor office. Eligibility for aid shall be terminated immediately
7 in the absence of such certification every semimonthly period.

8 SEC. 2. Section 1503 of said code is amended to read:

9 1503. It is the object and purpose of this chapter to provide
10 aid for children whose dependency is caused by circumstances
11 defined in Sections 1500 and 1500.1, *including children of*
12 *those unemployed parents who are unable to meet their paren-*
13 *tal obligation to support, who cannot procure any employment,*
14 *and who have no other source of aid;* and to keep children in
15 their own homes wherever possible and to provide the best
16 substitute for their own homes for those children who must
17 be given foster care.

18 Those engaged in the administration of aid under this chap-
19 ter are responsible to the community for its effective, humane,
20 and economical administration.

21 It is the intent of the Legislature that the employment and
22 self-maintenance of parents of needy children be encouraged
23 to the maximum extent and that this chapter shall be admin-
24 istered in such a way that needy children and their parents
25 will be encouraged and inspired to assist in their own main-
26 tenance. The State Department of Social Welfare shall take
27 all steps necessary to implement this section.

28 For the purposes of this chapter the value of supplies,
29 equipment, tools of the trade, motor vehicles within reasonable
30 values established by the department when used for work or
31 to seek work, and other personal property directly connected
32 with efforts to become self-supporting, which are a part of a
33 program to assist in maintenance and self-support shall not
34 be considered as personal property as established by Section
35 1521.

36 SEC. 3. Section 1552.3 of said code is amended to read:

37 1552.3. If on the first day of the ~~month~~ *eligibility period*
38 a child is eligible for aid, aid for the entire ~~month~~ *eligibility*
39 *period* shall be paid. *The eligibility period shall be determined*
40 *on the same basis as payments are made under Section 1552.4.*

SENATE BILL

No. 788

Introduced by **Senators Sturgeon, Way, Weingand, Rodda,
Bradley, Schrade, and Cobey**

(On behalf of the Senate Fact Finding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

An act to amend Section 1500.4 of the Welfare and Institutions Code, relating to aid to families with dependent children.

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 1500.4 of the Welfare and Institutions
2 Code is amended to read:
3 1500.4. For the purposes of this chapter, "unemployed
4 parent" means a natural parent, adoptive parent, or step-
5 parent with whom the child is living, and who:
6 (a) Is not working but is available for and seeking employ-
7 ment or, as a result of unemployment, has been accepted for
8 or is participating in a training project essential to future
9 self-support, or
10 (b) Is employed only part time as determined in accordance
11 with such standards as may be developed by the State Depart-
12 ment of Social Welfare in its rules and regulations, which
13 standards shall be consistent with federal law and regulations
14 governing the payment of federal funds to this state under
15 the Social Security Act and consistent with other provisions
16 of this chapter.

LEGISLATIVE COUNSEL'S DIGEST

SB 788, as introduced, Sturgeon (Soc. Wel.). Aid to needy children.

Amends Sec. 1500.4, W. & I.C.

Disqualifies for aid to families with dependent children parent unemployed because of bona fide labor dispute.

Provides parent who voluntarily terminates employment shall not be eligible for aid for 3 months following termination of employment.

SB 788

— 2 —

1 *However, if the parent voluntarily terminated his last em-*
2 *ployment, then his eligibility as an "unemployed parent"*
3 *shall not commence until three months after the last day of*
4 *such employment. A parent who is unemployed because of a*
5 *bona fide labor dispute, the existence of which has been estab-*
6 *lished by the State Department of Employment, shall not be*
7 *considered as an "unemployed parent" for the purposes of*
8 *this chapter.*

SENATE BILL

No. 789

Introduced by Senators Sturgeon, Schrade, Way, Rodda, Weingand,
Bradley, and Cobey
(On behalf of the Senate Fact Finding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

An act to add Section 1523.75 to the Welfare and Institutions Code, relating to aid to families with dependent children.

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 1523.75 is added to the Welfare and
- 2 Institutions Code, to read:
- 3 1523.75. For the purposes of this chapter, an unemployed
- 4 parent who fails or refuses, without good cause, to accept em-
- 5 ployment shall be presumed to have failed to provide for the
- 6 support of his children under Section 270 of the Penal Code.

LEGISLATIVE COUNSEL'S DIGEST

SB 789, as introduced, Sturgeon (Soc. Wel.). Aid to needy children.

Adds Sec. 1523.75, W. & I.C.

Provides that unemployed parent, under aid to families with dependent children program, who fails or refuses to accept employment, without good cause, shall be presumed to have failed to provide for the support of his children for purposes of criminal liability.

SENATE BILL

No. 790

Introduced by Senators Sturgeon, Way, Weingand, Rodda,
Bradley, Schrader, and Cobey
(On behalf of the Senate Fact Finding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

An act to amend Sections 1503.1 and 1511 of, and to add Section 1523.10 to, the Welfare and Institutions Code, relating to aid to families with dependent children.

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 1503.1 of the Welfare and Institutions
2 Code is amended to read:
3 1503.1. The provision of useful work experience and con-
4 structive vocational training for unemployed recipients is a
5 matter of statewide concern.
6 Insofar as practical each county department shall establish
7 a community work experience and vocational training program
8 for unemployed persons and others for whom such experience
9 and training is deemed desirable as part of a plan to help them
10 become self-supporting.
11 Such programs shall be conducted in accordance with stand-
12 ards and regulations established by the Department of Social
13 Welfare as desirable and necessary to qualify for such federal
14 funds as are available.

LEGISLATIVE COUNSEL'S DIGEST

SB 790, as introduced, Sturgeon (Soc. Wel.). Aid to needy children.

Amends Secs. 1503.1, 1511, adds Sec. 1523.10, W. & I.C.

Provides that county welfare department, in connection with community work experience and vocational training program, may pay for supervisors with county funds and available federal funds.

Provides that state shall pay 50 percent of expenses incurred by recipient in meeting special needs arising as result of participation in job training or work experience project, but not to exceed \$12.50.

Provides that if member of family is absent without authorization from a job training or work experience project, aid grant shall be reduced in amount equal to money value of work missed.

SB 790

— 2 —

The cost of materials, equipment and supervision provided by agencies cooperating with the county department in community work experience and training programs shall not be charged as an administrative expense under this chapter or with respect to other public assistance programs. *The county departments may pay for supervisors for work experience and training programs with county funds and any available federal funds.*

Work projects developed under this section shall be confined to projects which serve a useful public purpose, do not result either in displacement of regular workers or in the performance of work that would otherwise be performed by employees of public or private agencies, institutions, or organizations, and (except in cases of projects which involve emergencies or which are generally of a nonrecurring nature) are of a type which has not normally been undertaken in the past by the state or community, as the case may be.

All public entities, including state agencies, are authorized to cooperate and participate with the county department in the establishment of community work experience and training projects.

SEC. 2. Section 1511 of said code is amended to read :

1511. (a) For each needy family which includes one or more needy children qualified for aid under this chapter, except as provided in Section 1557, there shall be paid the sums specified in the following table, or so much thereof as is necessary for the adequate care of the needy family:

Number of needy children in the same home	Maximum aid
1 child -----	\$145
2 children -----	168
3 children -----	215
4 children -----	256
5 children -----	291
6 children -----	320
7 children -----	343
8 children -----	360
9 children -----	371

Plus five dollars (\$5) per child for each additional child.

If, when and during such times as the U.S. government increases or decreases its contributions in assistance of needy children in this state above or below the amount paid on January 1, 1961, the amounts specified in the above table shall be increased or decreased by an amount equal to such increase or decrease by the U.S. government.

(b) *If a recipient of aid under this chapter incurs additional expenses in meeting special needs caused by his participation in job training or work experience projects, the state shall pay 50 percent of such additional expenses not covered*

— 3 —

SB 790

1 *by the grant payable under (a), up to twelve dollars and fifty*
2 *cents (\$12.50) per recipient per month.*

3 ~~(b)~~

4 *(c)* For children receiving foster care who are qualified for
5 aid under the provisions of this chapter, except as provided
6 in Section 1557, there shall be paid the sum necessary for the
7 adequate care of each child, but not to exceed in any month the
8 product of eighty dollars (\$80) multiplied by the number of
9 children in each county receiving foster care. The state shall
10 pay 67.5 percent and the county shall pay 32.5 percent of the
11 aid furnished for the adequate care of such children.

12 ~~(e)~~

13 *(d)* As used in this chapter, "foster care" means care in a
14 boarding home or institution.

15 SEC. 3. Section 1523.10 is added to said code, to read:

16 1523.10. Whenever a member of a family that is receiving
17 aid under this chapter is absent from a job training or work
18 experience project without authorization, the aid grant to such
19 a family shall be reduced in an amount equal to the money
20 value of the work missed.

Senate Joint Resolution

No. 33

Introduced by **Senators Sturgeon, Way, Bradley, Cobey, Rodda,
Schrade, and Weingand**
(On behalf of the Senate Factfinding Committee
on Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

*Senate Joint Resolution No. 33—Relating to the establishment
of job training and work experience projects for AFDC
recipients by private employers.*

1 WHEREAS, Federal and California state statutes authorize
2 the establishment of job training and work experience projects
3 to provide vocational rehabilitation to unemployed parents
4 whose families are receiving aid to families with dependent
5 children; and

6 WHEREAS, The relevant provisions of the federal Social Se-
7 curity Act (Sec. 409 (a) (1), Title IV) have been interpreted
8 by the United States Department of Health, Education, and
9 Welfare as requiring that such job training and work expe-
10 rience projects be performed for public agencies and that pri-
11 vate employers are forbidden from establishing such projects;
12 and

13 WHEREAS, This limitation seriously hinders the potential of
14 training recipients for employment in private business because
15 there are many occupations found in private industry for
16 which there are no equivalent positions in governmental agen-
17 cies; and

18 WHEREAS, This limitation is not found in other job training
19 and work experience programs authorized by the federal gov-
20 ernment, such as the Manpower Development and Training
21 Act (42 USC 2571), and Area Redevelopment Act (42 USC
22 2501), and the Trade Expansion Act (19 USC 1301); now,
23 therefore, be it

LEGISLATIVE COUNSEL'S DIGEST

SJR 33, as introduced, Sturgeon (Soc. Wel.). Social Security Act.

Memorializes Congress to amend the Social Security Act to permit private em-
ployers to establish and maintain job training and work experience projects for
unemployed parents whose families are receiving aid under the AFDC program.

SJR 33

— 2 —

1 *Resolved by the Senate and the Assembly of the State of*
2 *California, jointly,* That the United States Congress is re-
3 spectfully memorialized to amend the Social Security Act to
4 permit private employers, including but not limited to, private
5 agencies, trade associations, labor organizations, and other in-
6 dustrial groups to establish and maintain job training and
7 work experience projects for unemployed parents whose fam-
8 ilies are receiving aid to families with dependent children;
9 and be it further

10 *Resolved,* That the Secretary of the Senate is hereby directed
11 to transmit copies of this resolution to the President and Vice
12 President of the United States, the Speaker of the House of
13 Representatives, and to each senator and representative of this
14 state's delegation to the Congress and to the Secretary of the
15 United States Department of Health, Education, and Wel-
16 fare.

SENATE BILL

No. 791

Introduced by **Senators Sturgeon, Way, Weingand, Rodda,
Bradley, Schrade, and Cobey**
(On behalf of the Senate Fact Finding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

*An act to amend Sections 1523.6 and 1523.7 of the Welfare
and Institutions Code, relating to aid to families with de-
pendent children.*

The people of the State of California do enact as follows:

1 SECTION 1. Section 1523.6 of the Welfare and Institutions
2 Code is amended to read:

3 1523.6. Any child ~~may~~ shall be disqualified to receive aid
4 for so long as the parent of the child refuses, *without good*
5 *cause*, to accept ~~reasonable~~ employment or fails to cooperate
6 to the best of his ability with plans designed to render him
7 more fully capable of supporting himself and his dependents.

8 Each county shall, in administering aid under this chapter,
9 make a determination as to the competence; *and* physical
10 ability ~~and availability~~ of each parent to engage in remunera-
11 tive work and shall require those parents, where it is deemed
12 feasible, to register for employment at the nearest office of the
13 State Department of Employment.

14 The State Department of Social Welfare and the State
15 Department of Employment shall jointly develop plans for
16 the orderly processing and placement of such cases. ~~Priority~~
17 ~~shall be given to those cases with the maximum availability~~
18 ~~and ability to work.~~

LEGISLATIVE COUNSEL'S DIGEST

SB 791, as introduced, Sturgeon (Soc. Wel.). Aid to needy children.

Amends Secs. 1523.6, 1523.7, W. & I.C.

Requires, rather than permits, disqualification of child for aid so long as his parent refuses to accept employment, if such refusal is without good cause.

Eliminates authority of Departments of Social Welfare and Employment to jointly set forth the types of cases and conditions for which employment is not reasonable and for which referral to the Department of Employment is unnecessary. Also eliminates provision requiring that priority be given to cases with maximum availability and ability to work.

SB 791

— 2 —

1 Nothing in this section shall be construed to prevent the
2 State Department of Social Welfare and the State Department
3 of Employment from jointly setting forth the types of cases
4 and conditions for which employment is not reasonable and for
5 which referral to the Department of Employment is unneces-
6 sary.

7 SEC. 2. Section 1523.7 of said code is amended to read:

8 1523.7. Aid shall be denied to an unemployed parent and
9 his family if it is determined by the county welfare depart-
10 ment, in accordance with *Section 1500.5 and the regulations*
11 *of the State Department of Social Welfare*, that:

12 (a) He fails to seek and to keep himself currently available
13 for employment as required by standards set by the depart-
14 ment, or

15 (b) He refuses without good cause to accept part-time, full-
16 time, temporary or permanent employment without reference
17 to his customary occupation or skill. Good cause for refusal of
18 employment shall be deemed to exist *for the purposes of this*
19 *section and Section 1523.6*, when:

20 (1) The offer of employment is not for a specific job at a
21 stated wage comparable to the prevailing wage for that type
22 of employment in the community, or

23 (2) The job is available because of a bona fide labor dispute,
24 the existence of which has been established by the State De-
25 partment of Employment, or

26 (3) The job is not within the physical or mental capacity
27 of the person, as established, when necessary, by competent
28 professional authority, or

29 (4) Acceptance would be an unreasonable act because of
30 hardships imposed upon the person or his family due to illness
31 or remoteness; interruption of a program in process for per-
32 manent rehabilitation or self-support; or conflicting with an
33 imminent likelihood of reemployment at his regular work.

Senate Concurrent Resolution

No. 47

(On behalf of the Senate Factfinding Committee
on Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

*Senate Concurrent Resolution No. 47—
Relating to family planning.*

- 1 WHEREAS, Recent studies show that many citizens are
2 "trapped" in a condition of poverty because of a number of
3 conditions frequently including poor education, poor housing,
4 poor health and poor family planning; and
5 WHEREAS, Great efforts are being made by government at
6 all levels to break the cycle of poverty by improving oppor-
7 tunities for good education, good housing and good health; and
8 WHEREAS, The California Medical Association by resolution
9 has voiced the opinion that family planning services should be
10 properly included in every adequate medical care program;
11 and
12 WHEREAS, Family planning services are not only not avail-
13 able, in most cases, to the persons needing them most, but even
14 where the services are available, medical and social service
15 workers counseling such persons are not free to refer them to
16 agencies where appropriate professional advice on family
17 planning is provided on a voluntary basis; now, therefore,
18 be it
19 *Resolved by the Senate of the State of California, the As-*
20 *sembly thereof concurring,* That the Legislature hereby finds
21 that provision should be made to include family planning serv-
22 ices, and the drugs and materials required therefor, in health
23 care programs wherever possible; that such services should be

LEGISLATIVE COUNSEL'S DIGEST

SCR 47, as introduced, Weingand (Soc. Wel.). Family planning.

States as legislative finding that provision should be made to include family planning services and drugs and materials required therefor in health care programs wherever possible, such services should be available to all who voluntarily seek them, and that persons engaged in medical and social work counseling should be free to provide information regarding agencies where family planning services may be obtained.

SCR 47

— 2 —

- 1 readily available to all who voluntarily wish to seek them ; and
- 2 that all persons engaged in the fields of medical and social
- 3 work counseling, whether privately or publicly employed,
- 4 should be free to provide, in the course of their official duties,
- 5 information regarding agencies where family planning serv-
- 6 ices may be obtained.

Senate Joint Resolution

No. 34

Introduced by **Senators Sturgeon, Way, Bradley, Cobey,
Rodda, Schrade, and Weingand**
(On behalf of the Senate Factfinding Committee
on Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

*Senate Joint Resolution No. 34—Relating to the income earned
by youths of families receiving assistance under the aid to
families with dependent children program.*

1 WHEREAS, The basic purpose of the aid to families with de-
2 pendent children program is to assist children deprived of
3 parental support and to enable these children to grow into
4 self-supporting, independent, and responsible members of the
5 community; and

6 WHEREAS, This purpose is now frustrated by the federal
7 Social Security Act which requires that the earnings of em-
8 ployed youths receiving aid to families with dependent chil-
9 dren either be deducted in computing their aid grants or be
10 retained for future educational needs, thus discouraging them
11 from seeking suitable part-time and summer employment; and

12 WHEREAS, Modification of this requirement would enable the
13 youths to justly derive some immediate personal benefit from
14 their employment in addition to learning the values of em-
15 ployment, self-support, and independence; and

16 WHEREAS, Such a modification would also, by assisting needy
17 families to achieve self-support, ease the burden on the tax-
18 payers, who are now compelled to support families who are
19 potentially capable of supporting themselves; now, therefore,
20 be it

21 *Resolved by the Senate and Assembly of the State of Cali-*
22 *fornia, jointly,* That the Congress of the United States is re-
23 spectfully memorialized to amend the Social Security Act to

LEGISLATIVE COUNSEL'S DIGEST

SJR 34, as introduced, Sturgeon (Soc. Wel.). Family welfare program.

Memorializes the United States Congress to amend the Social Security Act so as to exempt 50 percent of the earnings of youths of families receiving assistance under the aid to families with dependent children program from deductions from aid grants so as to permit them to keep such income for their personal use.

SJR 34

— 2 —

1 exempt 50 percent of the earnings of youths receiving aid to
2 families with dependent children from deductions from aid
3 grants, and to permit them to keep for their own immediate
4 use such exempted income; and be it further
5 *Resolved*, That the Secretary of the Senate is directed to
6 transmit copies of this resolution to the President and Vice
7 President of the United States, the Speaker of the House of
8 Representatives, to each Senator and Representative in this
9 state's delegation to the Congress, and to the Secretary of the
10 United States Department of Health, Education, and Welfare.

SENATE BILL

No. 792

Introduced by **Senators Way, Bradley, Schrade, and Cobey**
(On behalf of the Senate Fact Finding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

*An act to repeal Section 441 of, and to add Section 441 to, the
Welfare and Institutions Code, relating to public assistance.*

The people of the State of California do enact as follows:

1 SECTION 1. Section 441 of the Welfare and Institutions
2 Code is repealed.

3 441. Aid granted to a recipient shall not constitute a lien
4 upon any property of the recipient.

5 The cost of hospitalization furnished by a county to the
6 recipient shall not constitute a lien against the personal prop-
7 erty or personal effects of the recipient, or against an inter-
8 ment plot as defined in Section 7022 of the Health and Safety
9 Code.

10 SEC. 2. Section 441 is added to said code, to read:

11 441. If a recipient or his spouse, either individually or
12 jointly, owns real property, the county shall take a claim on
13 the property as a condition of granting aid. The claim shall
14 be taken as hereinafter provided.

15 The recipient and the spouse of the recipient shall execute
16 and deliver to the county an instrument in writing, acknowl-
17 edged in the same manner as deeds for real property, creating
18 a claim upon the real property for the purpose of reimbursing
19 the county for all moneys paid or to be paid as assistance to
20 the recipient. No interest shall be charged in connection with
21 the claim. The claim shall contain a description of the real
22 property and a provision for reimbursement of continuous
23 future assistance and shall be recorded and indexed in the

LEGISLATIVE COUNSEL'S DIGEST

SB 792, as introduced, Way (Soc. Wel.). Public assistance.

Repeals and adds Sec. 441, W. & I.C.

Requires county to take claim on real property of public assistance recipient as condition of granting aid, and provides for enforcement of claim after death of recipient, his surviving spouse, and after the minority of his surviving children.

SB 792

— 2 —

1 book of deeds in the county recorder's office of the county in
2 which the real property is located.

3 Upon the recording of the claim, the county shall have a
4 claim upon the real property for the amount of the assistance
5 paid or to be paid, which claim shall be prior to any other
6 claim recorded, and shall be notice to a subsequent purchaser,
7 assignee, or encumbrancer of the existence and nature of the
8 claim.

9 Should the recipient or his heirs, next of kin, or personal
10 representatives reimburse the county for the amount due by
11 the terms of the claim, the county shall execute and deliver a
12 satisfaction thereof, upon filing which, the record shall be
13 marked by the county recorder "satisfied and discharged"
14 with the date thereof.

15 Upon the death of a person who was a recipient, the county,
16 on the basis of its claim, shall have a claim against the entire
17 estate of the recipient for all such public assistance granted
18 to the recipient and shall file such claim against the estate of
19 the recipient. Such claim shall have the same priority as a
20 judgment against the estate of the recipient.

21 Notwithstanding any statute of limitations to the contrary,
22 no such claim shall be enforced against the property of a
23 recipient during the life of his surviving spouse or during the
24 minority of his surviving minor children, if any.

25 Any funds recovered from an estate of a recipient pursuant
26 to this section shall be shared by the county, state, and federal
27 government in proportion to the amounts that each contributed
28 toward aid grants to the recipient.

SENATE BILL

No. 793

Introduced by Senators Sturgeon, Way, Weingand, Bradley,
Schrade, and Cobey
(On behalf of the Senate Fact Finding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

*An act to amend Section 449.6 of the Welfare and Institutions
Code, relating to public assistance.*

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 449.6 of the Welfare and Institutions
- 2 Code is amended to read:
- 3 449.6. If the applicant is determined to be eligible, aid
- 4 shall be granted from the first day of the month following the
- 5 date of application, or from the first day of the month follow-
- 6 ing the date on which he becomes eligible if found to be later
- 7 than the date of application, or upon an earlier date if deter-
- 8 mined by and in connection with a petition for a fair hearing;
- 9 provided, however, that nothing contained herein shall be con-
- 10 strued to prevent a county welfare department from making
- 11 aid effective under Chapter 1 (commencing with Section 1500)
- 12 of Part 2 of Division 2 as soon as eligibility is determined, if
- 13 such date is earlier than that specified herein.
- 14 The county at the time of receiving an application for public
- 15 assistance shall determine whether the applicant needs imme-
- 16 diate assistance. If it appears that the applicant is eligible for
- 17 public assistance and a signed affirmation is on file to this effect
- 18 aid ~~shall~~ *may* be granted immediately. If subsequent investiga-
- 19 tion establishes ineligibility then the cost of such assistance
- 20 shall be shared by the state and county in accordance with the
- 21 applicable sharing ratio after federal contributions are de-
- 22 ducted.

LEGISLATIVE COUNSEL'S DIGEST

SB 793, as introduced, Sturgeon (Soc. Wel.). Public assistance.

Amends Sec. 449.6, W. & I.C.

Permits, rather than requires, county to pay aid on the basis of presumptive eligibility.

SENATE BILL

No. 794

Introduced by Senators Sturgeon, Way, Weingand, Rodda,
Bradley, Schrade, and Cobey

(On behalf of the Senate Fact Finding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

*An act to amend Section 443 of, and to add Sections 1509.6
and 1521.1 to, the Welfare and Institutions Code, relating
to public assistance.*

The people of the State of California do enact as follows:

1 SECTION 1. Section 443 of the Welfare and Institutions
2 Code is amended to read:

3 443. In order that recipients of public assistance may be
4 become self-supporting and productive members of their com-
5 munities, it is essential that they be permitted to earn money
6 without a proportionate deduction in their aid grants. It is
7 the intention of the Legislature to promote this objective to the
8 extent possible within the limitations imposed by federal law,
9 and the *director State Social Welfare Board*, in implementing
10 public assistance laws, is directed to do so in the light of this
11 objective.

12 In determining the income of a recipient, the following re-
13 quirements shall be observed:

14 (a) To the extent permitted by federal law, earned income
15 of a recipient of aid under any public assistance program for
16 which federal funds are available shall not be considered in-
17 come or resources of the recipient, and shall not be deducted
18 from the amount of aid to which the recipient would otherwise
19 be entitled.

LEGISLATIVE COUNSEL'S DIGEST

SB 794, as introduced, Sturgeon (Soc. Wel.). Public assistance.

Amends Sec. 443, adds Secs. 1509.6, 1521.1, W. & I.C.

Exempts 50 percent of earnings of needy child under 18 years of age for purpose of computing aid to families with dependent children grant or personal property holdings, and also exempts from consideration in computing personal property holdings earned income of child which is being saved for future education or preparation for future employment.

Expressly sets forth income exemptions permitted by federal law for aged and blind aid recipients, instead of granting such exemptions by reference to federal law.

SB 794

— 2 —

1 (a) ~~(b)~~ In computing the amount of income determined to
2 be available to support a recipient, the value of currently used
3 resources shall be included but the value of casual income and
4 inconsequential resources shall be excluded.

5 (b) *If the recipient is a recipient of old age assistance under*
6 *the provisions of Chapter 1 (commencing with Section 2000)*
7 *of Division 3, of the first fifty dollars (\$50) of his earned in-*
8 *come, the first ten dollars (\$10), plus one-half of the remainder,*
9 *shall be disregarded, and shall not be deducted from the*
10 *amount of aid to which the recipient would otherwise be en-*
11 *titled.*

12 (c) *If the recipient is a recipient of aid to the blind under*
13 *the provisions of Chapter 1 (commencing with Section 3000)*
14 *of Part 1 of Division 5, the first eighty-five dollars (\$85) per*
15 *month of his earned income, plus one-half of his earned income*
16 *in excess of eighty-five dollars (\$85) per month, shall be dis-*
17 *regarded, and shall not be deducted from the amount of aid to*
18 *which the recipient would otherwise be entitled. For such*
19 *period as is permitted by federal law, there shall also be dis-*
20 *regarded such additional amounts of other income and other*
21 *resources, in the case of an individual who has an approved*
22 *plan for achieving self-support, as may be necessary for the*
23 *fulfillment of such plan.*

24 (d) *Earned and other income made available to recipients*
25 *of public assistance through the various titles of the federal*
26 *Economic Opportunity Act of 1964, to the extent provided by*
27 *federal law and regulations, shall not be deducted from the*
28 *amount of aid to which the recipient would otherwise be en-*
29 *titled.*

30 SEC. 2. Section 1509.6 is added to said code, to read:

31 1509.6. For the purposes of this chapter, 50 percent of the
32 earnings of a needy child under the age of 18 years shall not
33 be considered as income to the family unit in determining the
34 amount of assistance to be granted to the family unit.

35 SEC. 3. Section 1521.1 is added to said code, to read:

36 1521.1. For the purposes of this chapter "personal prop-
37 erty" shall not include any earned income of a child which is
38 exempted under Section 1509.6 or, any earned income of a
39 child which is being saved for future education or preparation
40 for future employment.

SENATE BILL

No. 795

Introduced by Senators Sturgeon, Bradley, Rodda, and Weingand
(On behalf of the Senate Fact Finding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

An act to add Section 4727 to the Welfare and Institutions Code, relating to medical assistance for the aged.

The people of the State of California do enact as follows:

1 SECTION 1. Section 4727 is added to the Welfare and In-
2 stitutions Code, to read:

3 4727. The State Department of Social Welfare, in fixing
4 allowances for nursing homes under this chapter, shall fix
5 such allowances on a regional basis by averaging costs in-
6 curred, including a reasonable profit, by nursing homes in the
7 respective regions. Such costs shall be determined by means
8 of audits conducted by the department.

9 Each nursing home shall pay a fee of ten cents (\$0.10) per
10 bed monthly to cover the cost of the audits required by this
11 section. Any nursing home which fails to pay such fee shall
12 be ineligible to receive funds under this chapter.

LEGISLATIVE COUNSEL'S DIGEST

SB 795, as introduced, Sturgeon (Soc. Wel). Medical assistance for the aged.

Adds Sec. 4727, W. & I.C.

Requires Department of Social Welfare to establish allowances for nursing home services on a regional basis by averaging costs incurred, including a reasonable profit, by nursing homes in respective regions.

Requires nursing homes to pay monthly fee of ten cents per bed to cover costs of audits conducted to determine such average costs.

SENATE BILL

No. 796

Introduced by Senators Sturgeon, Way, Rodda, Bradley,
Weingand, Cobey, and Schrade
(On behalf of the Senate Factfinding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

*An act to amend Section 4701 of the Welfare and Institutions
Code, relating to medical assistance for the aged.*

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 4701 of the Welfare and Institutions
2 Code is amended to read:
3 4701. As used in this chapter:
4 (a) "Medical assistance" means medical care as defined by
5 Section 4502 of this code, which is rendered in behalf of aged
6 persons as provided by Section 4722 of this chapter and the
7 regulations of the State Social Welfare Board pursuant
8 thereto.
9 (b) "Aged person" means any person 65 years of age or
10 older who meets the following conditions:
11 1. Who resides in California.
12 2. Whose average monthly income over the next 12 months
13 is not expected to exceed the costs of his medical care plus the
14 cost of his maintenance as determined by the standard of
15 assistance for a recipient of old age security.
16 3. Who does not own personal or real property or both in
17 excess of the amount permitted for recipients of old age
18 security.
19 ~~4. Who is not a recipient of old age security.~~
20 ~~5.~~
21 4. Who is not a patient in an institution for tuberculosis
22 or mental diseases.

LEGISLATIVE COUNSEL'S DIGEST

SB 796, as introduced, Sturgeon (Soc. Wel.). Medical assistance for aged.

Amends Sec. 4701, W. & I.C.

Deletes provision making recipient for old age security ineligible for medical assistance for the aged.

SB 796

— 2 —

1 ~~6.~~

2 5. Who is not a patient in a medical institution as a result
3 of a diagnosis of tuberculosis or psychosis except to the extent
4 federal reimbursement is provided by Title I of the federal
5 Social Security Act.

6 ~~7.~~

7 6. Who is not an inmate of a public institution except as
8 a patient in a public medical institution.

9 (c) "County hospital" means a medical facility established
10 and maintained by the board of supervisors of a county pur-
11 suant to Section 1441 of the Health and Safety Code.

12 (d) "Contract hospital" means a nonprofit medical facility
13 licensed pursuant to Section 1401 of the Health and Safety
14 Code, with which the board of supervisors of a county which
15 does not maintain a county hospital has executed a contract,
16 currently in effect, to care for medically indigent individuals.

Senate Joint Resolution

No. 35

Introduced by Senators Sturgeon, Way, Bradley, Cobey, Rodda,
Schrade, and Weingand

(On behalf of the Senate Factfinding Committee
on Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

Senate Joint Resolution No. 35—Relating to the concurrent receipt of old age assistance and medical assistance to the aged.

1 WHEREAS, Section 1 of Title I of the Social Security Act
2 prohibits the concurrent receipt of old age assistance and
3 medical assistance for the aged; and

4 WHEREAS, This prohibition unjustly discriminates between
5 the recipient of old age assistance who, when ill, must wait up
6 to a month in order to become eligible for medical assistance
7 for the aged, and the aged recipient of aid to the blind or aid
8 to the totally disabled who becomes immediately eligible for
9 M.A.A.; and

10 WHEREAS, This prohibition causes great hardships for the ill
11 recipient of old age assistance in that he must deplete his per-
12 sonal resources, if any, to pay for necessary hospitalization
13 and related medical services until he can become eligible for
14 M.A.A.; and

15 WHEREAS, This prohibition causes a substantial economic
16 drain on local governments, medical practitioners, and hos-
17 pitals who must furnish and pay for hospitalization and re-
18 lated medical services for O.A.A. recipients who have no per-
19 sonal resources; now, therefore, be it

20 *Resolved by the Senate and Assembly of the State of Cali-*
21 *fornia, jointly,* That the Congress of the United States is re-
22 spectfully memorialized to eliminate from the Social Security
23 Act the prohibition against the concurrent receipt of old age
24 assistance and medical assistance for the aged; and be it
25 further

LEGISLATIVE COUNSEL'S DIGEST

SJR 35, as introduced, Sturgeon (Soc. Wel.). Social Security Act.

Memorializes Congress to amend the Social Security Act to eliminate the prohibition against the concurrent receipt of old age assistance and medical assistance for the aged.

SJR 35

— 2 —

1 *Resolved*, That the Secretary of the Senate be hereby directed
2 to transmit copies of this resolution to the President and Vice
3 President of the United States, the Speaker of the House of
4 Representatives, to each senator and representative in this
5 state's delegation to the Congress, and to the Secretary of the
6 United States Department of Health, Education, and Welfare.

SENATE BILL

No. 797

Introduced by Senators Way, Bradley, Schrade, and Cobey
 (On behalf of the Senate Factfinding Committee on
 Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

An act to repeal Section 4735 of, and to add Section 4735 to, the Welfare and Institutions Code, relating to medical assistance to the aged.

The people of the State of California do enact as follows:

1 SECTION 1. Section 4735 of the Welfare and Institutions
 2 Code is repealed.

3 4735. No relative shall be held legally liable to support or
 4 to contribute to the support of any applicant for or recipient
 5 of assistance under this chapter.

6 Notwithstanding the provisions of Section 206 of the Civil
 7 Code, or Section 270e of the Penal Code, or any other provi-
 8 sion of this code no demand shall be made upon any relative to
 9 support or contribute toward the support of any applicant for
 10 or recipient of assistance under this chapter. No county or
 11 officer or employee thereof shall threaten any such relative
 12 with any legal action against him, by or in behalf of the county
 13 or with any penalty whatsoever.

14 SEC. 2. Section 4735 is added to said code, to read:

15 4735. The degree of liability of adult children to contribute
 16 to the support or care of any aged person who receives medical
 17 assistance under this chapter shall be determined in accord-
 18 ance with the provisions of Section 2181 of this code.

LEGISLATIVE COUNSEL'S DIGEST

SB 797, as introduced, Way (Soc. Wel.). Medical assistance to the aged.

Repeals and adds Sec. 4735, W. & I.C.

Requires adult children of recipients of medical assistance to the aged to contribute to the support or care of such recipients, and makes degree of liability the same as is prescribed for adult children of old age assistance recipients.

SENATE BILL

No. 798

**Introduced by Senators Sturgeon, Way, Weingand, Rodda,
Bradley, Schrade, and Cobey**
(On behalf of the Senate Fact Finding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

*An act to repeal Section 4000 of, and to add Section 4000 to,
the Welfare and Institutions Code, relating to aid to the
disabled.*

The people of the State of California do enact as follows:

1 SECTION 1. Section 4000 of the Welfare and Institutions
2 Code is repealed.

3 4000. When used in this chapter, the following words shall
4 have the meanings ascribed to them in this section:

5 (a) "Needy disabled person" means a person who meets the
6 eligibility requirements set forth in this chapter and who is
7 both permanently impaired and totally disabled.

8 (b) "Permanently impaired" means that the individual has
9 a major physical or a major mental impairment or a combina-
10 tion of both which is verified by medical findings and appears
11 reasonably certain to continue throughout the lifetime of the
12 individual without substantial improvement.

LEGISLATIVE COUNSEL'S DIGEST

SB 798, as introduced, Sturgeon (Soc. Wel.). Aid to disabled.

Repeals and adds Sec. 4000, W. & I.C.

Provides that terms "needy disabled person," "permanently impaired," and "totally disabled" shall have meanings ascribed to them in regulations of the State Department of Social Welfare in effect on February 1, 1965, instead of defining such terms by statute.

SB 798

— 2 —

1 (c) "~~Totally disabled~~" means that the impairment substan-
2 tially precludes the individual from engaging in useful occu-
3 pations within his competence, such as holding a job or home-
4 making. Employment in a sheltered workshop or under an
5 approved vocational rehabilitation plan shall not be considered
6 a "~~useful occupation~~" for purposes of this chapter.

7 SEC. 2. Section 4000 is added to said code, to read:

8 4000. The terms "needy disabled person," "permanently
9 impaired," and "totally disabled" shall have the meanings
10 ascribed to them in the regulations of the State Department
11 of Social Welfare in effect on February 1, 1965.

SENATE BILL

No. 799

Introduced by **Senators Sturgeon, Way, Weingand, Rodda,
Bradley, Schrade, and Cobey**
(On behalf of the Senate Fact Finding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

An act to amend Sections 4135 and 4181.5 of the Welfare and Institutions Code, relating to aid to the disabled.

The people of the State of California do enact as follows:

1 SECTION 1. Section 4135 of the Welfare and Institutions
2 Code is amended to read:

3 4135. The State Department of Social Welfare shall *either*
4 make the final determination as to permanent impairment and
5 total disability *or, if it deems it feasible, shall delegate such*
6 *function to the counties.*

7 SEC. 2. Section 4181.5 of said code is amended to read:

8 4181.5. *Unless the department has delegated to the county*
9 *the duty to make the final determination of permanent impair-*
10 *ment and total disability, the* The county shall upon applica-
11 tion and periodically as required submit a complete report,
12 with a recommendation as to eligibility, of the medical informa-
13 tion and other essential facts relative to the determination of
14 permanent impairment and total disability to the State De-
15 partment of Social Welfare for decision.

16 If the State Department of Social Welfare *or the county,*
17 *as the case may be,* finds the person to be disabled in accord-
18 ance with the definitions set forth in Section 4000 the county
19 shall, if the person is otherwise eligible, authorize aid as soon
20 as administratively possible.

LEGISLATIVE COUNSEL'S DIGEST

SB 799, as introduced, Sturgeon (Soc. Wel.). Aid to the disabled.

Amends Secs. 4135, 4181.5, W. & I.C.

Directs the State Department of Social Welfare, if feasible, to delegate to the counties duty to make the final determination as to the permanent impairment and total disability of an applicant for aid.

Senate Joint Resolution

No. 36

Introduced by Senators Sturgeon, Way, Bradley, Cobey, Rodda,
Schrade, and Weingand

(On behalf of the Senate Factfinding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

*Senate Joint Resolution No. 36—Relating to the determination
of medical eligibility for the aid to the blind and the aid to
the totally disabled programs.*

1 WHEREAS, Regulations of the United States Department of
2 Health, Education, and Welfare and the provisions of the
3 Social Security Act permit local governmental welfare agencies
4 under the supervision of a state welfare agency to administer
5 public welfare programs and make determinations as to the
6 eligibility of applicants for aid; and

7 WHEREAS, Other regulations of the Department of Health,
8 Education, and Welfare prohibit local welfare agencies from
9 making the final medical eligibility determinations of the
10 blindness and disability of applicants for the aid to the blind
11 and the aid to the totally disabled programs and require the
12 state welfare agency to make these medical findings; and

13 WHEREAS, There is nothing which innately makes at least
14 some local governmental welfare agencies incapable or unquali-
15 fied to make such medical eligibility determinations; and

16 WHEREAS, The prohibition of local agencies making such
17 medical eligibility determinations results in waste and un-
18 necessary administrative complexity and often causes appli-
19 cants for aid unwarranted delays in the processing of their
20 applications; now, therefore, be it

21 *Resolved by the Senate and the Assembly of the State of*
22 *California, jointly, That the United States Department of*

LEGISLATIVE COUNSEL'S DIGEST

SJR 36, as introduced, Sturgeon (Soc. Wel.). Welfare applicant's medical eli-
gibility.

Memorializes the United States Department of Health, Education and Welfare
to amend its regulations so as to permit local governmental welfare agencies to
determine the medical eligibility of applicants for aid to the blind and aid to the
totally disabled.

SJR 36

— 2 —

1 Health, Education, and Welfare is memorialized to amend its
2 regulations so as to permit local governmental welfare agencies
3 to determine the medical eligibility of applicants for aid to the
4 blind and aid to the totally disabled; and be it further
5 *Resolved*, That the Secretary of the Senate be hereby directed
6 to transmit copies of this resolution to the President of the
7 United States and to the Secretary of the United States De-
8 partment of Health, Education and Welfare.

Schrade, and Weingand

(On behalf of the Senate Factfinding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

Senate Joint Resolution No. 37—Relative to protective payments of aid in behalf of recipients of aid to the permanently and totally disabled.

- 1 WHEREAS, The federal Social Security Act requires that aid
2 granted recipients of aid to the permanently and totally dis-
3 abled program be in the form of direct money payments; and
4 WHEREAS, Often recipients of this program, because of their
5 addiction to alcohol and drugs or because of their mental con-
6 dition, are unable to manage direct money payments to their
7 own benefit and best self-interest; and
8 WHEREAS, Similar money management problems in the aid
9 to families with dependent children program have been suc-
10 cessfully overcome by amendments to the Social Security Act
11 permitting, under carefully controlled situations, protective
12 payments made in behalf of the recipient to another interested
13 or concerned individual; now, therefore, be it
14 *Resolved by the Senate and the Assembly of the State of*
15 *California, jointly,* That the Congress of the United States is
16 respectfully memorialized to amend the Social Security Act
17 to permit protective payments of aid in behalf of recipients of
18 aid to the permanently and totally disabled when such recipi-
19 ents are unable to use direct money payments to their own
20 benefit and best self-interest; and be it further
21 *Resolved,* That the Secretary of the Senate be hereby di-
22 rected to transmit copies of this resolution to the President

LEGISLATIVE COUNSEL'S DIGEST

SJR 37, as introduced, Sturgeon (Soc. Wel.). Aid: permanently and totally disabled.

Memorializes Congress to amend the Social Security Act to permit protective payments of aid in behalf of recipients of aid to the permanently and totally disabled when such recipients are unable to use direct money payments to their own benefit and best self-interest.

SJR 37

— 2 —

- 1 and Vice President of the United States, the Speaker of the

Bradley, Schrade, and Cobey**
(On behalf of the Senate Fact Finding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

An act to amend Sections 3040 and 4160 of, and to add Section 3041 to, the Welfare and Institutions Code, relating to public assistance.

The people of the State of California do enact as follows:

1 SECTION 1. Section 3040 of the Welfare and Institutions
2 Code is amended to read:

3 3040. No person *who became blind while a resident of the*
4 *state* is entitled to aid under the provisions of this chapter or
5 Chapter 3 (commencing with Section 3400) of this part, un-
6 less he is at least 16 years of age and is a resident of the state.
7 No period of residence in this state is required.

8 SEC. 2. Section 3041 is added to said code, to read:

9 3041. No person who became blind while a nonresident of
10 this state is entitled to aid under the provisions of this chap-
11 ter or Chapter 3 (commencing with Section 3400) of this part,
12 unless he is at least 16 years of age, and unless he resides in
13 this state and has so resided continuously for at least one
14 year immediately preceding the date of application and for
15 at least five years within the nine years immediately preceding
16 the date of such application.

LEGISLATIVE COUNSEL'S DIGEST

SB 800, as introduced, Sturgeon (Soc. Wel.). Public assistance.

Amends Secs. 3040, 4160, adds Sec. 3041, W. & I.C.

Provides that person who became blind while nonresident of state is not eligible for aid to the blind unless he has resided in state for 5 of 9 years preceding application for aid and for one year continuously preceding application.

Provides that person who became disabled while nonresident of state is not eligible for aid to the disabled unless he has resided in state for 5 of 9 years preceding application for aid.

SB 800

— 2 —

1 SEC. 3. Section 4160 of said code is amended to read:

2 4160. Aid shall be granted under this chapter to any needy
3 disabled person who comes within all of the following de-
4 scriptions:

5 (a) Who has attained the age of 18 years.

6 (b) Who resides in the state and has so resided for at least
7 one year immediately preceding the date of application and
8 for at least ~~three~~ *five* years within the nine years immediately
9 preceding the date of application, *or who* has become disabled
10 while a resident of this state, ~~or is eligible under the terms of~~
11 ~~a reciprocal agreement entered into by the department with~~
12 ~~another state.~~

13 (c) Who has not made any voluntary assignment or trans-
14 fer of property for the purpose of qualifying for such aid.

15 (d) Who is not at the time of receiving such aid a patient
16 in an institution for tuberculosis or mental disease, a patient
17 in a medical institution as the result of a diagnosis of tuber-
18 culosis or psychosis, an inmate of a public institution of a cus-
19 todial (nonmedical), penal, or correctional character, or an
20 inmate of a federal medical institution. Any such inmate or
21 patient, however, may make an application for aid under this
22 chapter and have his application investigated and acted upon
23 without delay, in the same manner as applications of other
24 persons are acted upon, while he is such an inmate or patient,
25 and, if he is otherwise qualified under the terms of this chap-
26 ter, such application shall be approved. The aid shall be
27 granted to him from the first day of the month in which the
28 determination is made that he is eligible, but in no event shall
29 the aid commence prior to the date of the application. The
30 applicant may remain an inmate or patient until he receives
31 his first monthly payment, whereupon he shall cease to be
32 such inmate or patient.

33 (e) Who is not receiving adequate support from a husband
34 or wife, or parent, or child.

SENATE BILL

No. 801

Introduced by **Senators Sturgeon, Way, Weingand, Rodda,
Bradley, Schrade, and Cobey**
(On behalf of the Senate Fact Finding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

*An act to amend Section 403 of the Welfare and Institutions
Code, relating to welfare projects.*

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 403 of the Welfare and Institutions
2 Code is amended to read:
3 403. Among the projects approved by the State Depart-
4 ment of Social Welfare priority shall be given to those which
5 involve:
6 (a) Efforts to minimize as much as possible within the limits
7 of state and federal laws the administrative differences be-
8 tween the several categories of assistance;
9 (b) Demonstrations in providing family service programs;
10 (c) Employment counseling, training, and placement pro-
11 grams for public welfare recipients;
12 (d) Extension of rehabilitation and self-care services for
13 handicapped and incapacitated persons not accepted for serv-
14 ices offered by the *Department Bureau of Vocational Reha-*
15 *bilitation of the State Department of Education* ;
16 (e) Efforts designed to give particular attention to the fam-
17 ily where dependency is associated with illegitimacy, parental
18 behavior, delinquency and other family relationship problems;
19 (f) Coordinated use of medical, psychiatric, and casework
20 services with public welfare recipients;
21 (g) Development of caseload management and case classifi-
22 cation programs;
23 (h) Homemaker services for families and adults;

LEGISLATIVE COUNSEL'S DIGEST

SB 801, as introduced, Sturgeon (Soc. Wel.). Welfare projects.

Includes among county welfare projects for which state assistance is available those which involve the safeguarding of public funds by the detection of fraud and improving the accuracy of eligibility determinations.

SB 801

— 2 —

- 1 (i) Protective services for both children and adults;
2 (j) Projects demonstrating use of preventive services re-
3 lated to dependency, family breakdown, or personal maladjust-
4 ment; and
5 (k) Participation of county welfare departments in com-
6 munity service programs particularly in approaches to prob-
7 lems of underprivileged presented by recipients from minority
8 groups.
9 (l) *The safeguarding of public funds by the detection of*
10 *fraud and improving the accuracy of eligibility determinations.*

SENATE BILL

No. 802

Introduced by **Senators Sturgeon, Way, Weingand, Rodda,
Bradley, Schrade, and Cobey**
(On behalf of the Senate Fact Finding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

*An act to amend Section 104.1 of the Welfare and Institutions
Code, relating to public assistance.*

The people of the State of California do enact as follows:

1 SECTION 1. Section 104.1 of the Welfare and Institutions
2 Code is amended to read:

3 104.1. Notwithstanding any other provisions of this code,
4 the director is the only person authorized to adopt regulations,
5 orders, or standards of general application which are adopted
6 to implement, interpret, or make specific the law enforced by
7 the department, and such regulations, orders, and standards
8 shall be adopted, amended, or repealed by the director only
9 in accordance with the provisions of Chapter 4.5, Part 1, Di-
10 vision 3, Title 2 of the Government Code; ~~except that such~~
11 ~~regulations need not~~. *Such regulations, orders, and standards*
12 *shall be printed in the California Administrative Code or*
13 *California Administrative Register if they are included in the*
14 *publications of the Department of Social Welfare.*

15 In adopting regulations the director shall strive for clarity
16 of language which may be readily understood by those ad-
17 ministering public social services, or subject to such regula-
18 tions.

19 The rules of the department need not specify or include the
20 detail of forms, reports or records but shall include the es-
21 sential authority by which any person, agency, organization, as-
22 sociation or institution subject to the supervision or investiga-
23 tion of the department is required to use, submit or maintain
24 such forms, reports or records.

LEGISLATIVE COUNSEL'S DIGEST

SB 802, as introduced, Sturgeon (Soc. Wel.). Public assistance.

Amends Sec. 104.1, W. & I.C.

Requires that regulations, orders, and standards of the State Department of Social Welfare be printed in the California Administrative Code.

Senate Joint Resolution

No. 38

**Introduced by Senators Sturgeon, Way, Bradley, Cobey, Rodda,
Schrade, and Weingand**

(On behalf of the Senate Factfinding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

*Senate Joint Resolution No. 38—Relative to the standards for
public assistance caseloads adopted by the United States De-
partment of Health, Education, and Welfare.*

1 WHEREAS, In 1962 the United States Congress adopted
2 amendments to the Social Security Act to stimulate the pro-
3 vision of services by public welfare departments to aid re-
4 cipients which would maintain and strengthen family life and
5 assist recipients in attaining or retaining their capabilities for
6 self-support or self-care; and

7 WHEREAS, The necessity of providing such services to attain
8 these goals has been recognized, accepted, and implemented in
9 California by the State Legislature, county boards of super-
10 visors, and the state and county public welfare departments;
11 and

12 WHEREAS, In implementing the services program authorized
13 by the Congress the United States Department of Health,
14 Education, and Welfare has prescribed rigid standards of
15 maximum ratios of 1 supervisor to 5 caseworkers and 1 case-
16 worker to 60 cases for all adult and family cases needing serv-
17 ices; and

18 WHEREAS, These inflexible standards have little direct rele-
19 vance to the ability of public welfare departments to provide
20 those services necessary for the diagnosis and treatment of
21 the causes of dependency; and

22 WHEREAS, These strict standards have often actually im-
23 peded attempts to provide such services; now, therefore, be it

LEGISLATIVE COUNSEL'S DIGEST

SJR 38, as introduced, Sturgeon (Soc. Wel.). Public assistance.

Memorializes the U.S. Department of Health, Education, and Welfare to relax its caseload and supervisory standards in order to permit states and counties that flexibility which is essential to success in public welfare service programs.

SJR 38

— 2 —

- 1 *Resolved by the Senate and the Assembly of the State of*
2 *California, jointly,* That the United States Department of
3 Health, Education, and Welfare is memorialized to relax its
4 caseload and supervisory standards in order to permit the
5 states and the counties that flexibility which is essential to
6 success in the services program; and be it further
7 *Resolved,* That the Department of Health, Education, and
8 Welfare place emphasis on the results achieved through the
9 services program rather than on the adherence to rigid pro-
10 cedural requirements; and be it further
11 *Resolved,* That the Secretary of the Senate be hereby di-
12 rected to transmit copies of this resolution to the President
13 of the United States and to the Secretary of the United States
14 Department of Health, Education, and Welfare.

Senate Joint Resolution

No. 39

**Introduced by Senators Sturgeon, Way, Bradley, Cobey, Rodda,
Schrade, and Weingand**
(On behalf of the Senate Fact Finding Committee on
Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

*Senate Joint Resolution No. 39—Relating to judicial review in
public assistance cases.*

1 WHEREAS, It is in the public interest that the administrative
2 interpretation of statutory provisions be subject to judicial re-
3 view, so that those subject to regulation may have a forum
4 wherein they may obtain an impartial determination as to the
5 meaning of the statutes under which they operate; and

6 WHEREAS, The Social Security Act does not provide a state,
7 its political subdivisions, or a recipient of public assistance
8 such a judicial review of decisions made by the United States
9 Department of Health, Education, and Welfare relating to the
10 public assistance titles of the act; and

11 WHEREAS, The result is that the United States Department
12 of Health, Education, and Welfare is the final judge as to
13 whether a state is in conformity with the intent of the Social
14 Security Act; and

15 WHEREAS, The apparent unlimited authority conferred on
16 the department prevents the legislatures in the various states,
17 in many instances, from enacting desirable legislation in the
18 field of public assistance due to statements, often unfounded,
19 that the legislation will be declared by the department to be
20 out of conformity with federal requirements; and

LEGISLATIVE COUNSEL'S DIGEST

SJR 39, as introduced, Sturgeon (Soc. Wel.). Public assistance.

Memorializes Congress to amend Social Security Act to entitle states, their political subdivisions, and public assistance recipients to maintain appropriate actions in the United States Court of Appeal to obtain prompt and adequate judicial review of administrative determinations made under public assistance titles of the Social Security Act.

SJR 39

— 2 —

1 WHEREAS, If provision were expressly made for an adequate
2 judicial review of decisions of the department in the federal
3 courts, the problems discussed above would be equitably elim-
4 inated and there would grow a body of judicial precedents
5 that would enable the states to determine the extent of their
6 discretion under the Social Security Act; and

7 WHEREAS, The Advisory Commission on Intergovernmental
8 Relations has recently recommended that the states be given
9 the expressed right to appeal to the United States Court of
10 Appeals from administrative decisions of the department re-
11 garding conformity of their plans under the public assistance
12 titles of the Social Security Act; now, therefore, be it

13 *Resolved by the Senate and Assembly of the State of Cali-*
14 *fornia, jointly,* That the Congress of the United States is re-
15 spectfully memorialized to amend the Social Security Act to
16 entitle the states, their political subdivisions, and public assist-
17 ance recipients to maintain appropriate actions in the United
18 States Court of Appeals to obtain prompt and adequate judi-
19 cial review of administrative determinations made under the
20 public assistance titles of the Social Security Act; and be it
21 further

22 *Resolved,* That the Secretary of the Senate be hereby di-
23 rected to transmit copies of this resolution to the President
24 and Vice President of the United States, the Speaker of the
25 House of Representatives, to each senator and representative
26 in this state's delegation to the Congress, and to the Secretary
27 of the United States Department of Health, Education, and
28 Welfare.

Senate Concurrent Resolution

No. 48

Introduced by Senators Sturgeon, Way, Bradley, Cobey,
Rodda, and Weingand

(On behalf of the Senate Factfinding Committee
on Labor and Welfare)

March 22, 1965

REFERRED TO COMMITTEE ON SOCIAL WELFARE

Senate Concurrent Resolution No. 48—Relative to a systems analysis to simplify the administration of public assistance programs.

1 WHEREAS, It has become increasingly evident that public
2 assistance programs must enlarge their function from merely
3 being dole-paying programs to including services for the
4 diagnosis and treatment of the causes of dependency; and

5 WHEREAS, The success of such an emphasis on services is
6 wholly dependent upon the amount of time and skill which
7 caseworkers can devote to working with aid recipients to assist
8 them; and

9 WHEREAS, A blizzard of paperwork, complicated administra-
10 tive practices, and minutely detailed regulatory material have
11 increasingly engulfed public assistance caseworkers, precluding
12 them from working with aid recipients, and seriously jeopard-
13 izing the services approach; and

14 WHEREAS, New approaches, fresh thinking, and original
15 methods must be devised to bring a semblance of order and
16 simplicity to the administration of public welfare; and

17 WHEREAS, The Governor has recognized the gravity of the
18 existing situation and has proposed bringing the skills of Cali-
19 fornia's business, sciences, public administration, and techno-
20 logical industries to bear on these problems; now, therefore,
21 be it

22 *Resolved by the Senate of the State of California, the As-*
23 *sembly thereof concurring,* That the Governor be urged to im-
24 mediately order such a systems analysis of the administration
25 of public assistance programs in California.

LEGISLATIVE COUNSEL'S DIGEST

SCR 48, as introduced, Sturgeon (Soc. Wel.). Welfare.

Urges Governor to immediately order a systems analysis of the administration of public assistance programs in California.

SENATE RESOLUTION NO. 108

By Senators Sturgeon, Way, Bradley, Cobey, Rodda, Schrade, and Weingand: (On behalf of the Senate Fact Finding Committee on Labor and Welfare).

*Relative to a study of public welfare costs, financing,
cost sharing ratios, and administration*

WHEREAS, During the course of its 1963-65 study of California's public assistance programs the Senate Fact Finding Committee on Labor and Welfare reconfirmed the existence of serious problems relating to public welfare costs, financing, cost sharing ratios, and administration; and

WHEREAS, Eloquent arguments were presented to demonstrate the need for controlling more carefully total welfare expenditures in California, for providing relief from excessive welfare costs to county property-owning taxpayers, for simplifying and equalizing welfare cost sharing ratios, and for studying the desirability of state administration of public welfare programs; and

WHEREAS, Information, data, and specific proposals on these inter-related subjects sufficient and concrete enough to permit immediate action were lacking; and

WHEREAS, The Senate Fact Finding Committee on Labor and Welfare has recommended that no action be taken by the 1965 General Session of the Legislature pending further and more complete study of these problems; now, therefore, be it

Resolved by the Senate of the State of California, That the Senate Fact Finding Committee on Labor and Welfare is hereby authorized to undertake a study of public welfare costs, financing, cost sharing ratios, and state administration and report its findings and recommendations to the Senate no later than the 30th calendar day of the 1967 General Session of the Legislature.

SENATE RESOLUTION NO. 109

By Senators Sturgeon, Way, Bradley, Cobey, Rodda, Schrade, and Weingand: (On behalf of the Senate Fact Finding Committee on Labor and Welfare).

Relative to a study of child care centers, Welfare and Institutions Code revision and simplification, one unified adult category of aid, and flat grants

WHEREAS, The 1963-65 study of the Senate Fact Finding Committee on Labor and Welfare disclosed serious problems relating to the provision of child care facilities, the need for revision and simplification of the Welfare and Institutions Code, a study of one unified adult category of aid, and the payment of flat grants; and

WHEREAS, Limitations imposed by the committee's time and budget precluded its making a complete study and recommendations on these subjects prior to the 1965 General Session of the Legislature; now, therefore, be it

Resolved by the Senate of the State of California, That the Senate Fact Finding Committee on Labor and Welfare is hereby authorized to conduct a study of child care centers, revision and simplification of the Welfare and Institutions Code, one unified adult category of aid, and flat grants and report its findings and recommendations to the Senate no later than the 30th calendar day of the 1967 General Session of the Legislature.

APPENDICES

APPENDIX A

SENATE JOINT RESOLUTION NO. 13—1963

CHAPTER 163

Senate Joint Resolution No. 13 — Relative to judicial review in public assistance cases.

[Filed with Secretary of State June 24, 1963.]

WHEREAS, It is in the public interest that the administrative interpretation of statutory provisions be subject to judicial review, so that those subject to regulation may have a forum wherein they may obtain an impartial determination as to the meaning of the statutes under which they operate; and

WHEREAS, The law is not clear whether a state or its subdivisions, or a recipient of public assistance, may obtain a speedy and adequate judicial review of decisions made by the United States Department of Health, Education, and Welfare concerning the public assistance sections of the Social Security Act; and

WHEREAS, The result is that the United States Department of Health, Education, and Welfare, for practical purposes, is the final judge as to whether or not a state is in conformity with federal requirements; and

WHEREAS, The apparent unlimited authority conferred on the department prevents the legislatures in the various states, in many instances, from enacting sound legislation in the field of public assistance, due to statements, often unfounded, that the legislation will be declared by the department to be out of conformity with federal requirements; and

WHEREAS, If provision were expressly made for an adequate judicial review of decisions of the department in the federal courts, the problems discussed above would be eliminated, and there would grow a body of judicial precedents that would enable the states to determine the extent of their discretion under the Social Security Act; now, therefore, be it

Resolved by the Senate and Assembly of the State of California, jointly, That the Legislature of the State of California hereby memorializes the President of the United States, the Congress of the United States, and the Secretary of Health, Education, and Welfare to take such action as may be necessary to clearly enable a state and its political subdivisions, and public assistance recipients, to maintain appropriate actions in the federal courts to obtain a quick and adequate judicial review of administrative determinations made under the Social Security Act; and be it further

Resolved, That the Secretary of the Senate is directed to transmit copies of this resolution to the President of the United States, the Vice President of the United States, the Speaker of the House of Representatives, the Secretary of the United States Department of Health, Education and Welfare, and to each Senator and Representative from California in the Congress of the United States.

APPENDIX B

QUESTIONS FOR COUNTY SUPERVISORS' TESTIMONY SENATE FACT FINDING COMMITTEE ON LABOR AND WELFARE

San Luis Obispo, California
May 26, 27, and 28, 1964

1. Describe your county's first three months' experience (February, March, and April 1964) with the new features of California's child aid program which provides assistance to families with unemployed and underemployed parents (AFDC—UP).

- a) Include number of cases and recipients as of May 1, 1964.
- b) Include cost figures for these three months, broken down by gross and net county costs for grants and for administration.
- c) Compare these figures (b) with estimates made prior to February 1964, by such agencies as the county welfare department, the county administrative office, or the press, and indicate the source of each estimate given.
- d) Give the amount of the actual county budget for this fiscal year for AFDC—UP.

2. Comment on the staffing problems, if any, which you are facing due to both the new AFDC—UP program and S.D.S.W. Bulletin No. 629.

- a) How many additional staff members have you hired?
- b) Are you having difficulty in obtaining an adequate qualified staff? If so, do you believe such difficulties will continue?

3. Comment on the "work relief" feature of the AFDC—UP program in your county.

- a) Are you operating work experience and work training programs? Name them, and give the number of recipients involved.
- b) Name the work experience and work training programs which were operative prior to February 1, 1964.
- c) What difficulties, if any, have you encountered in setting up such programs?
- d) What suggestions do you have for improvements or changes in the present requirements regarding work experience and work training programs?

4. Describe your county's efforts to locate and obtain support from absent fathers whose families receive AFDC. Has AB 59 affected the number of such cases or the county's location and support-obtaining procedure?

5. What has been the effect of the changes made in all categorical aid programs through AB 59 on your General Relief program? (Specifically, compare your General Relief costs for February, March, and April 1963 with your costs for February, March, and April 1964.)

6. How many Medical Aid for the Aged cases did you have in county facilities during April 1964 who were there during the first 30 days of their confinement and for whom federal funds were available under the new legislation? (If available, also include any other figures for the period from July 1, 1963, to date.)

7. Are there any specific state M.A.A. regulations or statutes which merit reconsideration or modification?

8. What specific features of any aid programs covered by AB 59 and state regulations deserve further investigation by the Legislature? (Comment specifically in light of the actual experience of your county.)

APPENDIX C

SUMMARY OF RECOMMENDATIONS ON AB 59 AND BULLETIN 629

Public Hearings—May 26–28 and December 9–11, 1964

* State Statutory Change.

† State Administrative Change.

‡ Federal Statutory or Administrative Change.

MEDICAL ASSISTANCE FOR THE AGED

1. *1st 30 Days' Eligibility.*

*(a) State should share in costs.

Alameda p. 59, San Joaquin p. 192, Tehama p. 210, Kern p. 340, Merced p. 437, Sacramento p. 452. (Prepared statements—Amador p. 1, Calaveras p. 2, El Dorado p. 6, Mendocino p. 3, Siskiyou p. 5.) Cal. Tax. p. 75.

*‡(b) MAA and OAS should be payable during same month.

Lassen p. 80, Santa Clara p. 122, San Mateo p. 134, San Joaquin p. 192, Tehama p. 210, Riverside p. 243, Yolo p. 260, Sonoma p. 303, Humboldt p. 349, Marin p. 357, Sacramento p. 449, Kings p. 478, Mariposa p. 515. (Prepared statements—Alpine p. 2, Plumas p. 4, Trinity p. 2, Tuolumne p. 5.) Social Workers Union p. 147.

*(c) Private hospital patients should also be eligible for care during 1st 30 days.

Humboldt p. 349. (Prepared statements—Contra Costa p. 6, El Dorado p. 6, Santa Cruz p. 4, Trinity p. 2). Social Workers Union p. 146.

*(d) Reduce private hospital eligibility to or 15th day or after \$1,000 of costs.

(Prepared statement—Lake p. 2.)

*(e) Eliminate payment to nursing homes during 1st 30 days when patients are transferred in from county hospitals.

Ventura p. 171, Merced p. 437.

2. *Review of Cases Every 90 Days.*

†(a) Only some cases, not all.

Alameda p. 12 ps, Madera p. 283, Kern p. 339, Humboldt p. 351. (Prepared statements—Contra Costa p. 7, Monterey p. 5, Placer p. 8.)

†(b) Eliminate required visits to 10% of cases every 90 days.

Kern p. 339.

†(c) Need better supervision of patients in nursing homes.

Sonoma p. 304. (Prepared statement—Santa Cruz p. 4.)

*3. *Eliminate Outpatients from MAA.*

San Bernardino p. 106, Ventura p. 171.

†4. *Nursing Home Fee Schedule Reduced From 2 to 1 Level of Payment.*

Santa Clara p. 121, Kern p. 340. (Prepared statements—Placer p. 8, Santa Cruz p. 4, Yuba p. 6.)

†5. *Better Classification of Nursing Homes and Patients.*

Social Workers Union p. 147.

†6. *All Mental Hygiene Licensed Homes Should Be Eligible for MAA.*

Santa Clara p. 122.

- †7. *Restrict Overutilization of Physical Therapy.*
Kern p. 340.
- *8. *One State Agency to License Boarding and Nursing Homes Instead of Three.*
Sacramento p. 449.
- *9. *Increase Amount of OAS Aid Payable to Boarding Homes so MAA Patients Could Be Moved Out of Nursing Homes and Hospitals.*
Sacramento p. 449.
- *10. *Prohibit Advertising of MAA and PAMC.*
Cal. Tax. p. 75.
- *11. *MAA Certificate Not Valid for a Full Year.*
(Prepared statement—Contra Costa p. 6.)
- *12. *State Should Share in Administrative Costs of MAA.*
(Prepared statement—Mendocino p. 3.)
- *13. *PAMC Should Pay Outpatient Costs Re: Diagnosis Before Hospitalization.*
(Prepared statement—Amador p. 1.)

PUBLIC ASSISTANCE MEDICAL CARE

- *1. *Amount of Money, and Therefore Care, Inadequate—Especially AFDC.*
Yolo p. 261. SDSW p. 175.

AID TO FAMILIES WITH DEPENDENT CHILDREN

1. *Levels of Assistance*

- *(a) Too high in FG and UP in some instances.
Alameda p. 60, Ventura p. 167, Solano p. 13 ps, Riverside p. 245, Butte p. 273, Madera p. 293, Kern p. 320, Los Angeles p. 7 ps, Merced p. 425, Kings p. 478, Stanislaus p. 490, Nevada p. 512. (Prepared statement—Shasta p. 33.)
- *(b) Too low in some instances.
Humboldt p. 349, Los Angeles p. 7 ps. (Prepared statement—Tuolumne p. 6.) CSWO p. 108, Social Workers Union p. 138.
- *(c) Too high; should be based on average community income;
Lassen p. 78, Madera p. 293, Kern p. 320.
Previous average earnings of parent;
(Prepared statements—Monterey p. 5, Yuba p. 4.)
No special needs;
Keller.
Never should exceed minimum wage.
Tulare p. 203.
- *(d) Too low; should be based on: Not more than minimum wage plus exempted earned income equal to level of grant.
San Bernardino p. 96.
Increases in cost of living.
Sonoma p. 301.
- *(e) Repeal "subsidy" where one parent fully employed, other unemployed and eligible for UP.
Solano p. 13 ps, Kern p. 341, Los Angeles p. 7 ps. Keller, Cal. Tax. p. 76.

2. *Work Projects and Job Training.*

- *†(a) State or federal sharing in supervisorial costs.
San Bernardino p. 104, Tehama p. 208, Sonoma p. 301, Imperial p. 371, Los Angeles p. 7 ps, Sacramento p. 446. Cal. Tax. p. 76, CSWO p. 121.
- *(b) State sharing in recipients' needs caused by work projects.
(Prepared statements—El Dorado p. 4, Mendocino p. 2, Placer p. 9, San Diego p. 3.) Dietrich p. 26, Cal. Tax. p. 76.

- †‡(c) Should not specify membership of local citizen committees.
San Joaquin p. 188, Yolo p. 251. (Prepared statement—San Diego p. 2, Exhibit I.)
- ‡(d) Private employers should be able to cooperate in projects and training.
Kern p. 312, Humboldt p. 346.
- ‡(e) No need for Workmen's Compensation, at least that providing income if disabled.
Tulare p. 407, Stanislaus p. 499. (Prepared statements—San Diego p. 1, Exhibit I, Tuolumne p. 3.)
- *(f) Require women, stepfathers, fathers who have been deserted to participate too.
Kern p. 341, Merced p. 433.
- (g) Difficulty in getting child care arrangements so women can train and work.
Santa Clara p. 118 and p. 123. CSWO p. 121, SDSW p. 169.
- *(h) "Effect market demand" re: job trained for should also be determined by reliable sources other than Employment Department.
Alameda p. 8 ps.
- *(i) "Pay" credit determined on recipient's productivity.
(Prepared statement—San Diego p. 2, Exhibit I.)
Codify intent re: encouraging low productive worker's learning skills.
Cal. Tax. p. 77.

3. "*Good Causes*" for Refusing Employment (or Training).

- ‡(a) Not so specific in code, more local discretion.
Santa Barbara p. 148, Ventura p. 168, Yolo p. 257.
- *(b) Be more specific in code.
Cal. Tax. p. 77.
- *(c) Should be penalty for refusal to accept employment; 6 months' denial of aid.
Solano p. 13 ps.
Prosecution for failure to provide (270 P.C.).
Imperial p. 371.
Waiting period after loss of job.
Cal. Tax. p. 76.
Unspecified penalty.
Kern, p. 315.
- *(d) Burden of proof re: good or not good cause rests with county welfare department and should not.
Stanislaus p. 499.
Submit monthly verification employment is being sought.
Keller.
Codify specific requirements re: seeking employment.
Cal. Tax. p. 76.
- *(e) Deduct from grant for unauthorized absence from training or work project.
Kern p. 322.

4. "*Voluntary Quits*" and "*Strike Benefits*."

- *(a) Law and regulations should not permit.
Alameda p. 72, Ventura p. 168, San Joaquin p. 192, Solano p. 13 ps, Imperial p. 383.
- *(b) Prohibits aid to strikers, and three-month waiting period for voluntary quits.
Cal. Tax. p. 76.
- ‡(c) Unemployed should not be able to refuse offer for job because job is vacant because of strike.
Santa Barbara p. 148.
- ‡(d) Deduct anticipated income to lessen voluntary quits.
(Prepared statement—Mendocino p. 3.)

5. *Expansion of AFDC and AFDC-U.*

*‡(a) Should supplement low income families who are working full time.
NASW p. 97, CSWO p. 107, Social Workers Union p. 136.

(b) Should not supplement fully employed families.
Alameda p. 301.

*(c) Extend aid to children 18–21 years who are in school or in training.
CSWO p. 132, Social Workers Union p. 136.

*6. *Law Requiring Welfare to Locate Absent Fathers.*

No good, old way (with District Attorney) better.

Nevada p. 511. (Prepared statements—El Dorado p. 4, Santa Cruz p. 3.)

p. 67.

APPENDIX D

SACRAMENTO, CALIFORNIA, April 29, 1965

HONORABLE VERNON L. STURGEON
Senate Chamber

ADMINISTRATIVE REGULATIONS—#19938

Dear Senator Sturgeon:

You have submitted to us three publications of the State Department of Social Welfare, and you ask whether the material in the publications constitutes "regulations," so as to require the department to comply with the Administrative Procedure Act in promulgating the publications. You also ask us to indicate the effect of the publications, if we conclude that they constitute "regulations," and if they were not adopted in accordance with the Administrative Procedure Act.

Before we consider the publications in question, we will outline briefly the responsibility of the department to comply with the Administrative Procedure Act, and what constitutes a "regulation" for the purposes of that act.

Section 104.1 of the Welfare and Institutions Code declares that the Director of Social Welfare may adopt regulations, orders, and standards of general application to implement, interpret, or make specific the law enforced by the department. It further declares that such regulations, orders, and standards shall be adopted, amended, or repealed by the director only in accordance with the provisions of the Administrative Procedure Act, except that such regulations need not be printed in the California Administrative Code or the California Administrative Register if they are included in the publications of the Department of Social Welfare.

The term "regulation" is defined in the Administrative Procedure Act (Gov.C. Sec. 11371), as follows:

" 'Regulation' means every rule, regulation, order, or standard of general application or the amendment, supplement or revision of any such rule, regulation, order or standard adopted by any state agency to implement, interpret, or make specific the law enforced or administered by it, or to govern its procedure, except one which relates only to the internal management of the state agencies. 'Regulation' does not mean or include any form prescribed by a state agency or any instructions relating to the use of the form, but this provision is not a limitation upon any requirement that a regulation be adopted pursuant to this part when one is needed to implement the law under which the form is issued."

Viewed in the light of this definition, the question of whether the Administrative Procedure Act should have been followed in the promul-

gation of the publications of the department depends on whether those publications contain rules, regulations, orders, or standards of general application to implement, interpret, or make specific the law enforced or administered by the department. If the material contained in the publication relates only to the internal management of the department, or if its only contents are instructions as to the use of forms, the publication would not be covered by the Administrative Procedure Act.

The first publication, which is entitled "Special Reporting Instructions," accompanies a new section of the department's Research and Statistics Manual. In general, it explains a pending federal study respecting the earnings of certain recipients of aid to families with dependent children. The principal purpose of the publication is to instruct the counties in the use of federal forms pertaining to the study. We think that the publication would fall under the type of material exempted from the Administrative Procedure Act, as instructions as to the use of forms.

The second publication, which is designated as a circular letter (Circular Letter No. 1384A), contains considerable explanatory material respecting the medical assistance for the aged program, and sets forth examples of applications of the program in specific instances. There is no doubt that the publication is designed to interpret the law governing medical assistance for the aged, and to prescribe standards for the guidance of the counties. We think that the publication does contain "regulations," and that its promulgation would be subject to the Administrative Procedure Act.

We are of the same opinion regarding the third publication, which is designated as "Circular Letter No. 1546." The publication interprets several aspects of the law governing aid to families with dependent children, covering such matters as the right to apply for aid, discontinuance of aid when employment is obtained, and determining a person's ability to do a given job.

If a regulation required to be adopted in accordance with the Administrative Procedure Act is not adopted in accordance with that act, it can be invalidated in an appropriate court action (Gov.C. Sec. 11440).

Very truly yours,

GEORGE H. MURPHY
Legislative Counsel
By EDWARD K. PURCELL
Deputy Legislative Counsel

STATE OF CALIFORNIA—HEALTH AND WELFARE AGENCY

DEPARTMENT OF SOCIAL WELFARE

December 1, 1964

RESEARCH AND STATISTICS MANUAL LETTER NO. 61

The attached additions are to be entered in your copy of the Manual of Policies and Procedures, Research and Statistics.

This manual letter transmits a new manual section, S-297, on Special Nonrecurrent Studies and Special Reporting Instructions No. 18, concerning the Study of the Earnings Records of Certain AFDC Cases, advance notice of which was given in Circular Letter No. 1413 (Stat), dated July 29, 1964.

Special Reporting Instructions No. 18 supplement federal instructions for this study. A supply of the federal instructions, together with a supply of the study schedules, will be shipped to each county welfare department.

Filing Instructions

Issue 744 is to be filed following Issue 743 in the manual.

Issues 745 and 746 are to be filed following Issue 578 in the Special Reporting Instructions.

Handbook

REPORTS—PUBLIC ASSISTANCE

S-297.01

S-297 Special Nonrecurrent Studies

This section is used to identify and briefly describe the "one-time" studies occasionally carried on in response to federal or departmental needs, and to identify the Special Reporting Instructions applicable to such nonrecurrent studies.

S-297.01 Study of the Earnings Records of Certain AFDC Cases

The full federal title of this study is "Study of Public Assistance and Social Security Administration Records of Earnings for Specified Persons in AFDC Cases for Which a Redetermination of Eligibility was Completed in a Sample Month of 1964."

The "sample month" is September 1964. Counties will complete a Case Schedule form (FS-2064.1) on a small sample of AFDC cases for which a redetermination was completed during that month and an Assistance Group Member Schedule form (FS-2064.2) for each person in the sample FBU who was aged 14 or over at the end of 1963 and who was a member of the FBU at any time during 1963, if such person had any earnings recorded in 1963 or currently has a social security account number.

Detailed federal reporting instructions, supplemented by state interpretive instructions are contained in *Special Reporting Instructions No. 18*.

STUDY OF THE EARNINGS RECORDS OF CERTAIN AFDC CASES

Federal Title

The federal title of this study is "Study of Public Assistance and Social Security Administration Records of Earnings for Specified Persons in AFDC Cases for Which a Redetermination of Eligibility was Completed in a Sample Month of 1964." Two schedules are involved, a case schedule (Form FS-2064.1) and an assistance group member schedule (Form FS-2064.2), hereinafter referred to as Member Schedule.

Purpose of Study

The purpose of the study is to explore the potential usefulness of SSA earnings records as an additional source of information on earnings of AFDC families.

Method

California's part of the study will involve the completion by the county welfare departments of case schedules on a preselected sample of approximately 500 AFDC cases for which a reinvestigation of eligibility was completed in September 1964, and the completion of an assistance group member schedule on specified members of the sample cases. The scope and content of the schedules are clear from the forms and from the federal instructions, which will be sent to each county.

Supplementary State Instructions

Detailed instructions for preparing the two study schedules, Form FS-2064.1 and Form FS-2064.2, are contained in the accompanying federal instructions, identified as Inst. FS-2064.4. The following state instructions are intended to augment the basic instructions as to specific procedures for sample selection and transmission of schedules, as to differences between federal and California terminology, and as to clarification of possible ambiguities in the federal forms.

- A. Sample selection—The sample is drawn from *all* AFDC cases for which a reinvestigation of eligibility was completed in September 1964, both those for which the reinvestigation resulted in a renewal, or continuation of aid, and those for which the reinvestigation resulted in discontinuance of the case. The study sample is based on the quality control lists and schedules submitted by the counties. A list of sample cases will be submitted to each county for which the sampling procedure yielded one or more cases for the study. In some instances, because of incomplete information in SDSW, a sample case will *not* constitute one for which a reinvestigation was completed in September 1964. This arises from the fact that quality control lists from some counties do not distinguish between renewals (pursuant to reinvestigation) and approvals or between those discontinuances resulting from information disclosed by reinvestigation and those resulting from information obtained otherwise.
- B. Case identification—The member schedule form (FS-2064.2), as received from the Department of Health, Education and Welfare, has been overprinted by the SDSW to provide for the entry of the state *case number* on that form. The federal procedure provided for tying each member schedule to its associated case schedule by a "schedule number," to be assigned by the state, but it was concluded that use of the state case number would be a simpler procedure.
Two copies of each member schedule should be stapled to the associated case schedule before return of the completed schedules to the SDSW.
- C. Return of schedules; due date—All sample schedules should be completed, the member schedules attached to the corresponding case schedules, and the entire set returned to the Statistical Reports Bureau, SDSW, P.O. Box 8074, Sacramento, on or before December 14, 1964.
- D. Clarification of federal terminology and format.

1. The federal "redetermination of eligibility" is equivalent to our "reinvestigation."

2. Form FS-2064.1, Item 5—"Unemployment of parent" was not a basis for eligibility in California at the end of 1963. If the case was *not eligible* at the end of 1963, mark Item 5, "N.A.," if the case *was eligible* check the space, "Other."
3. Form FS-2064.1, Item 7—The schedule number will be inserted after the completed schedules have been returned to the Statistical Reports Bureau.
4. Form FS-2064.1, Section C—The federal "assistance group" is equivalent to our "family budget unit."
5. Form FS-2064.1, Section D—Line Item 1—The entry here is the name of the case head or, if he or she is not included in Item C3a, the *oldest* member of the FBU.
6. Form FS-2064.2, Section A—Insert the case number shown on the corresponding Form FS-2064.1.
7. Form FS-2064.2, Item 5. Leave blank.

STATE OF CALIFORNIA—HEALTH AND WELFARE AGENCY

DEPARTMENT OF SOCIAL WELFARE

October 6, 1964

CIRCULAR LETTER NO. 1384 A (FISCAL)

TO: COUNTY WELFARE DEPARTMENTS
COUNTY AUDITORS

Subject: Payment, Governmental
Participation and Claiming-MAA

I. Purpose of Circular Letter

This letter is to revise Circular Letter No. 1384 (Fiscal) dated August 7, 1963.

Although Sections II (Beginning Dates) and IV (Governmental Participation) are longer than previously, the context remains virtually the same. Clarification on several points was needed and this we have attempted to do. One item expounded upon is the retroactive claiming allowed by AB 59 and SB 497.

In the last paragraph of Section III A, the definition of a contract hospital is being interpreted as contradictory to the information contained in Section IV of Department Bulletin No. 620-H (MC) (Revised). This we have rewritten for clarity.

In the opening paragraph, Section III B, interpretation is being made that liens constitute a matching rather than a conformity issue. Interpretations exist of whether to pay MAA and not take a lien or take a lien and not pay MAA. This is not the case. There is no choice. Any ordinance, policy or practice must provide that the lien will not be taken. If the lien provisions are not met, not only would Federal matching funds for the MAA program be precluded in a particular county, but it would endanger Federal matching funds on a statewide basis. Therefore, as sufficient coverage of the lien provisions are provided in Department Bulletin No. 620-H (MC) (Revised) it has been deleted from this circular letter.

Section V, Claiming Procedures, as originally written is deleted in its entirety. The claiming procedures are now covered under Circular Letter No. 1465 (Fiscal) and this noted in the revised section of this circular letter.

II. Beginning Date of Eligibility for MAA

A. Inpatient Basis

Determination of the date upon which an applicant becomes eligible for MAA payments made in his behalf are (in no instance may the beginning date be earlier than three months prior to the month of application—see paragraph B, Retroactive Payments):

1. *In a county hospital or contract hospital* eligibility commences with the date of admission.
2. *In a hospital (other than county or contract hospital)* eligibility commences on the day following the first 30 days of care, or the day following the date his cost of care therein exceeds \$2,000*, whichever occurs first.
3. *In a nursing home* eligibility commences with either of the following:
 - a. If transferring from a county or contract hospital, the date of admission.
 - b. If entering from his own home or from a hospital (other than a county or contract hospital) the first day of the month following the date of admission, or the day following the completion of 30 days of care, or the day following the date his cost of care exceeds \$2,000*, whichever occurs first.

In determining the exclusions of the 30-day period or the \$2,000 (\$3,000) cost of care, only continuous confinement is considered. If a patient is discharged and readmitted within 10 days, this is not considered a break in continuous confinement. The law provides that a transfer from one qualified facility to another does not constitute an interruption of continuity of service.

If either exclusion requirement has been completed in the facility transferred from, there is no exclusion requirement in the facility to which transferred. If the

* The cost of care exclusion is \$3,000 for the period May 21, 1963 to July 25, 1963. (W & I Code Section 4722.1.) The \$2,000 is effective from July 25, 1963. No dollar exclusions prior to May 21, 1963, only the first 30 days of care.

exclusions are partially completed upon the date of transfer, the days of care and the cost of care accumulated to date are used in computing the total exclusion requirement.

The following are examples:

Persons A, B and C enter a *private hospital* on July 20.

A transfers to nursing home July 31. He is eligible to MAA in the nursing home on August 1.

B transfers to nursing home August 1. He has normal care and his cost of care does not exceed \$2,000. He completes 30 days of continuous care on August 18 and is eligible for MAA on August 19.

C transfers to nursing home August 5. His expenses were high in private hospital—these expenses plus nursing home charges exceed \$2,000 on August 12. He is eligible to MAA on August 13.

B. Retroactive Payments

In any hospital or nursing home, payment may be made for three months prior to the month of application, providing the person is eligible for MAA in accordance with Section A above. The retroactive payment cannot antedate February 1, 1963, for any beneficiary in a county hospital or contract hospital, nor can it antedate April 1, 1963, for any other hospital or nursing home.

Example 1: Entered *county hospital* June 1. Application signed September 5. Eligible for MAA June 1 since this does not exceed three months prior to month of application, and eligibility begins day of admittance to county hospital.

Example 2: Entered *private hospital* May 16. Application signed August 12. Eligible for MAA June 15, at the completion of the 30-day exclusion period. (It is assumed cost of care did not exceed the excluded amounts prior to June 15.)

Example 3: Entered *nursing home* from own home February 10, 1963. Application signed June 9, 1963. Eligible for MAA April 1, 1963. The retroactive payment cannot antedate April 1, 1963, or three months prior to month of application, whichever is later.

C. Outpatient Basis

If beneficiary has established eligibility for inpatient care, he becomes eligible for outpatient care upon release from any hospital or nursing home, if otherwise eligible.

III. Payment of MAA

A. Medical Facilities to Which Cost of Care is Payable

No cost of care shall be paid to a medical facility unless:

1. It is licensed by the State Department of Public Health; or
2. It is licensed by a comparable agency in another state; or
3. It is exempt from licensure pursuant to subdivision (c) of Section 1415 of the Health and Safety Code; or
4. It is operated by the Regents of the University of California.

Types of facilities to which MAA is payable are county hospitals, contract hospitals, private hospitals, nursing homes.

A *contract hospital* is a nonprofit medical facility licensed pursuant to Section 1400 of the Health and Safety Code, with which the board of supervisors of a county which does not maintain a county hospital or which maintains a county hospital that does not provide substantially all of the services customarily rendered in a general hospital, has executed a contract, currently in effect, to provide the care unavailable through the county hospital for medically indigent individuals.

If a county maintains a general county hospital which provides substantially all of the services customarily rendered in a general hospital, and also contracts with other hospitals for care of the medically indigent, such hospitals are *not* considered as contract hospitals in regard to provisions governing beginning date of assistance for MAA patients.

B. Excluded Facilities

The Veterans Administration, and Military and United States Public Health Services Hospitals are not authorized for MAA payments.

1. *Subsequent acute hospital services.* Payment for the use of *other* acute hospital facilities when the MAA patient's medical condition so warrants will not be

authorized if the MAA beneficiary is eligible for admission to Veterans, Military, or U.S.P.H.S. Hospitals, unless it is documented and established by the county welfare department in an individual situation that such a prohibition constitutes an undue hardship.

2. Time spent in one of the above excluded facilities is counted toward the 30-day exclusion period.

IV. Governmental Participation

A. Inpatient Care

1. Payments to a *county hospital* or *contract hospital* and to *nursing homes* if the patient is transferred from a county or contract hospital, participation is 50% federal and 50% county for the first 30 days of care or until the cost of care exceeds \$2,000*, whichever occurs first. Thereafter, it is 50% federal, 25% state and 25% county.
2. Payments to a *nursing home* if the patient enters from his own home or a hospital, (other than a contract or county hospital) participation is 50% federal, 25% state and 25% county from the first day of the month following the date of admission, or after the 30th day of care or after the cost of care exceeds \$2,000*, whichever occurs first.
3. Payments to a *hospital* (other than a county or contract hospital), participation is 50% federal, 25% state and 25% county after the 30th day of care or after the cost of care exceeds \$2,000*.
4. Retroactive Payments-Retroactive MAA payments are available for the three months prior to the month of application for eligible persons. In payments for retroactive claiming for care rendered, the periods claimable are as follows:

a. From February 1, 1963

Care must have been rendered in a county or contract hospital.

The participation basis shall be 50% federal and 50% county from the date of admittance until the date of application provided that other eligibility factors are met.

After the date of application the participation basis shall be 50% federal, 25% state and 25% county if the first 30 days of care or \$2,000* cost of care was rendered prior to the application date. If these exclusions were not met prior to application date the participation shall be 50% federal and 50% state until the exclusion factors are met.

b. From April 1, 1963

(1) Services rendered as in a. above or in a nursing home to which transferred from a county or contract hospital.

(2) Services rendered in hospitals or nursing homes *other than when transferring* from a county or contract hospital.

The participation basis shall be as follows:

For services rendered as in (1), the participation basis shall be as in a. above.

For services rendered as in (2), the participation basis shall be 50% federal and 50% county from the retroactive date of eligibility *until* the date of application. The *retroactive date of eligibility* is the first day after the appropriate hospital or nursing home exclusions are met.

For those cases meeting the exclusions prior to the date of application, the participation basis shall be 50% federal, 25% state and 25% county *from* the date of application.

For those cases not meeting the exclusion factors on the date of application, *no* participation is available *until* the exclusions are met. Thereafter, participation basis shall be 50% federal, 25% state and 25% county.

B. Noninstitutional Care (Outpatient)

1. Participation in payments for eligible MAA Noninstitutional Care (Outpatient) is 50% federal and 50% state in all instances.

There is *no* participation for outpatient care rendered during the retroactive period prior to the application date.

* The cost of care exclusion is \$3,000 for the period May 21, 1963 to July 25, 1963. (W & I Code Section 4722.1.) The \$2,000 is effective from July 25, 1963. No dollar exclusions prior to May 21, 1963, only the first 30 days of care.

C. Governmental Participation Chart for Inpatient Care

Institution	Circumstances	Eligible to MAA	Participation		
			Federal	State	County
1. All MAA Eligible Institutions	Prior to 3 months before month of application.	No			
2. County or Contract Hospitals	First 30 days of care or *\$2,000, of care, whichever occurs first.	Yes	½	--	½
	From 31st day of care or whenever cost of care exceeds *\$2,000, whichever occurs first, but not prior to date of application.	Yes	½	¼	¼
3. Other Hospitals	Retroactive feature.....	Yes			
	First 30 days of care or *\$2,000, of care, whichever occurs first (includes time and costs accumulated when transferring in).	No			
	From 31st day of care or whenever cost of care exceeds *\$2,000, whichever occurs first, but not prior to date of application.	Yes	½	¼	¼
4. Nursing Homes	Retroactive feature.....	Yes			
	<i>Entry from Own Home</i>				
	From entry date to last day in month of admittance, or first 30 days of care or, *\$2,000, of care, whichever occurs first.	No			
	From the first day of month following the date of admission, or 31st day of care, or whenever cost of care exceeds *\$2,000, whichever occurs first.	Yes	½	¼	¼
	Retroactive feature.....	Yes			
	<i>Entry from Hospital Other Than County or Contract Hospital</i>				
	From date of transfer from private hospital to last day in month of admittance, or first 30 days (accumulated days) or *\$2,000 of care (accumulated cost),	No			
	From first day of month following the date of transfer, or 31st day of care (accumulated days) or *\$2,000 of care (accumulated cost), whichever occurs first.	Yes	½	¼	¼
	Retroactive feature.....	Yes			
	<i>Entry From County Hospital or Contract Hospital</i>				
	From date of transfer from county hospital or contract hospital to the completion of 30 days care or *\$2,000 of care (county or contract hospital plus nursing home), whichever occurs first.	Yes	¼	--	½

C. Governmental Participation Chart for Inpatient Care—Continued

Institution	Circumstances	Eligible to MAA	Participation		
			Federal	State	County
4. Nursing Homes—Continued	From 31st day of care or *\$2,000 of care (county or contract hospital plus nursing home), whichever occurs first, but not prior to date of application.	Yes	½	¼	¼
	Retroactive feature-----	Yes			

* The cost of care exclusion is: \$3,000 for the period May 21, 1963 to July 25, 1963; \$2,000 effective from July 25, 1963; and no dollar exclusion prior to May 21, 1963, only the first 30 days of care.

NOTE: "Retroactive feature" is the period for the three months immediately prior to the month in which the application was made. However, participation is not available for any services rendered prior to February 1, 1963 or April 1, 1963, whichever is applicable. (See Section II, Par. B and Section IV, Par. A, 4.)

Time and Cost Accumulated. Time must be time which would ordinarily be eligible for payment except that it is being accumulated in the exclusion period. Cost accumulated must be at cost of care rates approved by SDSW, allowable by negotiation or allowable by "frozen" rates, for the institution(s) in which the services were rendered.

Time and costs may be accumulated in one institution and added to time and costs accumulated in another institution(s) for establishing exclusions. (Care is considered continuous when readmitted as an inpatient within 10 days.)

CLAIMING PARTICIPATION CHART FOR INPATIENT CARE IN THE ELIGIBLE RETROACTIVE PERIOD

Institution	Circumstances	Eligible to MAA	Participation		
			Federal	State	County
(Period commencing Feb. 1, 1963 and continuing after April 1, 1963)					
For County or Contract Hospitals	For the 3 calendar months <i>prior to application date</i> . From date of admittance within this period.	Yes	½	--	¼
	<i>After Application Date</i> . If exclusions were met prior to application date.	Yes	½	¼	¼
	Until the date exclusions are met.....	Yes	½	--	½
	After the date exclusions are met.....	Yes	½	¼	¼
Period Commencing April 1, 1963					
For Nursing Homes	IF TRANSFERRED FROM A COUNTY OR CONTRACT HOSPITAL.				
	For the three calendar months <i>prior to application date</i> . From date of admittance within this period.	Yes	½	--	½
For Hospitals Other than County or Contract Hospitals	IF TRANSFERRED FROM A COUNTY OR CONTRACT HOSPITAL.				
	For the three calendar months <i>prior to application date</i> . From date of admittance <i>if exclusions were met</i> in county or contract hospital.	Yes	½	--	½
	<i>Until</i> date exclusions met (in county and contract hospital plus other hospital).	No	--	--	--
	<i>From</i> date exclusions met (in county and contract hospital plus other hospital).	Yes	½	¼	¼
For Hospitals Other than County or Contract Hospitals and Nursing Homes	IF TRANSFERRED FROM A COUNTY OR CONTRACT HOSPITAL.				
	<i>After Application Date</i>				
	If exclusions required were met prior to application date.	Yes	½	¼	¼
	Until the date exclusions required are met...	Yes	½	--	½
	After the date exclusions required are met...	Yes	½	¼	¼
	FOR SERVICES <i>OTHER</i> THAN WHEN TRANSFERRING FROM A COUNTY OR CONTRACT HOSPITAL.				
	For the 3 calendar months <i>Prior to Application Date</i> .

V. Claiming Procedures

Claiming procedures are outlined in Circular Letter No. 1465 (Fiscal), dated February 21, 1964.

In addition to those procedures, the date of application for retroactive cases shall be shown on the MAA Form 802 when claiming the retroactive payment. This date should be reported in the case name column.

VI. Fiscal Methods of Apportioning MAA Recipient's Beneficiary Liability

Beneficiary liability is that income remaining which exceeds his needs outside the facility and the \$15 for incidental needs inside the facility.

Methods for Apportioning Beneficiary Liability

1. When beneficiary is on MAA inpatient status for full month.
 - a. If the full month is spent in one institution, apply the liability against the cost total to arrive at net amount for participation basis. Should the participation basis be part 50-50 and part 50-25-25, apply the total liability against the first costs (participation basis) with any remaining liability balance to be applied against second costs.
 - b. If the full month is spent in more than one institution, apply the liability against the cost total for the first institution with any remaining liability balance to be applied against the second institution's cost total, etc.
2. When beneficiary is admitted to MAA inpatient status during the month.
 - a. The beneficiary's liability is that income remaining which exceeds his needs outside the facility prior to admittance.
This may result in different liability amounts applying to the first month and to continuing months. The Form(s) MAA 202 should record these amounts and effective dates.
3. When beneficiary dies or is discharged from MAA inpatient status during the month.
 - a. Apply the total liability against the cost of care for the period until death or discharge. In some instances, this will mean that there will be no charge to the county under these circumstances.

NOTE: Facility should be instructed to collect the patient liability in accordance with practice used for private patients.

STATE OF CALIFORNIA—HEALTH AND WELFARE AGENCY

DEPARTMENT OF SOCIAL WELFARE

November 12, 1964

CIRCULAR LETTER NO. 1546 (AFDC)

TO: COUNTY WELFARE DEPARTMENTS
COUNTY ADMINISTRATORS OFFICES
COUNTY BOARDS OF SUPERVISORS

SUBJECT: CONDITION OF EMPLOYMENT AND AFDC

Some questions have arisen regarding interpretation and practice related to the acceptance of employment by AFDC recipients. In order to give effect to the law and regulations some specific procedures are necessary, both to protect the welfare and rights of the individual and to insure that the intent of the law and regulation is carried out with respect to *all* applicants for Aid to Families with Dependent Children. The following interpretations will be helpful pending preparation and release of appropriate handbook sections. These interpretations illustrate the department's expectations as to how this program is to be carried out. Evaluations of operations will be made against these expectations.

1. *The Right to Apply*

All persons must be permitted to apply for AFDC (C-011.05). General availability of work and refusal to seek or accept work are not valid bases for denying the person the right to apply for aid (C-172, Item 3), although refusal to seek or accept employment may be grounds for discontinuance of aid at a later time.

- a) The county must immediately initiate *all* of the actions necessary to complete the investigations of eligibility as promptly as possible (C-012.20).
- b) As a part of initiating actions to complete the investigation, the county must make an early determination as to whether or not each parent in the home is ready for the labor market (see Section C-171.1) and that the requirements for seeking and accepting employment apply.
- c) The parent must register with the CSES as soon as the determination is made that he is "ready for the labor market." If his usual occupation is farm labor, he must also register with the Farm Labor Office and will be referred by the local office, Department of Employment. See Department Bulletin No. 629, Supplement 318, Release No. 5, for referral procedures. If the parent's usual occupation is other than farm labor, CSES will determine whether farm labor is suitable employment for him, and if so, refer him to the Farm Labor Office. A person should not be expected to report to CSES more frequently than CSES requires in order to keep his registration current. (See Department Bulletin No. 636, C, 2 (c).)
- d) The person is entitled to an individual determination whether employment is available to him specifically, whether or not he is capable of performing such work, and whether or not the conditions of this specific job are reasonable for him. Referrals on a mass basis may not be considered as individual referrals and such referrals do not affect eligibility. All job referrals should be for an individual and based upon (1) the individual's capacity, and (2) a screening to disclose any likely difficulties that would preclude his taking the offered employment.
- e) When a person reports that the working conditions, including availability of sanitary facilities, drinking water, etc., do not comply with the conditions laid down by the State Department of Industrial Relations the following actions should be taken:
 1. Refer the person to another job if possible, and
 2. Refer the matter to the Department of Industrial Relations.

- f) When a person is working part time, a referral to a full-time job should be made only if he can be expected to earn more on the full-time job than he is earning on a part-time job.

2. *Discontinuance of Aid When Employment is Obtained*

Aid will be continued when employment is obtained and may not be terminated until all of the following have occurred:

- a) There has been a specific offer of a specified job at a stated wage.
- b) The offered job has been accepted.
- c) The pay for the first full week's employment has been received.
- d) The job is not less than 40 hours per week.

Services to assist the individual succeed on the job should be continued until it appears that his adjustment has been satisfactory.

3. *Determining a Person's Ability to do a Given Job*

Such decisions are, at times, difficult and always involve consideration of the individual in relation to a particular job. Much will depend upon the worker's judgment.

The easiest decisions are those where there is an obvious verifiable mental or physical disability. The most difficult decisions are with regard to healthy individuals and their ability to perform hard labor.

Farm labor, for instance, generally requires great physical exertion in unaccustomed postures, tolerance for heat and sun, and in many cases, manual dexterity. Persons who have been in sedentary occupations, or accustomed to little physical exertion, will be unable to work full time without being conditioned to the work.

When persons who are not accustomed to farm labor are referred to farm labor jobs, they should be considered as being referred to part-time employment until they are conditioned to the job. The required conditioning can be achieved by a time-limited assignment to a community work training project. Whenever possible, arrangements should be made for notification of the person when openings in his usual occupation are available.

When the person usually obtains his employment through his union, specific arrangements should be made with the union for the way in which immediate notification that work is available can be gotten to the person. If telephone communication is not available at the person's present work location, other means will need to be developed. When other arrangements are not possible, some social workers have arranged for such notices to be given to them and they, in turn, relay the information to the person.

4. *The Effect of Distance and Availability of Transportation on the Reasonableness of Employment*

Employment is "reasonable" when the cost and the effort to get to and from work is commensurate with what can be earned on the job.

The nature of some work—such as farm labor—may require long work days. To expect someone to spend a great deal of time, and a large proportion of what can be earned on traveling to and from the job is not reasonable.

The "rule of thumb" factors that should be taken into account are those that make travel to one's own work reasonable:

- a) Most people live within an hour's travel time from their work.
- b) Having a car in operating condition allows a person to go farther and to get to work easier than if he is dependent upon public transportation.
- c) If a person is dependent upon public transportation, it must be available at the hours when he goes to and returns from work.
- d) No transportation is needed if the job or the point from which transportation to the job will be provided is located within a mile of where he lives.

5. *Report of Earnings*

The person's report of his earnings is considered correct unless reasonable doubt exists to the contrary. (C-012.40, Item 1.) When there is reason to doubt the amount of earnings reported by the client, or when there are differences between information given the welfare department by the employer and the employee about earnings and deductions, the employer should be asked to report in writing, a) the gross amount earned, b) an itemized statement of

all deductions, and c) the net pay. The employer's statement should be shown the recipient and any differences noted by him should be cleared up by further discussion with the employer. Situations in which deductions or rate of pay appear to be contrary to the regulations of the Department of Industrial Welfare should be referred to that department for clarification, as should cases in which the employer and employee do not agree as to the pay and the deductions.

We are planning the preparation of written handbook materials that will describe SERVICES expected to be made available with respect to self-support.

It may be useful to see an outline that illustrates one way in which these program materials might be assembled:

SELF-SUPPORT PLANNING AND SERVICES

- I. *Purpose and Expectations*
- II. *Initiating Services*
 - Acceptance of application
 - Determination of Services needed, readiness for employment, and eligibility for AFDC
 - Short-term services
- III. *Services for Persons Not Ready for Employment*
 - Assessment of training needs
 - Development of a plan
 - Services during training period
 - Evaluation of readiness for employment
- IV. *Services for Persons Ready for Employment*
 - Development of a plan
 - Referrals for employment
 - Continuing services
 - Termination of services
- V. *Case Examples*

LETTER OF TRANSMITTAL

California Legislature
Senate Fact Finding Committee on Local Government
June 15, 1965

HON. GLENN M. ANDERSON, *President*
and Members of the Senate

Gentlemen :

The within report suggests guidelines and standards for application by local governmental agencies in dealing with proposed residential development in rural areas. The report was originally prepared by the directors and staff of the Black Mountain Soil Conservation District, which is located in Santa Clara County.

In consequence of the disastrous wildfires and floods experienced in California in 1964 and preceding recent years, this committee became interested in the adequacy of local development, building and public safety facilities standards in rural areas. It became self-evident that the lack of adequate standards in some local areas actually contributed to some of the physical and economic results of the recent natural disasters. This committee became interested by reason of its general jurisdiction in the field of local government.

Our study was necessarily brief. Accordingly, it produced no new state legislation, and we are not yet prepared to state that such legislation is necessary. During our study, however, the within "Black Mountain Report" came to our attention. It appears to be the only, or one of very few, such reports prepared in the state.

This committee reviewed the report and heard testimony on its background and contents. We concluded that it is a thorough and accurate study of the problem in question, and that it would be informative to the Legislature and to various local governmental agencies.

We transmit the "Black Mountain Report" herewith as a report of this committee, for the information of the Legislature and, through limited circulation, of certain local governmental agencies.

Respectfully submitted,

JOSEPH A. RATTIGAN, *Chairman*

UNITED STATES DEPARTMENT OF AGRICULTURE
SOIL CONSERVATION SERVICE
Morgan Hill, California

January 22, 1965

MR. RICHARD GARROD, *Chairman*
Black Mountain Soil Conservation District
Committee on Hillside Development
22600 Mt. Eden Road
Saratoga, California

Dear Mr. Garrod:

This is a draft of the Black Mountain Soil Conservation District's "Hillside Development Guide." The illustrations planned for this publication have not been completed, but will appear in the final draft.

This guide was prepared with the cooperation of the Santa Clara County Agricultural Extension Service, Fire Marshal, Health Department, Planning Department, Department of Public Works; California Division of Forestry; Central Fire District, Santa Clara County Flood Control and Water Conservation District; the Board of Directors of the Black Mountain Soil Conservation District; and was coordinated and compiled by the United States Department of Agriculture, Soil Conservation Service.

Sincerely,

DARWYN H. BRIGGS
Work Unit Conservationist

BLACK MOUNTAIN SOIL CONSERVATION DISTRICT

June 15, 1965

REPORT TO THE SENATE LOCAL GOVERNMENT COMMITTEE ON HOMESITE DEVELOPMENT IN MOUNTAINOUS AND RURAL AREAS

Gentlemen :

As district directors of the Black Mountain Soil Conservation District, we are interested in the orderly development of the district from a soil and water conservation standpoint. Our interest in land development is further accentuated by the fact that our once rural Santa Cruz Mountains are rapidly changing into an area of fine hillside homes and estates.

Based on our experience, we have found that careful planning in advance of development is mandatory in order to meet the needs of modern living and to avoid many costly errors common to such development.

Through much of this planning may be done on a do-it-yourself basis, on-site assistance from an appropriate private or public agency is frequently required.

It is, therefore, in the interest of orderly development of the rural areas that the following guidelines are submitted.

This report does not pretend to provide solutions to all of the problems associated with such developments; rather, it suggests guidelines, which if used, should aid landowners and developers to avoid many of the costly errors common to such hillside development.

Respectfully submitted,

RICHARD R. GARROD
Director, Black Mountain
Soil Conservation District

EVALUATING THE DEVELOPMENT SITE

Evaluation of a building site depends on the individual plans and preferences. For example, view and orientation to wind and sun are important personal considerations. Plans should also be adjusted within the limitations of water supply, sewage disposal, stability of the soils, erosion hazards and the accessibility of the site.

Household water supplies should be uncontaminated, nonturbid, contain no harmful salts, and have no objectionable tastes or odors. Each person requires 100–300 gallons per day when using automatic washers, dishwashers and other modern conveniences. One week's supply for a family of five persons using 280 gallons each per day, would be 10,000 gallons. In many outlying areas, wells may not produce enough water to meet family requirements.

Springs are sometimes a suitable source of domestic water. When gravity is planned to develop pressure from spring and tank sources, bear in mind the following. Usually municipal water pressures are 50–60 pounds per square inch. To create 50 pounds pressure, excluding friction loss in the system, 115 feet of elevation are required. Systems with inadequate pressures may require a booster pump.

Livestock water quality should be comparable to domestic water. Established quantity requirements are: horses and cattle, 10–15 gallons each per day, sheep and goats 2–4 gallons each per day, chickens, 2 gallons per 100 per day.

Irrigation water for lawns and ground cover plantings requires approximately 26,000 gallons per 1,000 square feet per year. This is equal to covering the area with nearly 42 inches of water, including rainfall. However, some native trees and shrubs require only irrigation during the first two or three summers.

Water for fire protection needs should not be overlooked when planning a development not served with municipal water. Both the supply and availability of water are very important to effective fire protection. Developments furnished with adequate fire protection water and facilities are often eligible for fire insurance rate reductions. The development of a water supply for firefighting is discussed in a later section.

Sewage disposal is a problem most rural homeowners must plan for during the preliminary stages of development. A septic tank with leach lines is the most common method for developments not served with sanitary sewers. **PLAN AHEAD!** This is one of the most important considerations in developing a sewage disposal system. Many good homesites have been made less desirable by destroying the only suitable site for the leach lines during excavation for the building site. In addition, such factors as soil depth, soil texture depth to water table, soil percolation rate and proximity to domestic water sources should each be considered before locating the system. The appendix contains a guide for evaluating the physical soil factors.

Site factors to consider when evaluating a development site are steep slopes . . . shallow unstable soils . . . and land slip areas. The appendix contains the criteria used in rating soils for this purpose.

Runoff and erosion control considerations are important when evaluating the development site. They are: Consider natural drainage . . . Avoid areas subject to flooding . . . Are excessive cut and fills necessary? . . . How can the site be developed without excessive earth moving? . . . Vegetative cover reduces water runoff and soil erosion . . . Remove the vegetation necessary to build on and provide adequate fire protection . . . Don't strip the site of all protective cover.

Access roads are not only matters of convenience but are necessities for protection from emergencies such as fire and flood. Factors relative to suitable access roads are found in the appendix.

DEVELOPING THE SITE

Water Supply

The development of domestic water supplies require careful planning. Depending on the situation, all uses may be planned in a single system or as separate systems. Realizing that each site requires specific plans, our discussion will take each use separately and will be confined to general guidelines.

Domestic Water. In areas serviced by municipal water companies, the purity, quantity, pressure and supply are regulated by appropriate local regulations and need not be discussed here. Compliance with local building codes should be the only considerations in these cases.

Individual water sources such as wells, springs, or stored runoff are the more common types.

Wells are generally considered the most reliable and safest source of water if properly developed. Information as to the location of wells from the sanitary viewpoint may be obtained from the local County Health Department. Information on water-bearing strata to guide in the location of wells is scarce. The occurrence of wells in the vicinity, coupled with the records of local experienced and responsible well drillers and the results of test wells will give further guidance.

Springs are of several types, and their development depends on their type. The local county health department and, where applicable, the Soil Conservation Service have standard plans for their development. The reliability of a spring to produce adequate water should be checked during the late summer months or when the flow can be expected to be at its lowest.

Sanitary considerations in developing a private source of water are important. Surface waters diverted from streams or collected in ponds or cisterns are considered by the county health department to be contaminated, and require treatment before use for domestic purposes. Where only surface waters are available, the danger of contamination increases as use is based upon cisterns, with uncontaminated catchment areas; ponds, from which livestock have not been excluded; surface stream flow, particularly in the more populated areas.

Wells and springs must be protected from surface flow or from shallow ground water. Surface flow should be diverted away from a spring. Wells should have a watertight seal (such as concrete) surrounding the well casing and extending at least 10 feet below the ground surface. The ground surface should slope away from the well. A pump platform of concrete sloping away from the pump and extending at least two feet from the pump in all directions is recommended. Before a new well, or any recently worked on is put into use, contact the county health department for instructions on disinfecting the well.

Storage for private water sources should be for at least two days. It is preferable that a week's supply is maintained to provide water during emergencies. Storage tanks should be covered and protected

A potential health hazard—should anyone attempt to use these waters for domestic use.

from sources of contamination. Suitable building materials for such storage tanks include concrete, steel and redwood. Water distribution systems should have pipes of adequate size to prevent excessive friction losses. Local building regulations and water system contractors should be consulted for your specific needs.

Irrigation Water. Irrigation, as used here is that which is normally thought of as “watering” around the yard. Here we are considering irrigation of landscape, erosion control and fire retardant plantings. If a more extensive irrigation system is planned for agriculture, assistance should be sought from professional engineers. Local irrigation pipe dealers and the Soil Conservation Service may aid you in the design of such systems. The water needs of landscaping and erosion control plantings has been discussed in the previous chapter. Sources of suitable irrigation water includes ponds, streamflow, in addition to wells. Sprinkling is generally the easiest, most economic method of irrigating, in addition to conserving water. Sprinkling is especially well suited for irrigating sloping land. Sprinkler pressures are generally 30-40 pounds per square inch. Steel, plastic, cement asbestos, and aluminum are all suitable materials for use in the system. Generally permanent underground systems with fixed risers are the easiest to operate, but the initial investment is high. For areas irrigated only a few times a year, surface aluminum pipe or plastic pipe or hose may prove most economical. As plants vary in their moisture needs, the frequency of irrigation should also vary. Deep rooted plants such as

shrubs and trees generally require less frequent deep irrigations, while grass and shallower-rooted shrubs require frequent shallow irrigations. To further complicate the issue, soils of different textures, (sands or clays) retain different amounts of water that is available for the plant's use.

Water for Fire Protection. All sources of water should be made available for fire protection. Aside from the domestic and irrigation supply, swimming pools and ponds can provide an additional source of water if appropriately plumbed. A rule of thumb used by fire departments for the minimum amount of water that should be available for firefighting is 10 gallons for each square foot of roof area. Thus, a home with 1,000 square feet of roof area would require 10,000 gallons of water. This amount could be stored in a tank approximately 13 feet 3 inches in diameter and 10 feet tall or, 12 feet square and 10 feet deep. The fire protection system should have the capability of supplying at least 10 gallons per minute for a minimum of two hours at 40 pounds of pressure. Capacity of a fire protection system is not enough, the water must also be available. It should be located so that fire equipment and personnel will not be prevented access due to burning buildings or vegetation. Fire pumpers must be able to drive to within 20 feet of the source. The pipe from the water source must have a standard 2½-inch male fitting with National Standard threads. This standard fitting is very important, as all fire pumpers in California are adapted to fit this size and type fitting. Any other size or type may make your water source useless when needed.

Where swimming pools are provided with a circulation pump, a hose fitting should be provided on the discharge of the pump. The pump could then supply a high pressure source of water through a hose, or through a pipe to a standard fire fitting. For immediate fire protection hoses connected to the faucets should be available at all times during the fire season. Swimming pools that are fenced and locked when not in use should be provided with the standard hydrant located outside the fence where it might be reached by a fire pumper. Due to the possibility of electric power being cut off during any fire, an auxiliary gasoline motor and pump may be needed.

Other fire protection measures that may be taken are: Use fire retardant roofing material . . . Use rooftop sprinklers . . . Use firebreaks as required by Public Resources Code, Section 4105 . . . Use fire retardant vegetation for erosion control and general landscaping (see the appendix for adapted fire retardant species). Consult the California Division of Forestry or the county fire marshal for assistance in developing your fire protection plans.

Sewage Disposal

Soil features must be considered when planning a development in an area not serviced by sanitary sewers. If before a site is developed, the soil slope, depth and percolation rate are considered, many problems can be prevented. The sewage disposal criteria table in the appendix shows the effect of these features on the minimum net* lot size. In addition to the effect on lot sizes, a poorly designed sewage disposal

* Net usable lot area is considered to exclude ravines, waterways, ridges, roads, etc.

Slippage of a filled area—fill areas require special construction methods.

An intended building site—on steep slopes deep cuts can be minimized by use of pile or pillar-type foundations.

system can pollute domestic water sources such as wells, springs and streams. The safe distance to streams and wells varies with the soil slope and percolation rate, but should never be closer than 50 feet. The sewage disposal system should be located on the lot plans before excavation or grading begins. Many good lots have been damaged or destroyed because the building pad was built before the sanitary needs were considered, and the only good site for the disposal system was stripped of topsoil or compacted. Compacted soils or soils without topsoil are poor areas on which to build a disposal system, as percolation rates are greatly reduced.

Many counties by ordinance require a percolation test be made on each site. Further information regarding sewage disposal systems may be obtained from the county health department.

Soil Stability and Foundations

Too many times, persons who build in the hills consider only the view or other aesthetic values when choosing a homesite. This often results in a development not being placed in a suitable area so far as foundations are concerned. The failure of foundations or slippage of a filled area results in calls for assistance from the county or city public works department or the Soil Conservation Service. Often little can be done without incurring large costs for remedial action.

Prevention through good planning is the best solution. When laying out your homesite on your property, consider if the home will have to be built on fill material. If so, is the soil material the type that will provide a well-compacted, safe foundation? Or is it likely to slip down the hill with your home or road when it becomes saturated with winter rains?

If the soil is of the latter type, plan to use special construction methods or practices to prevent this.

Another problem often resulting in foundation failure and resulting in court action is that of expansive soils. These soils when wet expand, and crack and shrink when dry. This is caused by the type and amount of a certain clay. If these soils cannot be avoided for use as foundations, soil engineers can recommend changes in soil foundation preparation procedures or in a change design of the building foundation. If slab floors are necessary on these soils, the expansive clay soils can be mixed with a nonexpansive soil to achieve soil stability.

In general, problems develop from improper and extensive earth-moving. Deep cuts are subject to soil erosion from rainfall and runoff waters. Extensive fills, if not compacted properly, often settle or slip in addition to being especially susceptible to erosion. Proper selection of development sites may require only a minimum of excavation. On sloping sites, earth moving can be minimized by use of different types of building construction, for example, pile or pillar-type foundations. When excessive cut or fills are necessary, follow these guidelines: Remove only the vegetation necessary; don't strip the entire site and pave the way for erosion . . . Scarify and mix surface soil on areas subject to fill . . . Compact the fill by having soil moisture at an optimum for compaction and compact with a sheepsfoot roller or similar tool . . . Maintain slopes on cut and fill at no steeper than one-foot vertical drop for each two feet of horizontal distance, where space

permits . . . Install subsurface drains in seep areas . . . Cover cut and filled areas with six inches of topsoil to aid in revegetation where practical.

Runoff Water and Erosion Control

A serious problem often overlooked during the planning and construction stages of development is making allowances for the disposal of runoff water and the precautions necessary to prevent soil loss through erosion. This holds true, not only for the development area itself, but also for the access roads and other areas which contribute water to the development. The lack of adequate runoff water control facilities often results in classic soil erosion problems. Filled areas not properly protected from runoff water are good examples. The best method of preventing the above problems from occurring is to divert the waters away from the site, especially the recently cut and filled slopes. Diversion ditches are generally the best to protect the above areas, while gutters with proper disposal facilities along access roads serve similar purposes. Proper disposal facilities as used above means culverts leading into natural watercourses through pipe drops, paved ditches or extensions to the culverts. Erosion can pose serious problems in both the cut and filled areas. Protection from sheet erosion is most generally accomplished by use of vegetation. Dense plant cover, well established, can withstand large runoff flows and still provide adequate soil protection at reasonable costs. (See the appendix for a list of temperate zone plantings for erosion control or contact the University of California Agricultural Extension Service, Davis, California.) The species in the appendix are listed according to their moisture needs, fire retardance, deer resistance, and use in plantings. If vegetation other than grass is to be used within 30 feet of a building, the planting should be fire retardant in nature and low in growth habit. In cut or filled areas where only subsoil is on the surface, the establishment of vegetation may present problems. Newly developed commercial products aid in the establishment of new seedlings by allowing seed, fertilizer, and insecticides to be applied in one operation through "hydroseeding." Jute, paper and hemp nettings have been developed to aid in solving the above. (See the appendix for a listing of representative commercial conservation products discussed above.) Prior to planting, an irrigation system should be installed for plantings which are going to require supplemental water. Sprinkler systems generally are best suited for this purpose. Although contour or basin irrigation may be used on the more level areas, or where the plantings are widely spaced.

To summarize, consider the following when planning for a hillside development: Remove vegetation only from areas required for buildings and fire protection . . . Slope cuts and fills as outlined under soil stability and foundations section, and replace topsoil to aid in establishment period . . . Protect new plantings with organic material such as straw, or use one of the new commercial mulches . . . In areas where deer are a problem, plant deer-resistant plants (consult the University of California Agricultural Extension Service publication, *Deer Resistant Plants for Ornamental Use*) . . . Where vegetation alone will not provide adequate erosion control, use diversion ditches, paved gutters, culverts and other mechanical practices.

Access road undermined by an adjacent stream—conditions such as this may prevent a fire tanker from answering a call or residents from escaping a fire.

Planning Access Roads

Access roads should be constructed to provide ready entry and exit at all times. (See the appendix for the access roads criteria table.) Access roads to hillside developments are often not properly designed or constructed and may cause severe problems. Erosion, stream siltation, loss of road and fire safety hazards are some of these problems. The California Division of Forestry recommends that two-way roads be constructed on grades not more than 10-to-15 percent. Those portions of roads with grades steeper than 10-to-15 percent should be kept to less than 500 feet in length. If the above conditions are not met, it may prevent two-wheel-drive fire tankers from pulling the grade while answering a fire call.

Useful information and guidelines regarding access roads may be obtained from local county public works department. Many private engineering firms are engaged in designing and supervising the construction of such roads. To summarize, consider the following when planning an access road in the mountains: Comply with the county ordinance code pertaining to excavating and grading in hillside areas . . . Use benches and retaining walls to lessen the right-of-way requirements . . . Use pullouts where two-way road construction is not economically feasible . . . Protect cut and fill areas from excessive runoff . . . Keep road grades under the 15 percent maximum . . . In laying out the road route, consider the type of material through which it will be constructed, such as rocks, seep areas, and adequate soil depth.

APPENDIX

Definitions

The terms used to describe the "degrees of limitations" for each of the different land uses on the following pages are defined as:

None to Slight—A condition which requires no more than normal precautions in the design and construction of a development.

Moderate—This condition requires more than normal precautions be taken during the planning and design stages of the development.

Severe—This condition requires considerable additional precautions be taken during the planning, design and construction phases of the development. Professional assistance should be obtained to aid in the planning, design and construction of the development.

Very Severe—This condition suggests that very extensive precautions in planning and design are essential. Professional assistance must be obtained in all phases of these developments. Often these additional precautions increase the cost of a development to uneconomic levels.

CRITERIA TABLE FOR ACCESS ROADS

Limiting soil features which should be considered during the design and layout of access roads (including driveways) include the percent of slope, soil depth, soil texture and drainage.

Soil features	Degree of limitation			
	None to slight	Moderate	Severe	Very severe
Percent slope	0%-10%	10%-20%	20%-40%	40%+
Soil depth to bed-rock or clay	60"+	36"-60"	20"-36"	Less than 20"
Soil texture	Sandy loam, fine sandy loam, very fine sandy loam and loam	Silty loam, sandy clay loam	Clay loam	Clay, silty clay, sandy clay and very fine sand
Soil drainage	Good internal drainage, no seeps present	Seepage requiring simple drains in the fills	Seeps and or springs requiring pipe drains	Seeps and/or springs requiring extensive and complex drains

In addition to the soil features listed above, the degree of limitation ratings have taken into consideration the soil's natural angle of repose, the shrink-swell ratio and compactability.

The above ratings for access road construction are based on a Santa Clara area soils survey released in 1958 by the Soil Conservation Service of the U.S. Department of Agriculture, and the California Agricultural Experiment Station. They are offered to serve as a guide but are not to be considered as applicable statewide. For local information and additional data on physical soil characteristics, contact the U.S. Soil Conservation Service, 2020 Milvia Street, Berkeley, California.

CRITERIA TABLE FOR SEWAGE DISPOSAL

Limiting soil features affecting sewage disposal which should be considered during design and construction of a sewage disposal system include soil texture, which is reflected in terms of percolation rate, soil depth, and the slope of the land.

Soil features	Degree of limitation			
	None to slight	Moderate	Severe	Very severe
Percent slope	0%-5%	5%-10%	10%-20%	20%+
Soil depth	10 feet +	6-10 feet	4-6 feet	Less than 4 feet
Percolation rate	0-20 min./in.	20-40 min./in.	40-60 min./in.	Over 60 min. per in.

Minimum net lot size for above conditions*				
Minimum net lot size in square feet	10,000	12,500 to 17,500	From ½ to 1 acre	1 acre or more

* Minimum net usable lot area is considered to exclude ravines, waterways, ridges, roads, and other areas not suitable for filter field construction.

The example percolation rate and minimum net lot sizes indicated above were based on a Santa Clara County ordinance and should not be considered as applicable statewide. Instead, the above ratings should be used only as a guide. Final determination must be based on the results of on-site tests for percolation. For complete requirements in developing a sewage disposal system consult the local county health department.

Care should be taken in homesite preparation, so that an undisturbed area of sufficient size is reserved for the sewage disposal system. Areas stripped of topsoil, or compacted, are usually not suitable for drain fields due to the reduced percolation rate. So, locate your sewage disposal system on your development site *before* you start to excavate for foundations etc.

PUBLIC AGENCIES TO CONSULT WHEN PLANNING A HILLSIDE DEVELOPMENT

Agency	Area of responsibility
State and Federal	
U.S. Department of Agriculture, Soil Conservation Service	Basic soils information, erosion control planting recommendations, irrigation system design
California State Division of Forestry.....	Fire prevention and control in mountainous areas
California State Soil Conservation Commission.....	Advice and counsel on coordination and formation of Soil Conservation Districts
County Offices	
Agricultural Extension Service.....	Vegetative planting information
Fire marshal.....	Fire prevention
Health department.....	Basic planning data relating to sewage disposal systems and domestic water supply development
Planning department.....	Basic planning, zoning and ordinances
Department of public works.....	Permits for buildings, access roads, foundations, and etc.
Local Special Districts, Where Applicable	
Fire prevention district.....	Fire prevention and control
County flood control and/or water conservation district	Flood prevention and stream channel maintenance
Soil conservation district.....	Soil and water conservation planning, watershed protection

REPRESENTATIVE CONSERVATION PRODUCTS

The products listed below are but a few of the erosion prevention and control products available. Each has its place in an erosion prevention planting program as discussed in this publication.

These products, when used in combination with retaining walls, diversion ditches and other mechanical practices, should provide a complete erosion prevention program with which to protect a hillside development.

Further assistance from local landscape architects, contractors and nurserymen will aid in the selection of appropriate products best suited to solving a specific problem.

Prices shown were taken from the manufacturer's literature, and as such, may be subject to local variations.

Brand name*	Description	Approximate cost per square foot
Solution products		
Aquatain.....	Chemical gelatinous film.....	2 cents applied
Catalin Resin 251.....	Permeable chemical film.....	2 cents applied
Catalin Resin 239.....	Impermeable chemical film.....	3 cents applied
Elanol.....	Polyvinyl alcohol spray.....	2 cents applied
Erosion Stop.....	Aqueous solution.....	4 cents applied
Soil Set.....	Elasticomeric polymer emulsion.....	3 cents applied
Mulch products		
Sta-Soil.....	Natural organic compost.....	4 cents applied
Turfiber.....	Paper fiber mulch.....	1½ cents applied
Fiber mat products		
Soil Saver.....	Woven jute mesh.....	6 cents applied
Troy Turf.....	Jute mat roll.....	10 cents applied
Mulchnet.....	Twisted paper net.....	½ cent product cost only
Erosionet.....	Twisted paper fabric.....	1 cent product cost only
Ultrack.....	Glass fiber blanket.....	Costs not available

* Brand names are used for ease in the description of the materials only. The use of these names does not constitute an endorsement. Likewise, the absence of a brand name is not intended as a criticism of that product.

LOCALLY ADAPTED PLANTS—THEIR USES AND CHARACTERISTICS FOR A TEMPERATE ZONE *

Name	Height	Landscape use	Comments
SHRUBS			
<i>Arctostaphylos hookeri</i>			
Hooker manzanita	1-3 feet	Ground cover on slopes	Sun or light shade, drought tolerant
<i>Arctostaphylos uva-ursi</i>			
Kinnikinnick Bearberry	2-6 inches	Ground cover on banks and slopes	Slow growth, sun or light shade, tolerant of poor soil
<i>Carissa grandiflora</i> Natal Plum	5-7 feet	"Nana compacta" and "Prostrata" are ground cover varieties	Slow growing, do not overwater
<i>Ceanothus griseus horizontalis</i> Carmel creeper	18-30 inch	Ground cover on banks and slopes	Likes any soil, sun or shade, fast grower
<i>Cistus ladaniferus</i> Gum rockrose	4-6 feet of growth	Ground cover on very steep dry slopes	Drought tolerant, deer and pest, tolerant
<i>Lantana montevidensis</i>	6-8 inches high, trailing to 3 feet	Ground cover on slopes	Needs full sun, do not overwater
<i>Rosmarinus officinalis</i> "Prostratus" variety	Low growth spreading 4-8 feet	Ground cover on slopes	Drought resistant
Dwarf rosemary			
TREES			
<i>Eucalyptus ficifolia</i> Red flowering gum	30-50 feet	For showy scarlet flowers	Drought tolerant, slow growing, plant in clumps
<i>Eucalyptus sideroxylon</i> Red ironbark	To 40 feet	For pink blooms	Drought resistant, fast grower, needs excellent drainage
<i>Prunus lyonii</i> Catalina cherry	15-35 feet	For creamy white flowers and deep green glossy foliage	Best in hot dry areas, requires irrigation and good drainage
<i>Umbellularia californica</i> California laurel bay tree	20-75 feet	For aromatic dark green foliage	A native found in canyons and along streams
GRASSES & LEGUMES			
Barley	24-36 inches	For erosion prevention on cut banks and filled areas	Grows during winter months without irrigation, an annual grown from seed
<i>Lolium rigidum</i> Wimmera ryegrass	18-36 inches	Use as a stabilizer on road cuts, and earth fill areas	Drought tolerant, low fertility requirement, short-lived winter annual
Blando brome-Lana vetch	To 24 inches	For stabilizing cut and filled areas, along roadsides and dam fills	Planted together this mix will grow and reseed well with 500 pounds of ammonium phosphate fertilizer per acre
GROUND COVERS AND VINES			
<i>Ajuga reptans</i> Carpet bugle	2-6 inches	For dense mat cover on slopes	Started from divisions requires irrigation often, hardy to 3°
<i>Hedera helix</i> English ivy	A vine	For dense cover on slopes	It roots at the joints or in the air, requires moderate irrigation
<i>Vinca major</i> Common periwinkle	6-12 inches	For dense mat in sun or shade	Requires frequent irrigation in hot dry locations
<i>Hypericum calycinum</i> Aaron's beard	To 12 inches	Excellent soil binder on steep cut or fill areas	If left unpruned often becomes a weed

* For further information contact the local agricultural commissioner or, where available, the local University of California agricultural extension service.

Example:

With 600 sq. feet (an area 20 x 30 feet) to irrigate, and 4 gpm., how many minutes will be required to apply 1 inch of water?

Start with 600 on left edge of graph, move horizontally across graph to intersection of 4 gpm., then straight down to bottom of graph. Read answer . . . 90 Minutes/Inch.

* This chart is based on 100% efficiency, adjust the time in minutes per inch to your own efficiency by multiplying the following factors for

90%—1.1

80%—1.25

70%—1.4

60%—1.7

50%—2.0

LETTER OF TRANSMITTAL

February 3, 1965

HON. GLENN ANDERSON, *President*
and Members of the Senate

Gentlemen :

The Senate Factfinding Committee on Public Health and Safety herewith submits a report on subjects studied by the committee during the 1963-65 interim period.

Chapter I of the report summarizes the five subjects studied and states the committee's conclusions and recommendations. Chapters II through VI deal separately with each subject.

Respectfully submitted by

WALTER W. STIERN, *Chairman*
JACK SCHRADER, *Vice Chairman*
FRANK S. PETERSEN
AARON W. QUICK
ALVIN C. WEINGAND

Chapter I

SUMMARY OF CONCLUSIONS AND RECOMMENDATIONS

1. *Should legislation be enacted to increase the authority of the Board of Medical Examiners to control unprofessional medical conduct?*

The committee has concluded that the Medical Practice Act needs revision in order to give the Board of Medical Examiners authority to protect the public from the negligent, immoral, and incompetent physicians who constitute a very small percentage of the total number of physicians. The Medical Practice Act does not permit the board to obtain jurisdiction over such physicians, and, if it did, the board might not have legal authority to restrict the offender's right to practice and to supervise his behavior on probation.

If the Legislature does expand the jurisdiction of the board, the Legislature should at the same time establish five district review committees to facilitate the working of the board's disciplinary responsibilities.

The Medical Practice Act is deficient in certain respects and should be revised. The section on mental illness is poorly worded, out of date, and too restrictive in some respects. Physicians who knowingly falsify insurance claims and government documents should come within the jurisdiction of the board. The board should have jurisdiction to discipline physicians who habitually practice in hospitals without procedures for the periodic review of surgery and medical treatment. Finally, the Legislature should provide the board with adequate investigatory authority to carry out its functions.

2. *Should legislation be enacted to reduce the county property tax on property within cities maintaining a health department?*

The proponents of this proposal are asking the state to reverse a state policy of 14 years standing. There is no merit in the contention that this proposal will apply to only five cities, for the Legislature will be asked to grant equal treatment to all cities and the request will be difficult to deny.

Legislation passed in 1947 gave cities a clear alternative: to consolidate health services with the county or to maintain a city health department and contribute to the support of the county health department. The committee finds no reason why that decision should be reversed at this late date.

The committee recommends:

1. The Legislature should take no action on any bill which reduces county taxes on property in a city maintaining a health department.
2. The Legislature should give favorable consideration to any legislation necessary to permit cities and counties to contract with each other regarding health services.

3. *Should legislation be enacted to abolish the power of local government agencies and to grant exclusive power to the state government to regulate fire safety in hospitals?*

Abolition of the power of local government agencies to regulate fire safety in hospitals will eliminate a part of the traditional responsibility of local government for the protection of the public against the danger of fire. The Legislature should not take this step without clear evidence of need and assurance that state regulation will be adequate for public safety. The evidence submitted to this committee was not persuasive to establish these facts.

The committee recommends:

1. The Legislature should take no action toward state preemption of the field of fire safety in hospitals without a comprehensive study to show the need, if any, for such legislation.

2. Any study of this subject should be but one part of a complete study of the proper division of responsibilities between the state and local government agencies for the health and safety of the public.

4. *Should legislation be enacted to require retailers to label meat, fish, and poultry which has been frozen and thawed as a "thawed product"?*

This is a consumer interest proposal aimed at giving the buyer more information about the quality of certain food. The bill does not attempt to protect the public against unwholesome or injurious food.

The evidence submitted to the committee shows that labeling meat, fish, and poultry as a "thawed product" does not provide the consumer with specific information about the quality or keeping quality of the food purchased.

Enactment of the bill may create unwarranted sales resistance leading to harmful disturbances in the production and marketing of food.

The committee recommends:

1. The Legislature should take no action on any bill which would require retailers to label thawed meat, fish, and poultry as a "thawed product."

5. *Should legislation be enacted to establish requirements of education and training for persons who use X-ray machines on human beings for medical purposes?*

Government regulation of radiation sources has been inaugurated in the realization the regulation is necessary to protect the living population and future generations from the hazard of unnecessary radiation. Because medical X-ray machines comprise the major source of public exposure, elimination of unnecessary medical radiation will greatly reduce the total amount of radiation and will enhance the public welfare. Regulation of equipment is not by itself sufficient; by using poor procedure an untrained X-ray machine operator can negate the value of the best equipment; there is much evidence that improperly trained people can and do operate medical X-ray machines. The state can

establish standards of education and training for medical X-ray machine operators without interfering with the right of medical practitioners to make judgments as to the need for using the equipment and without interfering with the responsibility of the practitioner for the safety of the patient.

The committee recommends:

1. Legislation should be enacted to provide that no one, except licentiates of the healing arts, shall use X-rays or X-ray producing equipment on human beings for diagnostic or therapeutic purposes without having been certified by the State Department of Public Health after meeting educational requirements and passing an examination.

2. Legislation should be enacted to provide that licentiates of the healing arts must supervise all X-ray exposure of human beings for diagnostic and therapeutic purposes.

3. Legislation should be enacted to amend the Medical Practice Act to require applicants for a physician's and surgeon's certificate and applicants for a podiatrist's certificate to show evidence of having attended a medical school whose curriculum provided for adequate instruction in radiology, including roentgenologic technique and radiation safety.

4. Legislation should be enacted to amend the Medical Practice Act to require applicants for a physician's and surgeon's certificate and applicants for a podiatrist's certificate to pass an examination in roentgenologic technique and radiation safety.

Chapter II

CONTROL OF UNPROFESSIONAL MEDICAL CONDUCT

Senate Resolution 204 of the 1963 Regular Session directed the Senate Factfinding Committee on Public Health and Safety to study the laws of the state relating to the control of unprofessional and unethical medical conduct. The committee held two hearings on this subject, one in San Francisco, September 22, 1964, and one in Los Angeles, October 13, 1964, and received testimony from professional medical associations, the State Board of Medical Examiners, and other interested persons.

This report describes the existing system of public and professional control of medical conduct, points out areas where the system is deficient, lists the recommendations made to the committee for improving the system, and states the committee's conclusion that the recommendations should be accepted by the Legislature.

Nothing in this report is intended to minimize the sincere and costly efforts of the physicians of California to eliminate from practice those very few doctors who reflect badly upon the whole profession.

This report primarily concerns the control of physicians who habitually engage in unethical and immoral conduct, who are professionally incompetent, or who have psychiatric disabilities which interfere with the proper treatment of patients. This report will often use the term professional incompetent to describe this wide range of medically antisocial behavior. The report of the Governor's Committee on Medical Aid and Health, December 1960, listed some of the actions of professional incompetents: failing to call in a consultant when such a procedure is needed, performing operations for which the physician's training is inadequate when qualified physicians are available, performing unnecessary operations, failing to carry out adequate diagnostic procedures prior to treatment or surgery, prescribing unnecessary or incorrect medication, failing to keep abreast of advances in medicine, feesplitting, overcharging, and ordering excessive hospitalization. Legal definitions of such conduct use such phrases as the following: gross or repeated negligence, gross immorality, and gross incompetence. Arizona law defines unprofessional conduct to include gross malpractice, repeated malpractice, or any malpractice resulting in the death of a patient.

The number of professional incompetents is very small relative to the number of practicing physicians, but there are no precise estimates of the total. The estimates range from one-tenth of 1 percent of all physicians (the percent complained about to the Board of Medical Examiners) to 5 percent. Harold C. Freedman, M.D., past president of the Kern County Medical Society, states that on the basis of 30 years of associating with physicians he believes that two to three percent do not meet professional standards of honesty, character, and morality. There are about 30,000 physicians practicing in California.

Roger O. Egeberg, M.D., dean of the School of Medicine of the University of Southern California, expressed an opinion as to why professional incompetents constitute a greater problem today than in the past. The reason, he said, lies in the

revolutionary changes that have occurred in medicine and in society's expectations of medicine. Medicine has advanced more since 1933 than in all the history of mankind up to 1933. . . . This has happened at terrific cost and with an amazing complex of equipment and tests making judgment more difficult and giving greater opportunity for doing wrong or for not doing right.

The State Board of Medical Examiners, pursuant to the Medical Practice Act, issues physician's and surgeon's certificates and exercises disciplinary authority over certificate holders. The board is made up of 12 members appointed by the Governor, one of whom, the public member, is not a licensee of the board. From 1953 to 1962 the board issued an average of 2,198 physician's certificates each year. At the present time the board issues about 2,400 certificates each year.

To obtain a California physician's and surgeon's certificate one must submit testimonials of good moral character, meet specific educational requirements, and pass an examination. The Medical Practice Act requires applicants for the certificate to have the equivalent of a high school education, three years of college, a degree from a four-year medical school approved by the board, and one year of internship at a hospital approved by the board. Certain subjects must be in the curriculum of an approved medical school. The examination covers nine subjects and at least a portion of the examination in each subject must be written. A score of 75 percent is necessary to pass.

Under certain conditions, the holder of a physician's certificate from another state can obtain a reciprocity certificate in California without examination. The educational and examination standards of the issuing state must be equivalent to California standards.

Section 2137 of the Medical Practice Act provides:

The physician's and surgeon's certificate authorizes the holder to use drugs or what are known as medical preparations in or upon human beings and to sever or penetrate the tissues of human beings and to use any and all other methods in the treatment of diseases, injuries, deformities, or other physical or mental conditions.

The exercise of disciplinary power by the board takes place in three distinct steps. The first step is to obtain jurisdiction over the physician on one of the grounds specified in the Medical Practice Act. The second step is to find, pursuant to the requirements of the Administrative Procedures Act, that the physician is guilty of wrongful conduct or that he falls within the provisions of the act on mental incompetence. The third step is the act of discipline itself, suspending or revoking the physician's license, or taking some other action regarding his right to practice.

Twenty-three sections of the Medical Practice Act define unprofessional conduct; these constitute the grounds on which the board can

obtain jurisdiction to discipline people for wrongful conduct. Eleven of these sections cover the following acts: procuring a certificate by fraud; purchasing a medical degree; impersonating a certificate holder; impersonating an applicant for a certificate; employing a person to treat the sick whose certificate has been suspended; employing a person to bring in medical business; using the initials, M.D., falsely; violating any provisions of the act; performing a criminal abortion; violating the law relating to cancer treatment; and betraying a professional secret. Five sections concern the use of narcotics and dangerous drugs. Five sections concern improper advertising. Section 2411 defines unprofessional conduct as knowingly making or signing any certificate or other document required by law which falsely represents the existence or nonexistence of a state of facts. Section 2383 defines unprofessional conduct as (1) the conviction of a felony or (2) the conviction of any offense, felony or misdemeanor, involving moral turpitude.

Neither the Board of Medical Examiners nor any other agency of government has authority to restrict the right to practice medicine of physicians who engage in unethical medical practices or whose medical conduct amounts to gross negligence or gross incompetence, no matter how harmful to patients the physician's conduct may be. Patients can bring malpractice actions against such physicians but that does not affect the physician's right to practice medicine. Even when a physician has been convicted of a crime, the board has no authority to suspend or restrict his license until the conviction is affirmed on appeal or otherwise disposed of. The subject of the board's lack of authority to deal with professionally incompetent physicians receives further comment in the section of this report containing recommendations for legislative action.

Professional medical societies and the medical staff of some hospitals attempt to control the conduct of professional incompetents.

The California Medical Association has adopted a set of principles to guide physician-hospital relationships. These principles may be taken as a description of how the best hospitals in the state perform the functions of supervising, reviewing, and controlling the medical care of patients. The following four paragraphs summarize these principles.

The governing body of the hospital appoints physicians to the medical staff on the basis of the medical staff's recommendation, which depends on the individual skill and training of the physician and not on licensure.

The medical staff works through a committee system to supervise treatment and care. The executive committee coordinates policies and activities and acts upon the recommendations of other committees. The credentials committee investigates applicants for staff privileges, investigates breaches of ethics, reviews the activities and competence of staff members, and makes recommendations regarding them to the executive committee. Before recommending that a physician be granted staff privileges, the committee investigates his skill and character, including information from the county where he previously worked and the hospitals where he previously practiced. The joint conference committee coordinates the activities of the medical staff, the governing body of the hospital, and the hospital administrator. The medical records committee assures the maintenance of medical records at the required

standard. The surgical procedures committee reports on the agreement or disagreement of diagnoses before and after surgery on the basis of pathological analyses of tissue. The medical procedures committee makes a qualitative analysis of medical and surgical procedures undertaken in the hospital. The hospital utilization committee attempts to make sure that the hospital is used as efficiently as possible. Committee records are confidential and are the property of the medical staff and are not a part of the patient's record or of general hospital records.

Committees of the medical staff make periodic reports and recommend discipline of staff members. When severe disciplinary action is necessary, the facts are reduced to writing and reviewed by the executive committee. The governing board of the hospital reviews the executive committee's recommendation and may conduct further investigation before accepting, rejecting, or modifying the recommendation.

Disciplinary action may include any of the following:

reprimand or probation; limitation, suspension and revocation of privilege. When considered necessary, the appropriate committee may recommend and the executive committee may impose, prior to a hearing, immediate suspension or limitation of privileges subject to final action after the hearing is completed.

Staff physicians must agree to accept voluntarily the decisions of the medical staff and the hospital governing board.

If the hospital terminates a physician's staff privileges, the executive committee requests the physician to submit the names of other hospitals where he has staff appointments and to consent to the executive committee advising the other hospitals of the termination of his privileges and of the reasons therefor.

There are three factors which reduce the effectiveness of hospitals as a source of control of professionally incompetent physicians. First, not all hospitals meet the high standard called for in the California Medical Association's guiding principles for physician-hospital relationships. Neither law nor regulation sets standards for hospital medical staff organization and the supervision and review of medical and surgical treatment in hospitals. The hospital licensing act, administered by the Department of Public Health, contains sanitation and building standards to assure that hospitals are safe places for the accommodation of infirm persons. The Joint Commission on Accreditation of Hospitals, a private organization sponsored by national medical and hospital associations, accredits about one-half of the hospitals in the state; law does not require that hospitals seek accreditation. Second, professionally incompetent physicians may work in an office instead of a hospital. Third, if a physician loses his privileges at one hospital, he can continue to work in other hospitals. The guiding principles of the California Medical Association require a disciplined physician to consent to having other hospitals notified of the action taken against him, but if he does not do so, the disciplining hospital may choose not to risk a lawsuit by notifying other hospitals of its action.

Professional medical societies are another source of control of professionally incompetent physicians. Local societies receive their charters

from the California Medical Association which has delegated disciplinary functions to local societies. The constitution and bylaws of the state association provide procedures for the performance of disciplinary functions.

Carl E. Anderson, M.D., representing the California Medical Association, told the Senate Factfinding Committee on Public Health and Safety,

At the present time, a great deal of screening, review, supervision, regulation and disciplinary action takes place in county and state medical societies. . . . For instance, in addition to the requirements of education and licensure, an investigation is conducted by county medical societies concerning applicants for membership. The public is invited to submit to county medical societies, complaints concerning physician's unethical conduct, overcharges, and other matters pertaining to the profession's integrity. These complaints are carefully investigated and erring members are appropriately admonished and disciplined.

A fundamental weakness of the professional medical society as a source of control of professional incompetents is the absence of legal sanctions. Expulsion, the most severe penalty which the society can invoke, need not affect the physician's practice. Moreover, social and economic pressures, fear of lawsuits, and the difficulty of obtaining evidence may inhibit a society from taking action except under extreme circumstances.

Testifying before the Senate Factfinding Committee on Public Health and Safety, Harold C. Freedman, M.D., of Shafter, California, president of the Kern County Medical Society in 1962, gave the committee a cogent summary of the factors working against the best efforts of professional societies and hospital staffs to discipline physicians. The following is a summary of a portion of Dr. Freedman's remarks:

Pressures from county medical societies and hospital medical staffs have done much to improve medical standards. Despite progress and despite hours of work, despite reprimands and curtailed privileges, the incorrigibles remain incorrigible. The public must be protected against this tiny group of men.

In 1961 and in 1964 the Kern County Medical Society invoked a Judicial Council to hear complaints against physicians; on each occasion two members were complained against. Attorneys represented both the society and the physicians complained against. The 1961 proceeding resulted in the expulsion of one member from the society and the placing of the other physician on probation. The Kern County Medical Society was the only society in the United States to expel a member that year.

These cases illustrate some of the reasons why professional self-discipline is insufficient. First, the expense of such proceedings is too great for small societies to bear. The 1961 proceeding cost over \$1,300 and the 1964 proceeding cost \$4,700. Second, such proceedings frequently result in a lawsuit against the society by the disciplined physician, causing more lost time and expense. Third, the

procedure is ineffective. The doctor expelled from the society in 1961 practiced in a rural area and had his own hospital. The action taken against him did not hurt him in any way; he continued his medical way of life totally unchanged. The ultimate that a medical society can inflict on a member, expulsion from the society, may not curtail his activities at all. Fourth, many doctors are not members of professional medical societies and are therefore not within the control of organized medicine.

Hospital committees may not be able to act because the doctor performs a questionable practice in his office or at several different hospitals. Hospital committees are loathe to act on a single case. Even if one hospital committee disciplines a physician, the physician may continue to practice at another hospital.

A county medical society cannot get transcripts of records from hospitals and offices in the face of determined legal opposition. County societies lack adequately trained staff to do investigative work.

When I was president of the Kern County society in 1962 I tried to get hospitals to notify other hospitals when a member of the staff received discipline or had restrictions placed upon his practice. For legal reasons this idea met with no success.

* Recently a hospital in Kern County restricted the right to practice of a doctor and had to defend itself in a time-consuming and expensive lawsuit which it eventually won. But other hospitals would be loathe to face similar lawsuits just on the basis of information supplied by the hospital which first restricted the doctor's privileges.

RECOMMENDATIONS MADE TO THE COMMITTEE

1. *Legislation should be enacted to give the Board of Medical Examiners authority to discipline physicians who habitually engage in unethical and immoral conduct injurious to patients and physicians whose professional incompetence endangers patients.*

Source of recommendation: California Medical Association; State Board of Medical Examiners.

Comment: Enactment of this proposal will strengthen public protection against harmful medical treatment. At the present time neither the Board of Medical Examiners nor any other agency of government has authority to restrict the right to practice medicine of physicians who engage in such conduct. Control of such conduct by hospital medical staffs and professional medical societies is ineffective because physicians can practice without being members of a professional society and if they lose staff privileges at one hospital they may obtain such privileges at another, or they may build their own hospital. Malpractice actions may be brought against such physicians but that does not affect the physician's right to practice medicine.

Suggested statutory language for the enactment of this recommendation is as follows:

Unprofessional conduct includes, but is not limited to, the following:

(a) Violating or attempting to violate, directly or indirectly, or assisting in or abetting the violation of, or conspiring to violate, any provision or term of this chapter or of any regulation relating to medical conduct validly adopted by the board pursuant to the Administrative Procedure Act.

(b) Gross negligence.

(c) Gross incompetence.

(d) Gross immorality.

(e) The commission of any act involving moral turpitude, dishonesty, or corruption, whether the act is committed in the course of the individual's activities as a certificate holder, or otherwise, or whether the act is a felony or a misdemeanor.

(f) Any action or conduct which would have warranted the denial of the certificate.

Carl E. Anderson, M.D., representing the California Medical Association, made the following comment to the Senate Factfinding Committee on Public Health and Safety regarding statutory language similar to that quoted above.

Some of the terms suggested are broad. However, similar language is found in many of the licensing acts applicable to various professional and technical groups. I believe we can reasonably assume that the board and the Attorney General's office will not proceed against a person under such a statute in doubtful cases.

The idea has been expressed that such legal sanctions as this recommendation proposes may stifle medical experimentation. That is not the case. Unorthodox or experimental surgery and medical treatment should take place with the patient's consent in medical research centers where consultation is available, where conditions can be controlled, and where results can be recorded. Under those conditions, experimental surgery and experimental medical treatment will not fall within the proposed definition of unprofessional conduct.

2. *Legislation should be enacted to expand the probationary authority of the Board of Medical Examiners to permit it to place terms and conditions on the behavior and medical practice of an offender and to prescribe actions and procedures to encourage his rehabilitation.*

Source of recommendation: California Medical Association; State Board of Medical Examiners.

Comment: If legislation is enacted to increase the board's jurisdiction as proposed in recommendation number 1, the board will need to have authority to fashion remedies aimed at rehabilitating rather than punishing such physicians. If the board can only suspend the license of such a physician or revoke the license entirely, the courts may be so restrictive in their interpretation of the new jurisdiction that the purpose of changing the law will be defeated. If, on the other hand, the board can fashion remedies aimed at rehabilitating the doctor, the courts will be more likely to accept the board's judgment. Rehabilitation rather than punishment, moreover, is sound both morally and socially. The goal of the board should be to protect the public against

incompetent and unethical physicians. This goal can be achieved in individual cases by restricting the practice of the doctor instead of prohibiting him from working altogether.

The California Medical Association specified some of the measures the board might take to rehabilitate a licensee:

(a) require additional medical training and an examination, either written, oral, practical, or clinical upon completion of the training;

(b) require a complete diagnostic examination by one or more physicians appointed by the board;

(c) restrict the extent or kind of practice and enforce such restrictions in all hospitals and in the office.

The Medical Practice Act presently authorizes the board to take such action as it deems proper against a physician who has come within its jurisdiction and has been found guilty of misconduct. Two reasons lead the board to question whether the courts will sustain, pursuant to this broad grant of disciplinary authority, the kinds of orders suggested in the previous paragraph. First, when the statute was drafted in 1937, concepts of rehabilitation were not as widespread as they are today, and a court might refuse to interpret the statute to include such powers. Second, the statute is open to the charge of being vague, general, and ambiguous.

Section 2376.5 of the act allows the board to place terms and conditions on the right to practice when a physician petitions the board to reinstate his license after a year's suspension or revocation. This authority will be inadequate as a tool for rehabilitation because after a year's suspension rehabilitation will be much more difficult if not impossible.

3. *Legislation should be enacted to authorize the State Board of Medical Examiners to establish five district review committees composed of persons holding a valid physician's and surgeon's certificate whose duty it will be to hear disciplinary matters which the board assigns to the committee.*

Source of recommendation: California Medical Association; State Board of Medical Examiners; Los Angeles County Medical Association.

Comment: Witnesses recommending the establishment of district review committees suggested the following details concerning the appointment, organization, and authority of the committees:

There will be a district review committee in each of the five appellate districts designated for district courts of appeal in Government Code Section 69012.

Each committee will consist of five physicians appointed by the Governor. The Governor will appoint the committees from nominees submitted to him by the Board of Medical Examiners, the deans of approved medical schools in California, and professional medical societies. Assuming that legislation creates committees with five members each, the appointments will be on the following basis: one member nominated by the Board of Medical Examiners, one member from the faculty of a clinical department of an approved medical school nominated by the deans of such schools, and three members nominated by professional medical societies. Should legislation be enacted to create committees with more than five members, at least 60 percent of the membership

should be nominated by professional medical societies. There must be at least two nominations for every position to be filled. Each committee member, except the member from the faculty of a clinical department of a medical school, will reside in the district where he serves. The term of office will be four years, and the terms will be staggered so that there will always be experienced men on the committee. Members of the district review committees will receive per diem and expenses as provided for the Board of Medical Examiners.

The Board of Medical Examiners will assign cases to the district review committees. All proceedings of the committees will be in accordance with the Administrative Procedure Act. The committees will have the same authority that a hearing officer has under present board proceedings. That is to say, the committee will prepare a decision, but decision-making power will reside in the board itself. The board will be able to adopt, modify, or reject the proposed decision or take such other action as its discretion dictates.

As provided in the Administrative Procedure Act, a hearing officer will sit with the district review committee and he will have the same authority that a hearing officer has at the present time when the Board of Medical Examiners hears a contested case. He will preside at the hearing, rule on the admission and exclusion of evidence, and advise the committee on matters of law.

The cost of the committees will be an expense of the Board of Medical Examiners which is supported by renewal fees of certificate holders.

The following comments are on the need for establishing district review committees at the same time as the Medical Practice Act is amended to give the Board of Medical Examiners additional jurisdiction and probatory authority.

The board is presently heavily burdened with its duties of examination and discipline and will need additional manpower to cope with new disciplinary duties. The board states that it presently turns over to a hearing officer some cases that it would like to hear. The board is presently in session 29 days each year and has decided to increase the June, August, and October meetings by an additional day. An additional 30 days are required for grading examination papers. The board also transacts much business by mail, telephone, committee action, and special meetings.

District review committees will strengthen the disciplinary authority of professional societies and hospital medical staffs. The knowledge that complaints will be heard quickly by a committee of physicians having authority to restrict or suspend the right to practice will encourage voluntary compliance with medical ethics. The district review committees may function as an appeal mechanism when physicians refuse to comply with the disciplinary decisions of medical societies and hospital medical staffs.

The actions of the district review committees will not be subject to some of the influences working against action by professional societies and hospital staffs. The committees, having jurisdiction over a large number of physicians, will not be so subject to economic and social ties. The committee will not work under the threat of a lawsuit. The com-

mittee will have adequate funds, investigating powers, and trained staff to do the investigation.

The district review committees will be responsible to the public. The committee members will be appointed by the governor and will be a State agency.

4. *Legislation should be enacted to bring up to date the provision in the Medical Practice Act on mental illness.*

Sources of recommendation: California Medical Association; State Board of Medical Examiners.

Comment: Section 2385 of the Medical Practice Act provides that the board must suspend the certificate of anyone who is admitted to a state hospital for mental illness or who is adjudicated mentally ill or insane. The board may restore the right to practice when it receives evidence of restoration of competence and satisfies itself that, with due regard for the public interest, the right to practice may be safely reinstated. The board may require an oral examination to determine fitness to resume practice.

The California Medical Association pointed out several deficiencies in this section. First, persons who are mentally ill should come within the board's jurisdiction whether they are admitted to a state hospital for the mentally ill or some other place of care. Second, some mentally ill persons should come within the board's jurisdiction even though they have neither been adjudicated mentally ill nor admitted to a state hospital for the mentally ill. Third, the suspension of a license ought not to be automatic, as Section 2385 requires, with some kinds of mental illnesses. A pattern of behavior in medical practice contrary to good medical standards caused, for example, by exhaustion or by physical abnormality ought to be grounds for the board to investigate. The board might decide to restrict the physician's practice for a period of time. If a physician knows his right to practice will be suspended automatically, he will be reluctant to seek treatment.

Specific recommendations:

(a) Section 2385 of the Medical Practice Act, which relates to mental illness, should be placed in a separate category apart from the provisions of the Medical Practice Act which relate to unprofessional conduct. This can be accomplished by adding to Chapter 5 of Division 2 of the Business and Professions Code a new article relating solely to mental illness and by placing the language of Section 2385 in the new article.

(b) The board should be given authority to require a written as well as an oral examination before reinstating the license of a physician whose right to practice has been suspended pursuant to Section 2385.

(c) A new section relating to mental illness should be enacted giving the board authority to proceed against a certificate holder who becomes mentally ill to the extent that he requires supervision or restraint or to the extent that he is dangerous to himself or to the person or property of others and is in need of supervision or restraint.

(d) If the proposed new section suggested in paragraph (c) is enacted, the statute should state that the board may proceed against a certificate holder under either Section 2385 or the new section. The purpose of such a provision is to make clear that Section 2385 will

govern and will result in immediate suspension where the evidence establishes a case falling within Section 2385. In cases which do not come within Section 2385, the board will proceed under the authority of the new provision and the proceedings will be governed by the Administrative Procedure Act.

5. *Legislation should be enacted to authorize the Board of Medical Examiners to take summary action against a certificate holder where the board finds after investigation clear evidence of an immediate and continuing threat to the public health and safety.*

Source of recommendation: California Medical Association.

Comment: Under present law the board cannot act against a licensee convicted of a felony until the judgment of conviction has been affirmed on appeal or otherwise disposed of. The board's authority to take action against mentally ill licensees is limited to persons who are adjudicated insane or mentally ill or who are admitted to a state hospital for the mentally ill.

This recommendation raises, however, a serious legal problem. All proceedings of the board must meet the constitutional requirement of due process of law, and the Administrative Procedure Act, which governs board proceedings, is specifically designed to meet such requirements. Legislation authorizing the board to proceed summarily would by-pass the requirements of the Administrative Procedure Act. It is therefore possible that such legislation would be unconstitutional.

The purpose of this recommendation will nevertheless be substantially achieved if legislation is enacted to increase the board's jurisdiction as proposed in recommendation number 1 and if legislation is enacted to increase the board's authority to deal with cases of mental illness as proposed in recommendation number 4. The behavior of a physician convicted of a felony, for example, might bring him within the new jurisdiction of the board. The board could therefore begin proceedings without awaiting a final appellate court decision in the criminal action.

6. *Legislation should be enacted to define unprofessional conduct in the Medical Practice Act to include regularly attending or treating patients in a hospital which does not have an established mechanism for periodic review and evaluation of the medical care rendered therein.*

Source of recommendation: California Medical Association.

Comment: At the San Francisco hearing of the Senate Factfinding Committee on Public Health and Safety, Carl E. Anderson, M.D., the representative of the California Medical Association, suggested that legislation should be enacted to authorize the Board of Medical Examiners to adopt regulations setting forth standards and procedures for periodic review of medical care rendered in hospitals. He pointed out that a basic distinction exists between the function of a hospital to provide a safe place for the care of infirm persons and the function of a hospital as a place for the surgical and medical care of patients. The State Department of Public Health regulates hospital sanitation and building safety standards to assure that hospitals are safe for the accommodation of infirm persons. The medical staff, according to Dr.

Anderson, has always been and should continue to be responsible for the medical care of patients.

Dr. Anderson suggested that an advisory committee consisting of representatives of the California Medical Association, the California Hospital Association, and other organizations should be appointed to assist the board in drawing up the regulations on hospital review procedures.

At the Los Angeles hearing Dr. Anderson made the following statement:

The final area in which it appears that our previous statement was not entirely clear, relates to the area of self-regulation of hospital medical staffs. We are strongly of the opinion that those hospitals which do have organized medical staffs, are doing, or with guidance already available from voluntary organizations, are capable of doing a just and commendable job of quality control and professional self-discipline. There could be no beneficial result from the involvement of any governmental agency in this area of professional discipline.

It is only in the area of those hospitals which do not have an organized medical staff or other review mechanisms that we believe some action is needed. Our recommendation is that the Board of Medical Examiners be given the authority to take action on the grounds of unprofessional conduct against any licentiate who regularly attends or treats patients in a hospital, which does not have an established mechanism for periodic review and evaluation of the medical care rendered therein. Both the California Medical Association and the California Hospital Association offer their assistance to the Board in implementing this recommendation, if it is adopted.

7. *Legislation should be enacted to define unprofessional conduct in the Medical Practice Act to include signing, with knowledge of its falsity, any document directly or indirectly related to the practice of medicine which falsely represents the existence or nonexistence of a state of facts.*

Source of recommendation: California Medical Association; State Board of Medical Examiners.

Comment: Section 2411 of the Medical Practice Act is worded in such a way as to prohibit the board from taking action against unethical physicians who falsify certain insurance claims, government documents, and other documents. The board can take action only if the physician falsifies a document required by law. Some documents are required by law, others are not. Under the section, therefore, a physician may intentionally falsify an insurance claim or a government document and not come within the disciplinary powers of the board.

8. *Legislation should be enacted to bring up to date the provision in the Medical Practice Act making the use of certain narcotics unprofessional conduct.*

Source of recommendation: State Board of Medical Examiners.

Comment: The Medical Practice Act lists specific drugs whose use is defined as unprofessional conduct. The board suggests amending the

act so that it incorporates by reference narcotics specified in Sections 11001 and 11002 of the Health and Safety Code and dangerous drugs specified in Business and Professions Code Section 4211. These sections contain precise definitions of many narcotics and dangerous drugs and are often amended to cover new compounds.

9. *Legislation should be enacted to authorize the Board of Medical Examiners to adopt rules of professional conduct appropriate to the establishment and maintenance of a high standard of integrity and dignity in the profession.*

Source of recommendation: State Board of Medical Examiners.

10. *Legislation should be enacted to authorize the Board of Medical Examiners to require a written examination when a person whose certificate has been suspended or revoked for a period of one year petitions the board to reinstate the certificate.*

Source of recommendation: State Board of Medical Examiners.

Comment: Present law authorizes the board to give an oral examination in this situation.

11. *Legislation should be enacted to provide the Board of Medical Examiners with adequate investigatory and procedural authority to carry out these recommendations.*

Source of recommendation: State Board of Medical Examiners.

Comment: The board suggested the following specific amendments to the law:

(a) Section 1881(4) of the Code of Civil Procedure provides that a physician cannot, without the consent of his patient, be examined in a civil action as to any information acquired in attending the patient. The section should be amended to provide that it does not apply to any investigations or proceedings under the State Medical Practice Act.

(b) The Administrative Procedure Act should be made specifically applicable to the district review committees.

(c) Section 2379 of the Medical Practice Act, which makes the willful betrayal of a professional secret unprofessional conduct, should be inapplicable to investigations or proceedings under the Medical Practice Act.

(d) The propriety of board action suspending, revoking, or restricting the right to practice should be subject to judicial review upon questions of law only.

Limiting court review to matters of law only will prohibit a complete new trial of the case and will, at the same time, fully protect the rights of the accused physician. A complete new trial is neither necessary nor desirable.

Qualified persons will hear the evidence and decide the facts of the case. In those cases which are assigned to a district review committee, a total of 17 persons will review the evidence: 5 physicians on the district review committee, 11 physicians on the board, and 1 nonphysician on the board. These persons should be well qualified to weigh the evidence and to understand the issues, for almost all cases will involve questions of medical practice.

The rights of the accused physician will be fully protected by a court review of matters of law. The court will see that the provisions of the Administrative Procedure Act were followed at each stage of the proceedings. The court will see that all requirements of substantive law were met. The court will decide, for example, if the facts as found constitute gross negligence, gross incompetence, or gross immorality. Finally, the court will decide whether the evidence submitted at the hearing supported the findings of fact.

Allowing a complete new trial of a case might defeat the purpose of enlarging the jurisdiction of the board. Given the responsibility of conducting a complete new trial, the court will be inclined to stay the execution of the board's decision until the trial has been completed. Such delay runs counter to the purpose of expanding the jurisdiction of the board, namely, to prevent professionally incompetent physicians from practicing medicine. A court review of matters of law will not take as long as a new trial and the court will be less inclined to stay the execution of the board's decision.

12. *Legislation should be enacted to authorize the Board of Medical Examiners to raise the certificate renewal fee from \$20 to \$40 to pay for the increased cost of board activities which will result from the enactment of other recommendations in this report.*

Source of recommendation: California Medical Association; State Board of Medical Examiners.

13. *No legislation should be enacted which will create a board with authority independent from the Board of Medical Examiners to discipline licensees of the board.*

Source of recommendation: California Medical Association; State Board of Medical Examiners; Los Angeles County Medical Association.

COMMITTEE CONCLUSION AND RECOMMENDATIONS

The committee has concluded that the Medical Practice Act needs revision in order to give the Board of Medical Examiners authority to protect the public from the negligent, immoral, and incompetent physicians who constitute a very small percentage of the total number of physicians. The Medical Practice Act does not permit the board to obtain jurisdiction over such physicians, and, if it did, the board might not have legal authority to restrict the offender's right to practice and to supervise his behavior on probation.

If the Legislature expands the jurisdiction of the board as suggested herein, the Legislature should at the same time establish five district review committees to facilitate the working of the board's disciplinary responsibilities.

The Medical Practice Act is deficient in certain respects and should be revised. The section on mental illness is poorly worded, out of date, and too restrictive in some respects. Physicians who knowingly falsify insurance claims and government documents should come within the jurisdiction of the board. The board should have jurisdiction to discipline physicians who habitually practice in hospitals without procedures for the periodic review of surgery and medical treatment. Finally, the Legislature should provide the board with adequate investigatory authority to carry out its functions.

Chapter III

REDUCTION OF COUNTY PROPERTY TAX ON PROPERTY WITHIN CITIES MAINTAINING A HEALTH DEPARTMENT

Assembly Bill 1485 of the 1963 Regular Session would reduce the property tax in the six cities of the state maintaining a health department on July 1, 1963—Long Beach, Vernon, Los Angeles, Pasadena, San Jose, and Berkeley. The Senate Committee on Local Government referred the bill to interim study.

This report analyzes Assembly Bill 1485; summarizes the testimony presented to the committee at a hearing on the bill in Los Angeles, January 21, 1964; states the arguments for and against the proposal; and sets forth the committee's recommendation that the Legislature take no action on any bill such as Assembly Bill 1485.

In 1947 the Legislature enacted a statewide system of health services. Counties provide health services in all unincorporated areas and in all cities which turn over health functions to the county. Cities may maintain a health department but do not receive a reduction in county taxes for doing so. The state pays about 20 percent of the total cost of local health services.

Following the 1947 legislation about 400 cities turned over city health functions to the county. On July 1, 1964, the City of Los Angeles transferred its health department to Los Angeles County. There are now five cities in the state which maintain a health department—Long Beach, Vernon, Pasadena, San Jose, and Berkeley.

Assembly Bill 1485 would change this system by giving property owners in these five cities a reduction in county taxes. The amount of the reduction is a certain portion of the cost to the county property taxpayer of supporting the county health department. The portion is measured by the relationship of the assessed value of all taxable property within the city to the assessed value of all taxable property within the county. The ratio of the assessed value of city property to the assessed value of county property multiplied by the cost to the county taxpayer of supporting the county health department equals the amount of the reduction.

Assembly Bill 1485 requires that revenue lost to the county under the bill's provisions be made up by increasing county property taxes in the areas of the county outside the cities which receive the tax reduction.

To understand the effects of enacting a measure such as Assembly Bill 1485, characteristics of the present system should be noted in the following examples.

Example 1. A county health department serves all areas of the county and all cities in the county except City A which maintains its

own health department. In this situation, City A property taxpayers fully support the city health department and, by paying county property taxes, contribute to the support of the county health department.

Example 2. A county health department serves all areas of the county and all cities in the county except City A which maintains its own health department. City A turns over its health functions to the county. In this situation, City A property taxpayers are relieved from paying city taxes to support the City A health department. County property taxes must now bear the cost of supporting health services in City A.

Example 3. A county health department serves all areas of the county and all cities in the county except Cities A and B. City A turns over its health functions to the county. City B does not. County taxes must now pay for health services in City A. Since taxpayers in City B pay county property taxes, their taxes may increase because City A turned over its health functions to the county.

The effect of enacting a bill such as Assembly Bill 1485 can be illustrated with two examples.

Example 1. A county health department serves all areas of the county and all cities in the county except City A which maintains its own health department. Assembly Bill 1485 becomes law and applies to City A. City A property taxpayers receive a reduction in their county taxes. The amount of the reduction is a portion of the cost to the county property taxpayer of supporting the county health department. The portion is measured by the relationship of the assessed value of taxable property in City A to the assessed value of all taxable property in the county. County property taxpayers outside of City A pay increased county taxes to make up for the tax reduction in City A.

Example 2. A county health department serves all areas of the county and all cities in the county except City A which maintains its own health department. Assembly Bill 1485 becomes law and applies to City A but does not apply to City B located in the same county. City B finds that because it has a relatively high assessed valuation, it can support health services within its boundaries for less than the proportionate share it contributes to the support of the county health department when proportionate share is defined as Assembly Bill 1485 defines it. Cities in other counties may find themselves in the same position as City B.

CITY STATEMENTS

Four of the five cities with health departments made a presentation to the committee. The following is a summary of their statements.

Long Beach

Long Beach, a city of 360,000 people, is large enough to provide a full range of health services. The city health department, in existence for 60 years, is larger than many county health departments and provides services not required by state law. Examples: an alcoholic rehabilitation clinic, an occupational health program, assistance to other city departments in the inspection of substandard buildings.

All groups studying whether Long Beach should consolidate its health services with the County of Los Angeles have concluded that no true savings will result from consolidation. Taxpayer organizations support a Long Beach health department.

Abandonment of the Long Beach health department will seriously impair the work of civic health and welfare organizations. The Community Welfare Council of Long Beach, composed of 86 health, welfare, and civic organizations, fears that a loss of leadership will result if the city abandons its health department. People will drive to local meetings but they will not drive to meetings held 25 or 30 miles away.

The financial burden on Long Beach from maintaining a city health department has increased now that Los Angeles has consolidated its health services with the county. During 1963-64 Long Beach will pay about \$390,000 in county taxes for the support of the county health department. This sum will increase to about \$700,000 a year when the county tax rate goes up to pay for health services in the City of Los Angeles.

Pasadena

Pasadena provides 16 health services not provided by the county. Three of them are as follows: a planned parenthood program, a housing inspection program, and a preschool health program. If Pasadena consolidates its health service with the county, the city will have to establish a separate bureau to continue the services now provided in the city.

San Jose

The people of San Jose want a higher level of health service than provided by the county; that is why San Jose wants to keep its own health department. Some of the programs of the San Jose health department not provided by the county are: home accident prevention; food handlers training; an ongoing glaucoma screening clinic; an ongoing diabetes screening program; a study of seasonal farm workers, supported by the United States Public Health Service; and a health and sanitation program for slum areas. San Jose might lose its coordinated public health and school health program if San Jose gives up its health department. To make up for the loss of the coordinated program, the schools will have to increase taxes by 2 cents per \$100 of assessed valuation.

San Jose fears the loss of cooperation between the health department and other city departments if consolidation takes place.

There are, perhaps, services which should be turned over to the county; mental health is one example. But maintenance of control of some health programs, such as sanitation, is vital.

Berkeley

The City of Berkeley does not wish to give up its health department because many special features of the Berkeley Unified Health Program might be lost. Some of these special features are:

1. An integrated system of public health and school health. The Berkeley Unified School District receives health services from the City of Berkeley.

2. The visiting nurse program. Visiting nurses provide care for publicly supported patients in the patient's home, rather than in an institution. This enhances the well-being of the patient and lowers the cost of medical care.

3. Special employment arrangements with the University of California. Berkeley hires members of the School of Public Health to work part time in the Berkeley Health Department. The city fears the loss of such arrangements if it consolidates its health department with the county.

Only the pressure of financial loss will force Berkeley to give up its health department. Five different makeups of the city council have considered the question and have decided against consolidation. The Berkeley Taxpayers Association, Berkeley Citizens United, and the Berkeley League of Women Voters have studied this problem and have concluded that "local services are preferable and recommend retention [of the city health department]. . . ." These organizations make this recommendation in spite of the fact that Berkeley residents can save money by consolidating its health department with the county. Berkeley costs for health are about \$5 per capita; Alameda County spends \$2.76 per capita for health services.

COUNTY STATEMENTS

Santa Clara and Alameda Counties each made a presentation to the committee. The following are summaries of their statements.

Santa Clara County

The Santa Clara County Board of Supervisors neither supports nor opposes the consolidation of San Jose's health department with the county, although the board believes that consolidation will improve government organization in the county.

There are 16 cities in Santa Clara County; 15 of them use county health services. If a city wishes to have a higher level of service than the county provides, the city can contract with the county to pay for the special services desired. Palo Alto is an example of a city in Santa Clara County which does this.

The irregularity of San Jose's boundaries provide a sharp example of the weakness of using city boundaries as the demarcation of a public health jurisdiction. Santa Clara, for example, is undertaking a rat extermination program in an area completely surrounded by San Jose. The program will be more difficult as a result.

Experience shows that neither the city nor the county enforce residence requirements for persons who use public health services. Santa Clara's main health office and outpatient clinic are located in the City of San Jose.

Alameda County

Two large cities, Oakland and Alameda, have consolidated their health departments with Alameda County. Each has contracted with the county for additional services above the county standard.

Enactment of Assembly Bill 1485 will mean a loss of revenue to Alameda County of about \$205,000 annually.

ARGUMENTS IN FAVOR OF REDUCING COUNTY PROPERTY TAXES IN CITIES MAINTAINING A HEALTH DEPARTMENT

1. *A city health department can do a better job serving the public than a county health department can.*

A county health department must respond to both urban and rural needs while a city health department deals solely with urban problems. This difference puts the city health department in a better position to care for urban needs than a county health department.

To be effective a health department must respond swiftly to changing conditions. A county health department, because it is a big organization and covers a lot of territory, cannot respond as quickly as a city health department.

A city health department is more responsive to community needs than a county health department. City health department officials, because they are closer to the people, have more incentive to do a good job than county health officials.

Health services are highly personal. The closer health services are to the people the better.

2. *Community needs and the desires of the people should govern the decision whether to have a city health department; the present system forces cities to give up their separate health departments for financial reasons.*

Needs and desires of people vary from city to city. Each city with a health department has special reasons for wanting to keep the department. Yet the present system of financing county health departments places the property taxpayers in these cities at a disadvantage relative to other county property taxpayers. The State should not force cities to give up their health department for financial reasons alone.

Assembly Bill 1485 will remove the financial pressure for consolidation of city health departments with the county. The five cities having health departments will be free to use community interest as the criterion for deciding whether to keep the city health department.

3. *Assembly Bill 1485 is an appropriate way to permit five cities with special needs to keep their health departments.*

Contrary to what the opponents of Assembly Bill 1485 say, the bill poses no administrative problems. Government budgets are built up agency by agency; finding the cost to the county taxpayer of operating the county health department will not be difficult.

Cities which do not maintain a health department will not want to come under the provisions of Assembly Bill 1485 because once a city has consolidated its health department with the county, the city will not want to reverse the process. The responsibilities and the cost of operating a health department are so great that no city will wish to reverse a previous consolidation.

ARGUMENTS AGAINST REDUCING COUNTY PROPERTY TAXES IN CITIES MAINTAINING A HEALTH DEPARTMENT

1. *The present system of financing health services fully serves the public interest.*

California has a superior statewide public health service with counties serving as the chief administrative unit. Health services have in no way suffered in the more than 400 cities which have consolidated their health departments with the county. Some of these cities, such as San Diego, Sacramento, and Oakland, are the largest cities in the state. By contracting for additional services from the county, cities can, if they wish, have a higher level of service than the county provides. No city must give up special programs. Many cities contract with a county for special services.

2. *The proposition that a city health department can serve the public better than a county health department is false.*

Counties are just as responsive to community needs as cities are. To speak of the superior ability of cities to deal with urban problems ignores the metropolitan character of counties today in California. Counties are as close to the people and have as much incentive to do a good job as cities.

City boundary lines do not make sense for purposes of marking the jurisdiction of public health agencies. City boundaries often cut through the urban areas and sometimes surround unincorporated urban areas. Public health problems do not observe such jurisdictional lines. Like welfare services, public health services must be countywide for sound administration.

When a city health department exists in an urbanized county, there are inevitable duplications in service. Some instances are: crippled childrens' services, laboratory services, clinic services, and milk inspection.

3. *The financial scheme in Assembly Bill 1485 caters to narrow self-interest and is not consistent with the general good.*

The financial scheme in Assembly Bill 1485 will allow a few cities to have above average health services while contributing nothing to the support of health services in the county. The responsibility for supporting health services cannot be separated between city and county in modern metropolitan areas. For example, a slum may be next door to a high wealth city. To exempt the city property taxpayers in such a situation from contributing to county health support is highly unfair to other county taxpayers.

This argument does not imply that a city should be held to a county-wide standard of health services if the city desires better services. As pointed out previously, many cities contract with the county for special services.

4. *Enacting a bill such as Assembly Bill 1485 will undo the work of the last 14 years, for other cities besides the five now maintaining health departments will ask for equal treatment.*

Since 1947, when the Legislature enacted the present system of support for health services, State policy has been to encourage countywide health jurisdictions. Enactment of a bill such as Assembly Bill 1485 will reverse that policy.

If the Legislature enacts Assembly Bill 1485, thereby granting a tax reduction to five cities, other cities will inevitably ask the Legislature to give them equal treatment.

Such a possibility recalls what happened when the Legislature enacted a system for financing local libraries similar to the scheme in Assembly Bill 1485. Cities all over the state began to withdraw from the county library system. The Legislature had to pass a law to reverse this trend.

COMMITTEE CONCLUSION

The proponents of Assembly Bill 1485 are asking the state to reverse a state policy of 14 years' standing. There is no merit in the contention that this bill will apply to only five cities, for the Legislature will be asked to grant equal treatment to all cities and the request will be difficult to deny.

The 1947 legislation gave cities a clear alternative: to consolidate health services with the county or to maintain a city health department and contribute to the support of the county health department. The committee finds no reason why that decision should be reversed at this late date.

COMMITTEE RECOMMENDATIONS

1. The Legislature should take no action on any bill which reduces county taxes on property in a city maintaining a health department.
2. The Legislature should give favorable consideration to any legislation necessary to permit cities and counties to contract with each other regarding health services.

Chapter IV

STATE PREEMPTION OF THE FIELD OF REGULATING FIRE SAFETY IN HOSPITALS

Senate Resolution No. 240 of the 1963 Regular Session directs the Senate Factfinding Committee on Public Health and Safety to study the conflicts between requirements established by state agencies and by local government agencies for hospital construction and to study the causes and effects of such conflicts.

The chief sponsor of Senate Resolution 240, the California Hospital Association, as well as the State Fire Marshal and the Executive Secretary of the State Building Standards Commission recommended enactment of legislation to require uniform statewide regulation of fire safety in hospitals. If enacted, the proposal will end the authority of cities, counties, and districts to regulate this subject.

This report summarizes the testimony presented to the committee at a hearing on Senate Resolution 240 in Los Angeles, January 22, 1964; states the arguments for and against the proposal; and sets forth the committee's recommendation that the proposal not be enacted.

Section 13143 of the Health and Safety Code gives the State Fire Marshal jurisdiction over fire safety in any building used as an asylum, jail, mental hospital, hospital, sanitarium, home for the aged, children's nursery, children's home or institution, or school and directs him to adopt regulations establishing minimum standards for the prevention of fire and for the protection of life and property against fire and panic. Section 13108 of the code gives the State Fire Marshal jurisdiction over state-owned buildings. The State Fire Marshal estimates that there are about 39 thousand buildings in the state within his jurisdiction.

Extensive review precedes adoption of the State Fire Marshal's regulations. Local fire and building officials meet with the State Fire Marshal to help draft proposed regulations. Next, the State Fire Advisory Board, composed of 11 fire department members appointed to the board by the Governor, reviews all proposed regulations. The State Fire Marshal holds hearings on the proposed regulations in northern and southern California. Before the regulations are finally adopted, the State Building Standards Commission holds further hearings.

To enforce his regulations the State Fire Marshal reviews the building plans of proposed new construction. He states what changes, if any, need to be made and reports his findings to the builder and to local fire and building safety officials. The State Fire Marshal directly enforces his regulations in areas outside of corporate cities and county fire protection districts and in local agencies upon request of the chief fire official.

The State Fire Marshal's regulations cover all aspects of fire safety but do not cover zoning matters. The regulations provide for safety

against the hazard of earthquake; they contain requirements about the fire-resistiveness of walls when a building is located close to other buildings; they require hospital staff to be trained in fire safety including the use of firefighting equipment. The regulations do not cover such matters as the location of a building or the placement of the building with relation to streets.

The State Fire Marshal has exclusive jurisdiction to adopt fire safety regulations for schools and state-owned buildings. A uniform, state-wide system of regulation exists with respect to these two classes of buildings.

The State Department of Public Health also adopts regulations covering hospital construction. Conflicts between the regulations of the two state agencies do not arise, however, because the State Building Standards Commission coordinates and supervises the adoption of all regulations by state agencies on the subject of building construction. Title 24 of the Administrative Code contains a codification of all such regulations.

Cities, counties, and fire districts have concurrent jurisdiction to regulate fire safety in all the buildings the State Fire Marshal regulates, except schools and state-owned buildings. This dual authority is one of the two causes of conflict between state and local requirements about fire safety in hospitals.

The other cause of conflict is the fact that the state requirements and local requirements differ from each other. This factor has increased in significance since 1961 when the State Fire Marshal adopted regulations substantially different from the Uniform Building Code.

The Uniform Building Code is a proprietary code written by the International Conference of Building Officials, a nongovernmental, voluntary organization. People from many states take part in writing the code, but, according to Mr. Del Dick, a building official from Whittier, 80 percent of the membership of the International Conference of Building Officials is from California. The California State Fire Marshal is a voting member of the group. The code has been in existence for 30 years; it is revised every three years. A research committee has responsibility for keeping the code adapted to new products.

Many cities and counties in California use the Uniform Building Code as the basis for writing their building code, but there is nothing uniform about the code after cities and counties adopt it. Almost all of them make some changes in the code. At the same time, many cities, especially small cities, adopt sections of the code verbatim without testing or questioning the validity of the provisions. This procedure can have bad consequences when the code-makers have done their job poorly or have overlooked some point. The State Fire Marshal cites the following example: The Uniform Building Code does not distinguish between old-fashioned mental institutions where patients are locked up and modern mental therapy centers where patients have great freedom of movement. Cities which adopt without change the sections of the Uniform Building Code on mental institutions will require jail-like construction of buildings that could be built more cheaply.

The last major revision of the State Fire Marshal's regulations, which took place in 1961, contains many provisions less restrictive than the

Uniform Building Code. The State Fire Marshal adopted his regulations on basis of what he believes are proper contemporary fire prevention practices.

Dual authority over fire safety in hospitals and different requirements at the state and local level give rise to frequent conflicts between builders and local building officials. Sometimes local regulations require more expensive construction than the state requires. In such cases the builder wishes to go by the state regulations. In other cases a local building official may interpret a requirement differently from the State Fire Marshal even though the language of the state regulation and the local ordinance is identical. The resulting dispute may require time-consuming negotiations to settle.

According to witnesses appearing before the committee representing hospital builders and architects, these conflicts cause the cost of hospital construction to be higher than it needs to be. They testified that conflicts between state and local regulations bring about delays in construction schedules and expensive change-orders in construction already completed. They charged local regulation with adding to the expense of hospital construction by calling for unnecessary equipment and construction features. The following were instances submitted to the committee:

1. A local building code required the use of specially constructed doors with latches. Solid wood doors, approved by the state, were just as good for patient safety as the special doors required by the local building code. Local officials granted a waiver in favor of the state standards and saved the builder about \$120,000.

2. A hospital undertook a modernization program. Plans called for a plate glass door to the pharmacy so that the night switchboard operator could see if anyone was in the pharmacy. The local building code called for a solid wood core door. After three months of delay, the local officials granted a waiver in favor of the plate glass door.

3. A hospital was able to convince local building officials that a fire well would not enhance patient safety as much as a sprinkling system, because bedridden patients can be transported downstairs only with great difficulty. Savings to the hospital were estimated at \$600,000; 12 private patient rooms which would have been used for the firewell were saved.

4. A city required an extremely costly storage vault for flammable liquids. State regulations allowed cheaper storage facilities and would have served as adequately.

5. The State Fire Marshal allows 5,000 square feet of floor area without separations in hospitals. The City of Los Angeles allows 2,500 square feet. The State Fire Marshal testified that state regulations of 25 years ago were similar to the Los Angeles regulation but that experience and research have shown that 5,000 square feet without separation provides adequate fire protection.

ARGUMENTS IN FAVOR OF STATE PREEMPTION OF THE FIELD OF REGULATING FIRE SAFETY IN HOSPITALS

1. *Enactment of the proposal will eliminate unnecessary costs in hospital construction.*

Hospitals are highly complicated buildings and are therefore costly to build. Moreover, the development of new medical techniques constantly adds to hospital complexity and the rate change is accelerating.

The existing system of dual authority over hospital fire safety and the resulting conflicts increase the costs of hospitals unnecessarily. Local regulations often require more expensive equipment and construction features than needed. Disputes over the interpretation of regulations lead to delays in construction. Local officials sometimes require changes in parts of a building already completed. Whenever an architect begins to plan a building he must spend valuable time finding out exactly what the local regulation is, for he cannot rely on the fact that the Uniform Building Code is in force in the jurisdiction. Statewide uniformity of regulation will eliminate these unnecessary expenses.

2. State regulation adequately protects the public against the hazard of fire in hospitals.

Both the State Fire Marshal and the executive secretary of the State Building Standards Commission testified that the State Fire Marshal's regulations are adequate to protect the public in hospitals and that there is no need for local agencies to have more restrictive regulations.

An analogy can be drawn to the way California regulates fire safety in schools. In 1933 the state preempted the field of school construction regulation. California has not had a single loss of life in a school fire that can be traced to the construction of a school during the last 25 years. Statewide uniformity has been both economic and effective.

State fire safety regulations deal with the hazard of earthquakes and the fire resistiveness of walls when buildings are close together. No additional local regulation of these matters is necessary.

State regulations require the staff of hospitals to be trained in fire fighting and fire safety. Local fire officials help train hospital staff in fire safety and use actual demonstrations to teach use of the equipment. Hospitals have frequent fire drills.

Highly restrictive local codes may in practice decrease the safety of the public in older hospitals. Most local codes do not require existing buildings to come up to new standards as the new standards are enacted. Consequently, the more restrictive the local code is, the less incentive there is for the owner of a building voluntarily to bring his old structure up to the new standards.

3. Enactment of this proposal will not interfere with local land use zoning and related matters.

First, the State Fire Marshal's regulations cover fire prevention and protection of life and property against fire and panic. His regulations do not cover land use zoning and related matters.

Second, if the Legislature enacts a statute providing for statewide uniformity in the regulation of fire safety in hospitals, the statute can specifically provide that local jurisdiction will retain authority to regulate land use, building setback requirements, property line requirements, side and rear yard requirements, and fire zone requirements.

4. *Statewide regulation of fire safety in hospitals, administered by the State Fire Marshal, will provide a simple, flexible, and fast procedure for builders to get their plans approved.*

This argument replies to the charge that state preemption of the field will result in complicated, inflexible bureaucratic control.

First, the proponents of state preemption are builders and architects. They have the most to lose from a complicated, inflexible procedure, yet they have no such fears of the State Fire Marshal's office. Builders and architects presently submit plans to the State Fire Marshal for approval and are familiar with his procedure. They apparently find it satisfactory; otherwise they would not favor state preemption of the field.

Second, experience indicates that builders and architects find the State Fire Marshal's regulations, as well as his administration of the regulations, reasonable. The State Fire Marshal states that in 1961-62 his office checked over three quarters of a billion dollars in construction plans "without a single request for an actual official hearing to have relief from a regulation."

Third, the State Fire Marshal's procedures are simple and flexible. If an architect wishes to make a substitution which provides equivalent safety, all he has to do is to state as much in a letter to the owner. If the State Fire Marshal agrees, after consulting with local fire and building officials, the matter is settled.

ARGUMENTS AGAINST STATE PREEMPTION OF THE FIELD OF REGULATING FIRE SAFETY IN HOSPITALS

1. *The State Fire Marshal can, without legislation, reduce the conflicts caused by dual jurisdiction by making his regulations conform to the Uniform Building Code.*

The proposal for state preemption of the field arises chiefly because the State Fire Marshal's regulations are less restrictive than the Uniform Building Code. Almost all cities and counties use the Uniform Building Code as their fire safety code. The State Fire Marshal is a voting member of the organization which writes the code. He should abide by the rule of the majority and make his regulations conform to the Uniform Building Code. That would greatly diminish the desire for state preemption of the field of hospital fire safety regulation.

2. *Cities, counties, and fire protection districts should have the right to legislate as they see fit to protect the public from the hazard of fire in hospitals.*

Local government has traditionally had responsibility for safety of residents from the hazard of fire. Enactment of this proposal would strip them of their power to regulate fire safety in hospitals. Local government is just as concerned about fire safety in hospitals as in any other kind of building.

The judgment of state officials about fire safety in hospitals may be good, but their judgment should not be final. People look to their cities, counties, and fire districts for protection from fire and will hold local officials responsible for misfortunes. The Legislature should not deprive local officials of power to exercise this responsibility.

3. *If local regulation makes the cost of hospital construction greater, that is the price of a high standard of safety.*

There is nothing wrong with higher cost when it purchases greater safety.

4. *Enactment of this proposal will make builders and architects subject to an inflexible and distant bureaucracy.*

Regulations never cover all the cases which arise and must always be interpreted to cover new situations. The larger a government agency is, the more inflexible its regulations, and the more difficult it is to obtain an interpretation. At the local level, on the other hand, a builder can quickly reach the top administrator of a government agency to get a decision.

5. *The Legislature does not have sufficient evidence on which to base a major shift in policy of the kind called for by this proposal.*

The Legislature should not make major changes in state and local relationships unless there is a statewide pattern of need calling for state action. The Legislature does not know the extent to which cities and counties are adopting unnecessary fire safety ordinances, if any. The Legislature should assume that cities and counties are acting reasonably until the contrary is shown. The evidence in support of the present proposal consists of some broadly stated general charges and some inconclusive examples.

The state should not preempt any field of regulation unless there are sound reasons for doing so and until the consequences of doing so are clearly foreseen. The Legislature does not have sufficient evidence that uniform statewide regulation will provide adequate safety in all the thousands of hospitals in the state. Until there is reasonable assurance of that fact, local government should retain power to act in this field.

COMMITTEE CONCLUSION

Abolition of the power of local government agencies to regulate fire safety in hospitals will eliminate a part of the traditional responsibility of local government for the protection of the public against the danger of fire. The Legislature should not take this step without clear evidence of need and assurance that state regulation will be adequate for public safety. The evidence submitted to this committee was not persuasive to establish these facts.

COMMITTEE RECOMMENDATIONS

1. The committee recommends that the Legislature take no action toward state preemption of the field of fire safety in hospitals without a comprehensive study to show the need, if any, for such legislation.

2. The committee recommends that any study of this subject should be but one part of a complete study of the proper division of responsibilities between the state and local government agencies for the health and safety of the public.

Chapter V

REQUIRING RETAILERS TO LABEL MEAT, FISH, AND POULTRY WHICH HAS BEEN FROZEN AND THAWED AS A "THAWED PRODUCT"

Senate Bill 1272 of the 1963 Regular Session provides that retailers of meat, fish, and poultry must label the food as a "thawed product" if it has been frozen and thawed. The bill applies to food sold for home consumption and does not apply to food sold in restaurants.

The Senate Standing Committee on Public Health and Safety referred the bill to interim study.

This report summarizes the testimony presented to the Senate Fact-finding Committee on Public Health and Safety on Senate Bill 1272 in Los Angeles, January 22, 1964, states the arguments for and against the proposal; and sets forth the committee's recommendation against enacting a bill such as Senate Bill 1272.

Freezing preserves food by slowing down and, at very low temperatures, halting the growth of bacteria which cause food poisoning and food decay. Food-poisoning bacteria do not grow at temperatures below 38 degrees Fahrenheit and they grow very slowly at temperatures between 38 and 45 degrees Fahrenheit. Food-spoiling bacteria grow at temperatures down to minus 10 degrees Fahrenheit. The lower the temperature at which frozen food is stored, the longer it will be preserved and the better the quality it will have when it is thawed. Authorities recommend holding frozen food at zero degrees Fahrenheit or less.

People can eat food which has been frozen, thawed, and refrozen any number of times without endangering their health. The process of freezing and thawing in itself does not cause food to be injurious or unwholesome. The possibility that refrozen food may be unwholesome arises from bacteria growth when the food is in a thawed state. Thawed food, like any other food, may spoil. But if food is safe to eat, it can be frozen and eaten later.

The effect of freezing, thawing, and refreezing on the flavor, texture, and appearance of food has not been precisely determined. There is little doubt that repeated freezing will lower the quality of some foods: fish, hamburger, ham, and pork, for example. On the other hand, there is little evidence that repeated freezing lowers the quality of poultry until the process has been repeated many times.

Many factors affect the quality of frozen food. The basic factor is the quality of the food before it is frozen. Other factors include the speed and temperature at which the food is frozen, the age of the food at the time of freezing, the suitability of packaging, the temperature at which the food is stored, and the length of storage. The storage life of different cuts and kinds of frozen meat, fish, and poultry varies greatly. Frozen ham held at zero degrees Fahrenheit, for example, has a good quality

storage life of two months; regular cuts of beef held at the same temperature have a good quality storage life of 12 months, according to the Refrigeration Research Foundation.

The California Pure Foods Act (Health and Safety Code, Sections 26450-624) prohibits the sale of food which is unwholesome or injurious to health.

California law regulates some aspects of frozen food processing, storage, and sale. Frozen food locker plants must meet sanitary standards and must have facilities for frozen food preparation. Wholesale cuts of meat must be frozen at minus 10 degrees Fahrenheit in still air or at zero degrees Fahrenheit in blast air. Each package of food wrapped and frozen for storage must have a label designating the product and identifying the processor. Certain hermetically sealed frozen foods must not be cooked before freezing and must be in a container which states that perishable food is inside and warns the purchaser to keep the food frozen until ready for use.

California law does not require frozen food to be stored at zero degrees Fahrenheit or less. Nor does California law require any food to be marked "Do Not Refreeze" or "Thawed Product."

ARGUMENTS IN FAVOR OF REQUIRING RETAILERS TO PLACE THE LABEL "THAWED PRODUCT" ON MEAT, FISH, AND POULTRY WHICH HAS BEEN FROZEN AND THAWED

1. *Because refreezing thawed meat, fish, and poultry diminishes the food's quality, consumers want to know whether such food has been frozen.*

Consumers receive much information warning them against refreezing food. Twelve cookbooks in widespread use tell readers to avoid refreezing meat, fish, and poultry. The same information goes to consumers from the American Meat Institute, the United States Department of Agriculture, the University of California Extension Service, and manufacturers of home freezing equipment. These sources of information state that refreezing food, and especially meat, fish and poultry, will diminish the quality of flavor, texture, and appearance.

To make intelligent decisions on the basis of this information, consumers need to know whether the food they buy has been frozen and thawed. If a housewife, for example, purchases food to be cooked that same day or within a few days, she can prudently buy thawed food, for she does not intend to refreeze the food. On the other hand, if she purchases food to put into her home freezer, she will purchase food that has not been thawed.

In other situations, whether food has been frozen and thawed may determine the housewife's decision as to how much food to buy. For example, if she finds a bargain in meat that has not been frozen and thawed, she can buy a large quantity for storage in her freezer. If the meat has been thawed, however, she will buy a small quantity for immediate use.

The housewife can make none of these decisions unless she knows whether the food has been thawed. And the only way she can obtain such information with certainty is for the law to require meat sold at retail to have a label giving her the information.

2. *The law ought to require informative labeling of thawed meat, fish, and poultry because the consumer can obtain the information in no other way.*

A law requiring retailers to disclose whether meat, fish, and poultry have been frozen and thawed will be analogous to laws requiring informative labeling of food and drugs and prohibiting the misbranding of food and drugs. Law requires a label on packaged food and drugs stating the name of the manufacturer, packer, or distributor and the quality of the contents. Food and drug advertising cannot be false or misleading in any particular. If a food contains artificial coloring, for example, the label must disclose that fact. By the same token, if a food has been frozen and thawed, that fact should be told to the purchaser. The aim of Senate Bill 1272 is to get the facts about food quality to the consumer.

Such disclosure requirements are based on the principle that there should be fair dealing between buyer and seller. This principle is sometimes difficult to put into practice under modern conditions of production and distribution where the bargaining power of buyer and seller is frequently unequal. Buyers have practically no opportunity to investigate into conditions of manufacture and often have little opportunity prior to purchase to determine the quality of a product. Informative labeling helps to redress this situation to some extent by placing the buyer in a better position to decide how to spend his money.

The need for informative labeling of thawed meat, fish, and poultry has increased with the growth of home freezing. Many consumers buy food in quantity for storage in a home freezer. Since meat, fish, and poultry usually constitute the largest portion of food purchases, the need to make intelligent decisions about the purchase of these products is especially important. Informative labeling of thawed meat, fish, and poultry will give consumers information they need.

3. *Enforcement of Senate Bill 1272 will be possible if the law requires wholesalers to certify to retailers that meat, fish, and poultry purchased by the retailer has not been frozen and thawed.*

Opponents of Senate Bill 1272 have objected that the bill will be difficult to enforce. They say that retailers, to avoid the requirements of the bill, may ask wholesalers to deliver all meat, fish, and poultry in a thawed state.

This objection to the bill can be met by requiring wholesalers to certify to retailers that meat, fish, and poultry purchased by the retailer has not been frozen and thawed. The retailer can then sell the food without labeling it. If the food has been frozen and thawed, the retailer can apply the label.

ARGUMENTS AGAINST REQUIRING RETAILERS TO PLACE THE LABEL "THAWED PRODUCT" ON MEAT, FISH, AND POULTRY WHICH HAS BEEN FROZEN AND THAWED

1. *Requiring thawed meat, fish, and poultry to be labeled "Thawed Product" will not give the consumer specific information about the quality or the keeping quality of such food.*

Many factors determine the quality of frozen food, and freezing effects different foods in different ways. The quality of meat, for instance, depends on the treatment and care of the animal before slaughter, the age of the animal, slaughtering conditions, the cut of the meat, the age of the meat before freezing, the method of freezing, the kind of packaging, the temperature at which the meat is held in the frozen state, and the length of time the meat is held in a frozen state. The shelf life of frozen meat, fish, and poultry varies greatly. Regular cuts of frozen beef, for example, can be held in the frozen state much longer than pork, hamburger, or variety meats such as liver, heart, and kidney. The Refrigeration Research Foundation reports that the length of the storage life of frozen poultry is greatly influenced by prestorage handling.

The label "Thawed Product" will blur over all distinctions in the quality of frozen meat, fish, and poultry and as a result may be more misleading than informative. Many people will interpret the label to mean that the food is of inferior quality. In a given situation food with the label might be better in quality than food without the label.

The basic fallacy of the bill is its underlying, unproved assumption that refreezing harms the quality of all meat, fish, and poultry. Some foods are harmed by refreezing, some are not noticeably harmed. The bill is too blunt an instrument to achieve the goal of informing the consumer about food quality.

2. *Requiring thawed meat, fish, and poultry to be labeled "Thawed Product" will disrupt the industries which get these foods to the consumer and the cost of disrupting such industries will be passed on to the consumer.*

Customers will think there is something wrong with food labeled "Thawed Product" and will hesitate or refuse to buy such food. Not everyone is as rational and well-informed as the housewife hypothesized by the proponents of this bill. This supposed housewife knows that thawed food is not injurious to health; she just wants to know that the food has been frozen so that she can avoid refreezing it. There are many people, however, who will not read the label with such objectivity; they will think that thawed meat, fish, and poultry is dangerous or poor in quality. Such a conclusion would be reasonable because people know that government regulation of food is usually for the purpose of protecting public health.

Sales resistance or a shift in buying patterns will cause great disturbances in the production and marketing of meat, fish, and poultry. For example, many food products such as sausage, bologna, wieners, and luncheon meats, contain some thawed meat, fish, or poultry and will have to be labeled as a "thawed product." Suppose a substantial number of consumers refused to buy or preferred not to buy such products with the required label. Manufacturers, producers, and processors would have to take such a shift in buying habits into account. The kinds of food sold as well as processing operations would change. The consequences to industry cannot be precisely forecast, but to predict a major disturbance is not unwarranted. The cost of such a disturbance, not to mention the cost of labeling, will be passed on to the consumer.

Even supposing that some consumers will be better informed if thawed meat, fish, and poultry is labeled, there is no evidence that consumers in general will be better off.

3. *Enactment of a bill such as Senate Bill 1272 will be especially harmful to the California seafood industry.*

Modern commercial fishing vessels have freezing devices for large quantities of fish. Industry practice is to freeze the catch while the fishing vessel is at sea. Fish is delivered in a frozen state to the retailer who thaws the fish, cuts steaks or fillets, and places the fish on display. This procedure allows large quantities of nutritious and delicious food to reach the market.

If a bill such as Senate Bill 1272 were enacted, consumers might wish to buy only fresh-caught fish. This would have an immediate and disastrous effect on the fishing industry. Sales of salmon, halibut, swordfish, abalone, and crab would promptly decline.

Labeling fish as a "thawed product" will not give consumers useful information about the food. People seldom buy fish in quantity for home freezing. Ordinarily people buy fish with the intention of consuming it the same day. On those occasions when dinner plans must be changed and fish is refrozen, the fish will nevertheless be an acceptable and nutritious food when prepared.

4. *A bill such as Senate Bill 1272 will be difficult to enforce.*

Example 1. A wholesaler delivers, in a thawed state, meat which has been frozen but says nothing to the retailer about the meat's history. The bill requires the retailer to label this meat. How does the retailer find out that the meat has been frozen?

Example 2. A retailer knows that meat has been frozen and thawed. He intentionally does not label the meat for fear of offending customers or of having to reduce his price. How does an inspector find out that the law was disobeyed?

5. *Enactment of a bill such as Senate Bill 1272 may cause poor food handling practices.*

At the present time when seafood becomes unfrozen for any reason, industry practice is to put the food on the market immediately. If the law requires thawed seafood to be labeled, the owners of thawed seafood might prefer to refreeze it and to sell it in a frozen state rather than to label it.

Suppose a retailer, to evade the law, requests his wholesaler to deliver all meat in a thawed state and not to tell him whether the meat has been previously frozen. Under such an arrangement, the meat will be held at a higher temperature for a longer time before it reaches the buyer.

6. *Competition between sellers is the best guarantee to the consumer of the quality of frozen food.*

The retailer of frozen food does business in a competitive field. He wants customers to like his product and to come back to buy more. The

best way he can get and keep customers is by selling a good product at a competitive price. This is the consumer's best guarantee of quality.

A good example of the system at work is in the marketing of seafood. To market a superior product, the industry takes pains to keep all seafood at zero degrees or below until ready for sale. Apprentice butchers receive instruction in how to keep seafood at such temperatures. Retailers can tell by color, appearance, and holding qualities if the food has been carefully processed.

Business competition is the best guarantee to the consumer of getting high quality meat, fish, and poultry.

COMMITTEE CONCLUSION

This is a consumer interest bill aimed at giving the buyer more information about the quality of certain food. The bill does not attempt to protect the public against unwholesome or injurious food.

The evidence submitted to the committee shows that labeling meat, fish, and poultry as a "thawed product" does not provide the consumer with specific information about the quality or keeping quality of the food purchased.

Enactment of the bill may create unwarranted sales resistance leading to harmful disturbances in the production and marketing of food.

COMMITTEE RECOMMENDATION

The committee recommends that the Legislature take no action on any bill such as Senate Bill 1272 of the 1963 Regular Session.

Chapter VI

CERTIFICATION OF X-RAY TECHNICIANS

The question—should the state establish requirements of education and training for persons who use X-ray machines on human beings for medical purposes—came to the committee through the assignment for interim study of Senate Bill 1480 of the 1963 Regular Session. Using information presented to the committee at a hearing in Los Angeles, January 21, 1964, and information acquired from staff research, this report analyzes the question, sets forth an argument and a rebuttal argument, and concludes that state regulation is necessary to protect the public from the hazards of radiation. The committee recommends that a certification program be enacted.

Beginning with the introduction of Assembly Bill 2768 at the 1959 Regular Session, this question has been before the Legislature at each general session. An interim study of Assembly Bill 2768 by the Assembly Interim Committee on Governmental Efficiency and Economy resulted in a recommendation that the bill be reviewed in the light of the committee's hearings in Los Angeles, September 17 and 18, 1959, and reintroduced at the 1961 session.¹ As introduced, Assembly Bill 1317 of the 1961 session was identical to Assembly Bill 2768; the bill died in the Assembly Committee on Governmental Efficiency and Economy after being amended twice. This study of Senate Bill 1480 of the 1963 Regular Session results from the recommendation of the Senate Committee on Business and Professions.

The Assembly Public Health Committee has published four reports on radiation problems; none of them deals with the question of educational standards for X-ray machine operators.²

The question of state certification of X-ray technicians arises because ionizing radiation has harmful effects when it strikes human beings. Ionizing radiation, whether it consists of X-rays, alpha rays, beta rays, gamma rays, a beam of neutrons, or cosmic rays, and whether it is emitted from an X-ray machine, a fluoroscope, a cyclotron, or a radioactive isotope,³ disrupts the biochemical components of human cells.⁴

⁴ United Nations, General Assembly, *Report of the United Nations Scientific Committee on the Effects of Atomic Radiation* (Official Records: Seventeenth Session Supplement No. 16 (A/5216)) (New York, 1962), p. 7.

As the radiation passes through the cells of the body, it splits molecules into fragments, which, deprived of chemical stability, interact with each other and with unaltered molecules, upsetting the chemical balance of cells, and giving rise to new chemical compounds.⁵

Two kinds of damage—somatic and genetic—result from ionizing radiation passing through the human body. Somatic damage is confined to the person radiated; genetic damage is passed on to the descendants of the radiated person in the form of altered heredity. Radiation striking the body causes somatic damage; radiation striking the sex cells prior to reproduction causes genetic damage.⁶

The movement for state certification of X-ray technicians arises not from the somatic but from the genetic effects of radiation. There are two reasons why the somatic effects of medical radiation are not a public health concern. First, somatic damage is unlikely to occur unless a person receives great or repeated doses of radiation, or unless the exposure is to large or to sensitive portions of the body.⁷ Second, the person radiated receives the medical benefits of the radiation; his welfare and no else's is at stake. The genetic effect of radiation is a completely different matter; to explain the difference will require a description of the process by which genetic damage is caused.

Although the operator of an X-ray machine can confine the primary beam to a small area, he cannot totally control the direction of the radiation emitted from the X-ray tube. Some of the X-rays will scatter about the room, bouncing and changing direction, until their energy dissipates. As a result, when someone makes an X-ray study of a medical or dental patient, whether the study consists of taking a picture or of using a fluoroscope, some of the X-rays will pass through the patient's gonads—the testes of the male, the ovaries of the female.⁸ Within the sperm-producing cells in the testes, and within the eggs in the ovaries, are the genes, the units of heredity, which control characteristics of offspring. An X-ray, striking the genes, may alter the structure, causing a mutation. Once a gene mutates, the change is irreparable.⁹ The mutation will be carried in the cells of each succeeding generation until the line of descent dies out.¹⁰

Scientists cannot say exactly how many mutations will result from a given amount of radiation,¹¹ but they do know that any amount of radiation, however small, can induce some mutations.¹² A scientific report states the matter in this precise way: "There is no minimum amount of radiation dose . . . which must be exceeded before any

¹² *A Practical Manual* . . . , p. 9.

harmful mutations occur."¹³ Moreover, the more radiation received, the more mutations will occur, and this is true even though a person receives small doses of radiation over a long period of time.¹⁴ The total amount of radiation received from conception until reproduction is what is important.¹⁵

Nor can scientists measure the amount of human harm that mutations cause.¹⁶ One difficulty in making such a measurement is that a specific defect caused by a mutation might be tragic to one person but only mildly deleterious to another. An example is the death of an embryo, the death having been induced by a mutation. Another difficulty is that a mildly deleterious mutation may persist in the line of descent for many generations, bringing unhappiness to many people, while a grossly harmful mutation may die out in a single generation.¹⁷ These difficulties notwithstanding, scientists agree that the vast majority of mutations are harmful and that practically all mutations whose effects can be detected are harmful.¹⁸ Examples of genetic defects of the most serious kind include mental deficiency, epilepsy, congenital malformations, neuromuscular defects, hematological and endocrine defects, defects in vision and hearing, cutaneous and skeletal defects, defects of gastrointestinal or genitourinary tracts, and shortened life.¹⁹

The effect of a mutation seldom shows in the first generation; several generations may carry the mutated characteristic before it appears.²⁰

To summarize, from the genetic point of view, there is no such thing as a safe dose of radiation; any dose is harmful,²¹ and damage will inevitably result from radiating people who later bear children.²² To reduce the radiation exposure of potentially childbearing people, the people who carry the genes which will govern the physical and mental character of future generations, is the aim of public regulation of radiation sources.²³

The sources of radiation are natural and manmade. Natural radiation comes from radioactive materials on earth and cosmic rays from space. Manmade sources of radiation include fallout from nuclear explosions, nuclear reactors, X-ray machines, electronic microscopes, and so on. Authorities are agreed that medical radiation contributes considerably to the sum of manmade radiation,²⁴ and that medical radiation is about equal to total natural radiation.²⁵ The American College of Radiology states that "Medical and dental use of radiation produces a major part of the radiation exposure of human beings."²⁶ Comparisons between

medical radiation and radiation from fallout lack certainty because weapons testing is not subject to world-wide control and varies greatly from year to year.²⁷ The former State Coordinator of Atomic Energy Development and Radiation Protection estimates that medical exposure is 40 times greater than fallout exposure.²⁸

The X-ray machine, used to take photographs of internal organs, and the fluoroscope, consisting of a fluorescent screen mounted in front of an X-ray tube, used to examine internal organs directly, are the chief sources of medical radiation. Table 1 shows that all but a small number of the X-ray machines in California are used for human medical purposes.

The purpose of state regulation of medical sources of radiation is to eliminate unproductive radiation; the purpose is not to reduce its diagnostic and therapeutic benefits. To obtain the full medical benefits of radiation, exposure possibly should be even greater than it is at present, and, as medical science finds new uses for radiation, total exposure almost surely will increase.²⁹ To reduce the inevitable genetic consequences, each medical exposure should be both necessary and productive of concrete benefits.³⁰ Medical organizations recognize this as a goal and actively pursue educational programs to achieve it.³¹

There are three ways to eliminate unproductive medical radiation. The first is for medical practitioners to eliminate all unnecessary X-ray

²⁷ Federal Radiation Council, p. 21.

³¹ Joint Committee on Atomic Energy, *Hearings, Radiation Standards, Including Fallout* (Part 1), 1962, pp. 290-92, 298.

exposures—a matter of judgment.³² No specific study can be condemned if it will benefit the patient, “but no single examination should be done without a good and sufficient reason for it.”³³ In many situations the benefit of the study to the patient cannot be certain, just as the precise genetic damage to humanity cannot be measured. As a practical matter, however, doctors can make each study as limited as possible and proceed only after evaluating the need for further investigation.³⁴

The second way to eliminate unproductive medical radiation is to make sure that X-ray installations are as safe as possible. As of January 31, 1962, about four years after the enactment of a New York City law requiring radiation installations to meet safety standards, 12,483 installations had been inspected. Seventy percent of them were found to be deficient upon first inspection.³⁵ In 1962 the director of the Office of Radiation Control of the City of New York estimated that, by improving the safety of radiation equipment used on human beings, his office had reduced unnecessary radiation by 25 percent.³⁶

The third way to eliminate unproductive medical radiation is to use good technique. “Even with the best equipment the dose to the patient depends primarily on the competence of the operator and his sincere interest in radiation safety. Careless beam orientation and the use of fields larger than necessary may increase the gonad dose by a factor of more than a hundred.”³⁷ The skilled and dedicated X-ray machine operator will position the patient correctly, use proper filters on the beam, focus the beam as narrowly as possible, measure the patient’s body, make each exposure as brief as possible, use shielding devices, take as few pictures as possible, and use exact timing in developing the film. Failure to use these and other techniques will result in unnecessary radiation of the patient.³⁸

A good case can be made that a well-qualified dentist can train an assistant to take dental X-rays properly in a short period of time. Dental X-rays require low voltages and can be confined to the head. If the primary beam is properly filtered and confined to a narrow area, the amount of scatter radiation to the gonads will be very small. The most important single factor in reducing dosage from dental X-ray is the use of fast film. Two scientific studies, and a publication of the Bureau of Radiological Health, State Department of Public Health, support the conclusion that proper equipment, rather than the technique of the X-ray machine operator, is the essential factor in reducing the genetic hazard from dental X-rays.³⁹

Turning from a statement of the possible ways to eliminate unproductive medical radiation to the actual situation in California, we find

that in 1961 the Legislature enacted the Radiation Control Law⁴⁰ to provide "an integrated effective system of regulation within the state" for sources of ionizing radiation⁴¹ Sections 30305 to 30314 of the regulations under this law, which refer to such matters as shielding, tube housing, switches, filters, and the like, set forth requirements for safety of X-ray equipment used in the healing arts.⁴²

California law does not require operators of medical X-ray machines to meet any requirements of skill, ability, education, or training. Legally, anyone may use an X-ray machine on human beings in California.⁴³ The Department of Public Health interprets the Radiation Control Law to authorize regulations concerning X-ray machine safety but not to authorize any requirements for X-ray machine operators.⁴⁴ And, because the Legislature has failed to pass three bills introduced to enact requirements for X-ray machine operators, the department no doubt would be severely criticized if it issued regulations in that field. The regulations issued under the Radiation Control Law contain a section which states that a user of X-ray equipment in the healing arts "shall assure that all X-ray equipment under his jurisdiction is operated only by persons adequately instructed in safe operating procedures and competent in safe use of the equipment,"⁴⁵ but it is evident that this regulation contains no enforceable standards. Nor does California law require practitioners of the healing arts to supervise the operation of medical X-ray machines, although in some circumstances using an X-ray machine on a human being without supervision by a licentiate of the healing arts might subject a layman to the prohibition against practicing medicine without a license.⁴⁶ These qualifications having been noted, the general statement remains true: Legally anyone may use an X-ray machine on human beings in California.

It is important at this point to draw a distinction between radiologists and other kinds of medical practitioners. A radiologist is a specialist in the use of radiation to diagnose and treat disease; he is a medical doctor or a doctor of osteopathy, and, if he is a medical doctor, he is probably certified by the American Board of Radiology, a private association of radiologists. He has had three or four years of special training beyond his internship in the medical use of radiation.⁴⁷ Radiologists as a group are the best qualified of all medical practitioners to operate and to supervise the operation of X-ray machinery.⁴⁸ Table 2 shows, however, that radiologists have registered only 792 of the 5,403 X-ray machines used in private medical offices in California.

SOURCE: Bureau of Radiological Health.

Two private, nationwide organizations certify the competence of X-ray technicians. The American Registry of Radiologic Technologists, the older, was organized in 1922 and incorporated in 1936 by radiologists and X-ray technicians and is today governed by a board composed of four radiologists and four X-ray technicians. Applicants for certification must have completed two years of training and experience under the supervision of a radiologist (supervision is defined as three visits per week for a total of 10 hours by the radiologist to the place where the technician is working, usually the X-ray department of a hospital) or he must have completed a two-year course of training and experience at a school approved by the American Medical Association. After July 1, 1966, supervision by a radiologist will not be sufficient; applicants will have to complete a two-year course at an approved school. To be certified, the applicant must pass a written examination.⁴⁹

The American Radiography Technologists, the other organization which certifies X-ray technicians, requires applicants to have two years of training and experience under the supervision of a physician or a radiologist, or to have completed a course of training of approximately two years in a school approved by the American Radiography Technologists, and to pass a written examination.⁵⁰

The California membership of these two organizations is as follows:⁵¹

American Registry of Radiologic Technologists ---	3,885
American Radiography Technologists -----	900
Total -----	4,785

⁴⁹ [Informational Pamphlet], The American Registry of Radiologic Technologists, 2600 Wayzata Boulevard, Minneapolis, Minnesota.

⁵⁰ Application for Registration, American Radiography Technologists, P.O. Box 284, Enid, Oklahoma.

⁵¹ Letters to the Senate Factfinding Committee on Public Health and Safety from: (1) Alfred B. Greene, Executive Director, The American Registry of Radiologic Technologists, August 24, 1964; (2) Margaret E. Harris, 10921 Marian Drive, Garden Grove, California, August 26, 1964.

Partly because so many certified X-ray technicians work for radiologists, the best qualified X-ray operators do only about one-half of the total diagnostic X-ray work performed in California.⁵²

At this committee's 1964 hearing and the 1959 hearings of the Assembly Interim Committee on Governmental Efficiency and Economy, substantial testimony indicated that inadequately trained and even incompetent personnel operate X-ray machines in medical offices. Commonly an office nurse, a receptionist, or some other assistant to the doctor will do the X-ray work.⁵³ She may have received the most cursory instruction and be told to follow the printed directions of the equipment manufacturer, directions relating solely to the mechanics of operating the equipment.⁵⁴ A witness at the 1959 hearings described several cases of gross incompetence in the use of X-ray in medical offices.⁵⁵ At the 1964 hearing of the Senate Factfinding Committee on Public Health and Safety, an X-ray technician, an employee of a radiologist who is a Fellow of the American College of Radiology, said, "Even some of our own radiologists will hire anybody that walks in."⁵⁶

Whether many nonradiologist medical practitioners can do all kinds of medical X-ray work and give the patient only necessary, productive radiation, is doubtful. A medical student may get some experience in the actual operation of X-ray equipment at the intern or resident level,⁵⁷ but he does not receive the technical training that an X-ray technician receives.⁵⁸ Surveys of medical offices have shown that X-ray equipment is frequently operated unsafely. For example, a 1960 account of conditions in New York City reported that most nonradiologist physicians and dentists were either unaware of or lacked an understanding of radiation safety standards.⁵⁹ The same account says that in many offices X-ray studies of the chest exposed the gonads to the primary radiation beam.⁶⁰ In California, the First Report of the California Coordinator of Atomic Energy asserts that "many medical users employ deficient equipment, are insufficiently informed as to the doses delivered to the patient, and are unfamiliar with the best procedures and precautionary measures. . . ."⁶¹

Medical schools are, however, increasing instruction in radiation safety. A 1962 survey conducted by the American College of Radiology, asking 87 medical schools how much instruction they gave in radiation safety, found that 74 of the 78 schools which replied to the questionnaire gave some instruction. Of the four schools that gave no instruction, two were planning to do so. The total number of hours of

instruction (actual hours, not "units") at the 78 schools was 346, or an average of 4.4 hours for each school. Forty-five of the schools said they had increased instruction in radiation safety by 50 percent within five years preceding the survey.⁶² The University of California medical schools in Los Angeles and San Francisco require students to take 16 hours of radiology during the first two years, and the schools provide further instruction in radiology during the third and fourth years.⁶³ In a letter to this committee, the UCLA School of Medicine reports that "throughout all the courses . . . , an attempt is made to incorporate the importance of recognizing the hazards of the indiscriminate use and the advantages of the proper uses of radiation in the diagnosis and treatment of disease."⁶⁴

In addition to the question whether many medical practitioners are themselves qualified to do all kinds of medical X-ray work, there is a serious question about how closely practitioners supervise the people in their offices who take X-rays. One witness at this committee's hearing, a radiologist, testified that a medical practitioner is in the best position to evaluate an X-ray technician's competence because the practitioner must see each X-ray picture and must rely on it almost completely to make a diagnosis.⁶⁵ An X-ray picture, however, does not tell the practitioner how many exposures were made nor whether the technician took all necessary safety precautions. Some X-ray machine operators have no supervision whatever from a medical practitioner. There are, for example, 15 medical and 21 dental X-ray laboratories registered in California with no medical practitioner as an operator or director. In addition, there are 15 portable X-ray services, operated by nonmedical practitioners, used for taking X-rays of bedridden patients.⁶⁶

AN ARGUMENT AGAINST STATE REQUIREMENTS FOR X-RAY TECHNICIANS

Allowing the medical profession to perfect a voluntary system of control is better than establishing state requirements for X-ray machine operators. This voluntary system should consist of all X-rays being made under the supervision of a physician and all physicians limiting their use of X-rays to the degree they are competent in making X-ray studies.

Under a voluntary system, the welfare of the patient will remain, as at present, the exclusive responsibility of the physician. If the state sets up requirements for X-ray machine operators, the physician's responsibility will be diluted.

The medical profession is moving toward adequate control voluntarily. Patients are becoming more educated about the dangers of

radiation, and, since patients have a free choice of physician, they will go to doctors who operate X-ray equipment properly. As a partly self-disciplining profession, medicine itself can and will control doctors who use X-ray incompetently. Finally, the fear of malpractice suits and moral pressure require doctors to operate X-ray equipment safely.

AN ARGUMENT IN FAVOR OF STATE REQUIREMENTS FOR X-RAY TECHNICIANS

Voluntary action by the medical profession, leading to an adequate system of control, is an unattainable ideal. Although partly self-disciplining, the medical profession does not have the power to require all medical practitioners to limit their use of X-ray to the degree of their competence.

The present voluntary system permits an absence of responsibility at the crucial time and place: when the patient is X-rayed. The doctor is not present in many cases, and by looking at the film later cannot tell whether the procedure used to take the picture was the best one possible. The evidence is great that many medical practitioners are not qualified to do all kinds of medical X-ray work with maximum safety. Enactment of state requirements for X-ray machine operators would increase, not detract from the doctor's responsibility. He would be forced to make a responsible choice between the following alternatives: (1) take the X-rays himself, (2) hire a certified technician, or (3) send the patient to a certified technician.

COMMITTEE CONCLUSION

Government regulation of radiation sources has been inaugurated in the realization that regulation is necessary to protect the living population and future generations from the hazard of unnecessary radiation. Because medical X-ray machines comprise the major source of public exposure, elimination of unnecessary medical radiation will greatly reduce the total amount of radiation and will enhance the public welfare. Regulation of equipment is not by itself sufficient; by using poor procedure an untrained X-ray machine operator can negate the value of the best equipment; there is much evidence that improperly trained people can and do operate medical X-ray machines. The state can establish standards of education and training for medical X-ray machine operators without interfering with the right of medical practitioners to make judgments as to the need for using the equipment and without interfering with the responsibility of the practitioner for the safety of the patient.

COMMITTEE RECOMMENDATIONS

1. Legislation should be enacted to provide that no one, except licentiates of the healing arts, shall use X-rays or X-ray producing equipment on human beings for diagnostic or therapeutic purposes without having been certified by the State Department of Public Health after meeting educational requirements and passing an examination.

2. Legislation should be enacted to provide that licentiates of the healing arts must supervise all X-ray exposure of human beings for diagnostic and therapeutic purposes.

3. Legislation should be enacted to amend the Medical Practice Act to require applicants for a physician's and surgeon's certificate and applicants for a podiatrist's certificate to show evidence of having attended a medical school whose curriculum provided for adequate instruction in radiology, including roentgenologic technique and radiation safety.

4. Legislation should be enacted to amend the Medical Practice Act to require applicants for a physician's and surgeon's certificate and applicants for a podiatrist's certificate to pass an examination in roentgenologic technique and radiation safety.

APPENDIX TO CHAPTER VI

STATE OF CALIFORNIA OFFICE OF LEGISLATIVE COUNSEL

3021 STATE CAPITOL, SACRAMENTO 95814

Sacramento, August 11, 1964

HON. WALTER W. STIERN
2901 Skyline Boulevard
Bakersfield, California

X-RAY MACHINES - NO. 6632

Dear Senator Stiern:

You have asked the following questions, which we will answer in series, regarding X-ray machines and the use thereof.

QUESTION NO. 1

Does the California law state the circumstances under which the operation of an X-ray machine must be under the supervision of a licentiate of the healing arts?

OPINION AND ANALYSIS NO. 1

The only specific provision of law which we have found on this subject is Section 638 of the Penal Code which provides as follows:

"638. No person shall operate or maintain any X-ray fluoroscope, or other equipment or apparatus employing roentgen rays, in the fitting of shoes or other footwear or in the viewing of bones in the feet. This section shall not apply to any licensed physician, surgeon, podiatrist, chiropractor, or any person practicing a licensed healing art, or any technician working under the direct and immediate supervision of such persons. Any person violating the provisions of this section shall be guilty of a misdemeanor."

However, the use of such machines would be subject to the general limitations against the practice of medicine by licensed persons. Thus, Section 2141 of the Business and Professions Code, a part of the Medical Practice Act, provides as follows:

"2141. Any person, who practices or attempts to practice, or who advertises or holds himself out as practicing, any system or mode of treating the sick or afflicted in this State, or who diagnoses, treats, operates for, or prescribes for any ailment, blemish, deformity, disease, disfigurement, disorder, injury, or other mental

or physical condition of any person, without having at the time of so doing a valid, unrevoked certificate as provided in this chapter, is guilty of a misdemeanor."

QUESTION NO. 2

When an X-ray machine is operated for medical purposes does the California law spell out how close the supervision of the person operating the machine must be?

OPINION AND ANALYSIS NO. 2

Again, there are no specific provisions on the subject in the statutes of this state.

QUESTION NO. 3

Are there any requirements in the California law for persons who operate X-ray machines?

OPINION AND ANALYSIS NO. 3

This state has no licensing or certification provisions for operators of such machines. However, we note that attempts have been made to license such persons (see A.B. 2768, 1959; A.B. 1317, 1961).

QUESTION NO. 4

Are chiropractors licensed to use X-ray machines in California?

OPINION AND ANALYSIS NO. 4

Neither the Chiropractic Act (Ch. 2, commencing with Sec. 1000, Div. 2, West's B. & P.C.) nor the regulations adopted by the State Board of Chiropractic Examiners (16 Cal. Adm. C. 300) specifically regulate the use of X-ray machines by chiropractors.

In this connection we note that a chiropractic certificate only authorizes "the holder thereof to practice chiropractic in the State of California as taught in chiropractic schools or colleges; and, also to use all necessary mechanical, and hygienic and sanitary measures incident to the care of the body, but shall not authorize the practice of medicine, surgery, osteopathy, dentistry or optometry, nor the use of any drug or medicine now or hereafter included in materia medica" (Sec. 1000-7, West's B. & P.C.). In the latest court decision interpreting this language, the appellate court of California upheld a lower court decision defining the scope of chiropractic practice as follows:

"A duly licensed chiropractor may only practice or attempt to practice or hold himself out as practicing a system of treatment by manipulation of the joints of the human body by manipulation of anatomical displacements, articulation of the spinal column, including its vertebrae and cord, and he may use all necessary, mechanical, hygienic and sanitary measures incident to the care of the body in connection with said system of treatment, but not for the purpose of treatment, and not including measures as would constitute the practice of medicine, surgery, osteopathy, dentistry, or optometry, and without the use of any drug or medicine included in materia medica.

"A duly licensed chiropractor may make use of light, air, water, rest, heat, diet, exercise, massage and physical culture, but only in connection with and incident to the practice of chiropractic as hereinabove set forth." (*Crees v. California State Board of Medical Examiners* (1963), 1213 Cal. App. 2d 195, 202.)

Any use of X-ray equipment by a chiropractor would have to be within the scope of the above limitation.

QUESTION NO. 5

Are chiropractors licensed to use X-ray machines in New York?

OPINION AND ANALYSIS NO. 5

On July 1, 1963, a new law concerning such use took effect in New York (Sec. 1, Ch. 780, Law 1963). That law provides as follows:

" . . .

"3. A license to practice chiropractic shall not permit the holder thereof:

" . . .

"f. To use radio-therapy, fluoroscopy, or any form of ionizing radiation except X-ray which may be used only as provided in this subdivision; (i) X-ray shall only be used for the purposes of chiropractic analysis; (ii) such use of X-ray shall be confined to persons over the age of 18; and (iii) the area of such X-ray exposure shall not extend below the level of the top of the first lumbar vertebra. The requirements and limitations with respect to the use of X-ray by chiropractors shall be enforced by state commission of health and he is authorized to promulgate rules and regulations to carry out the purposes of this subdivision. Chiropractors shall retain for a period of three years all X-ray films taken in the course of their practice, together with the records pertaining thereto, and shall make such films and records available to the state commission of health or his representative on demand."

Very truly yours,

A. C. MORRISON
Legislative Counsel

LETTER OF TRANSMITTAL

SENATE CHAMBER, STATE CAPITOL
SACRAMENTO, June 18, 1965

HONORABLE GLENN M. ANDERSON
PRESIDENT OF THE SENATE, AND
GENTLEMEN OF THE SENATE

Senate Chamber, Sacramento, California

MR. PRESIDENT AND GENTLEMEN OF THE SENATE: Pursuant to Senate Rules Resolution No. 1, adopted July 11, 1963, under authority of Paragraph 12.5 (13) of the Standing Rules of the Senate, the Senate Factfinding Subcommittee on Un-American Activities of the General Research Committee was created and the following Members of the Senate were appointed to said subcommittee by the Senate Committee on Rules: Senators Hugh M. Burns, Chairman, Aaron W. Quick and Stephen P. Teale.

The committee herewith submits a report of its investigation and findings.

Respectfully submitted,

HUGH M. BURNS, *Chairman*
AARON W. QUICK

UNIVERSITY OF CALIFORNIA

Introduction

On September 21, 1964, a student demonstration occurred on the campus of the University of California at Berkeley. Thereafter other and more serious demonstrations followed until it finally became necessary for the governor to summon officers to clear the administration building on the campus of more than 800 defiant students who had entered and staged a sit-in demonstration. Many arrests were made, the student rebellion received international publicity, and the image of a great cultural institution received irreparable damage.

It is the responsibility of this subcommittee to ascertain the causes of these disturbances and to report the extent to which they were inspired or influenced by subversive elements. We do this realizing that there is an unfortunate trend at present for the extreme right to see Communists everywhere, and for the extreme left to pretend that they no longer exist.

We have conducted investigations of subversive infiltration at the University of California and at other educational institutions throughout the state since 1941. From the inception of the most recent troubles at Berkeley we have had both overt and covert agents in the area who have provided us with a flow of information on a day-to-day basis. In addition we have obtained statements from university administrators, faculty members, Regents, and students; we have obtained all documents we believe material to the subject, we have studied the newspaper accounts, magazine articles, TV and radio programs that seemed important, and we have also obtained the publications issued by the Free Speech Movement.

For the purpose of placing the subject in its proper perspective, it will be helpful to the reader if he is provided with a chronology of events, commencing with the situation as it existed in Berkeley at the opening of the spring semester in 1964, and continuing until the time this portion of our report is being dictated, in March of 1965.

Chronology

Spring Semester, 1964—Intense pre-primary election activity by student groups creates congestion at Sather gate.

July 22 and 29—Chancellor's office, Dean of Students, campus police and the public affairs officer conferred and decided upon a stricter interpretation of the Kerr Rules.

September 14—Katherine Towle, Dean of Students, established a new policy. Sent letter to "Presidents or Chairmen and Advisors of all Student Organizations," officially barring all tables at Sather gate.

September 17—Dean Towle met with students representing 18 off-campus organizations to discuss her September 14 directive.

September 18—Dean Towle was presented with a petition from the 18 organizations protesting the September 14 directive.

September 21—The September 14 directive was reconsidered and a new directive issued allowing a limited number of tables at Sather gate.

September 21—Student leaders of the 18 groups walked out saying that they were not satisfied and that the modification was not sufficient.

September 21—First demonstration occurred.

September 23—Chancellor Strong issued statement through the *Daily Californian* to the effect that "its (university's) facilities were not to be

used for the mounting of the social and political actions directed to the surrounding community," citing President Kerr's Davis Charter Day Address, May 5, 1964.

September 23—A free speech vigil was held on Sproul Hall steps, 75 persons still being there on the morning of September 24.

September 24 and 25—Chancellor Strong conferred with President Clark Kerr.

September 28—Chancellor Strong presented his modified position at the university meeting, held at the Student Union Plaza. He interpreted section III of the Kerr Rules as eliminating any distinction between spoken and written expression, thus allowing free distribution of printed materials, buttons and stickers favoring political candidates in certain designated areas on the campus. The rationale of this change appeared to be that since controversial speakers were permitted on the campus, controversial literature should also be admitted.

September 28—Dean Towle's modified position allowing tables at Sather gate was officially announced.

September 29—Members of the Dean's staff took the names of 8 students who were at tables placed at Sather gate and in front of Sproul Hall, all in direct violation of university rules: that is, although the tables were placed in designated areas, no permits were obtained, which violated the university rules that were still in effect. The 8 students whose names were thus taken were Mark Bravo, Mark Fuchs, David Goines, Arthur Goldberg, Donald Hatch, Mario Savio, Elizabeth Stapleton, and Brian Turner.

September 29—From 300 to 400 students moved into Sproul Hall and remained there until 2:40 a.m. of the following day.

October 1—The eight students whose names are mentioned above were officially suspended from the university.

October 1—At 11:45 on the morning of October 1, Jack Weinberg, (non-student) was arrested in front of Sproul Hall. Thereafter 150 to 200 students entered Sproul Hall to take Dean Towle a hostage. Women employees left through the windows and over the roof, and the crowd which eventually grew to approximately 500 in number, imprisoned the police car by sitting down around it and refusing to move, thereby preventing it from taking Weinberg away. The car and its occupant were held captive through the night and the car suffered considerable damage.

October 2—10:30 a.m., the police car was still held captive by the crowd, Chancellor Strong and President Kerr conferred concerning methods to restore law and order to the university. Mario Savio addressed the crowd numerous times during the remainder of the day. At 5:00 p.m. an *ad hoc* negotiating committee requested a conference with university officials. At 6:00 p.m. Chancellor Strong read a statement to the crowd requesting them to disperse, and they refused. The total number of law enforcement officers summoned by the University Administration to handle the situation had reached 579 by 6 o'clock on the evening of October 7. At 7 p.m. spokesmen for the Oakland and Berkeley police departments informed Chancellor Strong that if their men were not used by 8 o'clock they would be recalled. At 7:15 a negotiating committee met with President Kerr and reached an agreement which was read by Mario Savio to the crowd, which then dispersed.

October 4 and 5—Free Speech Movement was created from a pre-existing united front of students and non-students who were defying the university administration.

October 5—Chancellor Strong turned the adjudication of the case of the eight suspended students over to a faculty committee on student conduct which was commonly known as the Ira Heyman Committee.

October 5—Chancellor Strong appointed a twelve-man study committee on campus political activities, better known as the Robley Williams Committee.

October 6—FSM Steering Committee met with Chancellor Strong to protest the personnel appointed to the Robley Williams Committee. On this day a petition bearing six hundred names supporting the Free Speech Movement and including faculty members as well as students, was delivered to Chancellor Strong.

October 12—A petition bearing eighty-eight names and signed only by the members of the faculty was delivered to Chancellor Strong recommending reinstatement of the eight suspended students.

October 13—Robley Williams Committee held an open meeting at which seventy of the seventy-one speakers demanded that the committee disband itself. There had been an FSM handbill circulating all day instructing students planning to speak before the committee to demand its dissolution because of dissatisfaction with its personnel.

October 15—The leaders of the Free Speech Movement threatened mass demonstrations.

October 16—Chancellor Strong agreed to expand the Robley Williams Committee to a total of eighteen members, six from the administration, six from the faculty and six from the dissident students. Two of the student representatives were selected by Chancellor Strong and the other four were selected by the FSM.

October 18—The FSM selected Mario Savio, Bettina Aptheker, Suzanne M. Goldberg and Sydney R. Stapleton as its representatives on the Robley Williams Committee.

October 21—November 10—Robley Williams Committee met a total of eight times during this period; on October 21, 24, 28, 29, and on November 4, 5, 7, and 10, when it finally dissolved itself.

November 12—The faculty representatives on the Robley Williams Committee, Professors Cheit, Garbarino, Kadish, Rosovsky, Verneulen and Williams, issued a report on the status of their deliberations and offered specific recommendations for a solution of the campus crisis.

November 13—President Kerr published his appeal to the university community for proposals. The *Daily Californian*, student paper, published the faculty report with his letter.

November 20—The next scheduled meeting of the Board of Regents of the University of California was set for this date, as stated by President Kerr in his letter which appeared in the *Daily Californian* on November 13, 1964, and which announced that he would submit his final recommendations to the Regents at that time.

November 20—The Regents modified existing rules to (1) permit advocacy, raising funds and recruiting members by students in designated areas on the Berkeley campus, but, (2) permission pertained only to the mounting of *lawful action*. The university retained the right to suspend any student who participated in unlawful on-campus or off-campus activity.

With the announcement of these rules by the Regents, between four and five thousand students demonstrated outside University Hall. Mario Savio declared to them that the students were completely dissatisfied with these rulings and would take further action.

November 24—Between two hundred fifty and three hundred fifty FSM supporters staged a sit-in for three hours near Dean Towle's office in Sproul Hall, following a noon rally, and a *San Francisco Chronicle* columnist wrote that the FSM movement was becoming more left-wing day by day.

November 25—The administration denied a request by SLATE to show a homosexual film on the university campus.

November 26—Dean Towle sent sixty mimeographed letters reprimanding students for violating the promulgated rules of the university.

November 30–December 1—Chancellor Strong announced that disciplinary action would be commenced against Mario Savio, Arthur Goldberg, Jacqueline Goldberg, and Brian Turner. Goldberg at a noon rally on the steps at Sproul Hall demanded that all charges be dropped, and Mario Savio, who was speaking at the Santa Barbara campus of the university, held a news conference and threatened a strike of teaching assistants, and massive demonstrations unless the charges were dropped.

December 2—Savio issued an ultimatum giving Chancellor Strong twenty-four hours to comply with FSM demands or face a massive sit-in demonstration. A noon rally at Sproul Plaza was held and Savio told the two thousand students who were assembled to hear him that the FSM would "bring the university to a grinding halt" unless the FSM demands were met. At 12:30 p.m. Mario Savio and Joan Baez, Carmel folk singer, led an invasion of Sproul Hall, which was occupied with military precision by more than 800 FSM supporters. Alameda County Deputy Sheriffs started arriving at 7:00 p.m. when Sproul Hall was closed, and the demonstrators remained inside. Chancellor Strong and some hastily-summoned Regents met at a San Francisco airport motel and formulated strategy to meet the situation, but before their plans could be placed in operation Governor Brown sent officers to the university campus, and the sit-in demonstrators were arrested, booked, and hauled away to Alameda County Santa Rita Prison Farm.

December 7—President Kerr was both booed and applauded when he appeared in the Greek Theater to address assembled students and faculty members. He was introduced by Robert Scalapino, Chairman of the Department of Political Science. Kerr agreed that he would take no action against any of the FSM demonstrators for violations of university rules committed prior to the massive December 2 sit-in, and made it plain that no more violations of regulations would be tolerated, and that peace must be maintained on the campus. But before the meeting adjourned Savio, flanked by several of his supporters, shouldered his way to the microphone, shoved the speaker aside, and was dragged away by police.

December 8—The Academic Senate on the Berkeley campus met and voted 824 to 115 to back the fundamental principles of the FSM, urged the administration to turn all control of student discipline over to the faculty, and suggested a five-point program to bring peace to the campus. This faculty decision was followed by a jubilant celebration on the part of FSM leaders, and on the following day Savio withdrew from the University at Berkeley for the purpose of making a national tour to spread the gospel of the FSM, stating that he would return to the campus the following semester.

December 19—The Regents directed the administration to preserve law and order; rejected the proposal of the Academic Senate to delegate Regents' authority over student discipline; agreed to review university policies regarding free speech; refused to restrict freedom of speech be-

yond the provisions of the First and Fourteenth Amendments to the Federal Constitution; and announced that existing rules were to be enforced pending further study by the Regents of the entire Berkeley situation. Savio vowed to continue the FSM fight, and expressed complete dissatisfaction with the Regents' decision.

December 20—An item in the *San Francisco Chronicle* predicted that Chancellor Strong would be replaced temporarily for reasons of ill health.

December 23—The Regents announced that they had appointed two committees, one to study rules on political activities at Berkeley, one to study the causes of the demonstrations.

December 27—President Kerr was quoted as saying that there was a hard core of demonstrators comprising as much as 40% of off-campus elements, including Communist sympathizers.

December 30—Savio spoke at the convention of The California Federation of Teachers, attacking Kerr and Jesse Unruh, Speaker of the California State Assembly, and demanding an investigation of the university Regents.

December 31—The Academic Senate Committee on Academic Freedom at Berkeley released its plan for settling troubles, the release having been made while its own executive committee was conferring with the Regents.

January 3—Chancellor Strong was temporarily relieved of his duties "because of health," and Martin Meyerson, suggested by Kerr, was appointed Acting Chancellor in his place.

January 3—Acting Chancellor Meyerson selected Neil J. Smelser, 34, Rhodes Scholar and Sociologist, as his assistant in charge of student political activities.

January 4—Acting Chancellor Meyerson was quoted as saying that "civil disobedience is only warranted when there is no recourse to reasonable deliberation." Savio declared that the rules promulgated by the Academic Senate's committee on academic freedom were totally unacceptable to the FSM.

January 5—Acting Chancellor Meyerson issued rules creating more campus areas that would be available to the students for free speech.

January 6—Arthur M. Ross, Chairman of the Academic Senate's Emergency Executive Committee, said that matters were improving, and that there was no sense in any more demonstrations. He added that student freedom of advocacy had been secured, disciplinary procedures established, and that any who wished to advocate should "get out and advocate."

History of Communism at Berkeley

A few years after the Communist Party was organized in the United States it divided the country into twenty districts, California, Arizona and Nevada originally being included in district number 13, with headquarters in San Francisco. The main office was moved from Grove Street to Haight Street and thence to 942 Market Street, and a few years ago Nevada was dropped out of the district and Hawaii substituted in its place because it occupied a greater strategic significance for Communist purposes. The important thing to bear in mind is that the headquarters for the whole of California and adjacent territory has always been situated in San Francisco. The main propaganda outlet for the Communist Party is now at 1408 Market Street, and the major Communist educational institutions have always been operated from that city.

District 13 is no longer a formal organizational component of the party, but the top decisions are nonetheless made in San Francisco—not in Los Angeles, and the party high command has always operated from the Bay Area.

As the Communist schools will play a prominent part in our description of infiltration at the Berkeley campus of the University of California, we should briefly set forth their history here by way of background. The first school was located at 675 Minna Street, and functioned under the name of Workers School. It continued operating at various places under this title, until for security reasons it changed its name to the Tom Mooney Labor School, and finally to the California Labor School, with branches in Oakland and Los Angeles. In the latter city the institution was eventually known as the People's Educational Center.

Changing the names of the Communist front organizations, youth organizations and Communist propaganda publications is an old Communist custom, and these changes of names and addresses for the Communist schools in San Francisco managed to fool some people of prominence who were persuaded to act as "education sponsors" under the mistaken assumption that the schools were being operated to provide an education for members of trade unions. It soon became evident, even to these credulous supporters, that the trade unions were limited to those under Communist domination such as the International Longshoremen's and Warehousemen's Union; the Marine Cooks and Stewards Union (which has since emancipated itself from Communist control), the United Office and Professional Workers of America, the State, County, and Municipal Workers of America, the United Federal Workers of America, and a host of others.

It should, of course, be obvious that a Communist school would hardly waste its time and money preaching anything other than Communism, and that even its classes in metal-working, or art, or folk dancing, or manual training, or ceramics, or virtually any other kind of a course can easily be utilized as a medium for the effective indoctrination of the students. It is equally true that no anti-Communist, or even a neutralist, would ever be allowed to teach or lecture at such a tightly-controlled institution unless he was sympathetic to the purposes for which it was created. In short, let there be no mistake about these schools being not only integral parts of the Communist apparatus, but vital and indispensable parts that were closely-watched, carefully-operated, and highly successful. For a short time even the Federal Veterans Administration was fooled by these changes in name and location and changes in the statement of purposes, and lent its support to the San Francisco Communist institution when it was operating as the California Labor School. It withdrew its assistance after this committee investigated the institution and found that it was a part of the California Communist organization. Shortly thereafter the AF of L Central Labor Council advised its members to withdraw support, having conducted its own investigation and arrived at the same conclusion. Indeed, the support by non-Communist unions was of very short duration; but from the inception of the first Communist school in San Francisco in 1932, it was consistently supported by all of the Communist-dominated unions and Communist front organizations.

In 1946 California Labor School persuaded the University of California at Berkeley to join with it and jointly sponsor an institution on the Berkeley campus known as the Institute on Labor, Education and World Peace. This was a two-day program, widely heralded and advertised through all of the Communist propaganda media in the Bay Area, and

by the Communist book store then being operated within a block of the Sather Gate. Here was an astounding spectacle of a great university lending its physical facilities, its dignity and its prestige to a Communist indoctrination center which was dedicated to the subversion of our country. This was one of the occurrences that led former President Sproul to establish a security officer at Berkeley whose duty it was to protect the university and its students against precisely this sort of unfortunate event, and to keep the state-wide administration currently informed about the problem of subversive infiltration in general, and also to protect innocent liberals and others against irresponsible red-baiting.

We must observe here that during the time this officer was functioning actively there were no recurrences of such incidents; the name of the university was protected; there were no massive demonstrations; there was no opening of the gates of the institution to Communist officials who will gladly utilize the campus as their forum for the spreading of their subversive propaganda. This security officer noted the changes of the Communist party line, predicted impending demonstrations; subscribed to Communist literature, developed his sources of information, was aware of the various front organizations that flourished around the perimeter of the Berkeley campus, and although he was only one man with his time thinly spread over the teeming Berkeley campus and the other eight campuses of the university as well, managed to keep the various administrations currently and accurately advised concerning local subversive problems.

While the California Labor School was being operated at 321 Divisadero Street in San Francisco it was subjected to a searching scrutiny by the Subversive Activities Control Board, which eventually cited it as a Communist organization, and the Attorney General of the United States officially listed it as subversive. Our own committee had conducted an investigation a few years previously and arrived at the same conclusion, which was published in its reports. The school then quietly ceased operating and, as we shall hereafter note, utilized other facilities for the purpose of indoctrination and recruiting—at considerably less expense to the Communist Party.

We believe it would be helpful if we include the names of the more important faculty members at these various Communist educational institutions in San Francisco, for the purpose of indicating that some of the most important party functionaries and veteran members were assigned to devote their indoctrination and recruiting skills to this type of work. It also serves to underline the fact that the party considered the schools of sufficient importance to assign some of their most able members to work in them, and it will indicate a certain interlocking system of co-operation with Communist-dominated organizations and front groups that was highly co-ordinated and skillfully administered.

Thus we find that Dorothy Ray was teaching at the school in San Francisco and was also handling the duty of Associate Director of its Social Sciences Department in 1936. We first made her acquaintance at a San Francisco hearing in 1941 when she was not only a member of the Communist apparatus but also a Deputy California Labor Commissioner, hearing cases in the field. She now heads the Southern Division of the Communist Party of California, with headquarters in Los Angeles, under the name of Dorothy Healey.

Vincente Lombardo Toledano lectured at the school in 1948. Toledano has also been mentioned in some of our previous reports as the organizer

and dominant figure in the Mexican Working Men's Federation, a Communist-controlled organization of enormous strength, which spread its activities throughout Latin America with the active collaboration of Constantin Oumansky, Soviet Ambassador to Mexico in the late 30's and early 40's. Toledano is still extremely active in Mexico as a Communist leader and occasionally comes into Southern California for the purpose of delivering lectures to various front organizations.

Herbert Aptheker, the father of Bettina Aptheker, who figures prominently in the Berkeley rebellion, spoke at the California Labor School in February 1951. We shall have a great deal more to say about Mr. Aptheker at a more appropriate place in this report, but it will be sufficient to point out here that for several years he was the editor-in-chief of a publication about the size of *Reader's Digest*, called *Political Affairs*. This is the monthly ideological publication of the Communist Party of the United States. Mr. Aptheker has lectured at many universities throughout the country, and in Communist circles has earned himself a reputation as a Marxian ideologist, a party theoretician, and an expert on the Negro minority in America. In 1949 he taught a course on "The American Negro Today," during the spring term of the California Labor School, which commenced on February 2, 1949. In April 1959 Mr. Aptheker broadcast regularly over station KPFA-FM in Berkeley. He spends a great deal of his time these days in Berkeley, but just before the first student demonstration, which occurred in September 1964, Mr. Aptheker was in the Soviet Union with some other Communists whose names will be given later.

George Lohr (whose true name is Ohlwerther), also lectured at the school when he was foreign news editor of the *People's World*, the Communist newspaper published in San Francisco. Lohr has traveled abroad many times on various assignments for the world Communist movement, was sent to San Diego several years ago to restore discipline in the party organization there, and has lately been spending much of his time in Communist East Germany.

Paul Heide, well-known East Bay Communist, also taught at the school, having lectured there in 1947. Mr. Heide, who has spent most of his life in trade union work, was connected with the War Manpower Commission of Northern California during World War II, and has been identified with a wide variety of Communist activities.

Oleta O'Connor Yates once acted as chairman of the Communist Party in San Francisco and was a lecturer at the school on several occasions. Mrs. Yates, now deceased, was once a candidate for the office of supervisor for the county of San Francisco on the Communist Party ticket, and during most of her adult life was prominent in some official Communist capacity in Northern California.

One of the most significant lecturers at the school was Irwin Elber, who was a consultant on labor matters to the War Manpower Commission in Northern California during World War II, under the direction of Sam Kagel, who himself lectured at the school on more than one occasion. Elber was also national organizer for a Communist-dominated union whose members worked in sensitive government positions. It was known as the United Federal Workers of America, and had chapters in every large city throughout the country. Elber's triple role as a trade union director for the Communist school, organizer for a nation-wide Communist-controlled union of Government employees, and consultant on labor matters to the War Manpower Commission in Northern California,

rendered him a formidable figure indeed. His office was located in room 302 of the Balboa Building at 593 Market Street, and his neighbors on the same floor were the International Union Council, Labor's Non-Partisan League, International Longshoremen's and Warehousemen's Union, separate offices occupied by Harry Bridges and Louis Goldblatt, the King-Ramsay-Connor Defense Committee, and the State, County and Municipal Workers of America. All of these organizations were oriented toward the Communist Party, and most of them were completely controlled by it.

Richard Gladstein and Herbert Resner also lectured at the school, and so did Aubrey Grossman and his wife. Mr. Grossman joined the Young Communist League while a student on the Berkeley campus, and was largely responsible for the success of the Communist schools in the Bay Area. He also was educational director for the Communist Party of San Francisco, and he wrote a letter on its official stationery urging all Communists to attend the school and give it all possible support. Messrs. Gladstein and Resner were Communist attorneys in San Francisco and active in representing the party itself as well as its galaxy of front organizations. Others whose activities make them worthy of special note, and who lectured at the school, were Jules Carson, educational director of the Communist Party of Alameda County in 1939, and Adam Lapin, associate editor of the Communist newspaper *People's World*, and well known in a succession of Communist organizations and activities.

Louis Goldblatt has heretofore been mentioned as the secretary-treasurer of the International Longshoremen's and Warehousemen's Union with his offices located on the same floor of the Balboa Building as those of Irwin Elber. Mr. Goldblatt has been identified as a member of the Communist Party as have Adam Lapin, Verne Smith, Jules Carson, and Wilhelmina Loughrey, who ran the Communist Book Store near Sather Gate. Mr. Goldblatt's two daughters are now attending the University of California at Berkeley and played prominent roles in the student demonstrations that started in September of last year. Goldblatt was a delegate to the Chicago Emergency Peace Mobilization in 1940 and persuaded the California State Industrial Union Council to assist in the work of that Communist front organization. He was secretary of the CIO State Council, and reliably reported to have been a member of the Communist Party since 1934, most of his activity having been in the Maritime and CIO unions. He was a member of the Trade Union Unity League in 1937 and 1938, played an important part in labor's Non-Partisan League, participated in the Institute on Labor Education and World Peace at the University of California, a program to which we have heretofore referred, and he delivered the main speech at a California Labor School banquet honoring Holland Roberts in 1947.

Another lecturer at the Communist school was John Jeffrey, head of the State, County and Municipal Workers of America. This Communist-controlled union of employees of the state and its political subdivisions, flourished during the late 30's and early 40's and was the dominant factor in the infiltration of the State Relief Administration during that period. Its members worked on a somewhat lower level in government jobs than did Elber's United Federal Workers of America—but the difference ended there. Both organizations were used to insinuate trusted party members in places of strategic importance and from these vantage points they managed to recruit, indoctrinate, and carry on the party program to the best of their ability. As we pointed out in our 1963 report, Dorothy Ray Healey is an

excellent example of this technique, having performed vital work in the interest of the Communist Party from her position of vantage as a Deputy State Labor Commissioner.

Of course, it was nice also to have large numbers of Communists on the public payroll so that the taxpayers would support them, not only when they performed their services for the state, or for the county or municipal governments in which they worked, but also while they were carrying on their Communist activities. The SCMWA reached the height of its activity just before or shortly after the close of World War II, and during that era it was relatively simple to determine which government office was sympathetic to Communism by walking in and taking a look on the bulletin boards and the desks of the employees and noting the propaganda material issued by the United Federal Workers of America, the State, County and Municipal Workers of America, the United Office and Professional Workers of America, (this latter organization functioned in non-governmental positions,) and also by the number of copies of the *People's World* that were scattered about the office.

David Adelson also lectured at the Communist School in San Francisco on occasion. He was president of Chapter 25, International Federation of Architects, Engineers, Chemists and Technicians. This union of technical personnel was actually started in the Soviet Union, and served as an excellent cover for espionage activities, particularly at Berkeley in connection with the development of the atomic bomb. We have covered this subject in some detail in previous reports, but it will do no harm to point out that there was a strong chapter of the organization in Alameda County under Mr. Adelson's supervision, that we had an informant who served as secretary for its executive board, and minutes of the board meetings were replete with pro-Communist declarations, discussions of the best techniques to spread propaganda and secure information, and references to well-known Communists who were active in the Bay Area who served as a liaison between the party and the FAECT Chapter 25. Marcel Scherer was the national organizer for this union, spent a great deal of his time in San Francisco and Berkeley during World War II, and was in frequent conference with members of the War Manpower Commission and officials of the Berkeley campus of the university.

We have frequently discussed John Howard Lawson in connection with our description of the Communist penetration of the motion picture industry, which was largely directed by him in Hollywood and by V. J. Jerome from New York. Mr. Lawson has been a member of the Communist Party for a good many years, is a writer of motion pictures, scenarios and plays, has written several books, and frequently lectures to Communist front organizations and at Communist front groups.

Paul Radin, the noted anthropologist who was once a member of the faculty on the Berkeley campus, also lectured at the California Labor School. Mr. Radin was recruited to Communism through the efforts of an expert in this field, Norman Mini. Mr. Mini has testified before this committee, has explained his long membership in the Communist Party and also in the Socialist Workers Party, and has explained the techniques used by him to indoctrinate and recruit Dr. Radin and other members of the Berkeley faculty. We wish to make it clear at this point that Paul Radin's brother Max was a professor in the Law School at the university in Berkeley, and had no connection with the Communist Party at any time.

There were, of course, many other Communists and Communist sympathizers who taught at the party's San Francisco schools. Space will

not permit a more detailed treatment of these highly important institutions, but in order to have the proper perspective before considering the Berkeley rebellion in detail, one must first realize the true nature of the Communist school, and the character of the propaganda that flows in ever-growing streams from the San Francisco sources of supply. Once we realize that the Party has always operated the entire Pacific Coast and Hawaiian apparatus from San Francisco; that the major propaganda sources are situated in that city, and that the indoctrination and recruiting schools are located there—only then is one adequately equipped to begin understanding why the main force of California Communism is located in the Bay Area instead of Los Angeles.

Red Chinese Propaganda

We have mentioned in the 1963 report that there was a deep split in the American Communist Party that grew from the Sino-Soviet rift; that the Mao group in the party calls itself the Progressive Labor Movement, and follows the concept that peaceful co-existence is a betrayal of Marxist-Leninist principle, and that there must be permanent and violent conflict with the capitalist forces leading to an inevitable large-scale struggle which, they confidently believe, the Communists will win. We also pointed out that both Peking and Moscow are in perfect agreement about the necessity of subverting the class enemy by attacking the United States and rendering it weak and vulnerable, and that there must be a relentless drive for world domination, and that these two major Communist powers only disagree about which techniques can best be used to attain that objective.

Since the publication of our last report Red China has opened an extensive propaganda outlet in San Francisco. It was first located at 292 Gough Street, and then moved to larger quarters at 2929 24th Street on July 1, 1964. It is known as "China Books and Periodicals," is well patronized, and is listed in Washington as an agency for a foreign government. When a united front is needed for a common cause, we see these dissident Communist factions collaborating. Thus when the Berkeley rebellion started we found a united front being formed with Trotskyites, Maoists, Socialists, and Moscow Communists joining forces with a wide variety of other groups.

The United Front

The term "united front" came into usage after the Seventh World Comintern Congress. It simply means, in the Communist sense, that members of the party will attach themselves to some popular cause for which large groups of non-Communists have manifested a willingness to take some positive action. They will then espouse the same cause, weld the groups together, trim down the leadership to the point that it can be dominated by the Communist minority, and from that time they will control the mass movement and bend it to their own objectives. The principal objective is to whittle away opposition and transform the popular cause into a class struggle.

The following excerpt from a book by the originator of the united front, entitled "United Front; The Struggle Against Fascism and War," will put the concept in focus.

Dimitroff is addressing the young delegates to the Seventh World Congress of the Communist International, as follows:

"On the basis of the experience you have already gained, in the decisions of the Seventh Congress of the Communist International, we expect you to find the proper ways and means of accomplishing the most important task of your movement, the task of uniting the forces of the entire non-Fascist youth, and first and foremost, of the working class youth, the task of achieving unity with the Socialist youth.

This, however, cannot be achieved if the Young Communist Leagues keep on trying, as they have done hitherto, to construct their organizations as if they were *Communist Parties* of the youth; nor will this be possible if they are content, as heretofore, to lead the secluded lives of sectarians, isolated from the masses.

The whole anti-Fascist youth is interested in uniting and organizing its forces. Therefore you, comrades, must find such ways, forms and methods of work as will assure the formation, in the capitalist countries, of a *new type* of mass youth organizations, to which no vital interest of the working youth will be alien, organizations which, without copying the party, will fight for *all* the interests of the youth and bring up the youth in the spirit of the class struggle in proletarian internationalism, in the spirit of Marxism-Leninism.

This requires that the Congress should very seriously *check up* and *reappraise* the work of the Young Communist Leagues, for the purpose of *actually* achieving their reorganization and the fearless removal of everything that obstructs the development of mass work and establishment of the united fronts and unity of the youth.

We expect the Young Communist International to build up its activity in such a manner as to weld and unite all trade unions, cultural, and educational and sports organizations of the working youth, all revolutionary, national-revolutionary, national-liberation anti-Fascist youth organizations for the struggle against fascism and war, for the rights of the young generation.

We note with great pleasure that our young comrades and friends in the United States have actually joined the mass movement of the united front of the youth which is so successfully developing, and have already achieved in this sphere successes which hold out great promises. All sections of the Young Communist International should profit by this experience of the French and American comrades."*

Thus each Communist front organization is actually an exemplification of the Dimitroff device; for each is composed of a majority of non-Communists united together because of a common purpose on which they can take common action; for better housing, for relief of poverty, to end racial discrimination, and the like. Occasionally the Communists will move quietly in until the infiltration has managed to capture key positions and gain control. More often they will start a new organization and use it to attract others. Then several fronts will be persuaded to join forces for the common objective, and this is the classic united front of organizations as originated by the secretary of the Third Communist International.

In previous reports we have described a formidable device used by Communists the world over and which is commonly referred to as "the diamond pattern." This operation permits a handful of dedicated Com-

*"The United Front: The Struggle Against Fascism and War," by Georgi Dimitroff, General Secretary of the Communist International. International Publishers, New York, 1938, pages 149-150.

munists to move into and take control of a large non-Communist organization. It was used to capture the Communist-dominated unions several years ago, including those that we have heretofore mentioned in connection with the California Labor School, and it has also been used with deadly effect among the important trade unions of Great Britain. Writing in the *Saturday Evening Post* for February 4, 1961, pages 33 and 68, Ernest O. Hauser described the operation through the observations of William J. Carron, President of Amalgamated Engineering Union of Great Britain, whose membership of over a million members makes it England's second largest union organization.

" 'The Communists do all the homework in our branches,' Carron began his story. 'There'll be a local union meeting somewhere, and half a dozen Communists will be among those present. These six fellows will wait until most of the others have gone for a cup of coffee. Then they get busy and press a resolution that goes out in the name of the entire branch—a thousand members, maybe.' No more than seven per cent of the union's rank and file, by Carron's estimate, was pro-Communist. But as the engineers were scattered through some critical sectors of Britain's industry—including shipyards, steel mills, automobile and aircraft factories, chemical and electronic plants—the Communists had long paid a special attention to this mighty union. By cleverly manipulating local and district elections, they have been able to get a disproportionate number of their men into the union's governing bodies. Thus, when the union's national committee of fifty-two met for its annual policy-making session last Easter, it included no fewer than twelve members of the Communist Party and ten known fellow-travelers. The rest was split, as a result of the Communists' homework, sixteen to fourteen in favor of unilateral disarmament."

About a year ago Reverend James H. Robinson requested permission to testify as a voluntary witness before the House Committee on Un-American Activities in Washington, D.C. He appeared before the Committee on May 5, 1964, a Pastor Emeritus of the Presbyterian Church of the Master, New York City, and director of a private organization known as "Operation Crossroads Africa, Inc.," 150 Fifth Avenue, New York City, which he created and directs. Reverend Robinson, who had been affiliated with several Communist front organizations in past years, stated that he had discovered the Communist hypocrisy, was familiar with their techniques, and appreciated the extremely critical danger of doing business with them. Since his remarks are similar to those of trade union labor leaders, who had comparable experiences, and because the techniques used there and the techniques experienced by Reverend Robinson will be pertinent to our discussion of the organizational activities of the Free Speech Movement at Berkeley, we set forth some of Reverend Robinson's testimony herewith:

"Mr. Ichord: You stated in your testimony that back when you were associated with Mr. Robinson and Ben Davis and others in several causes, that at that time you were of the mind that you would join with a Communist or anyone who was working for the objectives that you had in mind, and then later on you changed your mind. I would like you to elaborate somewhat on that.

Mr. Robinson: Well, I came to the place where you have to recognize first of all that you might do your own cause and yourself more harm if you join with people who are better organized than you are,

and better disciplined in a group than you are, and their greatest asset is tight discipline.

They know where they are going and what they want to do. They can play it easy or soft. They can sit in a meeting that everyone leaves and as long as there is a quorum, and they will get the votes. I saw this happen many times at first without knowing what was happening. I learned, but some people never did learn. I do not think it would be to my advantage, for example, in Operation Crossroads Africa, to let a Black Muslim come into Operation Crossroads Africa—I admit that one got in from the University of California at Berkeley, but we put him on a plane for Africa when we found out about it, and sent him home.

I would say the same thing about Communists. I would not let Communists in either. Now, would I let them co-operate with us in anything? No, I would not take that old position of co-operating any more. I would not get involved with people with ulterior motives who really end up trying to use you to make capital for their ends."

Speaking about why Americans become Communists, Reverend Robinson had this observation:

"I think there are a good many people who do not like anybody or anything; who are unhappy, dislocated personalities. This gives them a feeling of importance and of power when they join a dissident movement. I think this is a very strong thing in the minds of a good many people who take the Communist ideological position.

Now in Russia or some other place there may be different reasons. But I think in this country that is so. I look back on some of these people in those days who were on these committees, who were against everything and everybody. They were the happiest, I feel, when everybody else was tearing their hair out, if I can put it that way. There are some who take it, of course, because they want to be at the top. If they can get in control they will be in the strongest group. That is, a strong group makes all the decisions for everybody else. And I think this plays a pretty important role in the minds of many people who become Communists."*

Use of the diamond pattern technique which enables a small group of highly-trained Communist professionals to secure control of a trade union, a front, a unit of the Parent Teachers Association, or any other organization deemed of strategic importance for Communist objectives, is an illustration of the capture of a single unit or organization. But the same device has proved equally successful throughout the world when employed to form a united front by bringing several organizations together, thus forming a broad mass base for important action. The formula is always the same: First a few Communists will unobtrusively insinuate themselves into several organizations, scrupulously concealing their Communist affiliation, and eventually working their way into positions of authority. Then an agreement will be reached on forming a united front movement behind a popular cause. This new united front movement will operate on democratic principles for awhile, and then because it proves unwieldy and inefficient, the control will be narrowed down to a steering committee or an action committee, or an executive body, so that by narrowing down the organizational structure, a few Communists can work their way into this unit and can thereby control the macrocosm as effectively as they can control a single-unit microcosm.

*Committee transcript, May 5, 1964, pages 1791-1792.

The San Francisco General Strike

It will be well to examine at this point another great united front movement that soon was taken over by a small group of Communists who managed to exercise a dominant position in the San Francisco General Strike of 1934. This was an enormous movement that tied up the entire Bay Area, resulted in the loss of lives, and provoked demonstrations of fiery violence. It was centered on the International Longshoremen's and Warehousemen's Union, and soon mushroomed into radical labor ultimatums that were constantly changing, and that soon produced a deadlock which paralyzed the economic life of the Bay Area.

There has been much discussion about the San Francisco General Strike of 1934, which may seem ancient and irrelevant to include here, but which is another classic example of a united front movement that was operated in the same general manner and by the same general elements as the Free Speech Movement. The Communist Party disclaimed responsibility for actually exercising control over the strike strategy in 1934, just as the Communist Party always disclaims responsibility for a large united front movement that results in violent and revolutionary tactics. But we are fortunate in having a document, issued by the Communist Party itself, which removes any lingering doubt about the part played by Communists in the general strike of 1934. This booklet, an exceedingly rare piece of subversive literature comprising eighty pages and entitled, naturally enough, "The Great San Francisco General Strike," was prepared by William F. Dunn, and issued by Library Publishers, New York, pursuant to a resolution adopted by the Central Committee of the Communist Party of the United States at a meeting held on September 5-6, 1934. It asserted that the Communist Party was subjected to a vigorous attack because its "... program and influence accounted in the main for the solidarity of the mass movement and the fact that the working class was able to resist successfully the efforts of the employers and their government to smash the unions and institute the open shop all along the west coast as they had planned." (pages 3-4)

And on page 9, the booklet proclaimed that: "The strike reached its highest point in San Francisco because the influence of the Communist Party and the waterfront unions was strong enough to defeat the reactionary leadership." The most prominent of these unions was the International Longshoremen's and Warehousemen's Union, and some of its officers in 1934 are still in charge of that union, and at least one of them was consulted by the University of California administration during the student rebellion of 1964-65.

Like the demonstration against the House Committee on UnAmerican Activities in San Francisco in May of 1960, and like the demonstration against the administration of the state university at Berkeley, a united front is first formed with the broad base of non-Communist membership, and then is gradually taken over by the Communist Party, as we have already stated. This is precisely what happened in 1934. There were legitimate complaints against employers then, and in 1960 there were undoubtedly many people who felt that the House Committee was too sensational in its hearings and too careless in its charges; and in 1965 both faculty and students alike at the university in Berkeley were frustrated by years of confusion, bureaucracy, and a detached and aloof attitude on the part of the administration which seemed far removed from the life of the campus and smothered in a mass of red tape. But, let us see what

occurred in both the 1934 General Strike and in the 1960 demonstrations against the House Committee. We shall soon see the same formula used against the Berkeley campus in 1964-1965.

Mr. Dunn, speaking for the Communist Party of the United States, put it rather well when he declared in 1934 that:

"In the San Francisco General Strike (as in other strikes dealt with) we have a classical example of the Communist thesis that, in the present period of capitalist decline, a stubborn struggle for even the smallest immediate demands for the workers inevitably develops into general class battles. Beginning in a typical economic struggle over wages and working conditions of longshoremen, there took place, step by step, a concentration of class forces in support of one and the other side which soon aligned practically the entire population into two hostile camps: Capitalist class against the working class, and all intermediate elements towards support of one or the other. It became the well-defined class struggle, a test of strength between the two basic class forces. The economic struggle was transformed into a political struggle of the first magnitude." (page 67)

And on page 8, Mr. Dunn stated that:

"... In this sense, the strike was truly the greatest revolutionary event in American labor history."

And on page 72 he makes this significant statement:

"The Communists . . . are fully aware of the fact that out of every class struggle the workers can gain experience that will teach them the correctness of its revolutionary policies and tactics and win their confidence and support. This our party also attempted to do in San Francisco."

Twenty-six years later, SLATE, the radical student organization at Berkeley, took a leading position in organizing the demonstrations against the House Committee on Un-American Activities. It attracted a large number of students who were certainly not Marxists, but who, for one reason or another, were persuaded that the very word "Un-American Activities Committee" denoted an extra-legal, fascist, red-baiting organization that exercised no legitimate function except to pry and snoop into the private opinions of citizens and to smear their names publicly. This attitude is the result of years of intense propaganda by the Communist Party and its sympathizers, and they have stubbornly persented this completely distorted image of the House Committee so that the very mention of its name evokes in the mind of the average liberal a reflex action of intense and blind loathing.

But after the groundwork had been done, and the efforts of SLATE and other radical student organizations had enlisted the mass support of hundreds who were not oriented toward Marxism in any way, and after the violence at the San Francisco Civic Center which disrupted the meeting of the Committee and caused police to charge into the crowd in order to disperse it and restore order, the non-Communist elements returned to their daily pursuits, while the hard core of leaders managed to milk this revolutionary incident dry of every drop of propaganda that could be extracted.

Communist techniques rarely change; some of the refinements are tailored to fit changing conditions, but basically the old ways that have been tested and found successful are left alone. It is fundamental to all serious students of practical Communism that the party will always exploit large mass demonstrations such as strikes, rallies, and rebellions and

endeavor to transform them into class struggles. Thereafter they will propagandize, recruit, infiltrate, and consolidate their gains. It is also an old and successful Communist device to make a bold and wholly insupportable demand, and then allow a weak and indecisive opponent to claim victory by retreating ever so slightly. Thus if student rebels boldly lay claim to complete control of a university, and demand to handle the curriculum, select the members of the administration, handle all disciplinary matters, and provide everything but the money with which to operate the institution, their demands will undoubtedly be denied. Then they will settle for only the right to select the administrators and handle discipline—thereby allowing the administration to proclaim that the matter has been arbitrated and successfully settled.

This old Communist trick of launching a propaganda campaign to begin the operation, then organizing a broad popular front, whittling down the leadership and gaining control of the movement, pressing for outlandish demands, and then yielding a little in order to settle the controversy, is a familiar pattern we have seen used in countries throughout the world. They will steal half your property, set up cannons pointing at your residence, arrogantly proclaim their perfect right to do so, and then make a condescending settlement by removing the cannons and leaving machine guns in their place. As we shall see in greater detail later, the entire controversy at the University of California which commenced in the spring of 1964, actually amounted to a simple dispute between the students and the administration concerning the right to maintain tables at the university entrance for the purpose of collecting money and recruiting people for political activities off the campus. Then, with each administration concession, the students made a new series of demands that were always more bold, more arrogant, and made under the threat of another violent demonstration. As matters now stand, the FSM has secured virtually everything it asked for, and is now planning to gain control of the entire educational program at the university.

There have been demonstrations at other universities in this country, of course, but they were handled effectively and quickly by the authorities, and none of them even approached the massive revolutionary and forceful proportions of the Berkeley rebellion that erupted in September 1964, and which is still continuing. Probably one of the most heavily-infiltrated universities was the College of the City of New York during the late 1930's. According to an authority who is probably the best in his field, the situation there was comparable to the situation at the University of California during the same period. This description, which is taken from "The Story of an American Communist," by John Gates, states:

"The student body at CCNY was in ferment. The old world had been found wanting; ideas and shibboleths of the past were examined, assailed, discarded; new, radical notions became popular. The campus was a hive of political clubs: The Liberal Club, led by Lewis Feuer and Joseph P. Lash; a Socialist Club led by Winston Davis and William Gomborg; the pro-Communist Social Problems Club, led by Max Weiss, Max Gordon, Adam Lapin, Joseph Starobin; The Catholic Newman Club; Societies of Young Democrats and Young Republicans, and many others." (page 17)

Gates joined the Social Problems Club but was relatively inactive, only listening and staying and slowly becoming indoctrinated with the Marxian viewpoint. The most prominent Communist Party member at the college during this time was Max Weiss, who was also a member of

the National Committee of the Young Communist League. Weiss persisted in editing an unauthorized publication of the Social Problems Club, and was expelled from school.

The Social Problems Club was by no means restricted to the campus of the College of the City of New York. It was also the first Communist student group at the University of California at Berkeley, having been organized there on January 1, 1931, held its first meeting at Stiles Hall YMCA, and which was completely dominated by the Young Communist League, featuring such speakers as Louis Goldblatt, then secretary of the San Francisco Labor Council, and a notorious Communist; James Branche, a member of the Communist Party of Canada, and Sam Darcy, who was the organizer for District 13.

In the spring of 1934 the Social Problems Club became the Berkeley Chapter of the American Student Union, and was locally headed by Aubrey Grossman. He was an undergraduate at Berkeley at the time and later became an official of the Communist Party in San Francisco. His law firm has represented the party on a number of occasions and has always specialized in handling the legal problems for Communist-dominated unions and an array of front organizations.

From no less an authority than William Schneiderman, who for some fourteen years was the head of all Communist activities in District 13, we know that a campus unit of university faculty members existed at the University of California in Berkeley since the early 1930's.* This Communist organization was known as "Unit Five" and often met in the home of Professor Haakon Chevalier, professor of Romance Languages, and who was to become well known as the man who played a leading role in the Oppenheimer Security Case.†

As the student population of the Berkeley campus grew, so did the Communist organization there, until it managed to establish a propaganda book store within a block of Sather Gate—then, as now, the main entrance to the university, and organized the Mike Quinn Club, the Merriman Club, the Corodonic Club and other party units composed in whole or in part of students. The Merriman Club was named in honor of the late Major Robert Merriman, who came from the Economics Department at the university to become a major in the 15th International Brigade during the Spanish Revolution. He was killed fighting for the Loyalists in Spain, and is mentioned in every reliable account of the Spanish Revolution as a leader of the Communist elements in the Lincoln Battalion.‡

By 1939 it had become evident that the University at Berkeley would soon be conducting research projects under government contracts, and as we will soon see, the Communist high command decided to plant one of its controlled scientific organizations in Alameda County and scatter its politically reliable members throughout strategic departments. This was Chapter 29 of an organization known as International Federation of Architects, Engineers, Chemists, and Technicians under the immediate direction of Marcel Scherer, a graduate of the Lenin School of Political Warfare in Moscow. We have briefly alluded to the FAECT herein, and described this organization at length in our 1951 report. Excerpts from the executive board minutes of this espionage apparatus were published verbatim, and the astounding disclosures of this grim undertaking were largely shrugged aside as "red-baiting," and "witch-hunting." In the

*1943 report, page 114.

†1943 report, page 115.

‡Gates, *op. cit.*, pages 56-58.

light of subsequent developments, we cannot conceive of any sane American being so naive and apathetic today. They can no longer afford such an attitude.

With the beginning of research that led to the development of the atomic bomb, and continuing through 1945, Marcel Scherer met with government officials entrusted with the operation of our war effort in the Bay Area: The War Manpower Commission, The Office of Price Administration, The Office of Wage Stabilization, and the entire War Manpower program on the Berkeley campus under the direction of Berniece May. Here, then, was a Soviet-trained director of a scientific espionage medium, consulting and planning with government officials who occupied positions of enormous importance to our war effort. Some of them were clearly pro-Communists; some were little more than opportunists who would cooperate with anyone to promote themselves; others were quite aware of what was going on but too powerless and frustrated to do much about it.

This was the era of tolerance towards Communism. Many American liberals had been lured into front organizations through sympathy for Spanish Loyalists, and because we were temporarily allied with the Soviet Union against a common enemy. Many of these people moved on through a number of Communist front groups, others joined Communist-dominated unions, and some taught in or sponsored the Communist School in San Francisco.

During the same period the Unit Five members were spreading Marxism on the campus, and the student Communists were recruiting for the Young Communist League. Norman Mini has testified about recruiting professors while he was on the campus, and other students have given testimony about some of their experiences in the Communist clubs heretofore mentioned. Nathan Gregory Silvermaster was regarded by the rank and file members of the student Communists as a comrade of no particular significance, but when one of them was ordered to leave the university and take up a party assignment in Sacramento, he mentioned the fact to Silvermaster who accompanied him to the office of District 13 in San Francisco, remonstrated with William Schneiderman, who was then organizer for the district, and the order was rescinded. Silvermaster moved on from Berkeley to take positions in various agencies of the federal government, and it was in his Washington residence that the documents were photographed that had been taken by Alger Hiss from the State Department and returned after they had been photographed in the Silvermaster cellar.

In the late 30's there was a brutal killing of the engineer on a vessel called the *Point Lobos*, while the vessel was moored to an Oakland pier. The murdered man, George Alberts, had a reputation as a determined anti-Communist, and four members of the Communist Party participated in his liquidation. Three of them were arrested, prosecuted by Earl Warren, who was then District Attorney of Alameda County, and sent to San Quentin penitentiary. The fourth Communist who participated in this crime escaped, and was assisted in doing so by some student Communists at the University of California at Berkeley. He thereafter is reliably reported to have escaped through Mexico and has never been heard of since. Testimony concerning this entire case, together with the role played by the young Communists at the university, was given before the Committee at hearings several years ago.

We cite these preliminary matters only for the purpose of showing that the largest university in the United States has long been a target for Com-

munist infiltration. It was conveniently located near the headquarters for District 13 in San Francisco; the first Communist unit was planted on the campus almost at the same time that the Communist Party of the United States began to solidify its nationwide organization. There is overwhelming evidence to the effect that beginning with the Social Problems Club and continuing through Unit Five of the faculty organization down through the war years and thereafter, the university has been a constant target for Communist infiltration and activity.

Demonstrations by students at Sather Gate are nothing new. What *is* new is the professional technique, the highly sophisticated organization, the long-range strategy, the outrageous demands, the disrespect for the entire university administration—from Regents down. New, also, is the element of viciousness and violence, and the employment of extra-legal actions at a time when legal means were available to the students for settling their differences with the university administration. The mass united front technique is also new, so far as the Berkeley campus is concerned, and whereas previous student demonstrations from the 20's to the 60's had been characterized by large numbers of milling students, speakers, and the distribution of propaganda literature, there was nothing that approached the mob violence, the hatred and bitterness, the utter lack of respect for the administration, and the generation of the class struggle concept that characterized the Berkeley rebellion of 1964-65.

The Role of SLATE

The two student organizations that played the dominant roles in the Berkeley rebellion are SLATE and the DuBois Clubs. We have already devoted considerable attention to the formation and activities of SLATE in previous reports, and we shall briefly recapitulate that material here, and bring the history of the organization up to date. The DuBois Clubs of America is, however, a relatively new organization, having been formed since the publication of our 1963 report, and we are fortunately in possession of a great many of the documents issued by the DuBois Clubs. We consider it utterly impossible for anyone to adequately understand the nature of the Berkeley rebellion without first understanding the nature of these two organizations.

During the first semester of 1957 a student organization called TASC (Toward A Better Student Community), later known as SLATE, was started by three students from Berkeley who were dissatisfied with the operation of the Associated Students organization, and who were concerned with academic freedom and civil liberties. This student political organization was designed to place its own candidates in places of responsibility through student elections, and to campaign actively for its principles. The first campaign was unsuccessful, but during the second semester the organization became stronger and attracted a considerable following. It was in October, 1957, that Rule 17 at the Berkeley campus was modified to allow off-campus organizations of students to utilize campus facilities for their programs if they secured permission a week in advance. They were not, however, to solicit members, funds, or to engage in any religious proselyting.

SLATE's organizing convention was held in the Student Union on the Berkeley campus over the weekend of February 28, 1958. Mike Miller was elected chairman and Patrick Hallinan vice-chairman. Hallinan was thereafter to head the San Francisco Youth Festival Committee for the

eighth meeting of the World Federation of Democratic Youth, Soviet-controlled, at Helsinki, Finland. Other SLATE officers who participated in that meeting were Kenneth Cloke, Michael Tigar, and Michael Meyerson. Patrick Hallinan's brother Terence is an organizer and officer in the DuBois Clubs of America, which will be discussed later.

After SLATE had organized and launched itself on a career of picketing, demonstrations, and pressing for civil liberties, and freedom of speech; had placed its members in student offices on the campus, and expressed its distaste for the Berkeley administration, it elected a new group of officers who were: chairman, Al Madian; vice-chairman, Dave Armour; secretary, Brenda Goodman; treasurer, Brad Cleaveland; representatives, Dick Bowen, Howard Taylor, Pete Graham, and Marvin Sternberg; Administration, Jim Payne; national student association, Marvin Sternberg; education policy, Ted Kompanetz; athletic policy, Bob Gillen; civil liberties, Mike Shutz; student welfare, Bob Orser; A.S.U.C. analysis, Ted Kompanetz; national and international, Jim Gallagher; state and local, Dick Bowen.

By the end of the 1958 school year, a SLATE publication, *Cal Reporter*, owned its own printing press which was formerly the property of Lawrence Steinhart, a graduate student in Social Welfare. Financially the paper had a cash reserve of a hundred dollars remaining from the previous semester, but owed a balance of one hundred and thirty-five dollars on printing equipment. Cash donations were received from Carey McWilliams, Jr., who gave \$250; Al Madian, who donated \$50; David Rynin, Jr. son of Professor David T. Rynin of the Department of Speech, who not only edited the paper but donated \$60; Peter Franck, who gave \$100 and Pete Graham, who contributed \$90.

We are quoting a great deal of this material from a portion of the section concerning SLATE which we published in our 1961 report, and we are selecting those excerpts which in our opinion characterize the defiant attitude of SLATE toward the administration at the Berkeley campus, just as the same type of defiance on a larger scale characterizes the united front activities of the students engaged in the Berkeley rebellion of 1964-65. An example of the attitude of SLATE in this direction may be seen from editorials appearing in the issue of its paper for October 4, 1958. Apparently the students were somewhat disillusioned about the attitude of President Clark Kerr, who was beginning to crack down on the activities of student groups like SLATE, which then were becoming arrogant and actually interfering with the orderly conduct of the student body of the university. The editorial took Kerr to task for decreeing that there could be no more student demonstrations outside the front gate of the university:

"Hooray for President Kerr. His experimental suspension of the rule keeping candidates for state office from speaking on campus is a step toward giving campus life some resemblance of 'real' life. We only wish that the administration would not take two steps backward before they take one forward. What we are referring to is the outlawing of street speakers at Sather Gate.

Vice-Chancellor Sheriffs has graciously given speakers a chance to stand in an ivy patch the university is giving to the city anyway. We think that is mighty big of them, but we wish that the 'new Spirit' didn't mean the end of one of the best 'old traditions.' The *Daily Cal* has come out for retention of Sather Gate as a haven for

free speech. An Ex.Com. has sent a letter to the administration to the same effect.

So far, nothing has come of it. But judging by our own experience, we suggest that they inquire whether the administration ever 'received' it at all."

In the same issue the editorial writer expressed himself concerning the administration's disinclination to take any action permitting the *Cal Reporter* to be distributed among the students on the campus. The editorial writer complained "it's been almost six months since the *Cal Reporter* applied for permission to distribute on campus, and can you guess what's happened? Nothing."

These demonstrations at Sather Gate were usually held during the noon hour when thousands of students were emerging from their classes and were compelled to go through that gate on their way to lunch. Virtually all of these meetings were of an extremely radical nature, the crowd being harangued by the speakers and handed propaganda by student organizations of one kind or another. On many prior occasions Communist Party officials had addressed the students immediately outside the entrance to the university, and about a block away there was a Communist book store which kept supplies available under the administration of Mrs. Wilhelmena Loughrey, who has appeared as a witness before us, and who has been referred to on numerous occasions in earlier reports. This book store no longer has any useful function, because the propaganda that it used to distribute to students outside the university campus is now freely circulated on the campus itself, together with a rash of the most disgusting pornographic literature and a constant deluge of political propaganda ranging all the way from the mildest form of Socialism to the most militant form of material from Red China.

We pointed out in our 1961 report how SLATE was used as a transmission belt and through it reached the student body at large. We did not then imply, nor do we wish to imply now, that all of the members of SLATE were Communists or that the organization could be accurately described as a Communist front at that time. It certainly has become Communist-dominated since our 1961 report was issued, and from the very inception of this organization it is quite obvious that its leaders were strongly oriented toward Communism. Some were enthusiastic fellow-travelers, and others were simply willing to be led by their more articulate, disciplined and energetic colleagues and by the brash and insolent activities of the movement.

The 1964-65 rebellion in Berkeley was set off over denial of permission to set up tables at the entrance to the university. This being so, it is important to understand that exactly four years earlier, SLATE had engaged in a running battle with the university administration over the same identical controversy. President Kerr prohibited demonstrations at this point, but permitted students to assemble at Dwinelle Plaza on the campus, there to distribute such literature as they wished, and to make such utterances as they desired, so long as the proceedings related to campus activities and the legitimate interests of the student body.

On October 13, 1960, a SLATE officer addressed a mass meeting of students at Dwinelle Plaza, attacked President Kerr's policies and declared to the assembled students:

"Kerr's directives reflect his training in Industrial Relations, and reveal what Kerr would do if confronted by union leadership which didn't represent union members. I'd say democratize the union.

Clark Kerr would say castrate (sic) the leadership. Take this philosophy over to the ASUC and dump it and you have the Kerr directive."*

The student, who uttered these earthy and defiant statements was Mike Tigar, SLATE leader and candidate for ASUC Representative-at-large. Tigar was not only an officer of SLATE in 1960, but two years thereafter he was a member of a three-man committee that made the preparations in the United States for the Eighth World Youth Festival in Helsinki, was a delegate to that Soviet front organization of world youth, and reported on the proceedings in an article for the Communist paper in San Francisco, which was reprinted in the national Communist youth publication, *New Horizons for Youth*, in the October 1962 issue, page 13. This was the organ for the Youth Commission of the Communist Party, and its office was located at 799 Broadway, Room 233, New York 3, N.Y. There were eight other members of SLATE who were active participants at this World Communist Youth Festival. They were: Dave Armor, Kenneth Cloke, Michael Hallinan, Terence Hallinan, Clinton Jencks, Monica Klein, Beryl Landau, Michael Meyerson, and Michael Tigar. Three of these, Meyerson, Tigar and Cloke were immediate past presidents of SLATE at Berkeley, and we should not overlook the fact that Carl Bloice, although neither connected with the Berkeley campus nor SLATE, also attended the Helsinki Youth Festival, is presently a staff member for the Communist newspaper in San Francisco, *People's World*, and while at UCLA was the spark plug behind yet another early Marxist organization called the Independent Student Union. We mention Bloice because we will have occasion to refer to him hereafter in connection with the Berkeley rebellion.

Bloice is now director of publicity for the new Communist youth organization, DuBois Clubs of America, and Bettina Aptheker, one of the leading activists in the DuBois Clubs, was a SLATE candidate for Representative-at-Large of the Associated Students at the University.

From its inception this student organization was aware of the fact that during vacation periods there would be a dormancy which might result in serious loss of membership and also render SLATE so apathetic that its political energy would be seriously impaired. To overcome this condition it not only inaugurated an inter-campus exchange of correspondence with universities, colleges, state colleges, and other educational institutions throughout the country, but also inaugurated a system of summer conferences to which lecturers were invited to address delegates from student organizations.

On May 21, 1960, a SLATE "Inter-Campus Newsletter," was distributed, and read, in part, as follows:

"Due to the importance of reaching all of our contacts before the universities and colleges recess for the summer we are unable to send out as detailed and complete a report on student political parties and student political activity in general as would be desired.

However, this newsletter should communicate to you what is our most important thought—namely, that at last we are going up hill in our attempts to realize effective student political action. We in the West have witnessed in the last few months an encouraging upsurge in political awareness and involvement on the part of hitherto 'silent', if not apathetic, students. The need for inter-campus communication and coordinated action is now even greater.

*The Daily Californian, October 13, 1963.

An addenda to this newsletter discusses at some length the most recent student political activity, the picketing of the House Un-American Activities Committee in San Francisco. We hope to make the abolition of this committee a national effort on the part of students. More information will be forthcoming shortly.

The SLATE Inter-Campus Coordinating Committee will continue to function through the summer. It is important that we have summer addresses as we do not want the communications network we have built up to go 'on vacation' along with the schools. Send summer addresses to Irene Theodore, 2532 Regent Street, Berkeley 4, California."

This newsletter also pointed out that the new student organization at San Jose State College managed to elect two out of their five candidates to important posts in the student government at that institution, and that their members had made the trip north to help with the demonstration against the House Un-American Activities Committee hearings in San Francisco in May of 1960. The student organization at UCLA, "Platform," was reported as having won three positions in the student political government, and to have attained a high degree of activity in political influence at the Los Angeles campus. San Francisco State College was reported as having a student organization somewhat similar to SLATE in the organizational stage, and that it was growing rapidly and had "very strong faculty support!" At Sacramento State there was a new student political party, and it was reported that "having met with some of the individuals heading the organization we are sure things are cooking in Sacramento."

This SLATE communication announced a summer political party caucus which would probably be held at Big Sur State Park, and reported on the conditions at the Berkeley campus as of the summer of 1960 as follows:

"Student government at the University of California has been faced with a major crisis. The Executive Committee of the Associated Students recently challenged the Kerr Directives (which prohibit student government action on 'off-campus' issues, i.e. issues of local, national and international import) by passing a resolution protesting the violation of academic freedom by the University of Illinois where they fired Professor Leo Koch for stating his views on pre-marital sex relations.

Ex-Com was told in a secret meeting called by the Chancellor, to rescind its motion. It stood fast and instead, at its next meeting, passed a resolution entitled 'Scope of Student Government' in which it restated the philosophy that students themselves must decide the limits of their government. Subsequently the Chancellor voided Executive Committee resolution.

We cannot, at this time, predict the effects this administrative fiat will have on student government. As part of its summer activities SLATE will explore the means of having these Directives rescinded. If they remain in effect student government at the University of California will be nothing more than an administrative agent."

The 1962 SLATE Summer Session issued a program which proclaimed that the meetings would be held at the Student Union Building on the Berkeley campus of the University of California, commencing on Friday evening, July 27, and ending on Sunday afternoon, July 29. The conference

program stated that it would open on Friday evening, July 27, with a program of movies: "Come Back, Africa" and "Walk In My Shoes."

On July 28, Saturday, from 9 a.m. to 12 noon, there was to be an introductory session exploring the historical routes and presentation of political, economic, social and psychological situations. The speakers were announced as the Reverend Charles Gillenwater, second vice-president of the San Francisco Negro Historical and Cultural Society; Robert Ward, co-chairman, Afro-American Association, and Ella Baker, Student Non-Violent Coordinating Committee.

From 1 to 5 p.m. on Saturday, July 28, workshops were held, as follows: School Integration: Beverly Axelrod, a San Francisco attorney representing San Francisco chapter of the Committee on Racial Equality; Lydia Barros, Executive Secretary of the San Francisco chapter of the National Association for the Advancement of Colored People. On Housing and Urban Renewal the speakers were: Frank Quinn, San Francisco Council on Civic Unity; Mike Miller, managing editor of the *Liberal Democrat*, and Robert Bradley, representing the Congress on Racial Equality. The panel on Employment featured James Herndon, president of the Negro American Labor Council in San Francisco, and Robert Ward, of the Afro-American Association. The workshop on Voting and Politics featured: Henry Ramsay, Americans for Democratic Action, University of California, and Willie Brown, then a candidate for the State Assembly, a position to which he was subsequently elected. The workshop on Federal Government and Civil Rights featured only one speaker, Carl Bloice, journalist for the *People's World*. The workshop on Community Dynamics, featured Orville Luster, Youth for Service, San Francisco; Carl Werthman, Youth for Service and a graduate student at the University of California in Berkeley, and Javier Brocks, Encampment for Citizenship, Berkeley.*

The period from 8 to 10 p.m. on the evening of July 28th was devoted to music, featuring jazz programs and an introductory lecture by Dewey Redman. On Saturday evening, commencing at 10 p.m. and continuing indefinitely, a house party was scheduled, and on the concluding day of the conference, Sunday, July 29, there was a panel discussion which started at 10 a.m. and ended at 1 p.m., which featured the following speakers in a general discussion of the Negro problem: Ella Baker, Student Non-Violent Co-ordinating Committee; Wilford Ussery, chairman of the San Francisco chapter of the Committee on Racial Equality; Don Warden, co-chairman of Afro-American Association; Minister John X, Black Muslim Brotherhood; Carl Bloice, Marxist journalist, and Terry Francois, chairman of San Francisco chapter of the National Association for the Advancement of Colored People. The speakers who concluded the session for the balance of the day included Carl Werthman, Mike Miller, Carl Bloice, Herb Mills, Robert Ward, Henry Ramsay and Lydia Barros. Those wishing to register for the conference were requested to telephone Dorothy Datz, who was then SLATE chairman, at THornwall 3-5084, or to write her at 1579 Scenic, Berkeley 8, California.

The 1963 SLATE Summer Conference was announced on July 8, 1963, with this letter from Berkeley:

"Dear Friends, this letter is to inform you of the coming SLATE Summer Conference. The topic of the conference this year will be Educational Reform. It will be held between Summer Sessions, July 27-28, at Berkeley.

*The Encampment for Citizenship was described in our 1963 report, page 190, et seq.

Our purpose is to examine in depth the present condition of the educational system, alternatives to this system, and means of altering the system. We hope to crystalize our ideas and to stimulate discussion, thought, and action on the subject. Our major concern is to improve conditions at universities, since we believe they are not presently meeting the needs of mass, industrial, democratic society. By the end of the final plenary session of the conference, we hope to have defined our agreements and disagreements well enough to be able to synthesize our ideas into proposals for action.

To implement these prodigious plans, the conference will combine speeches and seminars. The speeches are intended to offer expert opinions on the present situation, alternatives to it, and methods of action. The exact speakers have not yet been established, but in order to indicate the scope and nature of the conference, we can mention several of those invited. They include Robert Hutchins, past chancellor of the University of Chicago and author of several books on education; James Dixon, president of Antioch College; Paul Goodman, author of many books on education including 'Growing Up Absurd'; Clark Kerr, president of the University of California; and Nevitt Sanford, author of the comprehensive text on American higher education 'The American College.' Of course, we cannot expect all of these to attend, but some are expected to come.

The seminars will cover both the present situation and methods of action (see the enclosed conference outline). We intend these to be both creative and informative. To do this we are inviting an expert in the particular subject of each seminar to be a resource person. The seminars will be opened by these people and then discussion by conference participants will attempt to clarify issues in the area of each seminar and to grapple with the problems involved. The report of each seminar will be mimeoed and brought before the conference as a whole.

We would also appreciate any working papers which you might want to submit on any of the topics to be discussed. These would preferably be by (sic) your own writing, but they may be short articles which you feel are particularly pertinent. We would appreciate it also if you could mimeograph them yourself (400 copies), but if this is impossible, send them to us as soon as you can.

The registration fee will be \$3.00, to cover the cost of mailing, working papers, and other arrangements for the conference.

We enclose below a bibliography of suggested readings. This is by no means complete or comprehensive and certainly will not give any solutions for what is 'bugging' us. That is for us to do at the conference. What they can do is give you a survey of the most pertinent and insightful thought in the field.

Caplow, Theodore and Reece J. McGee, 'The Academic Market Place'; Hutchins, Robert Maynard, 'Conflict in Education in a Democratic Society,' and 'The Higher Learning in America'; Goodman, Paul, 'Growing Up Absurd'; Lerner, Max, 'Education and a Place'; Hutchins, Robert Maynard, 'Conflict in Education in a Democratic Society,' and 'The Higher Learning in America'; Lerner, Max, 'Education and a Radical Humanism'; Meiklejohn, Alexander, 'The Experimental College,' and 'Education for Freedoms'; Read, Sir Herbert, 'Education for Peace,' and Taylor, Harold, 'Education and Freedom.'

We are enclosing an outline of the conference which should give you a better idea of what we are talking about. Below is a response form to this letter. We would also appreciate your returning this form, whether you are coming or not. Also note that if you send your registration fee in advance, we can send you the working papers in advance. Finally, we would be grateful for the names of anyone else (sic) who might be interested in the conference, and we have left a space for this on the coupon. Cordially, Mike Schwartz, Conference chairman."

The returned forms giving the name of the participant, his address, telephone number, school, and organization or affiliation, were to be sent to Wanda Mallen, 2635-A Fulton Street, Berkeley 4, California.

The 1963 SLATE Summer Conference was much more ambitious than its predecessor, but far less successful. This may have been due to the bulky and involved nature of the documents distributed prior to the opening of the conference, and also to the somewhat ponderous nature of the program itself. A sheet of paper entitled "Tentative Agenda" was distributed about a week prior to the opening of the conference on July 27, and stated that Dr. Christian Bay, of San Francisco, would make the opening speech from 10 a.m. until noon, and that his subject would be "Criticism of the Multiversity."

For an hour preceding Dr. Bay's address the first plenary session of the conference was to be held, followed by announcements, welcoming speeches, an outline of the conference, and distribution of working papers. From 1 until 2:30 p.m. there would be panel discussions by a student, faculty member, administrator and legislator followed by a general discussion and questions from the audience. The topic would be "Role of the University in Society—What It is and What It Should Be."

From 2:30 until 5:30 p.m. the first day of the conference was to be devoted to seminars, and we think it well to quote this portion of the tentative agenda in full, since it illustrates the SLATE viewpoint on matters that were to become of extraordinary importance during the Berkeley rebellion a year later.

1. "University governance (e.g., *in loco parentis*, character of decision-making process, student involvement in process, structure of power in the university).
2. Curriculum and the undergraduate experience (e.g., examination of the relevance of curriculum to life, "values of the undergrad, the quality of instruction and orientation of 'campus life.'"
3. Graduate education (discussion of graduate student values, academic experience, problems of adjusting professional desires to status in the institution, character of the graduate student population, graduate instruction).
4. Faculty values.
5. Student rights, academic freedom (e.g., student expulsions, policies on student organizations, speaker bans, behavior codes, living restrictions, hiring and firing of professors because of their political views).
6. The university and society (e.g., what purposes the university should fulfill in education for democratic participation, what its orientation in industrial society is and should be, how it should tackle problems of conformity, mass society).

7. The university and the cold war (e.g., examination of the role the university plays in supporting the cold war (*status quo* attitudes)."

At 9:30 p.m. the second plenary session of the conference convened and was to continue until 10 p.m. On Sunday, July 28, from 9 o'clock a.m. until noon, seminars were held on "Channels of Action," and this comprised discussions on "student government and student political parties; independent student action (strikes, boycotts, club and other organizational involvement, etc.; counter-university (plus effectiveness of such notions as counter-orientation programs, counter-course, etc.); faculty relations and the joint student-faculty action (educational campaigns, use of community pressure on legislature, etc.)"

The concluding speech of the conference was to be made by Nevitt Sanford, from 1:30 p.m. until 2:30, and from 2:30 until 4:00 p.m. there was to be a concluding plenary session, and an evaluation of the conference. This tentative agenda was followed by the distribution of an eighty-one page mimeographed document entitled "Education in the Multiversity." On its front cover working papers were described as follows:

- "1. Christian Bay: 'Toward Educated Lives.' 2. Gerald Gray: 'A Summary of Clark Kerr's 'Godkin Lectures'; 3. Gerald Gray and David Rynin: 'A Critique of Clark Kerr's Godkin Lectures,'"

The main topics to be considered at the conference were then listed as follows:

- "I. The University and Society; II. University Governance; III. University and the Cold War; IV. Student Rights and Academic Freedom; V. Undergraduate Experience and Curriculum; VI. Graduate Experience; VII. Reform; Bibliography and Credits."

The material set forth in the eighty-one page document distributed at the SLATE summer conference of 1963 contained the address by Christian Bay; a piece called "The Idea of a Student" by Reginald H. Green;" "The Student and the Campus Climate," by Fred Werner; "The University in a New World," by Harold Taylor; "The Hiatus Between Education and Student Life," by Philip E. Jacob; "The Campus Viewed as Culture," by Martin Trow; "The Latin American Student Movement," by Miguel Rotblat; an article from the *Michigan Daily*, entitled "Ivory Tower Administrators Rule Without Feedback;" an excerpt from an article by Prof. Reece McGee, a sociology professor from the University of Texas who taught social problems at Berkeley during the first summer session of 1963, entitled "The American University as a Disorganized Organization;" a piece entitled "The University and the War Effort," which bore no signature, but which closed with the following exhortation: "Join us in the picketing of the university's charter day ceremonies, protesting the university's involvement in the arms race. Charter day, 1 p.m., Gayley Road, below the Greek Theater."

"Academic Freedom," by Harold Taylor, was an important reference, also recommended. Its first paragraph should be quoted here because it established the theme that ran through the entire conference: namely, that the university exercised a parental attitude toward the students which was highly resented. Indeed, this concept of an authoritarian university, *in loco parentis*, dominated the entire conference, and was repeated and emphasized over and over again. The paragraph read as follows:

"In the absence of a precisely defined relationship between the student and the university, there exists the traditional relationship summarized in the concept *in loco parentis*. The theory establishes

the university as paternal guardian over the moral, intellectual and social activities of the student. From the tradition of *in loco parentis*, come these conceptions: the student need not be directly involved in the formation of the general university policies and the administration may circumscribe the perimeter of a student's interest, speech and thought, personal and group associations, and actions. Apart from the individual student, the university, operating within the framework of *in loco parentis*, may and does establish certain restrictions on the operation of the student government, the student press, and other student organizations."

Other sections of the eighty-one page booklet were: "Student Political Action," by James P. Dixon; "The Wasted Classroom," by Nathan Glazer; "Social Control in the Dorms or *Loco Parent*," by Joan Roos, "The Plight of the College Professor," by William Stanton, who is now a member of the California State Assembly, "That Wonderful Tradition," by E. G. Williamson, "A Note on Graduate Study," by Robin Room, "Freshman Orientation," by Dan Johnston, "The Need for Student Political Parties," by Carey McWilliams, Jr., together with several other articles for which no author was given.

It should be made clear that in most instances these articles were excerpts from longer pieces written for various publications, were included in the eighty-one page mimeographed booklet for study purposes, and were not delivered in person at the conference. We should make it equally clear that certain common denominators ran through the entire flavor of this booklet, urging student demonstrations of defiance against the university administration, citing student radical organizations in Latin American universities as ideal examples to be followed by students at universities in the United States, creating a spirit of dissatisfaction with any attempt on the part of university authorities to regulate the conduct of students, and the engendering of dissatisfaction with the courses being taught.

The 1963 SLATE Summer Conference was, despite elaborate preparations, top-heavy with red tape and unwieldy documents. From several persons who attended we have reliable information to the effect that there were only about sixty people present, and that most of the time was spent in agreeing with each other. None of the illustrious speakers appeared, and one informant stated that the seminars seemed to be based on deep student dissatisfaction because the university did not see fit to turn its affairs over to them. The university *in loco parentis* to the students was depicted as an outrage, and the consensus seemed to be that students should never be responsible for their actions to the university nor should the university have any responsibility to the Regents, the parents, the taxpayers or the State of California. There seemed to be full accord with the idea that an ideal situation would be for the university to supply the machinery for educating the students, but that all matters of social responsibility be left entirely to the liberal element of the student body.

SLATE activities immediately prior to the 1963 summer conference were interesting, and revealing. On May 13 a SLATE propaganda publication called for a "student revolution," and the organization's elder statesman, Brad Cleaveland, 30, announced in an article of snarling defiance that "the charge is simple: the faculty of this university is weak, indolent and irresponsible." He called the university a "circus," and stated that it was bogged down in bureaucracy. Members of the SLATE committee with Cleaveland at the time were Mike Schwartz, Jo Freeman,

Sandor Fuchs, Ken Cloke, and Steve DeCanio. The last three were arrested during the invasion of Sproul Hall on December 3, 1964. Ten thousand copies of this publication were distributed at a student rally held on the Dwinelle Hall Plaza on May 13. Cleaveland, who resided at 2151 Emerson Street, Berkeley, in 1964 earned his master's degree at Berkeley in political science, and was active both in SLATE and the student rebellion in 1964-65.

We have already referred to Ken Cloke as president of SLATE in 1962, and as a leader of the preparations for the Eighth Communist World Youth Festival which was held in Helsinki, Finland. It was in 1963 that Cloke became involved in a sordid matter which wound up with his being charged with the theft of fifteen dollars' worth of books from the California Book Company at 2310 Telegraph Avenue in Berkeley. He was fined \$25.00 and placed on two years' probation by the Berkeley Municipal Court where he entered a plea of guilty. Having been a member on the SLATE ticket for the Student Senate at Berkeley, he resigned from that position shortly after his arrest. It will be noted that Cloke has also been a prominent figure in the student rebellion, and at the time it occurred he was still on two years' probation, which would expire sometime in March or April this year.

SLATE had long been agitating for the new administration under President Clark Kerr to bring pressure on the Board of Regents to modify its rule that had long prevented Communists from being provided with a free rostrum on the campus from which they could address the students. When, indeed, this manipulation succeeded and the rule was modified, and when Albert J. Lina, chairman of the Northern Division of the Communist Party of California spoke at Wheeler Auditorium on the Berkeley campus, July 19, 1963, this first Communist speaker after the rescinding of the rule was sponsored by SLATE and the W.E.B. DuBois Club of Berkeley.

During all of its existence SLATE was constantly endeavoring to infiltrate its members into influential positions throughout the structure of student government at Berkeley, and at the election during the latter part of 1964 was able to elect seven out of its eight candidates.

Communist Youth in America

Since the DuBois Clubs of America are directly descended from the Young Communist League through two organizational changes, let us first examine the nature of the young Communist movement in general and then consider its aims and techniques which have been inflexible since the movement originated in October 1918. It was a year after the revolution in Russia that the Young Communist League was started in that country with an initial membership of 22,100.* Commonly known as the Komsomol it now comprises about nineteen million young people between fourteen and twenty-seven years of age, and is subject to the direct control of the Communist Party.† On page 63 of the *History of the Young Communist League*, this statement appears:

"The Russian Young Communist League, which from the formation of the Young Communist International has been its leading section and an example for the international youth movement, is educating its members in the spirit of international solidarity and

* *A Short History of the Young Communist League of the Soviet Union*, by A. Afonin, Co-operative Publishing Society of Foreign Workers in the USSR, Moscow, 1934, page 5.

† *Encyclopedia of Russia and the Soviet Union*, edited by Michael T. Florinsky, McGraw-Hill Book Co., Inc., N.Y., 1961 page 282, et seq.

proletarian struggle. As its leading section, the Leninist Young Communist League has always carried on an active struggle to bolshevize the Young Communist International and takes the most active part in its work, giving Bolshevik guidance, calling upon the young proletarians of all countries to fight determinedly for Communism and assisting in a Bolshevik manner the fight against all kinds of attempts to separate the struggle of the youth from that of the working class as a whole."*

The most important public document concerning the world Communist youth movement is the official *Programme of the Young Communist International*, approved by the Presidium of the Executive Committee of the Communist International. It was distributed to Young Communist Leagues throughout the world in May 1929. Our copy came from the national headquarters of the Young Communist League of America, 43 East 125th Street, New York City. On page 35 the relation of the youth apparatus to the Communist Party and the Communist International, is proclaimed as follows:

"The Y.C.L. opposes the idea of 'youth syndicalism,' which considers that an independent and isolated struggle of the working youth is possible. The Y.C.L. is a part of the Communist movement as a whole. The C.P. is the leader of the Communist movement and the entire working class; there cannot be . . . dual leadership, or the existence of two Communist Parties. The Y.C.L., while organizationally independent, works under the direction of the C.P. and the C.I., and recognizes the programme and tactics of the C.I. and C.P. The Y.C.L. submits to instructions of the C.P. and of the C.I. as the supreme body of the world Communist movement. The nature of the Y.C.L. as a mass school of Communism for the working youth implies that not every member of the Y.C.L. is automatically a member of the C.P. The Y.C.L., however, bears the name Communist because, although it is not formally a Party organization, it is nevertheless a Communist organization.

"The concrete tasks of the Y.C.L. in the work of the Parties consist in tireless agitation for the fighting aims of the Communist International, in supporting the Communist Party in its daily work and struggles, in participation in all revolutionary activities of the proletariat, in discussion and explanation of current political events and of the immediate tasks of the proletariat, and an active participation in Party discussions." (page 37)

Under the general program of defending the Soviet Union "... against the attacks of the Capitalists," the Communist youth has always been ordered to wage a ceaseless battle against compulsory military training and against military conscription in any form. Every Marxist youth organization has diligently pursued this directive, and they have been successful in eliminating such training from many large American universities. Their drive to eliminate Reserve Officers Training Corps programs on University of California campuses is already a matter of common knowledge—and the ROTC program has been discontinued.

The Programme of the Y.C.L., from which we have quoted, declared:

"The Y.C.L. combats both compulsory and voluntary forms of bourgeois military training of the youth, not in the spirit of pacifism, but from a standpoint of a class struggle." (page 47)

*A. Afonin, op. cit., p. 63.

Most of us who have paid much attention to Communism in general are aware of the fact that during the period of the non-aggression pact between Russia and Germany the American Communists did everything in their power to throttle our defense effort in strict conformity with the general Communist Party line of weakening us in every way possible. In June of 1941 when the Soviet Union was invaded and Russia became involved in the war, the line changed immediately and the American Communists were ordered to assist our military preparations in conformity with the new line. As our massive economic and military aid to the Soviet Union steadily increased until it reached enormous proportions, the Communist line was changed to avoid offending the United States, and hence the name of the Communist Party itself was changed to the Communist Political Association, the name of its monthly ideological magazine was changed from *The Communist* to *Political Affairs*, and the Young Communist League was assembled at a special convention in the Mecca Temple, New York City, on October 17, 1943, and changed its name to American Youth for Democracy. The first California State Convention of this organization, which, of course, was only the Young Communist League with a new title, was held in the North Star Auditorium, 631 West Adams Blvd., Los Angeles, on May 6 and 7, 1944.

The Young Communist Leagues in the various countries were all sections of the Comintern, which had its permanent headquarters in Moscow, and through its Executive Committee issued the orders, directives, changes of party line, and other instructions to its various component sections. With the dissolution of the Comintern and the Cominform, the central organization that performed the same international service, was the World Federation of Democratic Youth, which was founded in London in November of 1945. It is a part of the Communist international solar system which includes such world Communist organizations as the Women's International Democratic Federation, World Federation of Trade Unions, and other groups comprising teachers, lawyers, scientists, and writers. One of the affiliates of the World Federation of Democratic Youth is the International Union of Students, and American Youth for Democracy was affiliated with both organizations.

It is interesting to note changes in the method of handling the administration of the State University, from time to time, and we call attention to an article that appeared in the *Los Angeles Herald-Express* on January 19, 1948, which explains how the University of California at Los Angeles handled the problem when American Youth for Democracy applied for campus recognition. The editorial reads as follows:

"Officials of the University of California at Los Angeles are to be commended for their action in refusing official campus standing to the American Youth for Democracy organization, successor to The Young Communist League, on the ground that it is a political organization and political organizations are barred from campus recognition.

The community will look with favor on this stand for positive Americanism and will now watch with interest to see what the university does about those faculty members who have been interested in Communism and in campus activities of the Youth for Democracy gang.

The university apparently recognizes that the un-American activities of a small but active minority have given the institution much criticism in Los Angeles, California, and throughout the United States.

UCLA realizes that bad publicity hurts and that a state university should so act that its actions are above reproach.

There is a growing sentiment throughout the country to throw the exposing spotlight of publicity on those individuals and those Communist-inspired groups and organizations which are spreading unrest and trouble, seeking constantly to bring about the eventual overthrow of this country's constitutional government and the American way of life. This is not a witch hunt, nor is it persecution, but is rather an honest effort to rid this country of a despicable menace. Among the subversive groups the American Youth for Democracy is one of the most offensively dangerous. Its members are without moral integrity, without social consciousness and without restraint in their desire to stir up race antagonism, create dissension and revile every good influence in this land.

Nothing good can be said for the American Youth for Democracy, those who belong to it, those who support it or those who are tolerant of it. It is evil and dangerous in every way.

UCLA has taken a commendable first step, a step which should be followed by further patriotic house-cleaning."

After the war the international Communist party line changed back to its old tough and militant program against all capitalist governments, and American Youth for Democracy was dissolved in 1948 to be replaced by another young Communist youth movement known as the Labor Youth League. This was also simply the Young Communist League under another title, with the same set of objectives, the same techniques, the same subversive program of infiltration, and was subject to the same Communist adult leadership as were its two predecessor organizations.

By May 1949, plans for the new organization had been formulated, and the first organizational meeting was scheduled to be held in Chicago on May 28 and 29, 1949. National headquarters was established at 799 Broadway, Room 314, New York City, and chapters planted in various key cities throughout the United States, largely built on the old organizational structure of American Youth for Democracy. All adult Communists and all party organizations throughout the country were urged by the Communist National Committee to give every assistance to the Labor Youth League. The Northern California operation was handled through the normal Communist Party apparatus in San Francisco, and in Los Angeles the organization opened an office at 232 South Hill Street, Room 205, Los Angeles 12. It later established its permanent headquarters at 233 South Broadway, Room 207.

During the past few years, however, the activities of the Labor Youth League were made exceedingly difficult because there was a proliferation of Marxist-oriented groups such as SLATE, Independent Student Union, Young People's Socialist League, and various radical student organizations at state colleges and universities that provided competition for the LYL. When the Sino-Soviet dispute began to splinter the various Communist organizations in the summer of 1960, the Labor Youth League faded out of existence, and the young Communist movement was represented by these diverse student organizations that sent their delegates to the youth festivals, maintained their organizational contacts with the World Federation of Democratic Youth, carried out the general Communist line and program, but were not welded together in any central organization.

The DuBois Clubs of America

This brings us to the formation of the DuBois Clubs of America, the new national Communist youth organization that is the lineal descendant of the Young Communist League, American Youth for Democracy, and the Labor Youth League. It is accorded recognition as a student organization on the University of California campus in Berkeley, and its national headquarters is situated across the bay in San Francisco. As a matter of fact, as we shall see, the idea for the National DuBois Clubs was conceived in Berkeley and San Francisco, and developed from three meetings: the first was the Progressive Youth Organizing Committee that met in New York in June 1963; next was a Conference of Socialist Youth in San Francisco in April 1964, and finally there was the turbulent convention in San Francisco in June 1964. As we describe these preparatory gatherings of radical youth, the reader will understand how a handful of leaders managed to capture all important positions, and how they manipulated the meetings to solidify their control. The same names occur with monotonous regularity, as the same people move from one strategic office to another.

The San Francisco DuBois Club was established in March 1963, when its constitution was approved and adopted. Article II of that document provided that a close working relationship should be maintained with the Berkeley DuBois Club, and Article III stated that "the purpose of this organization is to study Scientific Socialism, and to apply its theories to social, cultural, educational and political activities."* Article IV of the constitution provided that membership should be open to "persons between the ages of sixteen and thirty-five, who subscribe to the organization's statement of principles, who attend a minimum of two consecutive general membership meetings, and who pay a membership fee fee of \$1.00."

The name for the DuBois Club of San Francisco was adopted in honor of the late William Edward Burghardt DuBois, a Negro educator who was born on February 23, 1868, and died on August 27, 1963.† Dr. DuBois was one of the founders of the National Association for the Advancement of Colored People (NAACP), was a leader in the struggle for Negro rights, and made a dramatic announcement of his conversion to Communism in the December 1961 issue of *Political Affairs*, page 9. He had been an ardent fellow traveler and member of many Communist front groups for years before he became a formal member of the Communist Party, and his affiliation was hailed with great enthusiasm by Herbert Aptheker on page 13 of the same issue of the magazine.

Several years before his death Dr. DuBois renounced his American citizenship and became a citizen of Ghana, where the pro-Communist government was greatly influenced by both Dr. DuBois, who tutored the Ghanaian president, and his wife, Shirley Graham, who acted as an unofficial counselor to the regime.

The San Francisco DuBois Club became active immediately after it was organized. It met with similar clubs in the Bay Area, participated in civil rights demonstrations such as trespassing on the premises of the Sheraton-Palace Hotel and the Cadillac agency in San Francisco. It also sponsored such Communist speakers as Frank Wilkinson, who spoke on April 10, 1964, and J. P. Morray, who was billed as "a noted Marxist scholar." At

*The term "scientific socialism" is Communist Aesopian language for Communism.

†*Political Affairs*, October, 1963.

the same time a solid liaison was being established with other radical youth groups throughout the country. In California the counterpart to the San Francisco DuBois Club was the Youth Action Union in Los Angeles, which, as we shall describe at some length, grew from the old Independent Student Union. The YAU provided such hard-working leaders as Marvin Treiger, Tobey and Michael Bye, Ruth Greenbaum, Victor Oliver, Alan Zak, Frank Alexander, Dan Bessie, John Haag and August Maymudes.

We are devoting considerable attention to the formation of the DuBois Clubs, because they are now the actual organization of Communist youth, and more particularly because they provided the driving power for the Berkeley Rebellion, and they constituted the hard core of the so-called Free Speech Movement at Berkeley. This is the first detailed account of the DuBois Clubs, and unless one understands how the movement originated, what it proposes to accomplish, and how it functions, he cannot understand the defiant eruptions at Berkeley. Since the DuBois Clubs certainly were the most significant element in the united front that mobilized the students to rebellion, and SLATE probably came next in importance, it is essential that we know something about these organizations.

Progressive Youth Organizing Committee

There is always a period of behind-the-scenes preparation for any Communist program of major significance. Caucuses are invariably held before a Communist minority attempts to jam a party line resolution through a non-Communist organization; plans are made before a new front organization is launched in order to make sure that the real control remains in proper hands, and that this control is carefully concealed from the membership. These, of course, are some of the tactics through which a dedicated, disciplined minority can accomplish results far out of proportion to its numerical strength.

More than a year before the San Francisco convention of June, 1964, some carefully selected people from California attended meetings of the Progressive Youth Organizing Committee, 80 Clinton St., New York 2, N.Y. A school of instruction was held from June 25 to 30, at a cost of \$30.00 per student. The Marxist character of this enterprise may readily be seen from the invitation to attend the P.Y.O. School, which read as follows:

"Outlined below is the tentative context of the P.Y.O.C. school to be held June 25-30. As it appears that there will be a substantial number of youth new to P.Y.O.C. type organizations and who have not attended classes before, we are suggesting two separate courses. One will be for them and one for those who have had classes before.

For those who have had classes the content will be centered on those questions which will give greater clarity to the major ideological questions in the left and progressive youth movement and facilitate the building and growth of P.Y.O.C. type groups. The major emphasis will be what is a working class approach as opposed to a petty bourgeois radicalism in these areas;

1. The youth question and strategic goals of youth.
2. The Kennedy Administration, the ultra-right and electoral policy.
3. The fight for full equality for the Negro people and the role of progressive youth.

4. Working class youth, discussing their interests, level of organization and level of understanding.
5. P.Y.O.C., its role today and pressures to alter its outlook and character.

The classes for newer youth and those who have not attended classes before will be: Is Marxism True? An introductory course covering these topics:

1. Capitalism or Socialism: which can do a better job for man?
2. Is Socialism inevitable?
3. Does Marxism point the way to win daily improvements and Socialism?
4. Does Marxism enable one to scientifically discover truth in every field of human activity and in nature?
5. Criticisms of Marxism.
6. Does Marxism point the way to be happy?

PLEASE ADVISE US OF YOUR THINKING AND SUGGESTED CHANGES ON THE TENTATIVE CONTENT.

The school will be held at a camp, with a swimming pool and full athletic facilities. The cost for the six days is \$30.00 for food, room and all other expenses. A limited amount of money is available for scholarships to the school. Please do not apply for a partial or full scholarship unless there is absolutely no way to raise the money locally. The June P.Y.O.C. activities are already running around two thousand dollars in direct costs to the national office and will leave us substantially in the red."

One of the ubiquitous Hallinan boys, Matthew (Dynamite), went to New York and participated in the school. There were other delegates from San Francisco and Los Angeles, and it was here that much of the basic strategy was perfected for the new nationwide Communist youth movement that was to emerge from the convention held in San Francisco over the week end of July 19-21, 1964. As this convention got under way, the advance preparation became evident when it was disclosed that a device had been perfected through which votes would be allocated in such a manner that a solid Eastern bloc could team up with the San Francisco DuBois Clubs and control the convention in the event of a crisis. The formula gave San Francisco delegates one vote each; other California delegates two votes each, and those from out of the state three votes each. There were twelve delegates from New York, with a total of 36 votes—and at the convention (this not being deemed enough), it was voted to give the New York delegates a total of 72 votes. These, cast invariably in a bloc on all vital matters, enabled the hard core to dominate the convention, which it did completely and ruthlessly.

One of the most crucial votes was on the adoption of the constitution, a draft of which had been prepared by a student from the University of Michigan. There was much dissension about the adoption of portions of this document providing for organizational structure and authority. The final vote for adopting the proposed sections was 284 to 233, with 24 abstentions. Here was an instance where a minority of those present was able to exercise control. At this point an estimated 30% of the delegates walked out in disgust, but this left the hard core solidly in power, and the convention proceeded about its business. We will later discuss this June 19 convention in detail.

This is not the appropriate place to set forth in depth the constitution of the new Communist youth movement, the working papers and reports

that were discussed at length, nor the details of its organizational structure. It is, nonetheless, essential that we know something of the component parts of the new organization if we are to know anything about the Communist element in the Berkeley rebellion that occurred about three months after the convention adjourned. As we progress to a detailed examination of the rebellion itself, the names of the leaders of the DuBois Clubs of America will become increasingly familiar. At the convention, as we have indicated, were Trotskyites, members of the Young People's Socialist League, representatives from the Youth Action Union in Southern California, members of the Student Non-Violent Coordinating Committee, a handful of other and less important radical youth organizations, and, of course, those adherents of the Moscow Communist line who were in firm control of the proceedings from their inception to their conclusion with the emergence of the new Communist youth organization in the form of the DuBois Clubs of America.

We have no intention of describing each of these organizations in depth, but it is indispensable to know something about the Youth Action Union of Southern California because of its proximity to U.C.L.A., its decidedly Communist orientation, and its importance as one of the more influential participating groups at the San Francisco convention of June, 1964.

Virtually all of these radical youth organizations with a Marxist or firm Communist orientation had their own publications that appeared from time to time, carried the current Communist Party line, gave notice of lectures, schools, meetings, and civil rights demonstrations, and served the usual propaganda purposes of the organizations they represented. The Youth Action Union also had such a publication, as did the DuBois Club of San Francisco, but the official organ for the Young Communist movement in the United States was a little magazine published under the name of *New Horizons for Youth*. Its office was located at 1426 Bristol Street, Philadelphia 40, Pennsylvania. Its editor was Lionel Libson, and members of its editorial council came from San Francisco, Chicago, Detroit, Philadelphia, Iowa, Pennsylvania, and Ohio. In September, 1964, Arlene Schupak wrote the following letter, which is self-explanatory, and shows how most of the local organizations of radical youth discontinued their publications, and in many cases discontinued operating under the old names, and simply became DuBois Clubs. This was the case with Youth Action Union of Los Angeles. The letter to which we refer read as follows:

"September 8, 1964

Youth Publications, Inc.
1426 Bristol St.
Phila., Pa. 19140

Dear Subscriber:

Due to many editorial and financial difficulties which could not be resolved by the publishers of *New Horizons for Youth*, it has become impossible to continue publishing. Many of you responded to our recent subscription drive and thus have paid for totally or partially unused subscriptions. We feel it only fair that we offer your money back on the unused sub, if so desired.

However, we have been happy to hear that a publication similar in form and content to *New Horizons* will be forthcoming from the

W.E.B. DuBois Clubs of America—a nationwide Socialist-oriented action organization recently formed in San Francisco. Many of the writers and supporters of *New Horizons*, including this correspondent, were active in the formation of this exciting new youth organization.

The forthcoming publication will be popular in format and will be designed to appeal to those active in the progressive movements of today as well as those masses of youth we are trying to involve in action.

At the request of the publishers of *New Horizons*, the editors of the new publication—yet to be named—have agreed to honor the unused subs of NHY, if this is agreeable to the subscriber. Since we do not expect there will be too many objections to this procedure, we have decided to go ahead with the transfer, unless we hear from you to the contrary. In other words, if you wish your money back, write; if not, then you should expect to receive the DuBois Club publication. For information on the DuBois Clubs, write: 1007 McAllister, San Francisco, Calif."

We mentioned the Independent Student Union in our 1963 report at page 133. This Marxist organization was started late in 1959, and was kept alive largely through the driving force of Carl Bloice and Althea Sims. After Bloice left for San Francisco, however, the organization began to slowly wilt and it eventually expired in 1962. Some of its members carried on under the name of Students for Peace and Freedom, and then this organization evolved into the Youth Action Union, in which we are now interested.

Among those on the YAU mailing list in 1964, immediately before the San Francisco convention, were Jim Berland, Downey; Dan Bessie, Reseda; Michael and Tobey Bye, Los Angeles; Ruth Greenbaum, Westwood; Dorothy Healey, Los Angeles; Joan Kramer, Los Angeles; Tamara Losnick, Los Angeles; LaRue McCormick, Los Angeles; August Maymudes, Los Angeles; Gene Partlow, Los Angeles; July Rinaldo, Los Angeles; Jeff and Tony Wilkinson, Los Angeles.

In 1963 meetings were held at 4402 Melrose Avenue, Los Angeles, where classes in Marxism were given to interested members. These classes were conducted by Dan Bessie, Hugh DeLacy and Marvin Treiger, who was then president of the organization. Even at this early date there was considerable propaganda concerning United States foreign policy, and at the meeting held on August 13, 1963, at which there were approximately 40 people, average age about 23 years, a letter was read from the Viet Nam Youth Federation stating that thousands of people in Viet Nam had been killed because of bacteriological warfare waged by the United States.

Meetings of the YAU were also held at 4302 Melrose, and occasionally at the homes of some of the members. The organization has never been successful from a financial standpoint, and was compelled to move its headquarters from one location to another during the entire period of its existence. Immediately before the June 19th conference in San Francisco, Tobey Bye was elected chairman, and Alan Zak was elected organizational secretary for YAU. They had participated, to some extent, in preparation for this conference and when official notification of the time and place was received from San Francisco, much of the enthusiasm among YAU members in Los Angeles was generated by the activities of the new president and organizational secretary. These notices contained questionnaires which were to be filled out and be sent to Bettina Aptheker, 635 51st Street, Oakland, California, telephone OLYmpic 4-5668, and

added that additional information might be received from Matthew Hallinan, 2414 Dwight Way, Berkeley.

The first *Youth Action News* to be published after the San Francisco convention appeared in July 1964, announced the acquisition of new offices at 1104 N. Mariposa Street and carried the following statement concerning the launching of the new Communist youth organization:

"The Phoenix is a legendary bird which is repeatedly destroyed by fire, yet is reborn, and emerges whole from the ashes.

There is a Phoenix liberated in the land. Out of the debris of the old left, reduced by the cold war, McCarthyism, the nuclear threat of annihilation, and 'the silent generation,' there is a new voice of the militant youth in the United States, rising 'from the ashes'—the W.E.B. DuBois Clubs of America.

In an historic convention held in San Francisco last month, delegates from all parts of the United States formed a new Socialist youth group, intended to deal with the new problems in a new way. The convention was not without its problems, even heartbreak, but on the other hand, moments of inspiration. The result was a nation-wide organization of youth seeking answers to the great problems of our time—peace, jobs, and freedom, and willing to work for their solution.

As difficult as the creation of the DuBois Clubs of America has been, the hard part is coming. It is one thing to declare the existence of a group, and quite another to translate it into a viable instrumentality for meaningful action. Our paramount problem is organization.

Here in the Southwest region, headway is being made in that direction. There are, in the Los Angeles sector, 1½ DuBois Clubs now in existence (the YAU will not formally affiliate with the DC of A until the regional conference in August), and there are two more coming. The planning committee is already thinking in terms of specific issues and actions.

The future of the DuBois Clubs cannot be foreseen, at this time. At worst, it may be premature, subject to disinterest on the left and harassment on the right. At best, it may serve to form the nucleus of a mass organization of those youth beginning to understand that *the only solution to the ills of society is in the transformation of the society itself.*" (Committee's italics)

San Francisco Socialist Youth Conference

Over the week end of March 21 and 22, 1964, a Socialist Youth Conference had been held at the YMCA building, 1530 Buchanan Street in San Francisco. This meeting was sponsored by the DuBois Clubs in San Francisco, Berkeley, San Francisco State College and Los Angeles, and the Youth Action Union. Those in the Los Angeles area who desired to attend the conference were to contact Anne Levine, a UCLA student, and sets of working papers were then distributed by mail. For some reason that we cannot explain, most of these papers were prepared in Los Angeles and were the result of work done principally by Stephen Solomita, Anne Levine, Paul Rosenstein, Victor Oliver, Alan Zak, Marvin Treiger and John Titus.

The invitation for the conference reads as follows:

"Dear Friend, on the weekend of March 21-22, there is going to be a conference in San Francisco, at the YMCA 1530 Buchanan (Geary and Buchanan), sponsored by a number of Socialist Youth Organiza-

tions. We hope to bring together a broad spectrum of young people who are interested in examining the possibility of a Socialist alternative to contemporary social problems.

Today there is a growing number among our generation who refuse to accept poverty, unemployment, bigotry and war as somehow beyond the rational control of man. We feel that this conference will provide a much needed arena in which these people can exchange ideas and experience. We have too often been prone to discuss rather than act upon their ideas. We hope that this conference will be able to produce some form of program, or at least point to a direction, by which young people can begin to actively deal with today's pressing social problems. We invite all who would be interested in such a conference to meet with us in San Francisco.

(Signed) San Francisco DuBois Club, Berkeley DuBois Club, San Francisco State DuBois Club, West Los Angeles DuBois Club, Youth Action Union."

The working papers were entitled: 1. General Background, by Stephen Solamita; 2. Beginning Years, by Anne Levine; 3. Free by '63?, by Paul Rosenstein; 4. The Black Muslims, by Victor Oliver; 5. Local Civil Rights Organizations, by Alan Zak; 6. Roll (sic) of the Left and Present Stages of the Struggle, by Marvin Treiger; 7. The Glass Menagerie in the Bracero Movement, by John Titus.

The agenda provided that on March 20th, 8:00 p.m., there would be check-in and registration, followed by an informal gathering at the San Francisco headquarters of the W.E.B. DuBois Club, 1007 McAllister Street. After lunch on Saturday, the 21st, there was an address from 1 to 1:30 p.m. by the keynote speaker, who was originally announced as Louis Goldblatt, secretary-treasurer of the International Longshoremen's and Warehousemen's Union, but he was unable to appear for some reason and the substitute speaker was Dr. Carlton Goodlett, of San Francisco. The keynote speech was followed by area reports, being brief summaries of local conditions and activities prevailing in the three major areas represented at the conference, to-wit: the Pacific Northwest, San Francisco and Bay Area, and Los Angeles. From 2:15 to 4:00 p.m. there were workshop discussion groups which were aimed at discussing contemporary social problems, comparing experiences in the various areas represented, and developing better co-ordination among groups on the West Coast.

The workshops considered the following topics: 1. Automation and American Labor, by Kayo Hallinan; 2. The Southern Civil Rights Movement, by Carl Bloice; 3. The Northern Civil Rights Movement, discussed by the delegates from Southern California; 4. The Ultra Right, discussed by Robert Kaufman; 5. Peace and Disarmament, discussed by the representatives from Seattle, Washington; 6. Civil Liberties, discussed by representatives from the Portland, Oregon, area, and Bettina Aptheker. From 4:15 to 5:30 p.m. at the plenary session of the conference, there were reports from each workshop, brief summaries about conclusions reached during afternoon discussions and suggestions concerning the role of Socialist youth in solving current problems. At 8:30 p.m. there were art movies at the W.E.B. DuBois Club in San Francisco, followed by a reception.

On March 21st there were discussions about the building of a nationwide Socialist-oriented youth organization, the opening speech having been made by the chairman for the day, Mike Meyerson, a member of the Bay Area National Organizing Committee. On Sunday afternoon the

discussion revolved around the formation and functions of a national youth organization and the consensus resolution on the West Coast position concerning the formation of such a movement was concluded shortly before adjournment at 4:30 p.m. on Sunday, the 21st.

Obviously the documents that were distributed to persons attending this conference are far too long to be included here, and, indeed, would hardly be relevant to this portion of our report. There was, however, a paper on "The Question of Orientation: Campus and Community," which is extremely pertinent, and which we therefore reproduce:

"This paper grew out of a discovery of certain weaknesses in the approach used by Students for a Democratic Society in outlining policy for student participation in community activity. SDS had frequently taken the position that the role of youth is to work almost exclusively among the poor and the unemployed while not actively pursuing (sic) policies among their peer groups on campus. The result has been a lack of organization of youth on educational issues and the development of a 'social worker' outlook towards the working class community. SDS has sent its members into the community to foster change irregardless of the objective capability of the working class community at the time to accept college youth. In certain instances similar problems have arisen in the Berkeley DuBois Club.

The purpose of this paper is not to deny that youth can successfully work among working-class people. Rather we wish to emphasize the positive aspects of political organization on campus around issues such as *in loco parentis* and democratic education which are relevant to the development of political consciousness and academic freedom among student youth.

In organizing the national group, or for that matter any group, one matter of primary importance is the area in which the group will function. We must look at those persons or groups who are to be members of this organization, and attempt to determine where and in what issues these people would be most effective.

This conference is the best proof of the growing political sophistication of American youth. We have grown from the 1960 Civil Liberties demonstration against HUAC, and have suffered our birth pains in innumerable single-issue organizations. For many of us the initial commitment was a moral one: We grouped separately issues such as peace, abolition of capital punishment, civil liberties and civil rights. However, the same multi-issue orientation, which as students led us to participate in these various activities, soon caused us to search further for the basic causes of what were seemingly separate evils. It gradually became apparent that these issues were closely related. Eventually some of us, particularly those here today, became convinced that the problems stemmed from the basic nature of our economic structure. The DuBois Clubs grew from this realization and were established to give Socialist youth the opportunity to discuss the inter-relationship of problems and to propose solutions to them.

In charting the course of the NYO (National Youth Organization) we must carefully analyze our past experiences, particularly in terms of the movements from which we have sprung. As all of us who participate and know, these were student demonstrations with little or no response from the outside community, particularly from non-student youth. Only recently have working youth demonstrated an

interest in political activity, and this only in the areas which directly affected them. The past year has seen the slow development of Youth For Jobs type organizations. The thousands of youth who leave school every year must first and foremost be concerned with the search for jobs. Thus, their political orientation is in the area of unemployment. With increasing experience in this field an awareness of the inter-relationship between racial discrimination and unemployment among minority groups is developing. However, as the DuBois Clubs know through their participation in the recent demonstrations at the Sheraton-Palace Hotel in San Francisco, even the participation of Youth For Jobs members, is not yet of majority proportion. It is apparent that working youth and the Negro community are only beginning to involve themselves in militant action, and that this is predominantly single-issue oriented. It would be a great mistake to assume that the NYO can develop a higher theoretical understanding of the inter-relationship of societal (sic) problems among groups who have not yet fully committed themselves to participation in single-issue movements. Our contention is that a person is most effective when working with those type (sic) of people with whom he is most familiar; in other words, those people with whom he can best communicate due to a similarity of living conditions, a similarity of daily life problems, or membership in the same class. Of course, in the struggle toward Socialism, many groups which are now distinct in our society will have to merge in a unified struggle, but this will not take place until these various groups have achieved a certain level of consciousness which they do not have today. Eventually ties will be developed between them by interest in the same issues, and, more important, through social exposure to each other. Meanwhile, these groups will progress at different rates and in different ways. They will come to an understanding of the need for Socialism through the solution of their day-to-day problems. These problems, based on economic situations, are of course, different in the different classes; and thus, the understanding of these problems is different in the separate classes. Intellectually one can understand the problems of another, but until one has actually felt these problems and their ramifications, he cannot effectively deal with them. To identify with the problems of one class does not necessarily presuppose the ability to most effectively work within or contribute to the aspirations of that class. For instance, the major problem facing working class people today is job-security. This can be understood in academic terms by those who are not members of the working class, but as they have never really been affected by the problem, i.e., have never been laid off because of automation, have never had to worry about how their children are going to be fed and clothed, and have never had to be dependent on state aid such as unemployment compensation, workmen's compensation or welfare; their approach lacking this experience cannot be the most effective. In the same vein, the problem of academic freedom can easily be understood by working class people but it does not affect them and therefore has no concrete importance for them, whereas for the intellectual it does.

The stated purpose of the NYO is to provide socialist alternatives to problems current on the American political scene. In so doing, we must first determine from what segment of society our base will be drawn. Organizational policies and objectives must be based on

the abilities of this segment to communicate with our Americans. We must not over-extend ourselves by simply relying on the premise that the working class is the only revolutionary element of society. We must honestly evaluate our resources and try to discover, in terms of the analysis of the situation discussed in the preceding portions of this paper, whether in fact we have roots in the working class. If we find that we do not, or that these roots are minimal, we must then attempt to deal with that portion of society with whom we can most immediately communicate, not forgetting, of course, that in the long run we cannot be really successful without establishing close relations with the masses of people.

We propose that our main area of concentration at this time should be among campus youth. It would be incorrect to fail to develop a higher political consciousness among that segment of America which has consistently demonstrated an ability to understand the inter-relationships between socio-economic issues, simply because the most revolutionary elements of society have not yet reached a similar level of political consciousness. Further, we are best prepared as students to deal with our fellows on campus. Similarities of educational experience make communications easier and increase our ability to develop real political consciousness. *We urge that the NYO take the form of National DuBois Clubs.* (Committee's italics) We must participate most actively in developing from our socialist viewpoint an understanding among college youth of the basic problem of a capitalist economy. We must not attempt to convert single-issue organizations of the nature of Youth For Jobs into multiple-issue groups, because to do so would dissipate their still weak forces and strip them of their potency in the areas of their primary concern. We should concentrate our off-campus activities in those areas in which we have historically proved most effective: Civil Rights, Civil Liberties, Peace, and Political Campaigning. Rather than posing socialist alternatives to groups which already exist in these fields, we should aid them in the attempt to consolidate support in the community. We should assist in furthering full understanding of these single issues among the non-committed portions of the working class population, both white and non-white.

We feel that our program must recognize the predominate characteristic of an American political organization today: Its one-issue orientation. Although a few advanced groups such as SNCC (Student Non-Violent Coordinating Committee) in the area of minority relations, and the Women's Strike for Peace in the area of international tensions, have begun to demonstrate an understanding of the relationship of capitalist interest as a whole to specific problem areas, a comprehension of the inter-relationship between capitalism-peace-integration is virtually absent from the political scene. Further, the vast majority of Americans are only beginning to realize that any ONE of these issues exist. Homeowners confronted by the Rumford Fair Housing Act come awake to the existence of a crisis in race relations, while communities threatened with economic bankruptcy by the closure of military establishments realize that peace is also an issue.

The nature of the problems facing working people and members of racial minorities in this country dictate that these groups be basically single-issue oriented. The working man, faced with the

necessity to support a family, naturally is preoccupied with the problems of automation, similarly the Negro faced with the constant denial of his basic human rights engages in a grass roots struggle for his human dignity. Both of these issues are vital to the survival of the concerned group. (This artificial dichotomy between 'working class' and 'Negro' disappears when the minority discovers that human rights are virtually meaningless without the material means to enjoy them. Thus, the struggle for equality quickly merges into the greater single issue of employment.)

When a class or racial minority is confronted with what is more or less a life and death struggle, it has little time to devote to other issues which do not directly involve him.

Today the segment of American society which is in the best position to come to grips with the multi-issue platform is the student community. The presence of the individual in the classroom forces upon him a consciousness of the existence of certain problems. Although classroom discussion is frequently superficial and does not necessarily provoke further thought it does create a frame of reference. Through the academic approach, the student is forced to deal in terms of inter-relationships rather than with ideas in isolation. Over the past four years the student community has demonstrated an increasing awareness of the relation of academia to real life, as detailed in the introductory portion of this paper, and its academic multi-issue orientation has made it capable of discovering relationships between economic and political issues which other elements of society more directly involved in the material struggle for existence cannot pause to consider.

Thus we see that a multi-issue socialist organization, founded at this moment in history will have to appeal to the student community for its main source of support in order to be successful. This does not mean a total and prolonged isolation of the 'intelligentsia' from the working class. It rather enunciates a starting point. The evolution of these two groups in the overall struggle for Socialism will naturally be convergent."

The foregoing paper was submitted by Robert Mandel, Portland Friends of SNCC (Student Non-Violent Coordinating Committee); Donna Haber, Berkeley Community DuBois Club; Phyllis Glick, Berkeley Community DuBois Club.

It is interesting to note that the delegates from Portland submitted a paper which set forth the status of radical youth activities in that state. It explains how FOCUS, a student radical group similar to SLATE at Berkeley, was an outgrowth of youth movements which had supported the Progressive Party, and which existed on the campus of Reed College through the academic year 1961. Then other radical groups took over the operation of left political activities at Reed College and engineered "the unusual victory for academic freedom that came with the Gus Hall tour of 1962." (Gus Hall was then and is now the national head of the Communist Party of the United States.) From that point forward a large membership in the radical left student movement was built up around the Cuban Blockade protest, the Defeat of Civil Defense, a Trade with China Resolution and the Pacific Northwest Peace Conference. At Portland State College a radical student organization, much like SLATE at Berkeley, elected eight members to the community senate in its first political activity and concentrated its propaganda on the issues of *in*

loco parentis. The report concluded by stating that "it will be easy to organize a group at Reed that will be Socialist oriented."

Among the more active participants at the San Francisco Socialist Youth Conference were: Lee Goldblatt, Beverly Radcliff, Harold Supriano, Toby Bye, Matthew Hallinan, Mike Meyerson, Guy Sandler, Marvin Treiger, Rodney Larson, Carl Bloice, Terence Hallinan, William North, Alan Zak, Michael Bye, Bettina Aptheker, Carol Perry, Leslie Brooks, James Berland and Kenneth King. Lee Goldblatt is the daughter of Louis Goldblatt, who was originally scheduled to deliver the keynote address at the conference; Matthew and Terence Hallinan are the sons of Vincent Hallinan, a professed Marxist and candidate for the Presidency of the United States on the Independent Progressive Party ticket several years ago; Marvin Treiger is presently attending Los Angeles City College and is active in Marxist politics; Alan Zak is chairman of the Los Angeles DuBois Club; Michael and Toby Bye are young Marxian activists from Los Angeles; Bettina Aptheker is the daughter of Herbert Aptheker, as we have heretofore explained; Carl Bloice is the former spark plug for the Independent Student Union, Marxist-oriented youth group in Los Angeles, is a writer for the Communist newspaper in San Francisco, and is an active member of the San Francisco DuBois Club; Supriano was an employee of the State of California, and has been connected with several radical organizations; Kenneth King is a member of the San Francisco DuBois Club who made a trip to Cuba in defiance of the State Department regulation against such travel.

The New National Organization of Communist Youth

After the Conference of Socialist Youth in March, it was decided to hold the next convention in Chicago, and there form the new national youth organization. The Coordinating Committee determined to switch the meeting place to San Francisco, however, and to hold it on June 19 through 21, 1964. We have heretofore mentioned the reasons for selecting the Bay Area as most suitable for the seat of Communist power on the West Coast. The leaders of the new youth movement apparently agreed as they stated in their pre-convention publication that the west coast area had a "more favorable political climate."*

Copies of *The Convener*, position papers, schedules of activities, copies of agenda and other materials, were widely circulated prior to the meeting, and attendance from all parts of the country was anticipated. Carl Bloice edited *The Convener*, assisted by Mike Meyerson, Terence Hallinan, Eugene Alexander, Hugh Fowler, Keith and Phyllis Glick, Gerrit van der Hoogt, Kathy Olson, Tom Waite, Luria Castell, Stephan Argent and Sue Miller.

Pre-Convention regional meetings were held in Wisconsin, Philadelphia, Chicago, and New York. Propaganda materials were distributed, generally echoing the current party line about getting out of Viet Nam, changing our government to a Socialist system, resisting the draft, and participating in all civil rights movements. There were some who preferred to hold the new youth organization somewhat aloof from other Left groups, but it soon became apparent that this attitude was impracticable. The National Coordinating Committee was expanded to thirty people, and they actually made all preparations for the San Francisco

**The Convener*, vol. 1, No. 3, p. 10.

meeting. Through the columns of *The Convener* they set the general tone of the convention, and through the issuance of position papers the program was planned well in advance. It is to be noted that one of the omnipresent brothers Hallinan wrote an "Editorial Expressing the Views of the Staff of the *Convener*," describing the United States action in Viet Nam as an "effort to crush the revolutionary desire and upsurge of the Vietnamese people . . ." and referring to our use of "napalm bombs, torture, concentration camps and other forms of extreme terror."*

Members of the San Francisco DuBois Club proudly claimed that they led the demonstrations in San Francisco that resulted in a total of 395 arrests and pointed out that there were " . . . several new and important features to these demonstrations. One was the audacity and determination of the participants. Another was the widespread popular support that they obviously had and the positive results they were able to bring about. The most significant is that they were led by a Socialist youth group, the W.E.B. DuBois Club."†

Those who signed the call for this June 1964 convention, as set forth on page 15 of *The Convener* No. 4, were: Eugene Alexander, Student Legislature, S.F. State College; David Bacon, Berkeley High School Socialist Club; Robert Baum, Minneapolis CORE; Diane Beeson, San Francisco W.E.B. DuBois Club; Bruce Benner, Research Worker, International Longshoremens and Warehousemen's Union, San Francisco; James Berland, Community Senate, Reed College, Portland, Oregon; Mike Berry, SLATE, Berkeley; Don Bluestone, Associate Editor of *Sanity*, Madison, Wisconsin; Leslie Brooks, Chairman, Ad Hoc Committee to End Discrimination, Los Angeles; Roberta Bruce, Board Member, Chicago Committee to Defend the Bill of Rights; Karol Burkett, Representative-at-Large, Student Legislature, San Francisco State College; Toby Bye, Youth Action Union, Los Angeles; Edward Campbell, Vice Chairman, CORE, Bridgeport, Connecticut; Norman Chastain, Co-Chairman, Citizens Committee for Disarmament, San Francisco; Frank Ciociorka, Executive Officer, TASC San Jose State College; Ken Cloke, former president of SLATE and member of the Student Senate at the Berkeley campus of the University of California; Ted Cohen, President, Berkeley Young Democrats; Dave Cunningham, Editor, *Iowa Defender*, Iowa City; Bill Dady, Economic Research and Action Project, Students for a Democratic Society, Louisville, Kentucky; Roberta de la Torre, Demonstration Chairman, Madison, Wisconsin region, Madison CORE; Stewart Dowdy, former National Student Association Coordinator, Illinois-Wisconsin Region; Rick Drobner, Commercial Artist, Los Angeles; Barbara Easton, Executive Officer of TOCSIN, a peace group not to be confused with the anti-Communist publication by the same name, Cambridge, Massachusetts; Michael Eisenschel, president, University of Wisconsin Employees Association, Madison, Wisconsin; Charles Fisher, President, Student Peace Union, College of the City of New York; Steve Frankel, Bridgeport Union of Socialist Youth, Bridgeport, Connecticut; Dan Friedlander, Grinnell College, Iowa; Lester Galt, former President, North Dakota Young Democrats; Mickey Gillmore, President, Harvard-Radcliffe Socialist Club; Art Goldberg, Chairman of SLATE, Berkeley; Gene Gordon, Trade Unionist, Bridgeport, Connecticut; Ruth Greenbaum, Chairman West Los Angeles DuBois Club; Beverly Gudbrandson, Shop Worker, Minneapolis, Minnesota; Matthew Hallinan,

Executive Committee, Berkeley DuBois Club; Don Hammerquist, Teamster, Portland, Oregon; John Handy, Jazz Musician, San Francisco; Gail Kaliss, President, Chicago Call for Youth; Brian Keleher, Michigan State University Young Socialists, East Lansing, Michigan; James A. Kennedy, Associate Editor, *Studies on the Left*, Chicago; Joseph Kransdorf, Activist, SPU, Pittsburgh, Pennsylvania; Revel Liebert, former Chairman Columbia University CORE, New York; Arnold Lockshin, University of Wisconsin Student Government; Vincent Lynch, the *Sun-Reporter*, San Francisco; Art McEwan, former Student Body President, University of Chicago, Illinois; Kim Maxwell, Chairman SPU, San Jose State College; Kip Montgomery, Local 10, ILWU, San Francisco; James Moore, President of the University of Wisconsin Socialist Club; Mike Meyerson, Ad Hoc Committee to End Discrimination, San Francisco; Leslie Olson, Bergern, North Dakota; James Peake, Jr., former NAACP Youth Field Secretary, East St. Louis, Illinois; Nancy Ann Penick, Civil Rights Activist, Louisville, Kentucky; Carole Powell, Chairman, San Francisco DuBois Club; James R. Prickett, Regional Director, California Federation of Young Democrats; Paul Richards, Chairman, Berkeley DuBois Club; Thomas Rossen, Community Senate, Reed College, Portland, Oregon; Guy Sandler, San Francisco State College DuBois Club; Jim Soliz Sager, Los Angeles CORE, the Mexican-American Committee, Los Angeles; Robert Scales, Shop Steward, St. Louis, Missouri; Thomas Seatina, Oakland Youth for Jobs; Richard Schaefer, Local 10, ILWU, San Francisco; Ronnie Schmidt, Tolna, North Dakota; Michael Schneider, California Democratic Clubs, San Francisco; Jeff Segal, Student Body President, Roosevelt University, Illinois; Judy Shub, Bruin CORE, UCLA, Los Angeles; Arlene Shupak, Business Manager, *New Horizons for Youth*, Philadelphia, Pennsylvania; Albert E. Silverstone, Chairman, Portland Students for Peace, Portland, Oregon; Tracy Sims, Ad Hoc Committee to End Discrimination, San Francisco; Charles Smith, University Socialist Club, Austin, Texas; Steve Solimita, Action Chairman, YAU, Los Angeles; Marvin Steinbrecker, President, Socialist Discussion Club, Iowa City, Iowa; Ed Spannus, Friends of SNICC (Student Non-Violent Coordinating Committee), Iowa City, Iowa; Bernice Taylor, High School Discussion Group, New Haven, Connecticut; Frank Thompson, Local 17, ILWU, Sacramento; Mike Tigar, former officer of SLATE, Berkeley; John Tillotson, SPU, Minneapolis, Minnesota; Marvin Trieger, Chairman, YAU, Los Angeles; Joseph Uris, Student Council, Portland State College, Portland, Oregon; Rita Vatter, Students for Integration, Minneapolis, Minnesota; Arno Vosk, Chairman, Action, Columbia University, New York; Douglas Wanger, Trade Unionist, Chicago; Thomas Waite, Chairman, Youth for Progressive Action, Minneapolis, Minnesota; Richard Weston, Chairman, TASC, Santa Rosa Junior College; James Williams, former editor, *New South Review*, Louisville, Kentucky.

Marvin Treiger presided at the opening session of the convention, outlined the procedure and general program, and the group then divided itself into sections on organization, civil rights, Puerto Rico, Negro problems, unemployment, Bracero farm workers, peace, civil liberties, education & culture, political action, Viet Nam, and Socialist youth unity. Terence Hallinan's statement entitled "We Must Now Begin to Speak," was widely distributed and served to establish the general tone of the convention, being a five-page document which set forth the history and accomplishments of the W.E.B. DuBois Club of San Francisco and pointed out

that there were five clubs in the general area and three in process of formation. He declared:

"San Francisco, it is true, has long had a reputation as a progressive town. But, there are still the same problems here as in any major city. When we first started, none of the mass organizations would have anything to do with us. When the United San Francisco Freedom Movement, for example, was launched a year and a half ago, we tried to participate. There was such an uproar that we were forced to withdraw our application and were not even permitted to attend meetings. Today we have a situation where the same CORE leader who led the campaign against us declares to the press that if Khrushchev wants to come walk on their picket lines, he is welcome, and the secretary of the San Francisco DuBois Club is a member of the executive board of the San Francisco United Freedom Movement.

This position we now enjoy has not come to us easily. We have it only because we were willing to fight for it. Conditions today are such that we have been able to mobilize a great number of young people and to show the mass organizations that any repercussions they might suffer from working with a socialist youth organization would be more than compensated for by the help our club could provide. It is the firm belief of those of us in the Bay Area that the conditions for a Socialist youth organization on the order of the DuBois Clubs exists in every major city and campus in the country."

The various sections then convened at the ILWU Building; at 60 Leavenworth Street, Apartment 22; at 918 Buchanan Street, 1007 McAllister Street (San Francisco DuBois Club headquarters), and at the office of the American-Russian Institute, 90 McAllister Street. This latter organization is an old Communist front, headed by Holland Roberts, former Stanford University professor, and for many years head of the Communist School in San Francisco.

These various workshops continued through Friday and Saturday, June 19 and 20, and reported to the general meeting. Treiger caused the first of a series of angry outbursts and disagreements when he stated that minority reports could not be read, but would be ruled out of order because there was too much to be done and too little time. A compromise was finally effected when it was declared that the majority report would be read in its entirety, and that there could be one opposition speaker who had three minutes to present his views. There could only be three suggestions for amendments. Immediately after lunch on Saturday, the majority adopted the tactic of presenting two or three amendments, and leaving no chance for any substantial change of the original report. Minority reports were never permitted to be presented. The chair also adopted the practice of recognizing only the most unpopular delegates for opposition remarks, so that there was actually little danger of the majority faction losing its iron grip on the convention.

There were wide varieties of radicalism represented: the Maoists, the Trotskyites, the Socialists, the Anarchists, the independents, the various autonomous local groups, and the usual scattering of existentialist non-conformists who appeared to be opposed to almost every suggestion. There was much acrimony, much shouting; and it soon became clear that a slowly-mounting anger and resentment was developing as it became ever more evident that a small faction was in control and would brook no challenge to its power. And this was the Moscow line Communist group, consisting of the leadership in the DuBois and Youth Action Union

organizations. They had dominated the National Organizing Committee, then the National Coordinating Committee that set up the San Francisco Convention, and the Socialist Youth Conference in March.

Principle was sacrificed for expediency when a proposal was made that no one be supported who had voted in Congress for the Smith or McCarran Acts. The proposal was defeated, but only because some 490 members of Congress who voted for these measures that are so hated by the Left establishment could not then be supported—and some of them might be needed for other matters.

The resolution on peace provided that no member of the youth organization should serve in the armed forces assigned to fight in Viet Nam. But this was defeated because all members would be liable to prosecution as draft dodgers instead of conscientious objectors.

During discussions of the proposed constitution, Robert Kauffman suggested that as Article III specified no person should be eligible for membership who opposed the principles and policies of the new organization, then no member of another national Socialist youth group should be entitled to vote or hold office. This was aimed at the Young Socialist Alliance and Progressive Labor Movement, and precipitated much argument. Carl Bloice declared that no effort was being made to unite the Left, and that no member subscribing to other ideologies would be allowed to influence policy decisions. At that point another Negro delegate said that he came for the purpose of welding together a broad movement of Socialist youth—not to form a rigid organization preoccupied with expelling anyone daring to disagree with its program.

Allan Sharp, a delegate from the national committee of another nationwide youth organization, then declared that the invitations to the San Francisco convention had been a hoax; that there was never any real intention of forming a broad youth group, and that neither he nor his followers would be able to participate under the provisions then being adopted.

At that point, Sharp started walking out of the meeting, and was followed by others until approximately one-third of the delegates had permanently deserted the convention. Those who remained were the faithful members of the DuBois Clubs, Youth Action Union, and a few other of the more radical and Communist organizations. Even the San Jose State College unit of the DuBois Club announced that it had no intention of affiliating with the new national movement.

After the mass exodus, the convention settled down to a semblance of order, but there were still some dissident voices to be heard. Finally, there was the matter of selecting a name for the new organization, and an unidentified delegate arose and said that he implored the leadership not to use the word "Socialist" in the title, because he held that word sacred. With considerable emphasis he stated that after what had occurred any use of the name would be utter hypocrisy. Then he walked out of the hall, accompanied by a round of applause and still more disillusioned delegates.

About 139 people remained, and it was now apparent to them that they had gone too far, and that their rigging of the meeting to concentrate power and warp the membership to the radical ideological views of the small core of leaders had provoked too much resentment. They then rescinded the proposal about exclusion of other Socialist groups. As one observer remarked, this was the inevitable penalty that plagues a group that first puts itself together as a small, tight little center of control and then seeks to hold a rubber-stamp convention. But this is the way with

Communist organizations the world over; as we have explained in previous reports, Communist organizations operate on the principle of what they term "democratic centralism." In theory this consists in the decisions being made by the broad membership and transmitted toward the apex of the organizational triangle for action. In practice, however, the few at the top make the decisions, and they are rubber-stamped by the membership. Those who oppose this practice are condemned as disrupters of the class struggle, opponents and enemies of the world revolutionary movement, and are suspended or expelled.

At present there are five DuBois Clubs operating in Southern California. DuBois Central is comprised mostly of Mexican-American members, and is headed by Alan Zak and Sue Green. DuBois South, a small unit with about seven to ten members who attend with any regularity, is headed by Victor Oliver and Frank Alexander. DuBois West, which devotes itself almost exclusively to the UCLA campus, is headed by Ruth Greenbaum, and is the most active of the five. Marvin Treiger is busily organizing new units, and DuBois East is small and not especially active as this report is being prepared. There are also skeleton clubs, one of which operates in the Santa Monica-Venice area. In the Bay Area, however, the activity is on a much more sophisticated plane and far more effective for reasons that we have mentioned: in short, because the center of Communist power and the most mass following and tolerance exists in that part of the state.

J. Edgar Hoover has described the DuBois Clubs of America as a Communist youth organization, and the Clubs have made no effort to conceal that fact. Several years ago the officials at the University of California would have been aghast at any suggestion that such a group be extended an official welcome to function on the Berkeley campus, but under the present administration such recognition was extended and the DuBois Clubs were given campus status in 1963.* It was, therefore, made easy for the DuBois Clubs to collaborate in propagandizing other students, recruiting more members, spreading dissension against the university authorities, and eventually providing driving power for the united front that triggered the first demonstration on the Berkeley campus in the fall of 1964, and terrorized the very administration that allowed them to function officially on the campus. It seems strange that despite the Regent's policy of not tolerating Communists as employees of the University, the administration welcomes Communist organizations, throws the portals open to Communist speakers, and exhibits an easy tolerance of Communist activists that defies all reason.

At the present time there is being formed a new national organization of Communist adults. These are the tough followers of the Red Chinese line of permanent revolution; the most militant of the Communists who scorn any concept of peaceful coexistence and demand a permanent war against our way of life. It will be interesting to see whether the university administration will also succeed in charming the Regents into extending official campus recognition to this organization. Any demonstrations that follow should indeed be spectacular. It makes very little sense to us that the administration at Berkeley should expel SLATE when that organization defied the rules and called Clark Kerr some unpleasant names a few years ago, and then recognize the DuBois Clubs. Perhaps there is a difference without much distinction, as SLATE managed to capture seven out

**Daily Californian*, November 11, 1964.

of the eight positions in student government at Berkeley in the 1964 elections, so its proscription didn't cramp its operation to any serious degree.

Notice should be taken that the formation of the DuBois Clubs of America was concluded on June 21, 1964. The announcement was mailed from the newly-established national headquarters in San Francisco, a series of regional conferences were scheduled for the late summer, and plans were made for the building of a network of local chapters. Funds were solicited for the support of the temporary national office at 1007 McAllister Street, San Francisco, and plans were made for publication of newsletters both from the Bay Area and Southern California organizations. This was accomplished in the south with the issuance of *The Correlator*, and in the north with the appearance of *Insurgent*, in the spring of 1965. Carl Bloice edits this publication, and the first issue contained material presented under the joint efforts of the staff and contributors. They included Celia Rosebury, managing editor; Karol Burkett Supriano, art editor, and former secretary of the Marxist School of Social Science in San Francisco; Howard Harawitz; David Castro; Michael Folsom; Steve Murdock, from the *People's World*, and John Haag, owner of a Venice West restaurant, and a leader of the Southern California West DuBois Club. The national office of the DuBois Clubs of America is now situated at 1853½ McAllister Street, San Francisco. The first issue of *Insurgent* leveled its propaganda guns in the general direction of the Regents of the university as the villains representing Big Business in the class struggle, as against the Progressive Element of the faculty and administrators and the student rebels as the heroes. This is the customary theme of all Communist propaganda; the rich, privileged class of exploiters against the poor, underprivileged masses of exploited people—the bourgeoisie against the proletariat, in Marxist terms.

Background for Revolt

The first phase of events leading to the Berkeley Rebellion falls now into its proper place. We have seen how the Communist Party originally established its headquarters on the Pacific Coast in San Francisco, developed its indoctrination and educational system in that city, established its faculty and student units at the Berkeley campus of the University of California and steadily built a strong base of operations in the Bay Area of California and particularly at the principal campus of the nation's largest university. We have also traced the growth of various radical student organizations there—especially SLATE, and we have seen how this organization and other groups united to form a new Communist youth organization, the DuBois Clubs of America, with its national headquarters also situated in San Francisco.

It now remains to examine phase two of the Berkeley Rebellion, and we move a step closer to the outbreak of actual demonstrations in September, 1964. This second phase consists in examining the international Communist situation immediately preceding the eruption of the rebellion and a determination of what the international party line was for Communist youth at that time. We shall reserve until later a discussion of the reasons that moved the Communist elements of the rebellion to select Berkeley as its most vulnerable target, the general attitude toward Communism on the Berkeley campus having been demonstrated by the erosion of its security measures, the opening of the campus to Communist

propaganda speakers, and the easy tolerance of pro-Communist faculty members who made little effort to conceal their profound Marxian bias either from students or administration.

It is significant to note that there was a meeting in Moscow, September 16-24, 1964, of "A World Forum for Solidarity of Youth and Students . . ." This convention was sponsored by the Committee of Youth Organizations of the USSR, the International Union of Students and the World Federation of Democratic Youth. We have already alluded to the two latter organizations as being the most important of the international Communist youth fronts, and at this particular meeting there were representatives from more than one hundred nations. The delegates from the United States consisted of four representatives from the DuBois Clubs and some students from the University of Wisconsin.

The United States National Student Association refused to participate in this Communist conclave, and the non-Communist Student Peace Union ". . . was flatly told that it could send no more than one delegate and would receive no financial assistance."*

The main topic of the conference was an international drive to accelerate the recruiting of students, the unleashing of student demonstrations, and the establishment of an International Solidarity Fund to channel Soviet and other financial aid to national liberation movements and to provide technical and financial assistance to new nations. A "liberation movement" in Communist terms, means the subversive strategy used to accomplish the destruction of non-Communist institutions.

It is also significant to note that three prominent California activists were in the Soviet Union in September, 1964. They were Herbert Aptheker, Carl Bloice, and Dr. Carlton Goodlett. Aptheker, is the father of Bettina Aptheker, who played a prominent role in both the DuBois Clubs and the student rebellion at Berkeley, and whose descriptions of the events of the past six months have been printed in several Communist publications. Mr. Aptheker was for several years the editor-in-chief of *Political Affairs*, the monthly organ of the National Committee of the Communist Party of the United States. He has appeared on the Berkeley campus as a lecturer on several occasions, and is one of the most important Communists in the country. Carl Bloice attended the Moscow meeting as a delegate from the DuBois Club of San Francisco, and Dr. Carlton Goodlett will be remembered as the keynote speaker at the DuBois Club Convention in San Francisco. He also happened to be in Moscow in September of that year.†

We may note in passing that Herbert Aptheker was scheduled to speak under the sponsorship of Youth for Peace and Socialism, Forerunner of the Youth Action Union, at Park Manor, 607 S. Western Avenue, Los Angeles, on May 3, 1962. He was, according to the handbill issued by the sponsoring organization, to speak on the Negro question, and he was accompanied at the meeting by Dorothy Healey, chairman of the Southern Division of the Communist Party of California.

The September meeting of the World Forum for Solidarity of Youth and Students had been preceded by a "preparatory meeting" in Moscow in April of that year. Consequently, at the April meeting a permanent secretariat of the World Youth Forum was established, and this secre-

**Problems of Communism*, November-December, 1964, pp. 64-67.

†See *Communist Affairs*, July-August, 1964, page 10; *San Diego Union*, January 31, 1965; *Problems of Communism*, November-December, 1964, page 64; Washington Report, American Security Council, December 21, 1964.

tariat was, of course, rigidly dominated by delegates from the World Federation of Democratic Youth and the International Union of Students.*

The December report of the American Security Council, issued from Washington, reported on the establishment of the International Solidarity Fund, and described this international center for the financing of subversion throughout the world on the part of radical youth organizations as "A Fund for the Revolution."† The *Washington Report* read as follows:

"Moscow . . . decided to establish an unlimited global 'solidarity fund' to finance Communist-led student agitations throughout the world. For 1965, one hundred million dollars of this fund have been earmarked for Latin America, including our Eastern Atlantic ocean bastion that also faces the Caribbean—Puerto Rico.

The first announced monies from this fund were employed in South Viet Nam in the month of November, 1964. Fifty thousand dollars were intended to produce the instability of the Saigon government and to promote the Viet Cong cause of 'national liberation.'

Money was liberally poured into capitals throughout the Asian-African bloc and into the iron curtain countries to promote 'hate America' riots because of the air-borne rescue operation in the Congo. That Communist maneuver proved successful because the air-borne forces were withdrawn, under the bombardment of the Moscow-Peking propaganda before all the hostages were rescued.

The outbreak of student agitation and lawlessness on the campus of the University of California was not isolated from this global Kremlin plan. It followed the identical pattern of similar student agitation that has been the rule rather than the exception under Communist Party and Communist front direction in Latin America. Defiance of authority and demands for independent 'political' activity on the campus, have characterized Communist-inspired disorder there.

The first public announcement of the establishment of this 'solidarity fund' came to my attention in a dispatch published on November 13, 1964, in the official Communist Party daily *El Siglo* of Santiago, Chile. The dispatch was datelined from Moscow the previous day. It carried the by-line of Joaquin Gutierrez, a Costa Rican Communist who is married to a Chilean Communist. Gutierrez was listed in *El Siglo* as its correspondent in Moscow.

The *El Siglo* dispatch quoted Vladimir Yarovoy, vice-president of the Komsomol (Russia's Young Communist League), as the authority for the announcement of this 'solidarity fund.' It was significant that Yarovoy chose November 12 to announce the existence of this fund and used the vehicle of the official organ of the Communist Party in Chile for the purpose. It was the nineteenth anniversary of the founding of another arm of the International Communist apparatus, the World Federation of Democratic Youth.

The fund is to be employed to stimulate anti-American propaganda, organize demonstrations and riots against American embassies, consulates, United States information offices and libraries, and to attempt to undermine constituted authority wherever and whenever necessary. The plan, it has been learned, calls for the organizers to provoke the police to employ what the Communists charge is 'brutality' to suppress the riots and to compel the military to employ

**Tass*, April 18 & 20, 1964, p. 33.

†The American Security Council, *Washington Report*, issued on December 21, 1964; see also: *Bulletin for Study of the USSR*, November, 1964, p. 62, which states that establishment of the solidarity fund was announced in Moscow on September 26, 1964.

identical tactics. This is designed to blacken the image of, and arouse sentiment against, the only forces that are equipped to forestall a Communist takeover.

The decision to earmark the vast sum of money for Latin America to emphasize the role of youth was made in Moscow after a thorough critique of the setbacks suffered by the Communists this year in their never-discarded master plan to capture Latin America.

The new plan met with the gleeful approval of the Chinese Communist delegates who attended a secret high level planning meeting for that purpose during their visit to Moscow for the forty-seventh anniversary observance of the Russian Revolution. Although it is true that the Moscow line has appeared to look 'softer' than the Peking line, both converge for the avowed identical objective to promote agitation and subversion through the use of violence by high school and university students. Despite the apparent cleavage in the Communist camp, this unity of purpose and cohesion in the youth movement is still visible in Latin America.

The thrust for the re-invigorated student offensive in Latin America will come from Communist Cuba, but dollar-starved Fidel Castro will not be given control of the expenditure of the 'solidarity fund.' He will only receive an allotment to cover expenses for the modern college of Communist subversion which he established in 1960 and which he has since spread across the island with at least six model red campuses. An estimated eight thousand youths from other Latin American countries have already undergone indoctrination and training in Communist subversion, including guerilla warfare since late 1959. That the study of Marxism-Leninism has become a mass phenomenon in Cuba was reported on November 26, 1964, by Leonel Soto, national director of the official Party schools, at a national meeting in Havana of schools for revolutionary education. He reported that more than 'one hundred and nine thousand revolutionaries have studied Marxism-Leninism in these schools.'

On November 30, 1964, a crack force of two hundred fifty Spanish-speaking Komsomol 'technicians' arrived in Havana. According to the Cuban radio they were brought in to train the Cuban *campesinos* (peasants) in the operation of sugar cane combines and lifts which Russia persuaded Castro to buy in order to speed up the harvest.

This in itself is most contradictory. The Russian sugar crop comes from beets. Besides, Fidel Castro announced that all able-bodied Cubans, male and female, will have to cut cane—on a voluntary basis—in the current harvest. There are unofficial estimates that this year's crop will reach five million tons, an increase of one million two hundred thousand over that of last year.

The Komsomols got the V.I.P. treatment on arrival at Havana aboard the Russian ship *Mikhail Kalinin* on the night of November 30. At the dock to welcome them were Aleksander Alexseyev, the Soviet Ambassador; Carlos Rafael Rodriques, minister-president of the National Institute of Agrarian Reform, officers of the Union de Jovenes Communistas (Cuba's Young Communist League), and officers of the Federation of Students of the University of Havana.

Rodriques welcomed them in the name of the official party, which is now called the Partido Unido de la Revolucion Socialista (PURS), and in the name of the government. It was significant, too, that Havana radio reported that he told the Komsomols: 'This is the first

time we will have had the opportunity to work in an experimental way with these machines.'

The Komsomol leader who thanked Rodriques for the welcome declared that they had been trained in the combine factories in Moscow and Rostov and that their stay in Cuba will be six months.

The Komsomol, as is known, claims nearly twenty million members between the ages of 14 and 26. The mission of the organization, as stated in official Soviet publications and in its own newspaper, *Komsomolskaya Pravda*, is to train Soviet youth in the theory and practice of Communism and in military indoctrination and training. Never before has a force of Komsomol established a beachhead in a Latin American country.

Spearheading the intensification of subversion in Latin America will be the young people who have undergone intensive indoctrination and training courses at the general headquarters of the Communist International apparatus in Czechoslovakia, Russia, Communist China and Cuba.

The unlimited 'solidarity fund' is reported to have received its blessing from Premier Chou En-lai when he was in Russia for the forty-seventh anniversary observance of the Russian Revolution.

Our two defense outposts in the Caribbean, Panama and Puerto Rico, are high on the target list for 'solidarity fund' aid during 1965. The same is true of Venezuela, whose sea of oil and mountains of rich iron ore as well as the totality of more than four billion dollars of United States industrial development the Communists would like to control. Castro continues to furnish at least known moral support to the uncontained guerilla warfare in Venezuela. He has boasted over the Havana radio that 'every victory of the F.A.L.N. is a victory for Cuba.'

The contingent of Komsomols who arrived in Cuba might soon fan out, with Cuban passports, to Latin American countries, although most governments would deny them visas, to organize and command the student demonstrations and riots. They could also enter certain countries surreptitiously to perform their missions.

The 'solidarity fund' has a great amount of spare Soviet dollars to disburse, thanks in part to the fact that the Russians have been able to buy wheat, and are being offered other products from the United States on handsome terms of credit. Coming events in 1965 will prove, through the accent given to youth through that unlimited fund, the wisdom or the foolishness of accepting this type of co-existence."*

In previous reports we have given the names of those students at the University of California, as well as other Communist youth leaders in the San Francisco Bay Area, who have defied the ban placed on travel to Cuba by the United States Department of State, and who since became leaders of the Berkeley Rebellion. Until the assassination of President Kennedy the student Communist front organizations that were propagandizing in favor of Fidel Castro and his regime were exceedingly active. But when it became evident that Lee Harvey Oswald was a member of the Fair Play for Cuba Committee, and that this organization was completely controlled by the Communist Party, it quietly ceased overt operations, but the travel from the United States to Cuba by Communist student leaders has continued.

*Written by Jules DuBois, Latin American correspondent for the *Chicago Tribune*.

The next International Communist Youth meeting of any significance was the convening of the Eighth Congress of the International Youth Union of Students at Sofia, Bulgaria, on November 28, 1964. This affair, noted in *Communist Affairs*, September-October, 1964, p. 9, continued with the devising of strategy for youth demonstrations throughout the world, and served as an implementation of the Moscow meeting held during the preceding month. It should also be pointed out that on December 16, 17 and 18, 1964, a preparatory committee meeting was held in Algiers for the purpose of laying the foundation for the Ninth Communist World Youth Festival which is scheduled to open in Algiers on August 9th of this year. It will be preceded by a World Conference of Teachers, which is also a Communist front, scheduled to convene in Algiers on April 4, 1965.*

Leon Wofsy

Commencing on page 19 of our 1951 report was a section on the Labor Youth League, explaining how this Communist movement was formed in Chicago in May 1949, under the direction of Leon Wofsy. Since Mr. Wofsy is now employed by the University of California, and moved from its San Diego campus to Berkeley at about the time the student rebellion started, and since he unquestionably is the top expert in the field of organizing Communist youth movements, it is appropriate to examine his background here in more detail.

Leon Wofsy was born at Stamford, Connecticut, on November 23, 1921. He finished high school at New Haven, then attended City College of New York in 1942. While he was a high school student in New Haven he was also active in the American Student Union, a Communist-dominated organization, and at New York City College in 1941 he was president of the Marxian Cultural Society, a section of the Young Communist League, and in 1942 he was an officer of American Youth for Democracy in New York.

Having majored in science, Wofsy worked as a chemist for about a year and a half after leaving college, and then became a full-time Communist functionary, specializing in its youth division. From 1937, certainly through the next eighteen years, he was one of the most active and important Communist officials in the United States. In April 1946, the Communist Party summoned a number of its more important members to hear their leaders speak in New York, and Wofsy was one of the speakers.† Two months later he addressed the Second National Convention of American Youth for Democracy, and by 1947 was its executive secretary in the state of New York. He became national educational director for AYD in 1948, and applied for a passport to attend a meeting of the World Federation of Democratic Youth, but the government considered him a subversive leader and determined that he should not be permitted to go abroad for the purpose of equipping himself to return to this country and assist in its destruction, and his application was therefore denied.

The government was obviously accurate in its appraisal of Wofsy's role, as he was one of eight Communist leaders from New York, Pennsylvania, Illinois and California who went to Chicago for the purpose of planning a new Communist youth organization in 1949.‡ This was the

**Algiers Republican*, Nov. 23, 1964; *Communist Affairs*, Nov.-Dec., 1964, p. 11.

†*Daily Worker*, April 9, 1946.

‡*Daily Worker*, April 1, 1964.

Labor Youth League which was created at a meeting at the People's Auditorium, Chicago, May 28 and 29, 1949. Wofsy publicly declared that the Labor Youth League was an adjunct to the Communist Party, and proudly declared that he was a Communist.

In a report to the National Committee, Communist Party of the United States, delivered on January 24, 1949, Wofsy said:

"The fight for repeal of the Draft and the defeat of Universal Military Training legislation is vital to a genuine program for young workers, as well as to the whole struggle for peace."

* * * *

"Our concentration policy requires that a major political and educational campaign now be organized for all party youth. . . ."

* * * *

"There are many additional aspects to the job of mobilizing the Party's youth. Our work among students will be examined, so that every student club views as its basic permanent task the winning of the widest possible section of the students as allies of the working class and within the framework, knows exactly its duties to the industrial concentration work of the Party. The opening up of systematic work among national groups youth must figure seriously in our plans."*

This acknowledged expert in organizing Communist youth made another report to the National Committee of the Communist Party of the United States in 1950, in which he said:

"While we cannot here take the time to document these beginnings, the important thing is that these very elementary movements toward unity, especially on the peace question, can be expanded and unfolded quantitatively and qualitatively, into an important democratic upsurge among large sections of youth in 1950.

This is the major question that confronts our Party among the youth; one which, among other things, points up the importance of the leading role of the League (as an advanced youth organization with a Marxian content) in actively rallying and stimulating the broadest movements of youth everywhere—in all the youth organizations, in the unemployment lines, on the campuses.

In the period between now and the First National Convention of the League, the job of vastly enhancing the League's capacity for leading and influencing youth on a mass scale in the great struggle ahead must receive the constant attention, the dynamic and imaginative leadership, of every Communist and advanced worker."†

There was no person during the entire history of the American Communist Party who played a more significant and successful role in organizing Communist youth throughout the country than Leon Wofsy. The first concerted effort to organize American students and indoctrinate them with Communism was made in 1931, according to Gilbert Green, who was then the national secretary of the Young Communist League.‡

As we have seen, the Young Communist League dissolved itself in October 1943 and reformed as American Youth for Democracy, a movement in which Mr. Wofsy played a vital role as national educational director. So successful had he become by this time, that he was made the

*Political Affairs, March, 1949, pp. 34, 44, 45.

†Political Affairs, May, 1950, p. 155.

‡Young Communist Review, April, 1938, p. 4, cited in *The Communist in the Schools*, by Robert W. Iversen, Harcourt, Brace & Co., N.Y. 1959, p. 124.

organizer of the Labor Youth League, which was simply a continuation of American Youth for Democracy under another name, and it proliferated until the splits and schisms in the American Communist movement and the Sino-Soviet dispute broke it up into a number of Communist youth organizations that existed independently of each other. The next Communist youth organization had its origin in San Francisco, the DuBois Clubs of America.

Leon Wofsy made many trips to California in connection with his duties as national director for the young Communist movement in the United States. He lectured at Communist schools, to groups of important party members, to youth leaders, and the usual array of Communist front organizations. He has been a resident of California continuously since September of 1961, when he was employed as assistant research biologist at the University of California in San Diego at a salary of \$9,500 a year. Wofsy continued to work at the San Diego campus of the university until July of 1964, when he applied for a position on the Berkeley campus as an Associate Professor of Biology at a salary of \$10,600 per year. He arrived at Berkeley in September of 1964, just in time for the commencement of the demonstrations. Also working at the La Jolla campus of the university, at the Scripps Research Institute, was another scientist whose name will be familiar to the readers of these reports. He was Martin Kamen, the man who was an assistant to Dr. J. Robert Oppenheimer at Berkeley during the research that led to the development of the atomic bomb, and who was followed by government agents and photographed passing classified information to a Soviet Vice-Consul in a San Francisco restaurant.

In connection with making the change from San Diego to Berkeley, and, indeed, in connection with his original employment by the university, it was necessary for Mr. Wofsy to file what the university terms a form 1501, which is permanently filed in the President's office, department of administrative records, 681 University Hall, Berkeley 4, California. Wofsy's form 1501 was filed on March 24, 1964, gave his home address as 3110 Denver Street, San Diego, listed him as an associate professor in the department of bacteriology, and showed his previous employment as follows: from November, 1942, to January, 1943: a chemist for the May Chemical Company, Newark, New Jersey, at a salary of \$200.00 per month; from January, 1943, to September, 1943: United States Army; from September, 1943, to May, 1944: Pyridium Corporation, Nepera Park, New York, a chemist at \$225.00 per month; from May, 1944, to May, 1949: American Youth for Democracy, New York City, an executive at \$250.00 per month; from May, 1949, to May, 1956: Labor Youth League, New York City, New York, an executive at \$250.00 per month; from May, 1956, to July, 1956: unemployed; from August, 1956, to August, 1957: Armstrong Rubber Company, West Haven, Connecticut, a chemist at \$470.00 per month; from September, 1957, to January, 1958, North Branford, Jr. High School, Connecticut: a teacher at \$300.00 per month; from January, 1958, to August, 1958: Sterling Chemical Laboratories, Yale University, a laboratory assistant at \$300.00 per month; from September, 1958, to May, 1961: Yale University, New Haven, Connecticut, graduate student; from June, 1961, to August, 1961: Yale University, post doctoral chemist at \$1,000 for the period from September, 1961, to June, 1964: University of California, San Diego: assistant research biologist (I) at \$9,500.00 per year; from July, 1964, to September,

1964, and until the present time: University of California at Berkeley: assistant research biologist (III), at \$10,600.00 per year.

It is of parenthetical interest to note that as this portion of the report is being dictated early in April, 1965, an old comrade of Mr. Wofsy's in the Labor Youth League at New York, and who also was its state director, has an application pending to teach as an associate professor of law in the department of law on the Los Angeles campus of the University of California. It is also a coincidence that he, too, has stated that he became disenchanted with Communism and left the Communist movement in 1956. This is precisely the same thing that Mr. Wofsy declared when he secured his position with the state university.

We wish to make it unmistakably clear that we do not believe that any particular retribution should be made against people who in good faith left the Communist Party. It is tragically simple to slip into an attitude of easy tolerance toward an international organization that has never swerved one iota from its determination to weaken our country by subversive methods, render us vulnerable and then to destroy our way of life, take away our cherished freedoms, and make us a section of the world Communist government. It is difficult for Americans to realize that every dedicated member of the Communist movement in this country must work to achieve that very end; that the burden of proof lies upon the individual former Communist member to convince others that his disenchantment is sincere, and that he has actually left the Communist Party. We are aware that many liberals who have been lured into Communist front organizations, and who then discovered the concealed Communist control, have become resentful and frankly related their experiences. We are also mindful of the fact that most of these people have preferred to slink away and snarl at those who would remind them of their unfortunate experience.

It may not be inappropriate at this point to remind our readers that we have conducted entire hearings for the purpose of affording an opportunity to individuals who were unwittingly lured into front organizations to come forward and testify concerning their experiences, and thus afford them an opportunity to set the record straight. We are happy to report that our confidence has not been betrayed by a single one of these individuals, and that many of them who were suffering because of their public records as having been associated with Communist front organizations, thereafter had no difficulty in securing work, and our files contain letters of appreciation from them.

We are aware that one of the major upheavals of the international Communist line occurred in February, 1956, when Khrushchev delivered his famous speech at the Twentieth Congress of the Communist Party of the Soviet Union, blasting Stalin and his regime, repeating in more emphatic terms the charges that the rest of the free world had been making for many years. Those members of the Communist Party who had closed their eyes to the truth, and who had lived in an atmosphere that excluded everything except Communist propaganda and Communist activities, received a staggering blow when the report by the Central Intelligence Agency of Khrushchev's speech was fully corroborated as accurate by the Soviet Union. Many former Communists left the organization after this period, and it is quite possible that Leon Wofsy, after a period of intensive devotion to Communist activity since he was a teenager in high school, was one of those who left the party. If their break was really sincere, and if their party activities were of such importance that

their statements would be of value to their government, most of these former members went voluntarily to the Federal Bureau of Investigation and gave frank and complete statements concerning the real nature of the Communist apparatus that is seeking to destroy us. Many went before legislative committees, such as the House Committee on Un-American Activities or the Senate Internal Security Sub-Committee. Our own files contain many statements by such persons, and we have invariably respected their wishes not to betray some of their former comrades who may still be in the party.

Such top Communist leaders as Ben Gitlow, Earl Browder, John Gates, Howard Fast, Hede Massing, Elizabeth Bentley, Dr. Bella V. Dodd, Whittaker Chambers, Paul Crouch, John Lautner, Frank S. Meyer, and many others, have gone to government agencies and offered such assistance as was desired; some testified before legislative committees in open hearings, thereby facing a lifetime of the most vicious abuse and attacks by the Communist apparatus in an effort to destroy their credibility; some have written books about their experiences that have been valuable sources of reliable information concerning the Communist subversion that has been gnawing away at the vitals of our society since 1919.

It is possible that the officials of the state university who assumed the responsibility of employing this former director of Communist youth activities throughout the entire country, and whose whole life from the time he was a high school student until he was a mature man was devoted to the Communist cause, had some confidential information that his statement about becoming disenchanted with Communism and breaking away from the movement was sincere and truthful. It is, of course, common knowledge that in many instances such statements are made to naive persons for the purpose of securing a well-paying job as an undercover subversive agent so that subversive activities may be pursued at taxpayers' expense. If, indeed, Mr. Wofsy and his former colleague who is now an applicant for a position at UCLA, *did* go to any government agency and if they co-operated fully in at least making some effort toward atonement for their former actions to wreck our government, we have been unable to discover that fact. Until we do, we consider it our obligation to the students, the faculty, the taxpayers, the legislature and the people of the State of California to make this type of information available.

Mr. Wofsy has only been on the Berkeley campus a short period of time, but he has nonetheless aligned himself with a group of colleagues some of whom have exhibited considerable sympathy for the Free Speech Movement in general and its radical leadership in particular.

We do not know, either, whether Mr. Wofsy saw fit to explain to those university officials who assumed the responsibility of accepting his story and giving him a job, that there was a great deal more to his Communist background than simply the work he did for American Youth for Democracy and the Labor Youth League as set forth in his form number 1501. If he made a full disclosure to these officials, and a full disclosure to the appropriate agency of our government, we will be most happy to make that fact as public as we have made public Mr. Wofsy's Communist background in the foregoing account. Until that time it is perfectly plain that we have nothing more than his simple statement to the effect that he became disenchanted with Communism and left the movement in 1956.

For approximately twenty years Leon Wofsy played a role of ever-increasing importance in the American Communist Party, until he was making reports directly to its National Executive Committee and was

considered sufficiently reliable and indoctrinated to be placed in charge of its National Youth Movement. We know that he made an *involuntary* appearance before a legislative committee in Washington in 1955, and on that occasion when he was interrogated about his experiences in the Communist Party, he responded by seeking refuge behind the Fifth Amendment.*

Target Berkeley

At this point we have completed explaining how the concentration of Communist strength was developed in the Bay Area. We must now consider the next phase of the Berkeley Rebellion, which will be an examination of the reasons why the Berkeley Campus was selected as a target for the mass demonstrations that started in September 1964.

It should be apparent by this time that the move against the Berkeley campus was not spontaneous. The position of the university *in loco parentis* to the students had been the central theme of the three major meetings described above: the National Organizing Conference in New York in 1963, the Socialist Convention in San Francisco in March 1964, and finally the June 1964 convention in San Francisco which gave birth to the DuBois Clubs of America. All that remained to trigger the demonstrations was some incident—almost any incident would have served the purpose. That incident was provided on September 14, 1964, when Dean of Students Katherine A. Towle wrote the letter that set the entire Berkeley Rebellion in motion. It soon gathered momentum, formed a united front mass movement of protesting students and faculty members, intimidated the administration to the degree where it retreated to a point of no return and conceded virtually every major demand made by the students, produced a condition of anarchy on the Berkeley campus, and then proceeded to consolidate its position.

As we have heretofore indicated, most of the students who originally went along with the united front movement discovered that the real direction of the rebellion was in the hands of SLATE and the DuBois Clubs, and quietly dropped out of the movement.

Since it was Dean Towle's letter that precipitated the difficulty, we should point out that the letter was distributed only after preliminary conferences between the Chancellor of the university, the Dean of Students, the Campus Police and the Public Affairs Office on July 22 and 29, 1964, and their agreement that a strict interpretation of the rules promulgated by President Clark Kerr was necessary. The important letter written by Dean Towle on September 14, 1964, read as follows:

"To: presidents or chairmen and advisors of all student organizations. Beginning September 21, 1964, provisions of the policy of The Regents concerning 'use of university facilities' will be strictly enforced in all areas designated as property of The Regents of the University of California, including a twenty-six-foot strip of brick walkway at the campus entrance on Bancroft Way and Telegraph Avenue between the concrete posts and the indented copper plaques on Bancroft Way which reads 'property of The Regents, University of California. Permission to enter or pass over is revocable at any time.'

Specifically, section III of the policy referred to above prohibits the use of University facilities 'for the purpose of soliciting party

*"Investigation of Communist Activities, New York—Part II—Youth Organizations," hearing before the Committee on Un-American Activities, House of Representatives, Eighty-Fourth Congress, First Session, March 16, 1955, p. 219 et seq., United States Government Printing Office, Washington, D.C., 1955.

membership or supporting or opposing particular candidates or propositions in local, state or national elections,' except that Chief Campus Officers 'shall establish rules under which candidates for public office (or their designated representatives) may be afforded like opportunity to speak upon the campuses at meetings where the audience is limited to the campus community.' Similarly Chief Campus Officers 'shall establish rules under which persons supporting or opposing propositions in state or local elections may be afforded like opportunity to speak upon the campuses at meetings where audience is limited to the campus community.'

Now that the so-called 'speaker ban' is gone and the open forum is a reality, student organizations have ample opportunity to present to campus audiences on a 'special event' basis an unlimited number of speakers on a variety of subjects, provided the few basic rules concerning notification and sponsorship are observed. These are outlined in detail in the booklet, 'Information for Student Organizations,' distributed to all organizations and their advisors. The 'Hyde Park' area in the Student Union Plaza is also available for impromptu, unscheduled speeches by students and staff.

It should be noted also that this area on Bancroft Way described above has now been added to the list of designated areas for the distribution of handbills, circulars, or pamphlets by university students and staff in accordance with Berkeley Campus policy. *Posters, easels, and card tables will not be permitted in this area because of interference with the flow of traffic. University facilities may not, of course, be used to support or advocate off-campus political or social action.* (Committee's italics)

We ask for the cooperation of every student and student organization in observing the full implementation of these policies. If you have any questions, please do not hesitate to come to the office of the Dean of Students, 201 Sproul Hall.

KATHERINE A. TOWLE
Dean of Students."

Students representing eighteen off-campus organizations took advantage of her invitation and visited her on September 17th. On the following day she was presented with a petition from these organizations protesting her directive, and on September 21st the directive was reconsidered and a new one announced, which allowed a limited number of tables at the main entrance to the university. This, however, was not satisfactory to the students and they held the first defiant demonstration on September 21, 1964.

The university had long banned Communists from its campuses, either as speakers or as employees. It was obvious that in the political science department there were professors who were capable of teaching about Communism objectively, and there was, therefore, no necessity for throwing the gates of the institution open to Communist propagandists who would use the facilities provided at taxpayers' expense for spreading their message of subversion. It was also obvious that if students actually wanted to listen to such speakers and had the time to do so, there were innumerable facilities near the campuses where they might go and enjoy that opportunity. The YMCA at Berkeley is situated directly across the street from the campus and has been welcoming Communist speakers for years, and there would be no inconvenience to those students who

wished to go there and see what a Communist official would have to say. Indeed, the students have been doing precisely that for the past twenty years. In addition there has always been an abundance of Communist meetings and Communist front organizations in the vicinity of the campus ever since the first Communist unit was planted there thirty years ago.

When the present university administration took over, however, these restrictions were eased. The Regents were persuaded to rescind their long-standing prohibition against Communist lecturers on the university premises; radical student organizations were given official university recognition; the university's security officer was suddenly burdened with the handling of insurance matters as well as his security duties, and an atmosphere of easy tolerance of left-wing radical activities pervaded the campus at Berkeley. Other campuses of the university remained relatively stable under their local administration, but the concentration of Communist power in the Bay Area and the new liberal administration there made it an inviting target. Furthermore, the concentration of university power and authority lies at Berkeley, the President of the statewide institution has his office there, the statewide administration building is located in Berkeley, and there the decisions are made that affect the operation of the entire institution, the largest educational complex in the United States.

The Role of Clark Kerr

Clark Kerr became Chancellor of the Berkeley campus of the university in July of 1952, and President of the university exactly six years thereafter. Since the changes we have mentioned above occurred during his administration, it is essential that we examine his background, his associations, his experience and his temperament in order to understand the reason for the liberalizing of the rules, the granting of almost unlimited freedoms to the students and faculty, and the assumption, at least by some of the students, that they could get away with virtually anything at Berkeley.

It should hardly be necessary for us to indicate at this point that we do not make the slightest implication of any subversive affiliation or activity on the part of Dr. Kerr by reason of anything contained in this portion of the report. He is the chief executive officer of the university, he made the decisions which were approved by The Regents and led the way to the new liberalizing influence at Berkeley, and it was President Kerr whose decisions resulted in the appointment of Dr. Edward Strong as Chancellor of the Berkeley Campus, in his summary removal, and in the appointment of Martin Meyerson as his successor. In endeavoring to make a determination of how the Berkeley Campus became vulnerable to student rebels, and how a minority of Communist leaders managed to bring this great educational institution to its knees, it is indispensable that we know something of the background of the man who was in command when the rebellion occurred.

Clark Kerr was born at Reading, Pennsylvania, on May 17, 1911. He was a teaching assistant at the Berkeley campus from 1937 to 1939 and then became a professor at Stanford University. From 1940 to 1945 he was a professor at the University of Washington in Seattle, then returned to Berkeley, where he taught until 1952. He became Chancellor in July of that year, as we have stated, and has been President of the institution from July, 1958, to date.

While maintaining his status at the University of California and the University of Washington, Dr. Kerr engaged in a great many extra-curricular activities. He was appointed to a committee which investigated the San Joaquin Cotton Strike of 1933. This strike was one of the most violent in the labor history of the state, although not long in duration. The strikers were led by Pat Chambers, Caroline Decker, Lillian Monroe, and other well-known Communists. The governor was compelled to send forces of highway patrolmen into the San Joaquin Valley for the purpose of preventing angry mobs from taking control of local government facilities. Bales of cotton and farm buildings were burned at night, two strikers were shot and killed, and a subsequent investigation disclosed that the union which precipitated the strike was a Communist-dominated organization known as the United Cannery, Agricultural, Packing and Allied Workers of America, with headquarters in San Francisco.

From May, 1934, until January, 1935, Dr. Kerr functioned as a field advisor for the State Relief Administration's Division of Self-Help Cooperatives. This was the period when the Communist infiltration of the State Relief Administration was gathering considerable momentum. The infiltration had become so pronounced by 1941 that the Speaker of the California State Assembly appointed a committee to investigate the situation. This committee, of which Assemblyman Sam Yorty, now mayor of the City of Los Angeles, was chairman, conducted a series of open and executive hearings in most of the large cities of the state. It filed its report with the State Assembly, and submitted thousands of pages of sworn testimony and exhibits. It found that the State, County and Municipal Workers of America was a Communist-controlled union whose headquarters were also in San Francisco, with a regional office in the Wilcox Building in Los Angeles. It collaborated with yet another Communist-dominated organization known as the Workers Alliance, whose members comprised people who were on relief or unemployed. The headquarters for this latter union was in San Francisco, and it was headed by Alexander Noral, a registered member of the Communist Party.

Kerr served with several government agencies during and immediately after the war: in 1942 he was a senior analyst with the War Manpower Commission; he worked for the Office of Price Administration in Seattle, Washington, in 1942; he was a consultant for the Hawaiian Territorial War Labor Board during 1943-1945, and also served with the Twelfth Regional War Labor Board. During 1945-1946, he was with the Office of Wage Stabilization in San Francisco, and also did much of his work for the War Manpower Commission in that city. It was inevitable that he was brought into close contact with the many Communists who were also working in these agencies—and as we were then allies of the Soviet Union, many people thought little of such associations. We make no implication that there was any guilt by association, but we do make clear that many of Kerr's most intimate colleagues during these years were at the same time teaching at the Communist school and participating in a wide variety of pro-Communist activities. Some of them came to work at the Berkeley campus after Kerr became its Chancellor, and some found places with the Institute of Industrial Relations, which he headed.

We are fully aware that some readers will criticize us for what they consider to be red-baiting and witch-hunting, and implying all sorts of dark motives by bringing this background into the open—but it is, we believe, an indispensable part of this report, and has a direct and pertinent bearing on the innovations that characterized Kerr's administration, both

as Chancellor at Berkeley and later as President of the University. The tolerance of the radical student groups, the opening of the campus to Communist officials, the reluctance to curb the activities of the most brash and defiant student rebels, and the obvious distaste for adequate security precautions, speak for themselves.

No one can seriously doubt that there were swarms of Communists throughout our wartime agencies. There was an unparalleled opportunity for infiltration, and the Communist apparatus seized it with alacrity. American employees in these agencies were concerned with winning the war. Communists were concerned not only with winning the war, but primarily with using the opportunity to further the interests of the Soviet Union and to promote the world revolution. The sordid story of Soviet espionage and Communist infiltration of our wartime agencies has been told by authorities too eminent to be disregarded or disbelieved. Thus the former head of the Central Intelligence Agency wrote in 1963:

"... the Soviets had over forty high-level agents in various departments and agencies in Washington during World War II. At least this number was uncovered; we do not know how many remained protected. Almost all of them, like the atomic spies, were persons of pro-Communist inclinations at the time. Many have since recanted."*

During the trial of Joseph Weinberg for perjury in connection with espionage activities at the University of California, U.S. District Judge Alexander Holtzoff stated, in March 1953, that the testimony in the case disclosed "... an amazing and shocking situation existing in the crucial years 1939-1940 on the campus of a great university in which a large and active Communist underground was in operation." Judge Holtzoff was referring to the Berkeley Campus of the University of California.†

There were tough, experienced Communists in the War Production Board, the Office of Price Administration, the Works Progress Administration, the War Manpower Commission, and many other of our federal agencies during this critical period. We listed many of them who were employed in sensitive positions in our 1959 report, page 171, et seq. During this era it was uncommon to find any of these offices in San Francisco devoid of propaganda materials distributed by party members, front organizations and fellow travelers. Many of these employees were regimented in the United Federal Workers of America and the United Public Workers of America, each of these Communist-controlled unions being headed by a party member.

Yet another authoritative writer has stated that:

"... Even of those who now take their refuge in the plea of self-incrimination, some, I am sure, are not consciously disloyal, much less out and out traitors. But their personal motives do not in this case change the historical reality. Insofar as they aided the web, knowingly or unknowingly, they were advancing the cause of the Soviet Union and the World Communist conspiracy. And by their silence today, however it may be motivated, they continue to advance that cause."‡

The John Day Co., N.Y., 1954, p. 108, et seq.; see also *The Silvermaster Cell: Russian Conspiracy in the U.S.*, by Ronald W. Hunter, MSS., Sept. 1957, p. 66, et seq.; also *Soviet Espionage*, by David Dallin, Yale University Press, New Haven, Conn., 1955, p. 439 et seq.

It was inevitable that those who were subjected daily for a long period of time to a relentless, highly-slanted barrage of Communist propaganda, and who were in daily association with dedicated party members, would either come to detest Communism or to accept it as a way of life with an attitude of easy accommodation. Very few people managed to preserve a detached neutrality under such circumstances. Many who were unquestionably loyal to their country and who were certainly proficient and sincere in working for it during the period of World War II, established friendships and social relations with other employees they knew or had good reason to suspect were members of the Communist Party. Some of these other employees taught in the Communist school, some were students at that institution, others were members of Communist front organizations, some were active in the Communist-controlled unions of state or federal employees, and a few were subsequently unmasked as Soviet espionage agents.

As Mr. Dulles pointed out in his book, *The Craft of Intelligence*, many of the individuals who collaborated with Communists in these governmental agencies from 1941 through 1945, and even for several years thereafter, realized their mistake. Even people who were members of the Communist Party at that time and who have since withdrawn from the Party, nevertheless were imbued with a tolerance for Communists and Communist organizations that is extremely difficult to extinguish.

We have stated time and again in these reports that no former Communist should be forever barred from employment in a government position or educational institution merely because he once made a mistake. But we insist that the burden of proof that the individual has made a full and clean break from his subversive affiliations lies with him, and too often this free-wheeling tolerance toward Communism in general will impel a complete amateur in the field of intelligence to simply accept the statement—under oath or otherwise—of a former Communist to the effect that he has become disenchanted with the movement and is now pure. If such an individual refuses to cooperate with the F.B.I., and invokes the Fifth Amendment when asked to discuss his experiences in the Communist Party under oath, and who instead launches into a diatribe about red-baiting and invasion of his constitutional right of free political association, such an attitude should at least raise some doubt about the sincerity of his reformation. It is ridiculously simple, of course, for a person to informally state that he is through with Communism, secure a job in a strategic position, sign a loyalty oath, and refuse to cooperate with any official agency which seeks to establish the truth or falsity of his disassociation with the Communist movement. Communist cards and membership books have not been issued for years, and ex-Communists who have really become disillusioned with the party can hardly expect to be hired in a government job or at an educational institution solely upon their self-serving declaration that they are no longer connected with the Communist Party, and particularly when they defiantly refuse to cooperate when the employer endeavors to determine the truth or falsity of such a declaration and when they deliberately withhold vital information about subversive affiliations or activities.

Chairman of the War Manpower Commission of Northern California, the main office of which was situated in San Francisco, was Sam Kagel. Consultants to this commission, in addition to Kerr, included Irwin Elber, Paul Heide, a Communist, Carl Brandt, also a member of the Communist Party, and Paul Schnur, secretary of the Communist School. Kagel was

born in San Francisco on January 24, 1909, attended high school at Oakland, graduated from the University of California at Berkeley and did graduate work there in the department of economics from 1929 to 1931. For about a year he was a reading assistant in a course taught by Professor Charles A. Gulick, Jr., who many years afterward became a faculty sponsor for SLATE. Kagel then obtained employment with the State Department of Industrial Relations from December 1931 until 1933; during the next ten year period he was employed by the Pacific Coast Labor Bureau as an economist doing counseling and advisory work with trade unions in the San Francisco vicinity, and from 1943 to 1945 was with the Manpower Commission in San Francisco. From 1945 to 1948 he attended Bolt Hall of Law at the Berkeley campus, served as an arbitrator in labor disputes, and taught techniques of collective bargaining under the auspices of the Institute of Industrial Relations and the Extension Division of the university. From January 1949 until August 1952, Kagel was self-employed as an attorney and was also doing some arbitration of labor disputes.

In 1952, Kagel became an employee of the University of California at Berkeley and in 1953 he was lecturing in the department of law at Berkeley and served on a committee appointed by Chancellor Kerr for the purpose of drafting appeals procedure for non-academic employees. In August, 1954, Chancellor Kerr appointed him as Kerr's personal representative in grievance procedures on non-academic employees, and in July, 1958, Kagel was promoted from a lecturer to a professor of law. He has held this position from 1958 until the present time. We wish to make it very clear that we are not inferring that Mr. Kagel was guilty of any subversive affiliation, but we also believe it helpful to know that he was, in effect, Kerr's superior for at least a period of several months during World War II, that during that period and afterwards the two were in frequent association in connection with their governmental duties, and that Kagel was not only teaching courses at the Communist School at the time, but was actually directing one of the programs of the school in the field of industrial relations, a department that was headed by one of his appointees, the Communist Party member, Irwin Elber.

In his original biography, Form 1501, which he filed with the university on August 14, 1952, and through all of the successive annual supplements thereto, Kagel listed his teaching experience, the lectures he had given before and after being employed by the university and listed the institutions with which he had served. This recital commenced with his work for Professor Charles A. Gulick, Jr. in August 1929, and continued thereafter, listing a total of forty lectures, panels, moderating activities, seminars, workshops and forums. But Mr. Kagel refrained from disclosing that while he was a member of the War Manpower Commission he also lectured at the Communist School in San Francisco. He conducted a course during the winter and spring terms of 1944 at the Tom Mooney Labor School, 678 Turk Street, San Francisco, on Tuesday evenings from 7:00 until 9:30 p.m.; he had conducted a course at the Communist School in 1943, fall term, on Monday evenings at 8:00 p.m. in collaboration with Paul Chown, who had been identified under oath as a member of the Communist Party, and who also was connected with the War Labor Board in San Francisco. Collaborating in the same general course, under the heading of Trade Union Leadership II, was Paul Pinsky, C.I.O. research director, who has also been identified as a member of the Communist Party. Mr. Kagel taught a course at the Communist School during

the spring term of 1945 which was listed in the school's catalogue as "Full Employment—The Road to Security." Being chairman of this course, Mr. Kagel invited others to participate in the lectures on Tuesdays from 8:50 to 10:20 p.m., and these lecturers included the Deputy Director of the War Production Board and also the Director of the Communist School at that time, Mr. David Jenkins, who was affiliated with the Marine Cooks and Stewards Union in San Francisco, and has repeatedly been identified as a member of the Communist Party.*

Mr. Kagel also neglected to list in his biography filed with the university, and in the subsequent supplements thereto, the fact that he participated in the Institute on Labor Education and World Peace, which was jointly sponsored by the Communist School and the university at the Berkeley campus on May 3 and 4, 1946; that he was the principal speaker at the Hotel Bellvue in San Francisco on April 22, 1942, at a meeting of the State, County and Municipal Workers of America, or that he had been appointed as Pacific Coast Negotiator by the International Longshoremen's and Warehousemen's Union, a fact which was, however, dutifully noted by the Communist newspaper on December 21, 1948.

During the period of the war Mr. Kagel was in frequent conferences with Marcel Scherer, a member of the Communist Party from New York, and a graduate from the Lenin School of Political Warfare in Moscow and heretofore mentioned.

It is clear that during the period of the war, when the United States was collaborating against a common enemy with the U.S.S.R., it was no more than natural that there should be occasional contacts between our own official agencies and those of the Soviet Union. Thus Dr. Louis Bloch, a member of the War Manpower Commission under Kagel, was in frequent contact with Gregory Kheifitz, Soviet vice-consul and espionage expert in San Francisco; that the chairman of the War Manpower Commission should be in frequent contact with Marcel Scherer, the head of a union that comprised scientists doing important research work. This was the era when the American Communists were masquerading as American patriots, and just as they had taken advantage of the opportunity to infiltrate and exert a powerful influence in the California State Relief Administration during the critical depression years of the late 30's and early 40's, so did they seize advantage of the opportunity to infiltrate and exercise all possible influence in our war agencies during World War II, and so did they take advantage of *any* critical situation for the purpose of serving the interests of World Communism, and everything else will be subordinated to that cardinal objective.

We have already discussed the Communist School in San Francisco at considerable length. By this time there should be no doubt about the fact that every course in these schools, under whatever name it functioned, was under the complete control of the Communist Party. To believe for an instant that any such institution, created and operated by the Communist organization, would be permitted to function in any manner that would not promote Communism, is ridiculous. The institution was attended by the members of Communist-dominated unions, such as the International Longshoremen's and Warehousemen's Union, the Marine Cooks and Stewards Union, the State, County and Municipal Workers of America, the United Cannery, Packing and Allied Workers of America, the United Office and Professional Workers of America, the United Federal Workers of America, members of the

*Official Catalogues, Communist School in San Francisco.

ultra-liberal element of the American Newspaper Guild, and a host of other similar unions in the Bay Area. A glance at the faculty of these schools and an analysis of the roster of sponsors and board of directors who served for any considerable period of time will remove any possible doubt about the true nature of these institutions. There were, of course, large blocs of members in all of these trade union organizations, and in all of the front organizations, who were not only non-Communist, but many of them were anti-Communist. We point out that if it was deemed necessary for officials of our wartime agencies to contact large groups of trade union members, it could have been accomplished by going directly to the unions themselves, and not waiting until the most "progressive" elements had been concentrated in a Communist school with an extremely limited student body for the purpose of making that contact.

Virginia Marie Taylor worked both in the Institute of Industrial Relations at the Berkeley campus of the university, in the Chancellor's office, and in the office of the President, where she is now employed.

Miss Taylor was born in Seattle, Washington, and attended the University of Washington in that city from August 1940 until May of 1945, majoring in journalism and political science. Her scholastic record was extraordinary, because she was elected to several honorary societies, including Phi Beta Kappa, in 1943. From July, 1944, to May, 1945, she was employed by the Office of Price Administration in the City of Seattle; from May, 1945, to October, 1945, she was employed by the War Labor Board in Honolulu; from November, 1945, to June, 1946, she studied painting at the San Francisco School of Fine Arts; from 1946 to June, 1952, she worked for Dr. Clark Kerr, who was then Director of the Institute of Industrial Relations, doing research and administrative assistance work.

When Miss Taylor first came to work for the university in June, 1946, she had no access to classified information and hence was not required to file a personnel security questionnaire. Her duties were with the Institute of Industrial Relations, which was established on the Berkeley campus in 1945.

During July through September, 1948, Miss Taylor traveled in Mexico, and toured Europe during the period from July, 1949, to July, 1950. She then resumed her work under Dr. Kerr at the Institute of Industrial Relations, and became his senior administrative assistant when he was elevated to the position of Chancellor at Berkeley in July, 1952. At present she holds a position technically described as "administrative analyst IV" in President Kerr's office at Berkeley.

When Miss Taylor secured her position in the Chancellor's office she did have access to classified material for the first time, and was required to submit a Personnel Security Questionnaire. On it she set forth her scholastic record, the social organizations to which she had belonged at the University of Washington, the various trips she had made and the institutions she had attended. She added, as an addendum to this questionnaire, a statement to the effect that she had attended the Communist School in San Francisco during the year 1948. She took lessons in ceramics for two terms at the school, and stated that she did so because there were no comparable courses available in the area. There were many courses in ceramics being taught in 1948, and they varied, as one might expect, from the very excellent to the very poor. Certainly none of the others were taught at a Communist school.

The Personnel Questionnaire also disclosed that in the summer of 1942 Miss Taylor went as a delegate to Campobello, New Brunswick, Canada, to an International Student Service Conference. This organization was composed of American young people and was a component part of the Communist-controlled American Youth Congress, having been connected with that movement since 1939.

Miss Taylor did *not* disclose on the questionnaire that she had acted as secretary to the University Academic Senate in 1950, a fact reported by the Communist newspaper in November of that year. She also refrained from disclosing that while a student at the University of Washington in Seattle she had been a member of the national Communist youth organization, then known as American Youth for Democracy. We do not infer that Miss Taylor was a Communist or when she filed her Personnel Security Questionnaire in 1953 she was subversive, but it is abundantly evident that she followed a pattern of activity that had been indulged in by other employees of the university in deliberately omitting from an official document concerning her qualifications for employment, extremely vital and pertinent security information. Whether or not she would have received a security clearance, which she did receive, if the information about her membership in the national Communist youth organization had been included in the questionnaire, we are unable to state. That she was indiscreet and perpetrated a fraud on the university by deliberately omitting such pertinent information is too obvious to merit further discussion.

Miss Clara Ontell was also employed in Chancellor Kerr's office on the Berkeley campus contemporaneously with Miss Taylor. She also was required to file a Personnel Security Questionnaire for the first time in April 1953.

Miss Ontell was born in New York, graduated from high school at Los Angeles in 1943 and attended Los Angeles City College from 1943 to 1945. She was a good scholar, very popular socially, was politically active and became student body president of the college. From 1947 to 1950 she attended the university at Berkeley and worked for Harold Norton during the summer of 1947 in the State Department of Social Welfare. From February, 1947, to September of that year she worked in the Student Cooperative Organization at U.C.L.A., and from 1947 until 1950 she was manager of Student Housing Cooperatives in Berkeley. During 1949 until 1950 she acted as historian for the California Alumni Association at Berkeley, and from September, 1950, until July, 1952, she worked as a part-time senior clerk in the Chancellor's office at Berkeley under the direct supervision of Virginia Taylor, and thereafter until March 31, 1953, was principal clerk in Chancellor Kerr's Berkeley office.

As of April 1, 1953, when her Personnel Security Questionnaire had to be filed, it was shown to be "in preparation," and thereafter was marked "clearance pending." The clearance was refused, however, and Miss Ontell resigned from the university on September 19, 1957.

Institute of Industrial Relations

Since some of the alumni from the Communist School in San Francisco thereafter came to work for the University of California at Berkeley, and some found positions in the Institute of Industrial Relations, headed by Dr. Kerr, it is appropriate that we consider briefly the origin and

operation of this department at the Berkeley campus. We quote from a booklet issued in September of 1946 by the university as follows:

"Few areas in the domestic social life of the nation are vested currently with greater public concern than the field of industrial relations. The development of better relationships between organized labor and organized employers, and the integration of these relationships with the interests of the individual citizen and the nation as a whole, constitute one of the most serious problems facing our economic and social system today.

The Legislature of the State of California expressed its desire to contribute to the solution of this problem when, in 1945, it established an Institute of Industrial Relations at the University of California. The general objective of the Institute is to facilitate a better understanding between labor and management throughout the state, and to equip persons desiring to enter the administrative field of industrial relations with the highest possible standard of qualifications.

The Institute has two headquarters, one located on the Los Angeles Campus and the other located on the Berkeley Campus. Each headquarters has its own director and its own program, but activities of the two sections are closely integrated through a Coordinating Committee. In addition, each section has a local Faculty Advisory Committee, to assist it in its relations to the University; and a Community Advisory Committee composed of representatives of labor, industry, and the general public, to advise the Institute on how it may best serve the community.

This program is not directed toward the special interests of either labor or management, but rather toward the public interest. It is divided into two main activities; investigation of the facts and problems in the field of industrial relations, which includes an active research program in the collection of materials for a research and reference library; and general education on industrial relations, which includes regular University instruction for students and extension courses and conferences for the community."

There follow four pages of additional material grouped under the following headings: Studying the Problems, Assembling the Facts, Educating the Student, Educating the Community, Graduate Assistantships, and Information. Additional information, says the pamphlet, can be obtained by writing to the director or secretary of the Institute's office, which was located at 214 California Hall, University of California, Berkeley 4, and at 101 Library Building, University of California, Los Angeles 24. It is interesting to note that when the Communist School in San Francisco ceased its activity after having been subjected to a series of investigations and public hearings by this committee, and certified as subversive and Communist-controlled by the Attorney General of the United States and the Federal Subversive Activities Control Board, it has been replaced by other Communist educational institutions, and sent its catalogues and other vital papers to the library of the Institute of Industrial Relations at Berkeley.

Since one of the basic objectives of the Institute of Industrial Relations is to inquire into the economic and social forces which give rise to labor problems, and as it deals with the recurring conflict between management and labor, it is natural that the Institute should attract sociologists,

political scientists, economists, and those interested in the general problems of labor dispute arbitration, trade union organization and matters generally involved in the administration of research problems financed by the United States government. Many of these are being handled on facilities owned or controlled by the University of California. In order to accomplish these objectives, the training of undergraduates by the Institute drew upon other departments of the university, such as economics, business administration, psychology, political science, history and engineering. And those undergraduate students who wished to pursue this type of study could select several fields on which to concentrate their attention, while the graduate student was offered a curriculum of study leading to the degree of doctor of philosophy in economics.

There were community advisory committees established to lend a wide base of support to the Institute for Industrial Relations, both at the Berkeley and Los Angeles campuses. The Northern Division included, in 1946, Lincoln Fairley, research director for the International Longshoremen's and Warehousemen's Union; Sam Kagel, listed as then being an arbitrator for the San Francisco Garment Industry; Jack Maltester, and Paul Pinsky, research director for the California C.I.O. Council. There were, of course, other members of the Advisory Committee for the Northern Division of the Institute of Industrial Relations, but the records of those just listed will give some idea of the atmosphere that pervaded the Advisory Committee and that served to continue the association between teachers in the Communist School and supporters of Communist enterprises that had existed during the period of the war.

Lincoln Fairley, national research director for the International Longshoremen's and Warehousemen's Union, was an instructor at the California Labor School during the spring term of 1947. He is also listed in the catalogues issued by the institution as a director, a member of its faculty and a lecturer in 1948, 1949, 1951, 1952, and 1953.

Mr. Fairley also participated in the activities of a Communist-controlled organization known as the Statewide Legislative Conference in 1947, and delivered a lecture on the "Contributions of Marxism" at the Communist School in 1948. In September, 1952, Mr. Fairley, with three others, posted a bond in the sum of twenty thousand dollars to secure the release of Ben Dobbs, a fulltime official of the Communist Party of California, who had been prosecuted under the provisions of the Smith Act.

Jack Maltester, a member of Local 362 of the Printing Specialties Union, was listed in the official catalogue of the Communist School as a member of its board of directors in 1946.

Paul Pinsky started teaching in the San Francisco Communist School as early as 1942. He was Pacific Coast Organizer in 1938 for the Federation of Architects, Engineers, Chemists and Technicians, heretofore mentioned; was listed as a sponsor of the Communist School in 1942; and was a member of its faculty in 1944, 1945, 1946, 1947, 1948, 1950, 1951, 1952, and 1953. Mr. Pinsky has been identified under oath as a member of the Communist Party, having been affiliated with scientific and technical units of the Communist Party in the late 30's.

During the latter part of 1952 a responsible federal agency made evidence available to a member of the administrative staff at the Berkeley campus, who layed the dossier on Kerr's desk. It provided proof of the Communist Party membership of Carl Campbell, a graduate research economist with the Institute of Industrial Relations, and who was discharged from that position by Kerr.

In this report, where we are compelled to devote so much space to the Berkeley Rebellion in general, it is impossible to trace the personnel of the Institute of Industrial Relations from its inception in 1945 to date. The foregoing description of some of its supporters and members in 1946, when it was just getting under way, will indicate the pervasive accommodation with some of the alumni of the Communist School on the Berkeley campus. We conclude by pointing out that an identified member of the Communist Party is now employed by the Institute of Industrial Relations on the Berkeley campus. She is Margaret Gelders Frantz, the wife of Laurent Frantz, and she is the daughter of the late Joseph S. Gelders, who was also a member of the Communist Party. Laurent Frantz moved to Berkeley from Knoxville, Tennessee, in 1951, and was a delegate to the founding convention of the Civil Rights Congress, a Communist-front organization which served as a source of assistance to those members of the party and its fellow travelers who were arrested or were about to be deported from this country. Both Margaret Gelders Frantz and her husband were identified as members of the Communist Party by the testimony of Ralph Vernon Long, on November 30, 1954. Mrs. Frantz also served as Alameda County Director of the Independent Progressive Party, also Communist-controlled, during the 1950's.

Prediction

Four years ago we printed the following statement in our report:

"Quick to take advantage of the slightest opportunity, the Communist Party in California is now solidifying its position so far as the indoctrination and recruitment of youth is concerned. From sources that we consider eminently reliable, we have learned that the United Front movement we described in our 1959 report will be employed in this effort to manipulate the numerous radical organizations on the various campuses of our state university, at private institutions and in our state and junior colleges, into collaboration with Communist fronts and other groups that are in sympathy with the general Communist line. Most of the Party's brass consider that a great mistake was made when the last Communist youth movement (Labor Youth League) was liquidated."*

At the Seventeenth National Convention of the Communist Party of the United States, its leader, Gus Hall, stressed the necessity for the party to regiment youth on American campuses. He referred to growing indications of rebellion, to demonstrations, and the task of organizing the radical student groups in some broad action movement that the Communists could bend to their own advantage. This was the official signal from the top American Communist for a new national organization of Communist youth, and an order for attention to be thenceforth focused on the universities and other educational institutions throughout the country.

We also made some statements about the Berkeley campus of the university in our 1961 report that will bear repeating in the light of what occurred since. On pages 97-98 we said:

"There is no question that President Clark Kerr acted quickly and decisively in reversing the resolution adopted by the Academic Senate of Northern California which provided that faculty members

*1961 report, p. 89.

no longer would cooperate with the F.B.I. This resolution, however, was so patently illegal from its inception and a usurpation of the authority of the Regents of the institution that there was in fact no other course to take. The legal decision that the resolution was void and ineffective actually came from Counsel Cunningham for the university Regents, and the medium through which the decision was transmitted to the liberal gentleman who precipitated the resolution was President Kerr. But the Kerr Directive that precipitated a great deal of controversy from both right and left on the campus, and which originally forbade the discussion of off-campus issues by students, has been amended three times and watered down to the extent that it no longer provides any restraint whatever. The gates have been thrown open to Communists, faculty members, students, and anyone else who cares to utilize the university property as a brawling ground for political controversy. Now that the gates have been swung wider and written propaganda has been accorded free access to the university and students, it takes very little imagination to determine what disciplined, dedicated, organized subversive group will be delighted to take advantage of the opportunity. If this is the only way that absolute freedom of speech and freedom of expression can be assured to the state university and its faculty and its students, we wonder how it is that there have been so many successful, well-oriented, unhampered graduates of this institution during the years of its existence when it functioned as a great educational institution and its facilities were not thrown open to this type of controversial and radical agitation. The condition that unless members of subversive groups are permitted to address students on the campus, and unless faculty members are allowed to accomplish the same kind of thing on university property, and unless any kind of subversive literature can be freely circulated, that freedom of speech and expression are being smothered, is to us merely an excuse to substitute license for freedom."

Cogobierno

In connection with President Kerr's remark during the first stages of the rebellion that he was convinced there were followers of the Castro-Mao Communist line deep in the hard core of the Free Speech Movement, we wish to set forth a comparison between student revolutions in certain Latin American universities and the rebellion at the University of California. As we shall explain later, a vital part of the FSM program was the establishment of a so-called "Free University." This would consist in direct participation by the students in running the university, determining the courses to be offered, handling disciplinary problems, and generally edging into the entire administrative control of the institution. It would be an astounding coincidence if this program were not consciously patterned after the same program pursued by Communist student groups at colleges and universities throughout the world. In the Latin American countries there is a special word for this sort of activity, *Cogobierno*. This simply means student participation in university government, and there are seven public universities in Bolivia alone which all operate on the *Cogobierno* system, with an over-all coordinating confederation which is affiliated with the International Union of Students. It will be remembered that this is the international Communist youth organization to which Carl Bloice was a delegate from the DuBois Clubs in San Fran-

cisco. The vice-president for Latin American affairs of the International Union of Students is a former Bolivian University student named Oscar Zamora who distributes travel and study grants from the I.U.S. among students in all of Bolivia's seven universities, thus maintaining firm ties between them and the International Communist Youth movement. A special study of student rebellions and long range strategy in Latin American universities was made in December last year by an important sub-committee of the United States Senate. We quote from it as follows:

"The students' inability to cope with injustices in their society frustrates them and causes them to look for a panacea. The appeal of Communist ideas to Latin American students can often be explained as the appeal of a universal panacea to a relatively unsophisticated group."

"... Communists are finding a fertile field among the youth entering universities, many of whom have already been well indoctrinated in Marxist thought by Communist speakers in secondary schools... One constant feature of the reform movement which began in Argentina in 1918 and spread across the continent, was the democratization of the university, which meant direct participation by the students in the university administration. The students wanted to elect one or more of their own to voting status on the directive council of each faculty or college, and thus help determine university policy. Student representation on university councils provides a position of authority from which student-elected representatives can attack what they consider to be entrenched interests both in and outside of the university. Today, with few exceptions, students have their delegates in governing bodies of Latin American universities..."

"*Cogobierno* and university autonomy, along with political apathy on the part of the student majority, have contributed to a favorable climate for Communist entree to the universities. The Communist tactic is to develop among the students an intelligent, active, highly motivated leadership which can devote all or most of its time to the attaining of office, and consequently of power. To permit this dedication to student and university politics for national and international political ends, Communist students are subsidized. This gives them considerable advantage over non-subsidized students in allowing them the time required for organizational and propaganda activity."

The report points out that in five of the seven universities in Bolivia Communist strength is on the wane, but despite this fact Marxist professors and administrators are numerous in all except at the University of San Andreas, in La Paz. Even in that institution a well-known professor in the department of economics uses a Communist text for his five-year course with apparent impunity. The university in Cochabamba, where the university voted its first non-Communist rector in ten years in 1960, has witnessed a bitter struggle for control. Because of a deadlock between the opposing forces in the 1963 election, the rectorship was in doubt for more than a year, and during this time the interim director—in his younger days one of the Marxist founders of the Student Communist Confederation at the university—managed to pack the faculties with pro-Communist professors.

Once they have attained a position of power the Communists entrench themselves by the employment of a variety of devices. Each university grants free scholarships each year to deserving students and the policy

at universities where the Communist influence is pronounced is to grant such favors only to those who are willing to align themselves with the Communist movement. Those students, of course, who are courageous enough to express anti-Communist sentiments are punished by receiving poor grades.

All attempts by the Bolivian government to control this situation have only provoked long student demonstrations, strikes and violent uprisings. The government has found it impossible to interfere with the autonomy of a state university.

In Venezuela the Communists solidly entrenched themselves throughout the public school system by 1939. "Communist professors," says the report, "tend to turn the schools or chairs they direct into centers of Marxist indoctrination. Under the system of university autonomy, the government has been powerless to dislodge them."

In Honduras, as in the other Latin American countries, there was a long period of infiltrating Marxists throughout the educational system at all levels. National University is the only one in Honduras, and here the infiltration produced the "... clearly observable phenomenon that has been the Communist tactic of achieving chaos and disorder, lack of respect, and lack of discipline in the various classes.*

Since Fidel Castro won his revolution and Communized Cuba, that country has been the training center for the guerilla warfare tactics and the infiltration of terrorists throughout Latin American countries, and for generally exporting Communist warfare. Through the Communist front organization, Fair Play for Cuba Committee, which vanished quietly when President Kennedy's killer was disclosed as not being of the extreme right, but on the contrary a former activist in this front organization, American students were sent to Cuba for training. After the Fair Play for Cuba Committee passed out of existence, students from this country continued their pilgrimages to Cuba despite the ban placed on such trips by the United States Department of State. These defiant young radicals included many students who thereafter took part in the Berkeley Rebellion. In passing, and in connection with the Fair Play for Cuba Committee, it is interesting to note that Burton Wolfe, former publisher of a little paper called *The Californian* was subsidized by one of the early leaders of the Fair Play for Cuba Committee in New York, one Lyle Stuart. Mr. Wolfe devoted considerable space in his little paper to some vicious, and inaccurate, attacks against Senator Burns and the counsel for this Sub-Committee.†

Fifty-nine American students arrived in Cuba in violation of the Department of State regulation on June 30, 1963. They went by a circuitous route through Czechoslovakia, the round trip fare via Europe being more than five times the amount paid by these students. Levi Laub, a student at Columbia University in New York, was the organizer for this trip and also one of the organizers for the Progressive Labor Movement, most militant of the American Communist organizations. The head of press relations for this delegation, and a former editor of the publications of the Progressive Labor Movement, was one Phillip Abbott Luce. He has recently become disillusioned with the organization and has written a most important expose of its activities.

*"Communist Infiltration in the Latin American Educational System," Senate Internal Security Sub-Committee Dec. 15, 1964.

†Senate Internal Security Sub-Committee report, Feb. 8, 1963, p. 451.

On August 14, 1964, eighty-four students, having recently returned from their illegal trip to Cuba, stated through their spokesman, Charles Berrard, that there were eleven Negroes who made the tour and had banded themselves together in the new movement which they called the Black Liberation Front. This statement carried no particular significance when it was made, but it packed a sensational meaning on February 16, 1965, when members of the Black Liberation Front were arrested by F.B.I. agents for plotting to blow up the Statue of Liberty and the Washington Monument.

Charles Berrard was mentioned in our 1963 report on pages 159, 160 and 182. He received his early Marxist indoctrination as a member of the executive board of the Independent Student Union, the Los Angeles organization once headed by Carl Bloice. Bloice and Berrard were closely associated in Southern California, and the latter headed the Students Strike for Peace Committee, and was a delegate to the Eighth World Youth Festival at Helsinki in 1962. Here is the case of a young man who received his early Marxist orientation in the Independent Student Union, progressed through the world gathering of Communist youth at its Eighth Festival, visited Cuba in admiration of Castro with a group that hatched these terrorist Communist movements in our own country, the Progressive Labor Movement and the Black Liberation Front.

An entire volume could—and should—be written about the effect of Castro Communism on the youth of America. President Kerr recognized the impact, very late, when he declared these highly indoctrinated Castroites to be at the heart of the Berkeley Rebellion. We also find that a former professor from the Berkeley Speech Department, Joseph P. Morray, was on hand in Cuba supporting the Castro regime during its early period, and returned to California in 1962 for the purpose of assisting in the direction of the Marxist school in San Francisco. His wife teaches in the Speech Department on the Berkeley Campus. She is Mrs. Marjorie K. Morray.

Even the so-called filthy speech incident at Berkeley had its Castroite in the person of Edward Rosenfeld, who returned from Cuba in 1964, and participated in the invasion of Sproul Hall on December 2 and 3 of that year. He was born in Illinois, was twenty-eight years old in 1964, and resided at 2400 Durant Avenue, Berkeley, at the time of his arrest. Among others who made the trip to Cuba were Stephen Driggs, a student at San Jose State College and the son of Hal and Margaret Driggs. The father was on the staff of the Progressive Labor Movement paper in San Francisco and the mother was San Francisco representative for yet another pro-Communist publication, the *National Guardian*.

We referred to Helen Travis, the Communist who worked diligently in the Constitutional Liberties Information Center in Los Angeles, described in our 1963 report. She was convicted on May 14, 1964, for making illegal trips to Cuba. Richard Thorne made his visit to Cuba in 1963, and there conferred with Robert Williams, the propaganda expert for Castro who delivered a vicious speech against the United States in Peking in 1963. John Thomas, a contributor to the *Progressive Labor Movement Quarterly*, declared that most of the students who go to Cuba receive such an intensive indoctrination that they return to the United States as confirmed revolutionaries. This observation was fully confirmed by Phillip Luce, as we shall see. Jerry Rubin was a sociology student at Berkeley when he made the pilgrimage to Cuba in 1964, and Bernardo Garcia, former graduate student at the Berkeley campus, made his pilgrimage in

1960. His wife went the following year. Both were active in the student rebellion at Berkeley in the fall of 1964 and in the early part of 1965.*

Phillip Abbott Luce was an undergraduate at Mississippi State University, where he battled against segregation and became identified as one of the radical leaders on the campus. He then went to Ohio State University where he did graduate work in political science, and led a demonstration against the State Capitol Building during the Bay of Pigs Invasion in 1961. He then moved to New York in 1962, became interested in radical movements and went to Cuba with fifty-eight other students and young people. It is necessary that we understand something of the fanaticism and dedication that motivates the Castroite Marxists who participated in the Berkeley demonstrations, and here for the first time we have the public declarations of a member of this group. We therefore quote from Mr. Luce's recent observations. He said:

"For me and my contemporaries, Cuba had the same revolutionary appeal that Russia did for young radicals in the 20's and 30's. When Fidel was still in the mountains and I was still a student at Mississippi, I eagerly identified with him, and after the revolution I endorsed the Cuban form of Communism. Fairly certain before I went to Cuba that Fidel Castro and his government represented the future for the Americas, I was convinced by the time I returned; and although I have rethought much of my earlier uncritical support, I still feel drawn to the romantic image of Fidel and the Cuban Revolution. After I had thumbed my nose at the American State Department, seen the Revolution at first hand and become filled with new enthusiasm, there was no doubt that when I got back to the States I would formally join a revolutionary group."

Luce continued his narrative by saying that he found the PLM, which he joined upon returning from Cuba, stimulating and attractive. It believed in direct action, it worshiped Castro, and generally followed the Peking line of the Communist movement. It scorned the inactivity of the regular American Communist Party, regarded it as stagnated, and Luce found that his new existence in the PLM entailed an entirely new way of life, a life of excitement, risk, action, common goals, and a deep sense of solidarity. He described the May Second Movement (M-2-M) which commenced with an initial violent demonstration on that date in 1964. Luce describes the organization as follows:

"We decided last January (1965) that M-2-M, although set up as a radical peace organization specifically concerning Viet Nam, should also join in other campus protests, such as the one that led to the riot at the University of California at Berkeley. Although emphasis is still laid on the need for American withdrawal from Viet Nam, the organizers of M-2-M are bitterly trying to stir up student grievances on various campuses including Brooklyn College, Adelphi, Harvard, the University of Cincinnati and City College of New York. The agitators claim that since college administrations are the logical extension of the 'power structure' (the Government), every student grievance should be the cause for a student demonstration a la Berkeley. Progressive Labor speakers advocate student strikes, rallies, sit-ins in the administration building and picketing as ways to get the students in a mood in which they can be led into a campus riot. Any issue, they insist, must be used to stir up trouble.

*See: "The Communist International Youth and Student Apparatus," monograph prepared for the U.S. Senate Subcommittee on Internal Security, 1963; "Communist Infiltration in the Latin American Educational System," *op. cit.*

The philosophy behind all this action among students—and actually the P.L.'s basis tactic—is to involve students in a direct confrontation with the power structure upon any and all levels. Progressive Labor contends that any young person can be made into a revolutionary if he is led into a fracas with some authority symbol, especially the police. If he is arrested, or better still, beaten and jailed, the chances are then good that he will begin to hate the police and the court system. The members of the P.L. are constantly told that all police are the same and that all police are enemies.”

In this connection our 1961 report, describing the demonstrations in San Francisco that occurred in May 1960 against the House Committee on Un-American Activities, stated:

“It is quite true that few of the students who participated in the May 1960 riots were members of the Communist Party. A minority of them had affiliated with SLATE at the University of California, some with the Young Socialist League, or with some of the Marxist-oriented youth groups that have been flourishing in American universities since the dissolution of the Labor Youth League, which was the youth apparatus of the Communist Party. Many more were simply hoodwinked by the propaganda campaign and aroused to animosity against the committee, and still more were merely curious participants who were motivated by no particular political bias. But when the incidents of violence were provoked by the adult Communist leaders, and these non-Communist students were hit with streams of water from high pressure hoses and given a taste of police authority when the milling crowds refused to disperse, they quickly became antagonistic toward all sorts of authority, the House Committee, the Fire Department, and the Police Department. This precise reaction had been anticipated by the Communist strategists who planned the entire undertaking, and they were quick to follow up their advantage.”*

When Luce discovered that the Progressive Labor Movement was storing up secret supplies of arms and ammunition, that elite members were being trained in karate, and that an undercover “sleeper” apparatus was being formed—he decided it was time to break away from the movement. He said:

“ . . . in December I was invited to join a small number of members—about ten—who would train to ‘go underground’—that is, to shed their present identities, leave home and family, and take on totally new identities. The people chosen for this project were to receive extensive training in disguise techniques, karate and the forging of papers, and some were told that they would be sent abroad to complete their training before they would take up their new lives.”

Here the Progressive Labor Movement borrowed a page from the old Communist book of standard operating procedures, because immediately after World War II many members of the American Communist Party were ordered to leave their families and assume new identities and disappear into the Communist underground where they would be of more value to the party. We described this technique in previous reports and it is interesting to see that this new and more violently active Communist organization is pursuing precisely the same sort of activity.

*1961 report, p. 38.

Mr. Luce concluded his revelations as follows:

"I ultimately decided to do the obvious. Although P.L. seems to be frank and open, I concluded part of it is secretly planning sedition. It was not, however, until late January that I took out time from the frenetic life led by all P.L. members to stand back and consider all the facts. Actual membership in this organization keeps you busy day and night with meetings, demonstrations, picketing, etc. And it is not until you put the pieces together that you see the picture as a whole. After I put all of the evidence together I decided that I had to leave the organization, that I should try to warn unsuspecting members—and other young people who might consider joining Progressive Labor—about what is really involved. A month or so after I left, the P.L. leaders heard that I intended to write a magazine article. Furious, they decided to expel me (even though I had already quit; I was the first P.L. member ever to be expelled) and issued a press release accusing me of a variety of improbable sins.

I still consider myself a political rebel, and I still support the development of a democratic left wing in the United States. Moreover, I think that people who share these beliefs have a right to make these views known by public, peaceful demonstrations, among other ways.

But membership in a group such as Progressive Labor can only jeopardize the life, the reputation and the effectiveness of an honest leftist in a democracy. No government and no individual should tolerate an organization some of whose members secretly plan to launch a reign of terror."*

We have explained the origin and operation of the Progressive Labor Movement for the purpose of showing how this very vital element in the united front that eventually became the Free Speech Movement was committed to the use of force and violence, and created incidents through which there would be a direct confrontation between students and the symbols of power and authority. At Berkeley these symbols were the administrative personnel of the University of California and the peace officers who were called upon to prevent the students from taking over the entire institution.

A great deal of nonsense has been written about these demonstrations, leaving the impression that all of the members of the Free Speech Movement were interested in freedom of speech; that there was no hard core of Communist leadership; and that there had been no real freedom of speech on the Berkeley campus. We have spent considerable space for the purpose of giving the background of the elements that united to form the Free Speech Movement, and we have taken pains to point out that there were hundreds of students who were originally attracted to the student demonstrations and protests prior to December 2, 1964, who were in no sense subversive but who had what they considered to be a perfectly logical and natural complaint against an inept administration, its confusion of rules and regulations, and the general atmosphere of administrative and political weakness that pervaded the Berkeley campus. We also pointed out how the Youth Action Union, the DuBois Clubs, the Young Socialist Alliance, SLATE, the Socialists and Trotskyites, the Progressive Labor Movement, and other radical youth groups combined for the purpose of forming the original united front, and that after the Sproul Hall sit-in of December 2, 1964, a great many original adherents of the move-

*"The Explosive Revival of the Far Left," by Richard Armstrong. *Saturday Evening Post*, May 8, 1965, p. 27 at p. 32, et seq.

ment dropped away from it, leaving a highly-disciplined group of Communists and radicals in firm command.

Many accounts have been written concerning the chronology of events that composed the Free Speech Movement and its demonstrations. These accounts of what happened have been set forth in the press, in a number of magazine articles, in the Sunday magazine sections of newspapers all over the United States, in the *California Alumni Monthly*, and in an endless series of articles being written for a variety of magazines by university professors, some militantly opposed to the Free Speech Movement, and others who militantly support it. These accounts of the demonstrations vary in some details, but basically they are in agreement. We have set forth our own chronology at the opening of this report, merely for the purpose of giving the readers some general idea of what occurred before we examined the rebellion in detail. We have now reached the point where we have established the background of the various organizations that united to form the Free Speech Movement, and we have explained the militant nature of its leadership.

It will now be our purpose to take each of the major incidents on the Berkeley campus since September, 1964, setting forth some circumstances that attended them which have not been explained in the press or in the various magazine articles referred to above.

The Demonstration of September 21, 1964

There has been a great deal of speculation, both in the press and by members of the FSM, concerning the spark that ignited the first demonstration on September 21, 1964. There have been many reports to the effect that former Senator William F. Knowland, editor and assistant publisher of the *Oakland Tribune*, contacted the Berkeley administration and requested that student political activity on the Berkeley campus be banned. The student newspaper carried a statement attributed to Knowland to the effect that he made no such request of anyone in authority at the university. In order to settle the matter for ourselves we requested a statement from Mr. Knowland, and on March 4, 1965, received a letter which read, in part, as follows:

"I am familiar with the fact that several statements were made by members of the FSM at the Berkeley campus that I had contacted the President, the Chancellor or The Regents, urging certain action upon them. There is no basis of fact for any such charge. At no time did I, or anyone of authority to speak for me, contact the President, the Chancellor, or The Regents, urging any course of action. Any such statements are false."

This statement was signed by Mr. Knowland, and settles the matter so far as we are concerned.

There is no question about the confusion and controversy that attended the maintenance of tables at the main entrance to the university campus which led to the letter we have already set forth, signed by Katherine A. Towle, Dean of Students, and dated September 14, 1964. This letter was issued after a conference between the Dean of Students and other officials of the Berkeley campus, and simply stated that no posters, easels, or tables would be permitted in the area at the main entrance to the university because of interference with the flow of traffic.

Dean Towle's letter was sent to the presidents, chairmen, and advisers of all student organizations, calling attention to violations of university

regulations on the twenty-six feet of brick walkway beside the Bancroft-Telegraph Avenue entrance.

The recipients of the letter requested a meeting for the purpose of discussing the situation and a meeting was accordingly arranged on September 17, attended by representatives of eighteen "off-campus" student organizations: SLATE, Campus CORE, (Committee on Racial Equality), University Society of Individualists, DuBois Club, Young Peoples Socialist League, University Young Republicans, University Young Democrats, Young Socialist Alliance, Campus Women for Peace, Youth for Goldwater, Student Committee for Travel to Cuba, Student Committee for "NO on Proposition 14," University Friends of SNCC (Student Non-Violent Coordinating Committee), Students for a Democratic Society, College Young Republicans, Students for Independent Political Action, Youth Committee Against Proposition 14, and the Independent Socialist Club. A petition or statement was formulated at this meeting, for presentation to Dean Towle, and was in fact presented to her on September 18, requesting that:

"The intersection at Bancroft and Telegraph represents the most frequently traveled area near the campus. And because each of us takes seriously this obligation to be informed participants in our society—and not arm chair intellectuals—we feel that this location alone guarantees not only our right to speak, but to be heard! It is a valueless right to have free speech if our corresponding rights to reach people with our ideas and to advocate action on them are not protected.

All of us subscribe to Chancellor Strong's statement that 'the university is no ivory tower shut away from the world, and from the needs and problems of society.' To eliminate the use of Bancroft and Telegraph is to shut this university up in an ivory tower. It is to limit the freedom of our ideas which is necessary to produce truly educated citizens of a democratic society.

We believe that the continued use of the Bancroft and Telegraph privileges will cause Chancellor Strong's goal of 'exposure to critical questions and search for knowledge' to be furthered.

And, therefore, we respectfully submit for consideration as policy the following: 1. Tables for the student organizations at Bancroft and Telegraph will be manned at all times. 2. The organizations shall provide their own tables and chairs; no university property shall be borrowed. 3. There shall be no more than one table in front of each pillar and one at each side of the entrance way. No tables shall be placed in front of the entrance posts. 4. No posters shall be attached to posts or pillars. Posters shall be attached to tables only. We shall make every effort to see that the provisions 1-4 are carried out and shall publish such rules and distribute them to the various student organizations. 6. The tables at Bancroft and Telegraph may be used to distribute literature advocating action on current issues with the understanding that the student organizations do not represent the University of California—thus these organizations will not use the name of the university and will disassociate themselves from the university as an institution. 7. Donations may be accepted at the tables."

This statement, signed by the organizations listed above, was presented to Dean Towle on September 18, and she conferred with university officials

on September 21. She then issued a new and modified directive stating that approval would be granted for use on university property of a restricted number of tables for which permits would be required as in other authorized areas. It also permitted the distribution of materials "presenting points of view for or against a proposition, a candidate, or with respect to a social or political issue," and it established "on an experimental basis" a second and more central "Hyde Park" area at the main entrance to Sproul Hall, noting that speakers should be ready to identify themselves as students or members of the staff of the university, that there would be no interference with traffic or the conduct of university business, *and that voice amplifiers could not be used because of the disturbance of work in Sproul Hall.* (Committee's italics) This directive continued to forbid, however, the distribution of material "to urge a specific vote, called for direct social or political action, or to seek to recruit individuals for such action," and to forbid collection of funds "to aid projects not directly connected with some authorized activity of the university."

It will be noted that by this action Dean Towle was put in the humiliating position of having issued a firm and specific directive to eighteen student organizations after consultation with the appropriate authorities at the university; seven days later, as a result of capitulation to a student demand, Dean Towle was forced to issue a modified directive to the student leaders at a meeting on the campus, after which they politely thanked her, stated that they were not satisfied even with the modified directive, staged the first of a series of demonstrations on Sproul steps, and thereafter began deliberate violation of the regulations.

The account of the Chancellor to the Academic Senate, issued on October 26, 1964, stated that on September 22 he had issued a statement which was published in the student newspaper to the effect that "the open forum policy of the university is being fully maintained, but that its facilities were not to be used for the mounting of social and political actions directed to the surrounding community." In that connection he cited President Kerr's Charter Day address of May 5, 1964, wherein he stated that: "Just as the university cannot and should not follow the student into his . . . activities as a citizen off the campus, so also the students, individually or collectively, should not and cannot take the name of the university with them as they move into religious or political or other non-university activities; *nor should they or can they use university facilities in connection "with such affairs."* (Committee's italics)

On the night of September 23, a demonstration was held on the Sproul Hall steps, about seventy-five students remaining there until the following morning. On the next day further discussions were held with President Kerr, as a result of which there was a further modification of the directives, it now having been decided that permission to distribute non-commercial literature on the campus should be permitted and that henceforth the regulations would be understood to allow distribution in designated places on the campus of printed advocative materials that might urge a specific vote on a proposition or a candidate.

This new and modified directive was presented to the students at a meeting on Monday, September 28, but even while the Chancellor was announcing these revised rules, the meeting was invaded by pickets who marched down the aisles carrying signs of protest. These pickets, according to the Chancellor's report, were organized at an unauthorized free speech rally at the Oak Tree in Dwinelle Plaza under the direction of Mario Savio and Arthur Goldberg. The Dean of Men informed these students that

although the Berkeley administration supported their right to engage in picketing which did not interfere with university activities, they were in violation of regulations for holding a meeting at the time of a university meeting, and without the permit required for that area, and that disciplinary action would therefore be instituted against them.

On the morning of September 29, students were manning tables at the prohibited area, but all appeared cooperative and willing to either desist or secure the required permits except Sandor Fuchs, who was presiding at a SLATE table at Sather Gate. He was told to make an appointment with the Dean of Men for 4:00 p.m. to discuss disciplinary action against him, but did not appear to keep the appointment.

On the afternoon of September 29 Mario Savio deliberately violated the regulations by establishing a table for the Student Non-Violent Coordinating Committee at Sather Gate. On Wednesday morning tables were being maintained by the Young Socialist Alliance and Campus CORE, and the students who presided at them were cooperative with the university officials; but a table maintained by Student Non-Violent Cooperative Committee was operating without a permit and the two students guilty of the violation, Brian Turner and Donald Hatch, were subjected to disciplinary action. The same ultimatum was delivered to David L. Goines, who was at a SLATE table, Elizabeth Gardner Stapleton, at a Young Socialist Alliance table, and Mark Bravo at a Student Non-Violent Coordinating Committee table. Each of these students was instructed to report to the Dean of Students' office that afternoon.

But at 3 o'clock from three to four hundred students moved into the second floor of Sproul Hall, where Mario Savio announced that all of them acknowledged having violated the university regulations in exactly the same manner as those students who had been instructed to make appointments with the Dean of Students, and each of them wanted a similar appointment. The Dean of Men stated that he was concerned only with the violations that had already been specified, and requested the crowd to disperse. Savio responded that the group would *not* leave unless they were guaranteed that the same disciplinary action would be meted out to all present. The specified students who were cited did not appear for interviews, and the crowd remained in Sproul Hall until about 2:40 a.m. on Thursday morning.

Chancellor Strong described the ensuing events in his report by pointing out that when the students persisted in refusing to discuss their cases the Chancellor determined, on the night of September 30, to exercise his authority directly. The students had therefore been given the privilege of appearing before the faculty committee on student conduct, but on the basis of written reports from the Dean of Men, and *after conferring with President Kerr* (Committee's italics), the Chancellor suspended the eight students who had been observed in violation of the university regulations, who had been warned but refused to desist from their violations, and who had been informed that this disciplinary action would be instituted against them.

On Thursday morning, October 1, mimeographed statements were distributed on the campus soliciting student and faculty support for the suspended students and announcing a "free speech rally" at noon on the Sproul Hall steps where tables began to appear in deliberate violation of the regulations. The Chancellor's report stated that at approximately 11:45 a.m., Deans Murphy and Van Houten and Police Lieutenant Chandler spoke to a man who was soliciting funds at a Campus CORE

(Committee on Racial Equality) table and who refused to identify himself or to leave the table. Chandler informed the individual (later identified as Jack Weinberg, a former student) that he was under arrest and went for assistance and a police car. The car was thereupon surrounded by demonstrators and mounted by Savio, who urged that students immobilize the car by sitting around it, and that the demonstrators invade the Dean of Students' office. On persuasion of the President of the Associated Students, Charles Powell, Savio left the gathering to meet with the Chancellor. He demanded that Weinberg be released and the suspended students reinstated. The Chancellor refused to accede to these demands, replying that he must enforce the regulations of the university. In San Francisco, Governor Brown was declaring, "This is not a matter of freedom of speech on the campuses" but "purely and simply an attempt on the part of the students to use the campuses of the university unlawfully by soliciting funds and recruiting students for off-campus activities. This will not be tolerated. We must have—and continue to have—law and order on our campuses."

Savio returned to the crowd surrounding the police car and described his conversation with the Chancellor. One hundred and fifty to two hundred students then entered Sproul Hall and announced their plan to hold Deans Towle and Williams hostage. Women employees left through windows, over the roof. When officers attempted to close the front doors of Sproul Hall at about 6:30 p.m., demonstrators interfered and one policeman went down, had his shoes removed and was bitten by Savio. The police car was held captive through the night. Students who disapproved of the methods of the demonstrators began to gather; the Dean of Men approached individual students and Assistant Dean Rice made an appeal to the crowd in an effort to head off the possibility of open conflict. Demonstrators who had immobilized the police car containing Mr. Weinberg, the arrested man, informed campus police officers that they held the officers responsible for providing protection against student counteraction in maintaining law and order on the campus.

On Friday morning, October 2, only authorized persons were admitted to Sproul Hall. Then another mimeographed sheet appeared setting forth the demonstrators' demands, and black arm bands were sold at Sather Gate to sympathizers with the Free Speech Movement. The California Students for Goldwater and the University Young Republicans, announced at this point that they did not "condone the disorderly means of protest that are now being used." The student newspaper published a statement of the Chancellor, dated October 1, emphasizing that "the university's policy prohibiting planning and recruiting on the campus for off-campus political and social action, and prohibiting also the solicitation or receipt of funds for such purpose is now, and has always been, the unchanged policy of the university," and that "the university has not restricted or curtailed freedom of speech of students on campus by any change of its open-forum policy." President Kerr, speaking at a San Francisco meeting of the American Council of Education said, "There is no freedom of speech issue at Berkeley . . . the rules in question are the historic policy of the University of California and they are as follows: (1) Solicitation of political funds on campus is not permitted. The law of the State of California does not permit such solicitation on state property. (2) Recruitment of pickets on university property is prohibited. (3) We do not permit meeting on campus for planning social and political action against the surrounding community."

Omitted from the Chancellor's report are the colorful details of events following Weinberg's arrest. We now quote from the official University of California alumni magazine, *California Monthly*, for February 1965, p. 10, where the events are described as follows:

"... Just before noon a university police car drove to the front of Sproul Hall—Weinberg stepped into the car and immediately approximately two hundred irate individuals surrounded it and sat down. The move was neither calculated, nor in any sense riotous—simply a spontaneous capture.

For the next thirty-two hours, student protest leaders—among them Mario Savio and Art Goldberg, a graduate student and former chairman of SLATE—periodically stood upon the car, a symbol of power and bargaining, decrying the growing 'machine of the multi-versity,' and exhorting students to fight for the right of free speech on campus according to the First and Fourteenth Amendments of the Constitution. They demanded release of Weinberg and lifting of suspensions. From the top of the police car student leaders argued that the administration had picked on the eight arbitrarily, that if they were going to suspend anyone they should suspend all the students who were at the card tables Wednesday. A number of students had signed a petition attesting that they had also manned tables contra regulations. Inveighing against what they interpreted as an attempt by the administration to divide and to conquer, leaders said that these four hundred students had demanded the same treatment from the Dean's Office that was meted out to the eight. But the Dean's Office just wanted a few. The police car in front of Sproul Hall continued to be surrounded by a growing crowd of students. The plaza in front of Sproul is central to the campus dining area and the Telegraph Avenue concourse, hence a natural spot for such a crowd to form.

Thursday night, October 1, about three hundred students carried the protest to Dean Towle's office in Sproul Hall. They sat down; a few stayed through the night. Gradually, these students left and concentrated again on the police car.

On Friday, October 2, Sproul Hall closed down, (offices were operating) and speculation swept the campus that the students would be arrested en masse. Control over the police car had placed the administration in a defensive posture, one that demanded action either through arbitration or force. The car had become a symbol not only for the dissident students, but for the administration, the public and the law as well. Toward the evening hours that Friday, Mario Savio and others began to instruct students who were sitting down to take off their watches, loosen their ties, and prepare for expected 'police brutality.' "

From members of the FSM movement, interested observers, university officials, and from our own independent sources of information we learned that although the demonstration started as a spontaneous movement, it quickly became evident that Savio, Art Goldberg, Dick Roman, Bettina Aptheker, and others, were fully prepared to assume leadership. As the students climbed on top of the police car, in which Weinberg was sitting with an officer, the top became dented, the fenders smashed, and the crowd continued to grow as tensions mounted. The demonstration had commenced on Wednesday, September 30, when the card tables were set up

in front of Sather Gate in plain defiance of campus regulations, with the suspension of the eight students who were members of radical political organizations, the invasion of Sproul Hall by approximately three hundred students who demanded to see the Dean of Men and to be suspended with their eight colleagues, the arrest of Weinberg, the invasion of Dean Towle's office on October 3 by about three hundred students, some of whom stayed through the night, and the October 2 immobilization of the police car by a mob of students.

During the vigil through the first night, a group of fraternity men appeared and threw eggs at the demonstrators, and a group of off-campus Latin American men then retaliated with deadly aim, saying that they were old hands at this sort of thing. People were now sleeping around the car, and on Friday night mentors were fanning through the crowd instructing them to make no resistance if the police came, but to go limp. They acted with far too much precision, speed and unity not to have been appointed ahead of time. The police arrived in large numbers at about 6:00 p.m., and tensions continued to mount. The officers formed a line across the plaza, and then Mario Savio and Dick Roman went to confer with President Kerr. Runners kept the crowd informed about the progress of the conference, and suddenly a loud roar was heard which turned out to be the motor police returning to Oakland. Savio said that Kerr had agreed to conciliate. The crowd immediately dispersed. It had reached a total of about six thousand students by Friday evening. Some of the students studied, some sang, some displayed placards bearing sarcastic remarks about President Kerr and the administration. Large numbers of the extreme left-wing element of the mob were highly emotionalized and angry. By the time the officers arrived the riot potential was very acute, and there were six hundred and forty-three officers from the Berkeley and Oakland police departments, the sheriff's office in Alameda County and the California Highway Patrol, fully armed, provided with riot equipment, and capable of caring for any situation that might arise. Zero hour had been set at 6:00 p.m. on October 2, at which time the police were to disperse the mob by any necessary means, restore order to the campus and take the prisoner to jail. But shortly before that time the police officers in charge of their forces were told that negotiations were in progress, that they should stand by, and that a few minutes after 7:00 p.m. an accommodation was effected between President Kerr and Savio, and the police left the campus.

Kerr had been giving a speech in San Francisco, returned to the campus and conferred with eight of the student leaders, with Savio doing most of the talking, at University Hall. The compromise provided, in effect, that the demonstrations would cease, there would be no further deliberate violations of university regulations, and that the university would refrain from pressing charges against Jack Weinberg, whose arrest had been effected by the University of California police department.

It was also agreed that a committee should be established representing students, faculty and administration and which would be empowered to conduct an investigation into all aspects of on-campus political activity, and that another committee should be established which would decide the matter of discipline in connection with the eight suspended students. At this point the article in the California alumni magazine pointed out that "in the final agreement, the latter committee was called the "Student Conduct Committee of the Academic Senate." In fact, no such committee existed. The agreement, at that point, contained a *misnomer* which carried

the implication that the students' cases would be referred to a committee of faculty members appointed by the Academic Senate."*

Even under the excitement and strain that provided the background against which these negotiations were conducted, it is incredible that such a mistake should have been made by the administration, and that this matter, together with other misunderstandings between the FSM representatives and the campus officials, should lead to a complete breakdown of negotiations and the resumption of student demonstrations on a more serious level.

Apparently the administration was thinking of the Faculty Committee on Student Conduct, which was appointed by and was advisory to the Chancellor, and the students assumed that it was something entirely different. The article in the Alumni magazine continued to state that "misunderstandings such as this characterize the period of negotiations—with the students and administration proceeding from entirely different premises and points of view, and deriving different meanings from common terms. The agreement effective between the administration and the FSM spokesman, a copy of which was obtained from the Chancellor's office, read as follows:

"1. The student demonstrators shall desist from all forms of their illegal protest against university regulations. 2. A committee representing students (including leaders of the demonstration), faculty, and administration will be immediately set up to conduct discussions and hearings into all aspects of political behavior on campus and its control, and to make recommendations to the administration. 3. The arrested man will be booked, released on his own recognizance, and the university (complainant) will not press charges. 4. The duration of the suspension of the suspended students will be submitted within one week to the Student Conduct Committee of the Academic Senate. 5. Activity may be continued by student organizations in accordance with existing university regulations. 6. The President of the university has already declared his willingness to support deeding certain university property at the end of Telegraph Avenue to the city of Berkeley or to the ASUC.

Signed

JO FREEMAN	CLARK KERR
PAUL C. CAHILL	JACKIE GOLDBERG
SANDOR FUCHS	ERIC LEVINE
ROBERT WOLFSON	MARIO SAVIO
DAVID JESSUP	THOMAS MILLER."

During the following week there was complete disagreement between the FSM leaders and the administration over matters of procedure. The spokesman for the FSM seized on the mistake in the name of one of the committees, charging that the apparent error had not been inadvertent and that this duplicity on the part of President Kerr created the opportunity for him to ram the settlement through and disperse the mob of students, and also to hand-pick a special committee that would be more representative of his own views than those of the FSM. Chancellor Strong pointed out that since there was no committee on "student conduct" of the Academic Senate, he turned the matter over to the *Faculty Committee on Student Conduct*, which was a duly constituted body that had been in existence for some time.

* *California Monthly*, February 1965, p. 11.

The Robley Williams Committee

Pursuant to the agreement mentioned above, Chancellor Strong appointed members to the Faculty Committee on Student Conduct as follows: Student members, Charles Powell, president of the Associated Students at the University, and Marcia Bratten, Sproul Award winner; faculty members, Theodore Vermeulen, Joseph Garbarino, Henry Rosovsky, and Robley Williams, who was elected chairman; the administration was represented by Vice-Chancellor Allen Searcy, Dean Katherine Towle, Dean Milton Chernin, and Dean William Fretter. The other two student members were to be nominated by the FSM. The FSM was completely dissatisfied with the establishment of the Robley Williams Committee, contending that it was illegally constituted, asking for its dissolution, and complaining that they had no voice in its establishment. There ensued a period of complete confusion with unwieldy faculty committees, protests and threats from the FSM, indecision and weakness on the part of the administration, and the inevitable concessions by the campus officials to the demands of the student rebels who were now fired with success, becoming more arrogant and defiant, and threatening mass reprisals unless their ultimatums were met.

The American Civil Liberties Union indicated that it might interest itself on behalf of the eight suspended students, only two of whom had obeyed the request from Robley Williams to confer about setting the time for hearing their cases. On October 12 the FSM spokesman bluntly told the administration that the Robley Williams Committee was stacked in favor of the administration and they would have nothing to do with it unless they had a more substantial representation. On October 13 the Academic Senate resolved that it was pleased to declare itself in favor of maximum freedom for student political activity. It also expressed itself as hopeful that peace and order in the intellectual community could be maintained, and that full use might be made of the joint faculty-student administration committee for that purpose. That evening, however, the controversial committee held an open meeting on the campus of the university. The gathering was jammed with FSM representatives who insisted that the committee was illegally constituted and should immediately be disbanded. On October 15, FSM leaders met with representatives of the administration on the Berkeley campus and threatened "mass demonstrations" if they were not permitted to present their case to the Regents of the university. That evening Professor Arthur Ross, from the Institute of Industrial Relations and chairman of the Committee on University Welfare, conferred with FSM spokesmen and agreed to consider modifying interpretation of the six-point agreement. On the following day the administration diluted its position still further by agreeing that the Robley Williams Committee would be expanded to include six members from each category, should hold two or three public meetings each week and wind up its affairs within three weeks. It was further agreed that a maximum of five "silent" observers and two "silent attorneys" would be entitled to attend all meetings, and that all findings and recommendations were to be made by a consensus of opinion. On October 18, the FSM named as its representatives Mario Savio, Bettina Aptheker, Suzanne M. Goldberg and Sydney R. Stapleton. The other two student members, Charles Powell and Marcia Bratten, had already been appointed by the Chancellor.

The Robley Williams Committee on Campus Political Activity held meetings on October 21, 24, 28, 29 and November 4, 5, 7 and 10, 1964. The first meeting was devoted to organization, the second meeting was chiefly characterized by objections from the FSM representatives. For instance, Mr. Stapleton contended that no political activity was being allowed on the campus and that he believed existing regulations were not valid because the Robley Williams Committee had been established to determine the validity of the rules. Suzanne Goldberg contended that she did not feel the October 2 agreement was relevant or valid because it had been disregarded by the administration, and that if the committee did not function properly the FSM was prepared to decide for itself what the proper channels of communication should be. The FSM delegation, in effect, completely repudiated the agreement of October 2, and declared that it now considered itself free to take the situation at the main entrance of the university into its own hands.

We can see little to be gained by presenting in detail the various wranglings and the incredible amount of hair-splitting technicalities, bickerings, and indecision that characterized the other meetings of the Robley Williams Committee. We have a complete file of the minutes, and can only point out that the attitude of the FSM representatives made it utterly impossible for the committee to perform its functions efficiently, and that this situation was evident at the second committee meeting on October 24, 1964. An attorney from the legal office of the university was present representing the administration at each of these meetings, and on occasion the FSM was represented by Robert Treuhaft, who has been repeatedly identified as a member of the Communist Party and who was one of the first persons arrested during the massive invasion of Sproul Hall on December 2, 1964. The minutes disclose that those members of the committee who represented the university administration very rarely called upon their counsel for advice; on the other hand, the FSM representatives frequently called upon their counsel, Malcolm Burstein, or Mr. Treuhaft, and it soon appeared that as acrimony and disputes developed between the three elements represented at the meetings, the original prospect of some agreement quickly faded to the vanishing point.

At the conclusion of its November 7th meeting, one of the longest, most argumentative and unfruitful in the short and stormy history of this body, it was agreed to again convene on Wednesday, November 11. But before this could be accomplished the Robley Williams Committee was dissolved by the Berkeley administration on November 9.

The faculty members of the committee issued a report on November 12, 1964, which consisted of ten separate items, being the views of the six appointed members of the Robley Williams Committee representing the faculty, but since they were somewhat involved, and since nobody seemed to pay much attention to them in any case, we can see no useful purpose in describing them here.

President Kerr commented on their report in the student newspaper, accompanied by his expression of conviction that "most of the students and their leaders who participated in the violation of campus rules did so *with heavy hearts.*" (Committee's italics) He concluded by stating that for the period of twelve years during which he was Chancellor and later as President of the university, he had always sought to "protect and increase the freedom of faculty members and students, always with the confidence that with greater freedom would go a greater sense of respon-

sibility. This view and the progress resulting from it is now meeting its severest test within the university and before the eyes of the entire State of California."

It will be seen, however, that President Kerr's insistence that the university be opened to professional Communist propagandists, and his statement that the tough leaders of the student rebellion performed their acts of violence and defiance "with heavy hearts," were precisely the sort of misapprehensions that paved the way for the demonstrations he deplored. And the biggest demonstration of all had not yet occurred.

The Heyman Committee

There is a *Committee on Committees* (our italics) of the Academic Senate at Berkeley, and on October 19, 1964, it appointed a Committee on Suspensions. Its members were Ira M. Heyman, professor of law, chairman; Robert A. Gordon, professor of economics; Mason Haire, research psychologist, Institute of Industrial Relations; Richard E. Powell, chairman department of chemistry, and Lloyd Ulman, director Institute of Industrial Relations.

The Heyman Committee released its report on November 13, submitting it to the Academic Senate which appointed it, instead of to Chancellor Strong. Since this committee had no authority to take any direct action, and was considered advisory to Chancellor Strong, he naturally expected the report to come to him. He, therefore, issued a statement on the day the report was released, stating, among other things, that:

"Although The Regents, the President and I had understood the Committee was to be advisory to me, Professor Heyman has 'addressed' the report to the Academic Senate and its committee concludes 'that it should render its report to the Berkeley division of the Academic Senate, with copies of the report to the university administration and the students involved.' President Kerr and I completely disagree with this procedure. Out of respect for and courtesy to the Academic Senate, we shall however await the reaction of the Berkeley Division to the report before commenting on its recommendations."

The Heyman Committee Report emphasizes the confusion that arose from an intricate complex of rules, administrative practices, and a lack of a clear, concise compendium that was sufficiently explicit to enable students to know what was prohibited and what was permitted. The basic policies were contained in a pamphlet and entitled "University of California Policies Relating to Students and Student Activities, September, 1963." These rules, however, were qualified and amended annually by supplements and qualified by what the Heyman Committee called "memoranda of clarification and modification" issued by Dean Towle and the statements made and practices followed by Chancellor Strong.

No one could find any requirement for a permit to operate tables on the campus, although such permits had nonetheless been required for several years. All were agreed that on-campus solicitation of funds for off-campus purposes (except for the Bay Area United Crusade, Cal Camp, and the J. F. Kennedy Memorial Fund) were clearly forbidden. In the cases of the eight suspended students, funds had been solicited for the Student Non-Violent Coordinating Committee, Young Socialist Alliance, and SLATE—hence the violations were obvious. There was some doubt concerning the SLATE solicitations by students David L. Goines and

Sandor Fuchs, because their solicitations might be construed as having been made for on-campus purposes. In addition, five of the suspended students refused to see Dean Williams at his request.

The Heyman Committee recommended that students Bravo, Goines, Fuchs, Hatch, Turner and Mrs. Stapleton be reinstated and their records expunged, and that each of them be punished by being placed in a state of "censure" for a period of no longer than six weeks; and that students Goldberg and Savio be suspended for six weeks beginning with September 30, 1964. The report concluded as follows:

"The imposition of academic penalties on these eight students would amount to additional punishment, and of a severity disproportionate to the offenses. We recommend that, so far as is feasible for each student, he be permitted to complete his course work for the present semester, but without academic penalty. We further recommend that each, at his option, be permitted to drop one or more courses, or to withdraw from the balance of the semester, but without loss of academic credit or the imposition of other academic penalties."

After President Kerr yielded to demands by the FSM for more representation on the Robley Williams Committee and throughout the period of that committee's deliberations, and also during the deliberations of the Heyman Committee, the Bay Area press was reporting continued activities on the part of FSM leaders. On October 31 the chief of the Berkeley police department issued a statement to the effect that the presence of police officers on the Berkeley campus "without action" was extremely injurious to officer morale and damaged public respect for law enforcement. He was referring to the summoning of police officers, members of the Alameda County Sheriff's office and the highway patrol to the Berkeley campus and then having them sent back again when President Kerr and Mario Savio reached an accord. Richard P. Hafner, university public affairs officer, stated in a letter dated November 18, 1964, to an agent of this committee that:

"The cost of repairs to the police car captured during the recent demonstrations was \$334.20. As far as students helping to pay for these repairs, rumor has it that the can in which contributions were being collected was found to be empty when the students went to pick it up. We have not been able to confirm this."

An itemized statement of the cost of police services rendered, on the occasion of the demonstration on October 1 and 2, 1964, is as follows: 1). U C Campus Police, 25 men, 517 man-hours, \$2,377.26; 2) Lawrence Radiation Laboratory, 28 men, 249½ man-hours, \$926.44; 3) City of Berkeley, 104 men, 501½ man-hours, \$2,170.96; 4) Alameda County Sheriff's Office, 185 men, 913 man-hours, \$3,628.60; 5) City of Oakland Police Department, 237 men, 1,086½ man-hours, \$4,580.78. This amounted to a total of 579 officers who spent a total of 3,267½ man-hours, at an expense of \$13,684.04.

On October 21, 1964, Mario Savio acted as a member of a panel at Willard Jr. High School, in Berkeley, at a meeting sponsored by the Friends of the Student Non-Violent Coordinating Committee, of which he had acted as campus president, to hear a report by Mrs. Irene Paull, concerning her activities with the Freedom School at Hattiesburg, Mississippi. Among the other qualifications of the principal speaker, one could mention her activities as an organizer for the Young Communist

League in Minnesota in 1938, and her invoking the Fifth Amendment when asked about her visit to Cuba in 1963 by the House Committee on Un-American Activities. Mrs. Paull is also a contributor to the *National Guardian*, Communist Party line newspaper. Other members of the panel were Mrs. Fay Stender, a member of the National Lawyers Guild in 1964, and an attorney with the firm of Charles R. Gary and Benjamin Dreyfus. Dr. Carlton Goodlett, who has already been mentioned in this and in previous reports, was also a participant in the program.

On November 4, 1964, the FSM scheduled a picketing of Sproul Hall to commence at 11:30 a.m. and to conclude at 4:00 p.m. At the rally coincident with this activity, Mrs. Elizabeth Stapelton, one of the eight suspended students, declared that "we are playing a great chess game with the administration. They have the political and economic power. All we have is the power of the masses." And the FSM threatened that unless the committee on political activity supported complete freedom of speech, assembly and association for the students, the FSM would adopt other means to secure its rights.*

Two hundred and fifty FSM pickets paraded in front of Sproul Hall on November 5, 1964. Art Goldberg addressed the group demanding "total political freedom on the campus," and threatened more demonstrations. At this demonstration there were between two and three hundred unsympathetic viewers, all students, who signed a resolution favoring law and order and condemning the disorderly tactics of the FSM in settling disputes on the campus. Another resolution condemning such tactics was passed by the senate of the Associated Students of the university, which represented the overwhelming majority of the enrolled student body.

On November 6, Savio, acting as spokesman for the student representatives on the Robley Williams Committee, rejected a proposal of Professor Sanford Kadish to the effect that the university should be permitted to take action against on-campus activities that resulted in off-campus illegal demonstrations, and on the following day Savio declared that since the FSM negotiations with the administration's committees had broken down, the Free Speech Movement would no longer consider itself bound by existing regulations. Speaking from Sproul Hall steps to a crowd of about four hundred he threatened "we'll break the regulations again and again and again." This determination to resort to still more defiant activity was implemented on November 9 when Stephen Weisman, chairman of the Graduate Student Coordinating Committee on the Berkeley campus and a member of the FSM, announced that there would be an effort to persuade teaching assistants, who comprised the bulk of the instructors for undergraduate teaching, to "tie up several of the larger departments of the university."

Several days prior to the threats of renewed demonstrations unless the administration agreed to the demands of the FSM, Mortimer Scheer, leader of the militant Progressive Labor Movement from New York (the most militant Communist organization in this country) appeared in Berkeley and contributed his talents to arousing the radical element among the rebellious students to more violent action. Scheer resided at 2679 Action Street, Berkeley, and is now the official representative on the West Coast for the recently-created Progressive Labor Party, an outgrowth of the Progressive Labor Movement.

*San Francisco Chronicle, November 4, 1964.

On November 9, Chancellor Strong warned the students against their planned demonstration on Sproul steps, and threatened disciplinary action. At the appointed time, however, about fourteen hundred students assembled, and Savio mounted the rostrum again with his familiar public address system. The rally was held in defiance of the administration, and tables were maintained and funds solicited in direct violation of the campus directives. Representatives of the administration took sixty names, but the demonstration nevertheless continued. A group of teaching assistants and graduate students working for higher degrees announced that they would also sit at the tables and join in the demonstration. This announcement was made by their spokesman, Robert Richeimer, a teaching assistant in the history department and a member of the FSM. Simultaneously a statement was issued by Richard Schmorleitz, FSM press secretary, to the effect that his organization would break off all communications with the university administration. On the following day two hundred teaching assistants, led by Stephen Weisman, joined the students. Twenty-two of them manned the illegal tables, but there was no effort to make any check on the part of the administration.

By November 16th the Chancellor's office had cited seventy students for violations of university regulations and the FSM thereupon commenced raising a defense fund. Signatures were also gathered on an FSM petition to the Regents, calculated to strengthen the Academic Senate report, which was not yet issued, but about which the FSM had prescient information.

Savio, Martin Roysher and Brian Shannon left Berkeley for Southern California on November 16 for the purpose of making visits and addresses at fifteen Southern California campuses for the purpose of spreading the FSM doctrine. The institutions on this speaking agendum were: the five associated Claremont colleges; the University of California campuses at Los Angeles, Riverside and San Diego; Occidental College; the University of Southern California; state colleges in the San Fernando Valley, Long Beach and Los Angeles; and city colleges at Los Angeles and Santa Monica. Savio also spoke at Stanford, addressing a meeting of a hundred and fifty students, sponsored by the young democratic organization.

On November 19, Assemblymen-elect John L. Burton and Willie Brown, Jr. sent messages to the university Regents demanding complete political freedom on the campus, and simultaneously the Academic Senate at Berkeley called for more liberal policies by the administration.

The Regents met at Berkeley on November 20th and modified but did not substantially change the rules regarding political activities by the students. They refused to allow on-campus activities in support of illegal off-campus actions, and added that the university should discipline students for illegal on-campus activities.

The Regents accepted the recommendations of the Heyman Committee and rescinded suspensions of the eight students who had been disciplined for violation of the campus rules. They declined to meet with representatives of the FSM, and during their session a silent demonstration of four thousand students was held, while Joan Baez, Carmel folk-singer, appeared and entertained the crowd. When Savio and Steve Weisman announced the Regents' decisions, the students sat in stunned silence. FSM leaders clearly considered that as a result of this meeting they had suffered a serious defeat, and declared that they were determined to proceed with further and more violent demonstrations. They received some support from Ralph J. Gleason, a columnist for the *San Francisco*

Chronicle who has addressed the San Francisco DuBois Club and had been a frequent observer of the student demonstrations. In his column "On the Town," which appeared on November 23, he praised Joan Baez and lauded the FSM, saying "a movement like this cannot be squelched." His fellow-columnist, Herb Caen, observed, however, that "the free speech rumpus over at Cal is getting more left-wing by the day . . ."

On November 25, Bay Area papers printed a statement by Kent Pursel, chairman of the Alameda County Board of Supervisors, who expressed himself as follows:

"The continued demonstrations on the university campus show that a movement of students is publicly flaunting the authority of the administration. Even the weak-kneed compromise by the Board of Regents was unacceptable to them . . .

Unfortunately, a 'noble ideal' (free speech) is being used to transform a respected institution into a common battleground between lawful authority and those who stand to gain by a continuation of chaos."

Pursel stated that "the Regents must be reminded that they represent all the people of California. Until the administration and the Regents stop marching in reverse, the university will have to remain subject to the harassment of a defiant minority."

On November 25th SLATE requested permission to exhibit a French film on homosexuality, entitled "Un Chant d'Amour." When this request was denied, Art Goldberg suggested that it nevertheless be shown against the wall at Sproul Hall, and another protest rally was staged on the steps of that popular building at noon.

In the November 26th issue of the *San Francisco Chronicle*, an editorial summarized the situation at Berkeley as follows:

"Under liberalized regulations, students may now assemble, speak, advocate, solicit and recruit to their hearts' content without restrictions, save one: they are subject to university discipline if they advocate on-campus actions that are illegal under California or federal laws . . .

The campus cannot become a breeding place for off-campus lawlessness. As President Kerr has observed, the university is not a fortress from which students (or non-student agitators) may mount attacks on the surrounding countryside . . ."

By this time the united front aspect of the Free Speech Movement was beginning to disappear. Many of the more conservative students who originally entered the movement as a sincere protest against a bewildering complexity of rules and regulations that were constantly being expanded, rescinded, supplemented, and amended, had realized that the entire movement was slowly but surely being taken over by Communist-oriented leaders. University offices and university typewriters, mimeograph machines, and other equipment, were being used by the FSM for its own purposes, and off the campus they had established offices known as "centrals," each one handling a special phase of the FSM strategy. The first of these centrals was maintained at Savio's home. Thereafter others were established to handle legal matters, public relations, press releases, planning of demonstrations, communications, and all of the other attributes that were now being organized with the precision of a military establishment. At the same time an intelligence

system was being established whereby liaison could be maintained with graduate students, teaching assistants, the academic senate, and an astonishing number of faculty members who were enthusiastic supporters of everything the Free Speech Movement espoused. There were also contacts and sources of information in the Chancellor's office, the offices of the various deans of the university, and in other key campus positions which enabled the leaders of the FSM to keep accurately informed of the plans of both the Academic Senate and the administration.

Savio had established himself, at least in the public mind and in the minds of most of the students, as the charismatic leader of the rebels. Disinterested and apathetic at meetings, impatient with long political discussions and arguments about ideological distinctions, this young man was a dynamo of activity when he mounted a rostrum with a bull horn in his hand and aroused his listeners to a high emotional pitch. He thrived on direct action, and cultivated a tough, condescending and arrogant attitude even toward the President of the university, to say nothing of the other administrative officials whom he treated with uniform contempt. Without the background of the FSM movement Savio and his handful of cohorts would have remained anonymous students at a big educational institution. Against the background of the FSM movement they were able to direct the activities of thousands of discontented students, force the university administration into retreat after retreat and concession upon concession. They were soon issuing ultimatums and threatening more demonstrations unless their demands were met within the time specified, and for a variety of reasons they were able to secure the support of a large segment of the faculty.

At the same time that the united front was becoming a para-military sort of organization, and the control was being consolidated in the hands of a few leaders, more and more adults appeared on the campus at the demonstrations, some of them known members of the Communist Party, some, like Mort Scheer, leaders of the Communist element that followed the tough line of Red China; some were students who had been indoctrinated on clandestine trips to Cuba; and there were the usual large numbers of chronic supporters of Communist fronts who always lend their assistance to such movements. After all, this was the greatest student rebellion in the history of the United States, and it occurred on the main campus of the country's largest educational institution. The classic united front organization that we described earlier had now become a tightly-disciplined, thoroughly organized, well-equipped movement. And it was about to stage the greatest demonstration of all, which was scheduled for December 2, 1964, with the invasion of beleaguered Sproul Hall.

On December 1, the press announced that Strong had brought disciplinary action against four FSM leaders: Mario Savio, Arthur Goldberg, Jacqueline Goldberg and Brian Turner, for their actions during the demonstration on October 1. This provoked a response from Robert Paul Kaufman, a graduate history student who had aided in the founding of the DuBois Clubs of America, had been active in Student Non-Violent Coordinating Committee, and who had been a member of the Fair Play for Cuba Committee, to the effect that graduate students would join in a demonstration with FSM. Kaufman, one of the leaders of the student rebellion who came to Berkeley from U.C.L.A., had established his Berkeley residence at 2734 Haste Street.

Savio then issued a statement giving Chancellor Strong twenty-four hours within which to meet a list of five demands by the FSM or face a massive demonstration. The five demands were as follows:

1. The dropping of all charges against Mario Savio, Arthur Goldberg, Jacqueline Goldberg, and several student organizations cited for breaking university rules.*
 2. An administration guarantee against further disciplinary action until a final settlement was reached with the Free Speech Movement.
 3. A statement that no regulations would be adopted by the university restricting students or organizations from exercising their full political rights on the campus.
 4. An administration agreement that only the courts should have authority to regulate the political activities on the campus.
 5. The adoption of a policy that all rules governing political expression on the campus should be determined, interpreted and enforced by the faculty-student-administration committee, whose judgment would be final.
- If these demands were not met, threatened Savio, the university would face a sit-in demonstration and the Graduate Coordinating Committee, headed by Stephen Weisman, stated that it would launch a strike if any police were called to quell the demonstration.

The Invasion of Sproul Hall

On December 2 there was a noon rally at Sproul Hall. Savio, microphone in hand, in top form and plainly enjoying his work, spoke to two thousand students and threatened to "bring the university to a grinding halt," because the FSM ultimatum had not been met. He was flanked by Joan Baez, folksinger from Carmel who was currently in difficulty with the Department of Internal Revenue for refusing to pay all of her income tax because she did not wish to make any contribution to the government's activities in Viet Nam. Other leaders of the December 2 demonstration were Jack Weinberg of the Committee on Racial Equality, a non-student; Stephen Weisman, heretofore mentioned; Arthur Goldberg and his sister Jacqueline, and Robert Treuhaft, the husband of Jessica Mitford Treuhaft, and who has been repeatedly identified as a Communist lawyer.

At 12:30 Baez and Savio began singing "We Shall Overcome," and led the march into Sproul Hall. Like the children of Hamelin following the Pied Piper, about five hundred of the assembled multitude followed their leaders into the building while two hundred stood silently and watched. With military precision the invasion proceeded. Savio was restrained from breaking into Dean Towle's office, but aside from that the sit-in proceeded in accordance with advance plan. The third and fourth floors of the building were used as study areas; the lobby was devoted to recreation, a first-aid station was established, and arrangements made to secure food.

By this time most of the broad base united front organization of the FSM was withering away, leaving the Communists and the more radical elements of the movement in full charge. Robert Treuhaft, counsel for the FSM delegates to the Robley Williams Committee, was observed at several of the student demonstrations and participated in this one—the most massive and defiant of all. He was also one of the first to be arrested. Treuhaft was a lecturer at the Communist School in San Francisco in 1947, and had worked as an Assistant Disputes Director for the War Labor Board and as a hearing Commissioner for the O.P.A. He also has

*The *San Francisco Examiner* also included Brian Turner in this list.

been active in virtually every Communist front organization in the Bay Area since the early 40's. In 1964 he attended the Communist-controlled International Association of Democratic Lawyers in Argentina with Robert Kenny of Los Angeles, Conrado Gomez of Argentina, and Norman Endicott of Canada. After attending the meeting these four went to Portugal where they endeavored to stir up difficulty over civil rights matters, and were summarily ordered to leave that country.

At about 4 p.m., Jack Weinberg—the arrested hero of the October 1-2 demonstration—made a dramatic appearance on the second floor balcony of Sproul Hall, standing in front of a large red and white FSM banner and announcing that there would be a program of entertainment during the evening which would consist of singing by Joan Baez, the showing of the film "Operation Abolition," which was calculated to arouse animosity against the House Committee on Un-American Activities, and an exhibition of the revolutionary motion picture, "Juarez."

Just before the invasion of the Sproul Hall building commenced, Charles Powell, student body president, endeavored to persuade the leaders not to invade the building. But the apostles of free speech booed, jeered and made so much noise that he could not be heard, and called him "a strike-breaker and a fink." At this point the Young Republicans, who had been a part of the FSM united front movement in its earlier stages, announced that the group would not condone this sort of action and withdrew their support. Thereafter the spokesman for the campus Young Republican Organization, Warren L. Coates, Jr., issued the following statement:

"The Republican Party and its Young Republicans have always favored the freest possible expression of ideas and political activities consistent with democratic processes, law and order. The activities of the University of California Young Republicans at Berkeley have been completely consistent with these principles. We negotiated in good faith with President Clark Kerr and the university administration for the broadening of political activities on this campus. At the same time we opposed the educationally disruptive and unlawful tactics of the group calling itself the 'Free Speech Movement' (FSM).

We remained members of the FSM with the hope of moderating their tactics. On December 2 we withdrew from the FSM convinced that it was hurting the image of a great university and destroying any chance of a further broadening of already liberalized political regulations.

The sad fact is that the FSM has inflicted irreparable damage on this campus. The university's independence and faculty-student relationship are at stake and may never be the same again. The fact that many of the FSM more militant tactics were suggested by identified Communist infiltrators and that these same infiltrators have greatly increased their influence over the FSM, makes us all the sicker. The situation on the Berkeley campus is bad and will probably become worse. But it is important to understand that the FSM neither represents nor is typical of the vast majority of Cal students."

By evening of December 2, the FSM organization had provided blankets, sleeping bags and food, a duplicate public address system, and even walkie-talkie equipment so that contact could be maintained with agents outside the building. Some of the teaching assistants who partici-

pated in the invasion conducted classes, and pleas by the administration and orders from both the police department and university officials for the students to vacate the building were greeted with boos and disdain. President Kerr conferred with Governor Brown. Peace officers in the East Bay Area were again alerted, and the Berkeley Police Department by this time expressed some impatience at being summoned and sent home repeatedly, since on the occasion of the October demonstrations they had been summoned and dismissed seven times in one day by a Berkeley administration that could not seem to make up its mind to take decisive action to enforce the university regulations, discipline the violators, and put an end to the demonstrations by using whatever force might be necessary for the accomplishment of that purpose.

At 7 p.m. the doors to the administration building, Sproul Hall, were closed, with approximately eight hundred invaders in full possession of the building. Some university Regents arrived at San Francisco airport, and met with President Kerr and Chancellor Strong; there were other San Francisco meetings, while inside the building classes were being held to instruct the demonstrators how to resist arrest by going limp and refusing to cooperate with officers in the event there was any attempt to clear the building by force. At midnight Savio had sentinels posted at the building's entrances to observe outside activities, and at 2:30 a.m. on December 3, Stephen Weisman told the demonstrators to dispose of any illegal objects they might be carrying. Among the illegal objects that were found when police finally took measures to clear the building was a supply of marijuana cigarettes in the possession of Lee M. Rhoads, 2615 Channing Way, Berkeley, 22, a salesman from Virginia who was a sympathizer with the students, and who was held by the Oakland Police Department in lieu of \$150.00 bail.

President Kerr and his administration had decided to allow the students to remain in possession of the administration building until they got tired and decided to emerge. This attitude was expressed not only by Kerr to Governor Brown, but also by other members of the Kerr administrative staff, who seemed determined to make any concession instead of resuming control of the campus by whatever steps might be necessary. But the public, responsible officials in Oakland and Berkeley, and high-ranking peace officers had other ideas as they watched the students settle down with their abundant supplies of food, blankets, communication systems and outside supporters, and they communicated with the Governor, who thereupon issued the following statement:

"I have tonight called upon law enforcement officers in Alameda County to arrest and take into custody all students and others who may be in violation of the law at Sproul Hall.

I have directed the California Highway Patrol to lend all necessary assistance. These orders are to be carried out peacefully and quietly as a demonstration that the rule of law must be honored in California."

Approximately seven hundred peace officers then proceeded to clear the building. Their forces comprised 150 highway patrolmen, 212 police officers from Oakland, and officers from the campus police department, the Berkeley police department and supplementary forces. Immediately before the arrests started, Joan Baez and other FSM leaders who were considered too important to be immobilized by arrests, escaped from the building and disappeared into the crowd. At 3:20 a.m. Police Lieutenant

Merrill Chandler followed Chancellor Strong into Sproul Hall to warn all demonstrators who refused to leave that they were in violation of the law, in that they were refusing to discontinue an unlawful assembly and that they were trespassing by occupying the building after it had been closed. Ten minutes later the arrests began, commencing on the fourth floor of the building and working down. The tensions were high, officers lined the hallways, ready for anything that might develop. The demonstrators were milling around outside the building, and the FSM leaders who had escaped were calling for a general strike by all of the 27,500 members of the student body. Jack Weinberg screamed and cursed as he was taken into custody; Savio shouted and sang and protested even after he had been incarcerated. There were a few who resisted arrest by struggling; some locked arms to make it more difficult for the officers to effect an arrest and to take them into physical custody, but most of the "freedom classes" had been sufficiently successful in telling the students to simply go limp and refuse to cooperate with the officers, and this was the procedure that most of them followed. In that connection it may not be inappropriate to refer at this point to an opinion rendered by Alameda County Superior Court Judge Robert H. Kroninger, in a case in which three juvenile Berkeley sit-ins were convicted of unlawful assembly during the December demonstration. The decision was mentioned in a column sent to newspapers throughout the country from Washington, D.C. on May 3, 1965, was written by Bruce Bioassat, and read, in part, as follows:

"The notion is growing in the United States that there is a curious nobility in breaking, ignoring or misinterpreting the law if it is done in a 'good cause.'

The cause, of course, can be racial desegregation, campus freedom of one sort or another, U.S. action in Viet Nam, or whatever.

Favoring job integration, some lawyers in Washington have consciously and deliberately advocated a misreading of the Taft-Hartley Labor Law to give it a racial content its authors and supporters never intended.

Lawyers, politicians, scholars, teachers, artists and clergymen were among the countless persons who voiced unconditional sympathy for the nearly eight hundred law-breaking demonstrators who rebelled last December on the University of California's Berkeley campus.

They appear to have the grossly mistaken view that if an uprising is basically passive and is styled as 'civil disobedience,' it somehow falls outside normal concepts of law violation.

In a little-noticed decision convicting three juvenile Berkeley sit-ins of unlawful assembly in the December rebellion, Alameda County Superior Court Judge Robert H. Kroninger (in the Berkeley-Oakland area) went right to the heart of that issue.

He cited section 148 of California's Penal Code which bars any intentional resistance, delay or obstruction of a police officer in the performance of his duty. Arresting persons unlawfully assembled in a school building was, he said, proper discharge of an official duty. Then Kroninger declared:

'It is clear that the response of lying down and relaxing the muscles of the extremities was intentional. And it is equally clear that the purpose and effect were to delay and obstruct the police officers. It matters not that the participants described such a resistance as passive, or seek exculpation under the mantle of civil disobedience. Such

terms merely obscure the question, as the purpose and effect of such conduct differ only in the degree from the responses of flight or violence. Resistance to the rule of law, whether active or passive, is intolerable . . .'

Unforgivably, the 378 University of California faculty members who sent Governor Edmund G. Brown a telegram of sympathy for the law breakers showed not the faintest awareness of this point. In ignoring it, they and all other sympathizers were dangerously close to arguing that the end (the demonstrators' objectives) justified the means (violating the law).

Judge Kroninger sensibly took note of that danger in his opinion when he said that 'to excuse lawlessness by diverting attention to its avowed purpose would be to reject the rule of law and invite chaos.' Kroninger also said that those who consciously act unlawfully must accept responsibility as law violators and not plead, as did many demonstrators and sympathizers, for amnesty the moment they were arrested."

The arrest of almost eight hundred limp and uncooperative people crowded into several floors of a building, and their booking, photographing and fingerprinting, obviously took a great deal of time. The booking was done at the campus police station which was conveniently situated in the basement of Sproul Hall, and thereafter the men were taken to the Alameda County Rehabilitation Center and the women were booked at the Oakland Hall of Justice and incarcerated in the Oakland jail. A list of those individuals who were thus engaged in the invasion of Sproul Hall and who were arrested and booked and are now being tried for the alleged offenses are as follows:

Some of the patterns of residence given by the arrested demonstrators show how they were concentrated in little groups. For example, at 2536 College Avenue, Berkeley, were Mario Savio, Dunbar Aitkens, Charles E. Artman, David L. Goines, Ilene Hanover, Albert B. Litewka, Martin H. Rock, Brian Turner, Samuel B. Slatkin, and Jack Weinberg. Sandor Fuchs, Arthur Goldberg, Jonathan King, and Wendel C. Brunner, gave their address as 2632 College Avenue, Berkeley.

The premises in which little groups of demonstrators were housed consisted of dormitories operated under the supervision of the university, boarding houses, and apartment houses. There were some instances where a group of men or women would rent a house, but these were the exception rather than the rule. The pattern of occupancy is interesting insofar as it gives the geographical locations and the proximity to the campus of these component parts of the FSM movement. In addition to those addresses already given some of the other most popular locations in Berkeley were 2700 Bancroft Way; 2532 Benvenue Avenue; 2131 Blake Street; 2248 Blake Street and 2423 Blake Street; 2424 Channing Way; 2630 Dana Street; 1927, 2315, and 2939 Dwight Way; 2400, 2542, and 2650 Durant Street; 2515 Fulton Street, 2215, 2231, 2309 and 2426 Grant Street; 2650 and 2721 Haste Street; 2283 Hearst Avenue; 2635 Hillegass Street; 2100, 2208, 2228, and 2325 McKinley Street; 2140 Oxford Street; 2420, 2516, 2519, 2527, 2531, and 2600 Ridge Road; 2437 Shattuck Avenue; 2231 Ward Street; and other addresses from Alameda, Albany, Belvedere, Lafayette, Oakland, Orinda, Palo Alto, Stanford, Richmond, Sacramento, and San Francisco.

The first charges of police brutality were made on December 4. Bonnie Flemming, who was not one of those arrested, stated that she glimpsed some officers with long clubs striking students on the second floor of Sproul Hall when she was standing on the steps of a nearby building; Martin Rock, 20, said an officer broke a pane of glass on the second floor of Sproul Hall and blamed a student for causing the accident. Peter Israel said that he was slapped, Arthur Goldberg said the police beat the hell out of him, and Mike Entin said that the police were "unduly forceful." Michael Smith, a political science senior, said the physician at Santa Rita Rehabilitation Center had treated him for possible concussion; but Dr. James Terry, the responsible medical officer at the Santa Rita facility, made a flat denial of this accusation.

Judge Rupert Crittenden, presiding judge of the Berkeley Municipal Court, acceded to pleas from a delegation of university faculty members, headed by Professor Larzer Ziff, associate professor of English, when they asked him to reduce the normal bail for trespassing and refusal to disperse from \$165.00 to \$55.00, and the normal bail for resisting arrest from \$275.00 to \$110.00. Professor Ziff stated that the faculty had raised a bail fund of \$8,000 by December 4, and had arranged for the posting of bail in the aggregate of \$80,000 by a bail bond firm.

On the evening of Thursday, December 3, an unofficial emergency meeting of the Berkeley faculty was called, and approximately 1,000 of

them attended. At this meeting a vote was taken, with 15 dissents, criticizing the administration for its handling of the demonstrations and calling for the ouster of Chancellor Strong. Other resolutions passed at this emergency meeting were recommendations that all students arrested for the sit-in should receive full amnesty, that a faculty committee should be established to hear appeals from any students punished for breaking university rules, that new rules for campus political activities should be declared in effect and enforced "pending their improvement," that the presence of highway patrolmen on the campus be condemned together with the refusal by police officers to allow interested faculty members to enter Sproul Hall during the period of the invasion. A telegram was sent to Governor Brown embodying most of these points, and it was signed by 378 of those attending the meeting. Dr. Michael Duodoroff drafted the message to Governor Brown with the aid of his colleagues Dr. R. Y. Stanier, Dr. Leon Wofsy, to whom we have already alluded, Dr. Ben Papermaster, Dr. Nathan Glazer, Dr. Henry F. May, Professor Mark Schorer, Professor John H. Reynolds, Paul Jacobs, Dr. Henry N. Smith, who took charge of collecting the bail fund for the jailed students, Dr. Dell H. Hymes, who declared that he intended to resign in protest against the handling of the sit-in demonstrators and thought others should do so, and others who expressed themselves in general terms as critical of both Governor Brown and the university administration. From San Francisco State College, Professor Urban Whittaker spoke out against the Berkeley administration, and was joined by Professor Dan Knapp of that institution, who denounced Governor Brown.

President Kerr then issued a statement on December 4th to the effect that Governor Brown had made the decision to call the officers and end the unlawful occupation of Sproul Hall, and called upon the faculty, the staff and the students to carry on the orderly processes of the university and to reject "what has become a free speech movement attempt at anarchy."

Kerr declared that when the FSM issued its ultimatum and set a deadline for compliance by the administration, that its demands had nothing whatever to do with free speech which it well knew, and that it was also aware that the university could not possibly accept the conditions. He said that the FSM and its leaders knew from the start that the police would have to haul them out and were now finding that they had thrown themselves into the arms of a community at large which was less tender and which had fewer scruples about administering discipline.

On this occasion President Kerr had nothing to say about the students carrying on their demonstrations "with heavy hearts."

The Campus Strike

No sooner were the leaders of the student rebellion released from jail when they started planning more demonstrations and more acts of defiance. They first called for a general strike of the university, by the student body, teaching assistants, staff and faculty. This action was originally calculated to include a great many non-students who resided in the immediate vicinity of the university campus, and who had been participating to some extent in previous demonstrations. Even as the police were making their arrests on the morning of December 3, FSM leaders who had escaped from the building drove through the Berkeley streets during the pre-dawn hours with a sound truck broadcasting

appeals for demonstrators to block all traffic accesses to the campus, and several hundred people responded. A picket line was established at one of the entrances to the university and another one at a parking lot near Harmon gymnasium.

On December 4th the student strike was joined by graduate students and teaching assistants who protested the Sproul Hall arrests, as well as a number of faculty members. Some professors, employed to teach and drawing their salaries for that purpose, closed their classes and refused to carry out their responsibilities because they were in sympathy with the protesting pickets and the rebellious students. Other members of the faculty expressed views that might be epitomized by the statement by Wallace F. Smith, an assistant professor of business administration, who declared:

"One of the saddest experiences I've had in my life was in the midst of this disorder. To be asked by my students in class to suggest means that they might use to counter it, and seeing no effective means other than to resort to the same tactics and violence, there was nothing I could suggest. And clearly they were asking for assistance in overcoming this attack upon their reputability, seriousness, and respect for the community."*

The picketing continued through December 5th and 6th, but as this was over a weekend, many classes that might otherwise have been disrupted were not being held. The most serious effect of the picketing was on Friday, December 4, when sharp lines of faculty splits were drawn between the extreme liberals who were highly critical of Governor Brown and the university administration and vehement in their support of the FSM rebels, the moderate faculty members who advocated the use of normal channels of authority and communication for the purpose of restoring order to the strife-torn campus, and the more conservative element that advocated swift and firm disciplinary action on the part of the administration as the only possible method to bring an end to chaos and anarchy that had been engulfing the Berkeley campus since the first demonstration occurred in September, 1964.

There are reports to the effect that during the period of the general strike, many professors who were sympathetic with the FSM used their classrooms for the purpose of expressing these sentiments to their students. There are many instances of this sort of flagrant violation of what the faculty refers to as "academic freedom," and there were other instances of professors and teaching assistants deliberately indoctrinating their students in an attempt to gain support for the FSM.

It should be noted that the teaching assistants are graduate students who are working towards a Master's or Doctor of Philosophy degree, and who are employed by the university to conduct sections of large classes under the direction of a professor. Some of the classes in the liberal arts department of the Berkeley campus comprise several hundred students, and are therefore broken down into sections under a number of teaching assistants, who are neither regarded as students or members of the faculty. They are in much more intimate contact with the students than are the professors, and therefore exert a strong influence over them, and are in turn subject to a powerful influence by their students. Savio, when he threatened to bring the university to a "grinding halt" was referring to a

**California Monthly*, February, 1965, p. 14.

strike by these teaching assistants, which would in effect paralyze the university.

There is a wide variety of views about the effectiveness of the general strike of December 3rd and 4th. Many classes were cancelled without authority, and in some instances heads of departments requested their professors to cancel classes while many graduate students and teaching assistants joined the strikers. At noon on December 4th a rally was addressed by Joan Baez and Assemblymen-elect Stanton, Burton and Brown. There was a picket line of approximately fifteen hundred people across the entrance to the university at Telegraph Avenue and Bancroft Way, about half of the classes were not functioning, and the university did "grind to a halt," as Savio had predicted. SLATE had called for similar violent action earlier in the year when the supplement to its bulletin, issued in large quantities to these students, declared that: "this institution . . . does not deserve a response of loyalty and allegiance from you. There is only one proper response to Berkeley from undergraduates: *that you organize and split this campus wide open!*" (Committee's italics.) The rest of the booklet contained typical Communist propaganda.

The university administrators wisely determined that they should postpone any effort at negotiating with the FSM leaders until after the weekend, and thus allow the situation to cool and settle somewhat. But the FSM was busy also.

Until the Sproul Hall invasion there had been a loosely-knit organization which called itself the Free Speech Movement. Many of its meetings resembled group therapy sessions, with the participants sitting around and examining themselves and each other and arriving at very little in the way of plans for action. There were large numbers of people who belonged to no organization and who detested organizations of any sort. But all of this disorganization vanished like magic after December 3rd, and in some astounding manner was immediately replaced by a highly organized structure, complete with departments and sub-departments, an executive committee and a steering committee, plenty of finances, and an abundance of technical equipment.

At Mario Savio's apartment a "Work Central" was established, and soon there were so many people in his quarters that he and Art Goldberg were compelled to take steps to procure larger facilities. Then, in rapid succession, other "Centrals" were established. In addition to the Work Central there was a Press Central, a Legal Central, FSM Central, Command Central, Strike Central, Correction Central, Finance Central, a Night Legal Central, and a Running Expenses Central. The two Legal Centrals could be reached by calling the following telephone numbers: 843-2101 and 848-1208. The telephone for the Command Central was 849-1028, and the Finance Central was listed in the records of the FSM as University of California extension 4941.

It was at this point that the united front movement was jettisoned and in its place appeared this highly sophisticated and efficient FSM organization with its executive committee and steering committee and its system of centrals and its mobilization of supporters that were scattered in key positions throughout the entire Berkeley campus. The dominant figures on the Steering Committee immediately prior to the Sproul Hall invasion were Arthur Goldberg, Mario Savio, Brian Turner, Bettina Aptheker, Sherry Stephenson, Jack Weinberg, Dick Roman, Tom Miller, Sydney Stapleton, Jack Weisman and Mike Rossman. The personnel of this committee changed slightly from time to time, but after the Sproul Hall inva-

sion it became crystal clear that the main leaders were Arthur Goldberg, Mario Savio and Bettina Aptheker.

There has been much speculation as to whether faculty sympathizers for FSM worked to bring order out of the chaos and give that movement some direction and guidance. On more than one occasion, at times of extraordinary tension and when one of the FSM leaders such as Goldberg or Savio was present and making mistakes—some faculty sympathizer would curtly order them to quit talking, and there was instant obedience from these defiant students. That there was some guidance from the left-wing of the faculty was clear. How far it went, and how much authority the faculty exercised in the running of the rebellion, is another matter.

Stephen Weisman was also an important member of the steering committee, and although a non-student, was affiliated with Independent Socialist Club on the Berkeley campus, a peripheral socialist group of factionalists who opposed working with liberals or supporting Democratic Party candidates. Weinberg was recruited out of the Committee on Racial Equality into the Independent Socialist Club approximately one week before he was arrested, and was considered by his colleagues to be politically inexperienced. Mario Savio had joined the Young People's Socialist League at Berkeley in the spring of 1964—a fact which has not hitherto been disclosed, to our knowledge. YPSL was a Trotskyist Communist organization, but he took very little interest in it, was quiet and detached at most of the meetings, and was considered politically lethargic. In the summer of 1964 Savio went to Mississippi to help the Student Non-Violent Coordinating Committee, and returned to the Berkeley campus fired with enthusiasm for the civil rights movement. He still took very little interest in meetings, but soon became a dynamic figure on the top of a battered police car, on the steps at Sproul Hall, on a podium, grabbing a microphone out of a professor's hands on the stage of the Greek Theater, and proving himself so adroit at arousing a crowd of students to a high emotional pitch that he soon became identified as the spokesman for the entire FSM movement.

Arthur Goldberg was an ex-chairman of SLATE, and is still active in that organization as well as in the Communist movement that follows the tough Chinese Communist line. Many close observers have expressed doubt that such leaders could devote the time and energy or, indeed, that they had the organizational talent to put together the FSM "Central" system over the week end of December 5 and 6, 1964.

The invasion of Sproul Hall and the campus-wide strike which followed, might be accurately described as follows:

"... Attitudes are bitterly and rigidly sectarian, and political warfare is waged at a pitch that strikes the outsider as close to hysterical. Classes are frequently disturbed by political rallies, and sometimes they have to be suspended because of student strikes."

But this description is of another university, the Central University of Caracas, Venezuela, and is an excerpt from an article by Bernard Taper.*

The full quote is as follows:

"Like most other Latin-American universities, it is an intensely political place. Attitudes are bitterly and rigidly sectarian, and political warfare is waged at a pitch that strikes the outsider as close to hysterical. Classes are frequently disturbed by political rallies, and sometimes they have to be suspended altogether because of student

*"Letter from Caracas," by Bernard Taper. *The New Yorker*, March 6, 1965, p. 101 at p. 124.

strikes. The most recent strike, a protest against the new university rule that students who repeatedly flunked two or three of their courses would be kicked out. In most parts of the world, such a rule would be taken for granted, but student leaders here declared that the reasons students were flunking was that the professors were reactionary and incompetent and their teaching methods antiquated. There is truth in that charge, but, characteristically, the quarrel had its roots in politics—an assertion by the university authorities that many of the students were on the campus solely to agitate, and had no intention of devoting any time whatever to academic work.”

Greek Theater Meeting, December 7, 1964

By December 4, the antagonism toward President Kerr that had been consistently exhibited by the FSM, began to spread to other segments of the student community. On December 4, the *Daily Californian* reproduced an editorial signed by the editors of student papers at Berkeley, Los Angeles and Davis campuses. It was entitled “We Need A Leader,” and stated that “Clark Kerr has shown perception and good will through his many statements to the press and the community. But to this day he has not come down to the level of the students, down to the base court.”

Three days later the Greek Theater meeting was called. The administration announced that classes would be suspended and that students and faculty alike would assemble to hear what President Kerr had to say. By 11 a.m. the theater was jammed. Thousands of people lined the nearby slopes while still others listened to the proceedings on remote loud speakers. The meeting had been carefully organized, and was in charge of Professor Robert Scalapino, chairman of the Department of Political Science. Kerr’s speech was one of dignity and a plea for moderation on the part of the faculty, administration, and students. At the conclusion of his talk he announced a further capitulation on the part of the administration, promising forgiveness to students for all offenses committed prior to the day after the invasion of Sproul Hall. This, of course, amounted to complete forgiveness for all offenses committed by the students since the inception of the demonstrations.

When Kerr finished speaking, he turned the podium over to Scalapino and while Scalapino was in the process of adjourning the meeting, he was shouldered from his position by Savio, who seized the microphone. This was an act of unwarranted and brash intrusion whereby Savio sought to inject himself without invitation on a program that had been carefully structured by the university administration. No invitation had been extended to, nor had any been requested by, the FSM movement. Savio merely saw an opportunity to keep the emotional fervor of his followers at a high pitch, and took this sudden and dramatic means to accomplish that purpose. Dramatic it was, indeed, as the campus policemen wrestled him to the floor, took the microphone from his hand, and dragged him on his back across the stage to the rear entrance of the theater. Professor Joseph Tussman, chairman of the Department of Philosophy, persuaded the police to release Savio so that he might speak, and he returned and announced, in a low and controlled voice, that there would be a noon rally on the steps of Sproul Hall. This rally was attended by the largest student assemblage in the history of the Free Speech Movement, estimates ranging from six to seven thousand, who listened while Savio attacked President Kerr, repudiated his proposals, and declared that the FSM would continue with its demands and its demonstrations.

While Savio made his sensational grab for the microphone, President Kerr stood in amazement, observing part of the occurrence from the door of a conference room where he had gone for a scheduled press conference. The acting chairman of the Department of Speech, Professor Robert Beloof, accompanied by Art Goldberg, approached the President and told him that he must let Savio address the audience. When Goldberg interrupted in an effort to catch the attention of Kerr, Beloof said, "for once in your life, shut up." And Goldberg meekly obeyed. President Kerr said that this would have to be arranged with Professor Scalapino, who was the chairman of the meeting, and after he had consented Savio announced the time and place of the rally.

Professor Beloof later recalled that the lack of communication between the Berkeley administration and its faculty was underlined by the fact that although he had been on the campus for sixteen years, during which time he had been promoted from a lecturer to chairman of his department, and Kerr had gone from a professor to president of the university, the two men had never spoken before.

Immediately prior to entering the Greek Theater to make his address, Kerr stated to two members of the faculty who were standing immediately outside the entrance, that Governor Brown had "double-crossed" him because when they had conferred about the invasion of Sproul Hall, the Governor had agreed with Kerr that the situation at the University of Chicago had been handled correctly by simply allowing the students to remain in a building until they became tired instead of ousting them forcibly. This was the course of action Kerr recommended at Berkeley, but he declared that when irate citizens and law enforcement officers began to telephone the Governor demanding that something be done to prevent continued violations of the law, he broke his prior commitment with Kerr and ordered officers to clear the students from the administration building.

Witnesses who were present at the news conference immediately following the Greek Theater program watched arrogant young leaders of the FSM talking to the President of the university as though he were their inferior, exhibiting no respect whatever for his position, issuing their demands and ultimatums, while Kerr stood and endured the situation. One cannot but wonder what would have happened if he had followed the action of Professor Beloof and told these arrogant youngsters to shut up and make their demands with some degree of respect, and at the proper time and place.

We should not close this description of the Sproul Hall invasion, the arrests, and the campus-wide strike that followed, without mentioning the fact that in connection with the strike FSM had a committee of almost one hundred and fifty members calling university students over the week end and asking for their support, and many students received anonymous telephone calls from people purporting to be their teaching assistants, advising them that it would not be advisable for them to attend classes during the strike. The Berkeley Chapter of the American Federation of Teachers also directed a statement to President Kerr, which, although employing polite language, made it clear that if any disciplinary measures were taken against teaching assistants or faculty members for deserting their posts to support a group of rebellious students, a strike would doubtless ensue. The pertinent part of this message read as follows:

"We would like to inform you that any punitive action taken against teaching assistants or officers of instruction would be in-

tolerable to our group and create *a situation in which class instruction could not continue . . .*" (Committee's italics)

Pending a meeting of the Academic Senate on December 8, the FSM temporarily suspended its strike at midnight the previous day. We have already mentioned the result of this meeting of the Academic Senate: general support of the FSM position by a vote of 824 to 115. At almost the same time candidates from SLATE for important positions in the student government won victories in all seven of the positions for which they were candidates, and Sandor Fuchs, SLATE chairman and FSM member, declared that:

"The victory for SLATE is a victory for the Free Speech Movement, and an independent ASUC. It comes at a time of the greatest victory for the student movement, just hours after the Academic Senate voted for full free speech on the campus."

Almost simultaneously the Senate of the ASUC (Associated Students of the University of California) passed this resolution:

"The ASUC Senate urges all professors, instructors and teaching assistants to be most tolerant of and lenient toward students missing classes, examinations, and papers during this semester, and especially during the last week."*

The Role of Chancellor Strong

On the night of Saturday, December 5, 1964, Chancellor Strong was taken to the university medical center in San Francisco. His physicians tentatively diagnosed the difficulty as a gall bladder upset, and stated that he would be hospitalized for at least a week. For this reason one of the most controversial and outstanding figures during the whole period of the Berkeley Rebellion was unable to attend the important meeting in the Greek Theater.

There should be no mistake about the political sentiments of Edward Strong. He had opposed the ouster of two Communist professors from the University of Washington at Seattle in 1948, and it is a coincidence that Raymond B. Allen, who was then President at the University of Washington, and who wrote the first important work establishing the complete contradiction between Communism and academic freedom, later became Chancellor of the University of California at Los Angeles.

Strong also was a militant opponent of the loyalty oath at the University of California several years ago, and has always been in favor of throwing the campuses open to known Communist officials and allowing them to lecture to the students. We say it is important for us to know this liberal tendency on the part of Dr. Strong, because in spite of this attitude when he became Chancellor of the Berkeley campus he undertook to enforce the existing rules and regulations without timidity and without favoritism.

This attitude, of course, met with the universal disapproval of the FSM and its faculty supporters. It also met with the disapproval of certain conciliatory elements in the administration of the university. On several occasions Chancellor Strong was encouraged by the administration to proceed with disciplinary action, and when he did so he found that negotiations to nullify that action were being carried on by superiors without his knowledge or consent. It was Chancellor Strong who declared on September 30, during the first sit-in at Sproul Hall, that:

*The foregoing quotations are taken from the *California Monthly*, February, 1965, pp. 68-69.

"The university cannot and will not allow students to engage in deliberate violation of law and order on the campus . . . When violence occurs, the university must take disciplinary action. Such action is being taken . . . I stand ready, as always, to meet with the officers of any student organization to discuss the policies of the university."

This comment provoked a statement from Mario Savio: "I think they (the administration) are all a bunch of bastards."

It was Chancellor Strong who took the decisive action to suspend the eight students whose names have been mentioned before, and it was Chancellor Strong's determination to enforce existing campus rules that brought him into disfavor with large segments of the liberal campus community. We do not contend that Chancellor Strong was the best of university administrators; we disagree with his views that known members of the Communist Party should be permitted to teach in an educational institution, or that they should be permitted to have access to campuses for the purpose of propagandizing large groups of students. But we are convinced that despite his liberal convictions, and despite his extreme popularity with the liberal element of the Academic Senate at Berkeley before the rebellion commenced, he had the integrity and determination to do the best job of which he was capable in attempting to enforce the rules he had been given to uphold. Then, as might be expected, his former liberal supporters turned upon him and joined with the FSM rebels to become his most bitter critics. We are further convinced that Strong was placed out on the end of a limb to receive the blows and the criticisms as the chief campus administrative officer, and when his unpopularity became apparent, the limb was chopped off and he was tossed into the discard. This action of summarily disposing of Chancellor Strong seems to us all the more reprehensible because it was not done openly, but the public relations department at the Berkeley campus issued statements that created the impression that Chancellor Strong *wished* to resign from his position because of ill health, and that *he* suggested Martin Meyerson as his successor. Fortunately, Strong himself issued a statement giving the lie to these contentions, and establishing the fact that he never had any intention of resigning and was told that he would either have to submit his resignation or be kicked out of office, and that he never did more than agree to accept Meyerson as his assistant, not as his replacement.

The Strong document went further and declared that he had been hamstrung at every turn from the moment the student rebellions commenced, and that he was continuously being by-passed in such a manner that his authority was whittled down and his prestige as Chancellor undermined.

Chancellor Strong refused to follow the recommendations of the Heyman Committee to reinstate the eight suspended students, but they nevertheless were granted amnesty through subsequent proceedings. We have noted that there were occasions when Chancellor Strong would take disciplinary action against some of the rebellious students for clear violations of the university rules, and then without his consent these same students would confer with other members of the administration, an *ad hoc* committee of the Academic Senate would be created without Strong's consent, and it would usually issue a recommendation completely opposed to the action the Chancellor had already taken. This procedure is, of course, characteristic of the cold, computer-like manner in which the university—especially the Berkeley campus—was operated.

The FSM, with its system of Centrals, the coordination of its activities, and the strength and firmness with which it acted, was far superior to the organization of the Berkeley administration, that was floundering in a bureaucratic tangle, with no clear and definite leadership, no firm insistence on the enforcement of its own rules, and an unwillingness to stand solidly behind the actions of the Chancellor. There were endless committee meetings, faculty resolutions, disruptions in the chain of command, and an area of confused overlapping between the administration of the state-wide university and the administration of the Berkeley campus.

On December 9 the executive committee of the Berkeley Chapter, American Association of University Professors, which had insisted on dismissal of all charges against the arrested demonstrators and demanded "a new chief campus officer" issued this statement: "Chancellor Strong has long been a respected member of this faculty. We are immensely saddened by the news of his illness and hope for his early recovery to full health." Strong was released from the hospital three days later and on the fourth day after his return to the campus moved swiftly to cancel use of Wheeler Auditorium on the Berkeley campus by the arrested students and their attorneys for a meeting at 7:30 a.m. on December 13.

There had been some intimations in the press, especially the *San Francisco Chronicle*, to the effect that Chancellor Strong would soon resign. We have positive information that these statements were never authorized by the Regents, but may have originated through unauthorized statements by one or more members of the Board of Regents who had advance information concerning Strong's ouster. These maneuvers behind the scenes, the hasty "off-the-record" meeting of three Regents at Hilton Inn at the San Francisco airport, and the announcement on January 3, 1965, that Strong had been removed from his position at his own request "for reasons of health," and that Martin Meyerson had been appointed Acting Chancellor in his place, so disturbed many of Strong's friends who were in a position to know the true facts of the matter, and they persuaded him to issue a statement on December 20, 1964, which was handed to each member of the Board of Regents and all of the Chancellors of the various campuses.

The following excerpts are taken from the Strong document:

"... The manner in which authority acts in relation to its responsibilities determines the reactions of others. Authority has reacted to violation of the rules and regulations, threats and intimidation with inconsistency rather than consistency, and through negotiation with *ad hoc* and often self-appointed groups and organizations rather than through established agencies involving appropriate persons and organizations. Too often reliance has been placed, or credence given, to individuals and groups without portfolio. Because of these mistakes there resulted an undermining of the acceptance of and respect for traditional ways of handling complicated matters of rules and regulations established both for the safety of the University and for the welfare of its members. There resulted an undermining of the respect for those campus officers normally responsible for carrying out the policies of the University. Too often there has been the announcement that 'henceforth law and order will prevail,' followed by vacillation, concessions, compromises, and retreats. No wonder, then, that an increasing number of persons have felt insecure or have become confused about the rightness of the University's position. During the days leading up to the fateful evening of October 2, the position

was stated and restated for all to hear that the University would never negotiate with individuals who were at that time engaged in unlawful behavior—for thirty-two hours, for example, holding captive a police car and the prisoner within. Despite these firm statements negotiation did follow. Established committees were bypassed. An *ad hoc* committee of the Academic Senate was established to deal with violations. The implications were far-reaching. Credence was given to the idea that administrative committees were even less fair or less capable than *ad hoc* bodies, and a breach between the administration and the faculty was opened. Negotiations by-passing the Chancellor left a vacuum in authority on the campus. Into this vacuum rushed scores of individuals and groups, some intent on saving the situation and others on gaining power.

Why throughout these many days we have not had consistency in the expression and enforcement of rules and regulations is a long and complex story. Why we have not consistently supported the integrity of established instrumentality is to be explained, in my opinion, by a too political rather than a moral approach to our difficulties. That these things have occurred is a fact.

What must the future course be? It must be the opposite of the past. We must not take one more step in retreat. We must be consistent and steadfast in enforcing rules and regulations. We must work only through established organizations and agencies. We will listen to all. But we will not yield to threats, pressures and defiance.

It is revealing that on December 9, Mr. Steve Weisman, a graduate student leader, had a rally on Sproul Hall steps, announced that now that the advocacy battle was won, the FSM would seek to enlist students in a campaign of academic reform—that is, a campaign to influence course content and to change the grading system. This was the campaign announced at the beginning of the semester by the SLATE Supplement, calling upon students to split the campus wide open. After three months of student demonstrations, there can be no doubt about the basic issue which now confronts the University. The legitimate authority of the University is being challenged and attacked in a revolutionary way. It is imperative that respect for duly constituted authority be upheld. The conciliation undertaken by the President in his agreement of October 2 with leaders of the student demonstrations was flouted by resumption of deliberate violations of rules. Every succeeding concession has been followed by further demands. Efforts to restore order and to enforce rules of right conduct have been crippled by three deficiencies: (1) The lack of a consistent and stable position in enforcement of rules; (2) The lack of clear and firm policies consistently maintained; (3) Infirmary of delegated authority to act at the local level as needed to enable the Chancellor to meet the responsibility assigned to him in restraining conduct not in keeping with the educational purposes of the University."

There is much more to Strong's statement, and there was amplification of the material quoted above in documents handed to the Regents in Los Angeles. Strong made it very clear that in his opinion discipline at the Berkeley campus was shattered by the attitude of President Kerr, who repeatedly gave in to the demands of the student rebels, and that not one student was under censure, probation, dismissal or expulsion for acts of civil disobedience subsequent to October 1, 1964, and that members of

the teaching staff who joined in the student strike during the first week of December were given immunity under the Kerr amnesty decree. Strong emphasized that he was literally forced from office over his protests, and that the statement he gave out at the time was simply not true, and that he had been forced to make it under pressure, and did so for what he then considered the best interests of the university.

Dr. Strong, now 63, probably made his final appearance in connection with the Berkeley rebellion when he appeared on April 2 to testify pursuant to a subpoena in Judge Crittenden's court where the first group of one hundred and fifty-five defendants were being tried. After describing the general succession of events in which he participated from September until the time of his ouster, he stated that spokesmen for the Free Speech Movement had issued an ultimatum which came to him through President Kerr on December 2, ordering him to yield to FSM demands and to grant amnesty to suspended students or face massive trouble. He stated: "I could do nothing while they were holding a gun at the university's head." Dr. Strong is now living quietly in his home at 1155 Euclid Avenue, Berkeley, and maintaining his teaching status without participating in the stormy affairs on the Berkeley campus that smoulder and erupt sporadically as tensions ebb and flow.

When Martin Meyerson assumed his new position as Acting Chancellor at Berkeley, he issued a statement on January 3, 1965, containing the following passage:

"It was only last night after Chancellor Strong's request for a leave that I was asked by him, by the Regents, and President Kerr to be acting Chancellor."

It is quite possible that Chancellor Meyerson might have been laboring under a misapprehension, and that could be attributed to the peculiar press releases that were appearing out of the university's public relations department. In any case, it is completely disputed by Strong's declaration that he never requested a leave, was given an ultimatum of either resigning or being fired, and did not join in any request with the Regents and President Kerr to be replaced by Meyerson, or anyone else.

Four months after the first student demonstrations occurred, the Board of Regents announced the appointment of two committees of its members, one to study possible changes in rules on regulating political activities on the campuses, and the other to investigate causes of the disturbances at Berkeley. The first committee, headed by Theodore R. Meyer, a San Francisco attorney who was elected chairman, and which is commonly known as the Meyer Committee, was comprised of the following Regents, in addition to the chairman: Donald H. McLaughlin, a San Francisco mining engineer and formerly prominent member of the department of Geology and Mining on the Berkeley campus; Mrs. Elinor Heller, Ather-ton, former Democratic National Committeewoman; John Canaday, vice-president of Lockheed Aircraft Corporation, Burbank; Mrs. Randolph A. Hearst, Hillsborough; Lawrence J. Kennedy, attorney at Redding, and Samuel B. Mosher, president of the Signal Oil and Gas Company in Los Angeles.

The other committee, commonly known as the Forbes Committee, or Byrne Committee, was composed of the following Regents: William E. Forbes, of Los Angeles, chairman; Philip A. Boyd, Riverside; Mrs. Dorothy B. Chandler, Los Angeles; William K. Coblenz, San Francisco; Norton Simon, Fullerton; Jesse W. Tapp, Los Angeles, and Edward Pauley, Beverly Hills.

It should be observed at this point that the Board of Regents has never had any adjunct that would enable it to make an independent investigation of important university matters. It has drifted into the habit of relying completely upon information received from academic committees, representatives of the administration, and upon personal representations from the President. Indeed, during the Kerr administration, the Regents were persuaded to institute an innovation. It consisted of private, off-the-record sessions with the President of the university at gatherings immediately preceding the formal Regents' meetings. At these affairs, carefully restricted so that no other members of the university administration and no members of the news media were permitted to attend, the real work of the Regents was done and the strategy planned that was formalized at the open Regents' meeting the following day. It should be quite obvious that many of the representations made by committees of the Academic Senate, the administration, or the President of the university, might be self-serving, and when the Board of Regents has no other means of ascertaining the objectivity of the representations, it acts, in practice, as a sort of rubber stamping mechanism for virtually all of the recommendations submitted to it by the President as the chief administrative officer of the university. The dangers inherent in this sort of operation are obvious. And since the ground rules for the operation of the university forbid faculty members, students or other members of the administration from making any direct contact with the Regents or with state officials on matters pertaining to the operation of the university without first going through the President's office, it is sometimes difficult for the Regents to know exactly what is going on.

It should be noted that the first of the student demonstrations commenced in the fall of 1964, and the Regents had no independent observers of their own authorized to gather objective information until the formation of the Forbes Committee which was created in December, 1964, but which did not actually start to function until February, 1965. Its 85-page report was submitted to the Regents in May, and appeared in the press on May 12th.

"How Are Things at Berkeley?"

On February 26, 1965, a special committee headed by Professor Arthur M. Ross issued a statement for circulation among hundreds of colleges and universities throughout the country in order to bring them up to date concerning conditions at Berkeley. Other members of this committee were Raymond G. Bressler, school of agricultural economics; Earl F. Cheit, school of business administration; Carl E. Schorske, department of history; Arthur H. Sherry, school of law; Robley C. Williams, department of molecular biology, and Richard W. Jennings, school of law.

The tenor of the report was that the Berkeley campus had finally settled down. "The primary academic functions of teaching, learning and research have regained their proper places," it said, together with fresh, and new discussions about the purposes and methods of the educational process. It announced that there were better communications between students and professors "in classrooms, studies, restaurants and professors' homes," and it announced that political advocacy was occupying a secondary place.

Problems were now being solved, according to the report, "by rational discussion and mutual adjustment." This Emergency Executive Com-

mittee, after conferences with the Regents, President, Chancellor, faculty and students, reported that the troubles had been solved. President Kerr had shown "discerning judgment," and Acting Chancellor Meyerson had "imaginatively opened new perspectives for the university community." The report chided some of the more liberal faculty members and FSM supporters because they had presumed to ask Judge Crittenden to dismiss the pending cases against the Sproul Hall invaders; it soothingly pointed out that campus tensions had relaxed; it saw no danger of students controlling education, and it concluded by declaring confidently that "With the crisis over political activity largely behind it, Berkeley has thus turned its attention to the larger problems of higher learning on the American urban frontier. What might have been a fatal community crisis has become instead a constructive opportunity for relating the traditions of scholarly life to the spiritual requirements of a modern democratic society."

This confident and comforting document was signed by all members of the Emergency Executive Committee and on February 27 the Bay Area papers reported that the document was being mailed to the colleges and universities originally intended.

But "How are things at Berkeley?" proved more optimistic than prescient, because the Filthy Speech Movement exploded on the Berkeley campus five days later, and on March 9 Kerr and Meyerson called a press conference and resigned. Thus when copies of the Ross Committee's report reached the colleges and universities with the question "How are things at Berkeley?" the recipients could easily find the answer in the newspapers without reading the document.

The Filthy Speech Movement

The Filthy Speech Movement started on March 3 when a thin, barefoot lad of twenty-two, a non-student named John J. Thompson, strolled across the Berkeley campus bearing a large sign on which was a four-letter word for sexual intercourse. He was arrested and as he was being conducted from the premises protested that he was only opposing censorship.

The American Civil Liberties Union in San Francisco, usually alert and deeply concerned with such things as free speech, civil disobedience and censorship, was informed of the occurrence. Its Northern California director is reported to have simply exclaimed: "Good Grief!" But Arthur Goldberg, of SLATE and FSM notoriety, promoted another student demonstration, and he was quoted as saying, "a guy had a right to express himself like he wants."*

At the time this new incident triggered another demonstration, there were faculty committees in abundance, new rules had been announced, and the Regents had demanded a tougher policy on the part of the administration. The vast majority of the 27,500 students at Berkeley were still trying to get an education despite all of these disturbances, when this barefoot boy with his dirty little sign appeared. SLATE and FSM leaders started a demonstration that attracted twenty-three hundred students, including women and minors, and the offensive four-letter word was repeatedly shouted. It seemed as though the administration had suddenly surrendered and withdrawn from the arena. Tables were set up, one of them bearing the sign "F— defense fund," which the campus police allowed to remain after an altercation with Goldberg. But when David

**Daily Californian*, March 4, 1965.

Bills, a freshman, sat down at the table to make collections, he followed young Thompson off to jail. Other arrests were made as follows: Stefan Argent, a student from Oakland City College; Michael Klein, a senior in the engineering department at Berkeley, who led a crowd into Sproul Hall basement and began to read the more juicy portions of "Lady Chatterly's Lover;" Edward Rosenfeld, another non-student, who had also been arrested during the Sproul Hall sit-in, and who was displaying signs "Support the F— Cause."

When Chancellor Meyerson was located by reporters and asked for a comment he stated that he had no comment, "not even one word." President Kerr could not be reached.*

It will be recalled that the theme which was pounded home over and over again during the SLATE conferences at Berkeley, and also by the founding conventions of the DuBois Clubs of America, was the complaint that the university stood in the position of an intolerant and authoritative parent toward its students, *in loco parentis*. This incident would seem to indicate that perhaps there should have been a substitute for a parent who had the good sense to get down the razor strap and haul the kids off to the wood shed. But in the anarchy that was allowed to prevail, the handful of bullies again ran over the vast majority of stable, well-behaved students by interfering with their rights to obtain an education without these disturbances that were now beginning to assume the atmosphere of a comic opera at Berkeley, and subjecting them to a barrage of obscenity and gutter language.

On March 5 a crowd of over seven hundred students gathered as the rally continued. An English professor, Mark Schorer, had the courage to appear and tell the defiant group "this protest fits more appropriately into the category of a panty raid, a sex-and-beer party." Professor Arthur Ross stated that the demonstration was not an enterprise worthy of young adults; Chancellor Meyerson declared that the students had "defied public law and therefore were arrested;" the barefooted young John Thompson, out on bail, appeared on the campus again and said that he represented the May 2nd Movement which was an organization against the presence of American troops in Viet Nam.

Then yet another twenty-two-year-old young man appeared, a pre-legal student at Berkeley, and signed complaints against the chief offenders at these rallies, who persisted in thrusting themselves and their offensive language on the majority of the student community. This courageous young man who alone seemed to have enough determination to take these actions was Mark Van Loucks, of Oakland. He was quoted as declaring, in his lone crusade for decency on the campus: "If the law can protect our freedom of worship or assembly or speech, why can it not also protect our feelings?"†

There was widespread indignation throughout the state over this last defiance of order at Berkeley. There were irate messages from Regents, and a sarcastic editorial in the *San Francisco Chronicle* of March 8, stating: "When students at the University of California last week displayed their acquisition of a four-letter word that does not appear even in Webster's New International Dictionary . . . one should certainly put that down as a significant learning achievement . . ."

On March 10, the *Chronicle* declared that Regents had telephoned the university and demanded that Kerr and Meyerson act immediately to

**San Francisco Chronicle*, March 5, 1965.

†*Oakland Tribune*, March 7, 1965; *Daily Californian*, March 8, 1965.

expel the students responsible for the demonstration, but President Kerr demurred, not defending the student action, but insisting that the campus must follow the disciplinary procedures worked out in the FSM disputes of the preceding fall and winter.

The Regents refused to be put off, however, and demanded that Kerr assume a position of leadership and take immediate disciplinary action against the students involved. At this point President Kerr was faced with three alternatives: he could either follow the orders of the Regents and expel the students or take other appropriate disciplinary action against them; he could let the courts handle the matter, as was done in the case of the invaders of Sproul Hall; or he could escape personal responsibility by passing the burden to one of the many committees of the Academic Senate. He elected to follow the latter course, but when he tried to find an appropriate committee to handle the situation, he was unsuccessful. This time the Academic Senate balked, declined to assume jurisdiction of the matter, and the President and Acting Chancellor then resigned, as we have stated.

At this point we are reminded of the earlier statement made by President Kerr, that the alternative of giving students total immunity could engender a situation akin to that in the University of Caracas, where student revolutionaries "used the campus as a fortress from which to sail forth to attack the general society." It was painfully clear that at this point the university campus at Berkeley was operating without any discipline or restriction whatever, compendia of filth were being distributed on and off the campus, and in support of this nauseating campaign were some of the most prominent leaders of the Free Speech Movement whose dedication to Communism they had disdained to conceal.

Kerr and Meyerson "Resign"

Before proceeding with a discussion of the Filthy Speech Movement, the background leading up to the resignation of President Kerr deserves some attention. It had long been his custom to ask and receive a vote of confidence from the Regents whenever he deemed it expedient, but at the meeting held in February of 1965, he had asked for such a vote and failed to receive it. He had been violently opposed to any attempt on the part of the Regents to investigate his administration of the university, and his protests had been ignored. He was thoroughly aware that many of the more influential Regents had become dissatisfied with his failure to take a firm command during the crisis at Berkeley and were tired of seeing the responsibility thrust upon one faculty committee after another. The eruption of the Filthy Speech Movement, on the heels of a reassuring statement by the emergency executive committee headed by Professor Ross, was simply the culmination of a series of events that indicated growing dissatisfaction on the part of the Regents with the Kerr administration.

In the meantime, nothing was being done in the way of discipline against the offending students, but the statewide administrative office at Berkeley was busy issuing statements about the resignations through its public relations department, while, as the *Oakland Tribune* stated on March 11, 1965, "a fresh shipment of statements arrived from El Cerrito (Kerr's off-campus residence), where the outgoing President had lashed away at the latest campus disgrace . . ."

Senator Burns, in Sacramento, declared at a press conference that a state of anarchy had developed on the Berkeley campus, that drastic

action must be taken to end this strife, that Kerr had demonstrated his inability to cope with the situation, and that since Kerr's resignation had been dramatically delivered to the press instead of the Regents, it indicated to Burns that Kerr was not very serious about having his resignation accepted.

Commenting on the Burns' statement, Senator J. Eugene McAteer, Democrat of San Francisco, declared that the legislature should insist that the university make security checks of its faculty members and other employees. His remarks were printed in the *Oakland Tribune* on March 12.

Subsequent events indicated that Senator Burns was not far wrong when he predicted that Kerr's dramatic resignation was not exactly what it seemed. A convocation of Chancellors was held at Kerr's request, and they issued a statement asking that his resignation be withdrawn. At the same time messages began to appear from various organizations and individuals, all imploring the President and the Acting Chancellor to withdraw their resignations, but while there was considerable student and faculty support for Meyerson, there was noticeably less for Kerr.

The impact of the filthy speech incident among legislators at Sacramento, among the alumni of the university, and the community at large was enormous. The state apparently had its fill of these astounding antics at Berkeley, and it was clear that the administration was powerless to do anything toward successfully restoring order and had fumbled about since September issuing reassuring statements, passing responsibilities from one committee to another, and wrangling incessantly over the wording of complicated resolutions on matters of technical procedure, jurisdiction and recommendations. There was no strong, dominant figure who emerged to assume charge of the situation during the crisis with the fairness and the firmness that was so desperately needed.

On March 18 Mario Savio and Stephen Weisman issued the familiar old warning that all sort of unpleasant things would happen to the university if students were disciplined for circulating obscenity. In early March a dirty little magazine called *Spider* was issued and sold in large quantities both on and off the Berkeley campus. Its staff consisted of Jacqueline Goldberg, sister of Art Goldberg, who was arrested during the Sproul Hall invasion; Sue Currier; Jim Prickett; Richard Currier; Andy Magid; Sandor Fuchs, the president of SLATE and one of the persons arrested during the Sproul Hall invasion; Stephen DeCanio, also one of the arrestees and participants in the Free Speech Movement, and Alice Huberman, also a Free Speech participant and a Sproul Hall arrestee.

DeCanio had an article entitled "Bourgeois Slave Morality—Opiate of the People," on p. 9, wherein he stated "... we have to fight and destroy institutions, interests, or individuals when they stand in the way." And "revolutionaries realize that it is their duty to seize and consolidate political power, even if it means the total annihilation of the enemy."*

The second issue of this magazine outdid its predecessor in obscenity, carrying a boldly frank interview with four of the dirty speech advocates in a series entitled "To Kill A —ing Bird." Chancellor Meyerson barred sale of the first issue of *Spider* on the campus, and when the second one appeared on March 18, he ordered it withdrawn and sent Dean of Men Arleigh Williams and Professor Neil Smelser to warn those who were selling the magazine that if they did not desist they would be subject to

**The Spider*, March 1965, 398—61st St., Oakland, California, pp. 9-10.

immediate disciplinary action. Notwithstanding the first warning, the students persisted in endeavoring to sell copies of the second edition of *Spider* on the Berkeley campus, received another warning and retreated. But the issue was sold out, about a thousand copies, and ten students led by a non-student, Charles Artman, staged a sit-down demonstration outside Chancellor Meyerson's office. Richard Schmorleitz, director of the FSM Press Central and a leader of the FSM movement, offered for sale published copies of a play entitled "For Unlawful Carnal Knowledge", another dirty word publication which Chancellor Meyerson also banned.*

It should be observed, however, that both issues of *Spider* and the play sold by Schmorleitz remained on sale at the student book store on the campus, and on March 24, despite the ban, *Spider* was being sold openly in a crowd of 3,000 students on the campus and at Sproul Hall in a probing strategy to find out what response could be provoked on the part of the Berkeley administration. There were no arrests, no interference, and the editors of the magazine conferred with Dean Williams and agreed to halt their sales for that day.

The trial of Arthur Goldberg, David Bills and Michael Klein, arrested during the obscenity rally on the campus, was set for April 20, before Municipal Judge Floyd Talbott, and pending the outcome of that trial and the case which resulted from the complaint filed by Mark Van Loucks, the Filthy Speech Movement, led by prominent members of the FSM, became dormant—at least for the time being.

We have no doubt that the Filthy Speech matter will not plague the campus as long as the most recent ruling of Acting Chancellor Meyerson remains in effect, because in April he ruled that the ban on the distribution of *Spider* which had been in effect although not observed since March 18, would be lifted. Immediately a third issue of the magazine was undertaken by its publishers. Meyerson ruled that the dirty little publication could be sold only by student organizations, and that shouting obscenities or displaying them on posters and handbills attached to doors, buildings, trees or other objects on the campus would be sternly prohibited.

When the Regents met in Berkeley last March, several of them expressed vehement criticism of the disciplinary laxness at Berkeley, but praised Chancellor Ivan S. Hinderaker for his handling of similar problems at the Riverside campus of the university. The student council at Riverside had passed a resolution calling on President Johnson to intervene in Selma, Alabama, which was obviously an off-campus issue and forbidden by the campus regulations. Chancellor Hinderaker did not endeavor to escape his responsibilities by shifting them to some faculty committee, but warned the council directly that he would dissolve it forthwith unless it rescinded its action. The action was rescinded, five of the students resigned from the council, and the educational processes at the Riverside campus of the university proceeded as usual.

On March 16, 1965, the senate of the Associated Students of the University at Berkeley passed a similar resolution, asking President Johnson to send Federal Marshals to protect citizens in Selma, Alabama, and the motion was carried. The response from Chancellor Meyerson consisting in a mild reminder to the ASUC Senate that off-campus issues were in violation of the "Kerr Directive."

*See *Daily Californian*, March 11, 1965, and *San Francisco Chronicle*, March 19, 1965.

On March 13 there was a five and a half-hour closed meeting of the Regents, specially called for the purpose of handling the emergency situation at Berkeley. Kerr and Meyerson withdrew their resignations, and announced later to the press that they would stay withdrawn "pending further discussions with the Regents."

On May 11, Judge Floyd Talbott found all nine of the defendants in the Filthy Speech case guilty. They were: Arthur Goldberg, James Prickett, John Thompson, Charles Artman, Daniel Rosenthal, Michael Klein, David Bills, Edward Rosenfeld and Stephen Argent. Time for pronouncing sentences was fixed by Judge Talbott for June 8.

The Free Student Union

About twenty-five hundred students gathered at Sproul Hall on April 22nd and listened while Mario Savio and Art Goldberg attacked the Acting Chancellor for imposing discipline upon the filthy speech offenders. Savio delivered another ultimatum, giving the administration until Monday, April 28, to rescind its action, and Goldberg lamely tried to defend himself for his participation in the incident, but his effort proved ineffectual. For the first time some students spoke in favor of the administration, and it was distinctly noticeable that support for the leaders of the FSM was waning.

On the following day Regents Meyer and Carter observed that new and tougher rules for student conduct had been suggested and that although the FSM would not like the new measures, there would be no capitulation on the part of the Regents. Savio addressed an audience of about three hundred, stating that telegrams from FSM would be sent to the Regents demanding reconsideration of the cases of the filthy speech participants by a special faculty committee, and reconsideration of the new rules of conduct before the Regents for consideration. But this time the Savio charm failed to work. Finally, he was interrupted by Brad Cleaveland, who said: "You're hot for direct action. It's stupid; you'll get crushed!"*

Three days later Savio bade his colleagues goodbye and good luck, stating that he was leaving the university because he could no longer "keep up with the undemocratic principles" of the administration. He said there was a widening gap between the FSM and the students in general, and he sarcastically assured his listeners that this was not "a Kerr-type resignation." When some of the most prominent figures of the FSM elected to support the Filthy Speech Movement, they were caught with an unsupportable cause. Their timing was also bad, because many of the students had been devoting so much attention to the stimulating activities of the FSM that their academic records had suffered badly. Steve Weisman had departed to work with the students for a Democratic Society in Georgia; Jack Weinberg had temporarily gone to San Francisco to work with the Committee on Racial Equality; Ron Anastasi, Martin Roysher and Mark Rossman were reported to have left the FSM altogether. With no dynamic speaker to replace Savio, the movement appeared enervated. It had long been apparent that dissension was growing, and that when Savio discovered his crowd was no longer responsive to his exhortations, he lapsed into his old attitude of detachment and left the arena.

On April 28, the Free Student Union appeared on the Berkeley campus. Jack Weinberg returned from San Francisco to assist Bettina Aptheker

**San Francisco Chronicle*, April 24, 1965.

with establishing the new organization. They declared that it would be operated with broader base support and tighter control than was the FSM, and defiantly declared that students would govern their own campus affairs, set their own standards of conduct, and join the faculty in determining the nature and form of the curriculum. It was announced that the new organization would fight to end "outside interference." Bettina Aptheker stated that the organizers of the FSU would not necessarily be its leaders, and Weinberg added that the weapon of the strike would be used, a more sophisticated and effective device than the sit-in.

We should add here that Bettina Aptheker had been one of the most indefatigable and effective leaders of the FSM, and had sent long descriptions of its activities to various Communist publications throughout the country; to the California Communist newspaper *People's World*, and to the official publication of the American Communist Party, formerly edited by her father, *Political Affairs*.*

On May 6th the new FSU held an organization meeting in Harmon gymnasium, a building with a seating capacity of 9,200. There were about 300 present to hear Bettina Aptheker, Jack Weinberg and Mike Lerner explain the structure of the FSU, which then claimed a membership of approximately 2,000 students.

Immediately following this meeting 500 students were recruited, and it was announced that support had been obtained from the Graduate Coordinating Committee and other sympathetic organizations, and that similar movements would be inaugurated on other campuses throughout the country "to represent the interests of all students." The FSU was a carefully-planned organization, whereas the FSM started spontaneously when students from all parts of the campus population became disgusted with an inefficient administration and translated their protests into defiant actions.

The Free University

One of SLATE's most important objectives was a drive to give students some control over their courses of instruction at Berkeley. Brad Cleaveland was a leader in this activity. He was a charter member of SLATE and had served as its treasurer in 1958, working closely with Marvin Sternberg who coordinated the Berkeley organization with other radical student groups at other campuses. There was a particularly close liaison between SLATE and the Independent Student Union in Los Angeles as early as 1958.

Soon SLATE was issuing student evaluations of university courses at Berkeley, and in some cases gave the most liberal professors the lowest ratings. Writing in a SLATE publication in 1963, Cleaveland stated that students should have some authority in determining the course of studies that they would pursue. He attacked the administration's bureaucracy that "... is now upon us with a terrific force through all its elements. Those elements began with publish-or-perish (no teachers): with departmentalization, and come all the way down to units, courses, and grades. Knowledge has been exploded, torn apart, dissected, and finally comes through to us by way of an insanely administered flood of fragmented bits."

These remarks by Cleaveland in 1963 set the pattern for FSM complaints a year later, and he concluded his statements by declaring that:

"As students we permit to some extent, and witness, the existence of a terrible chain of confusion. We permit faculty irresponsibility by

*See *Political Affairs*, January, 1965, p. 53; March, 1965, p. 10.

not demanding extended thought and dialogue. The faculty permits bureaucratic imposition to prevent facing the problem. The administration snuggles up to the seats of power in Washington by selling, or helping professors to sell themselves, to power. The only rub is that Washington is more interested in weapons than anything else these days . . . so is California . . . we've lost the free university. And Washington is entertaining international politics with the narrow view which comes from the market place, with no depth, with little broad understanding.

The size of Berkeley is not an argument against meeting the problem. Learning is ultimately a deeply personal experience; size does not necessarily make this impossible."*

A booklet called *SLATE Supplement* is published five times during the academic year. Two issues are supplements to the university catalogue containing a description of all of the courses of instruction offered, and the other three issues are open to articles concerning "higher education, ranging in scope from teaching practices to the call for revolution in this issue." (*SLATE Supplement Report*, Vol. 1, No. 4) It was in the fourth issue of this publication that Cleaveland issued his frequently repeated advice that the students "organize and split this campus wide open," accompanied by twelve pages of florid revolutionary propaganda.

It is also of interest to note that the editorial staff of these *SLATE Supplements* included Sandor Fuchs, Steve DeCanio and Ken Cloke, former president of *SLATE* and now a contributor to the Communist newspaper, *Sue Currier*, Jo Freeman, David Goins and Art Goldberg. Many of these were also on the staff of *Spider*, the publication that became a part of the Filthy Speech Movement.

The attacks contained in the *SLATE Supplements* included demands that the Regents delegate to the Academic Senate authority to handle student discipline, and that students and faculty combine to handle problems relating to curriculum. This insistence that the students have increasing authority in the operation of the institution is a system followed by radical students in other countries, is generally known as the demand for a "Free University," and is now becoming the chief concern of the Free Student Union. The term has long been used in other countries, and probably had its origin on the Berkeley campus because of a situation that arose at Adelphi College in New York.

In February, 1965, Dr. Allen Krebs, 31, was fired from his position as assistant professor of sociology at Adelphi College. An open Marxist, Krebs emphasized Marxism in his classes, but he did not believe that that was the real reason for his ouster. "The real problem," he said, "is that if you restrict yourself to a strict intellectual role in the classroom you are o.k. But if you become visible—if you act—you are squashed like a cockroach. The system cannot tolerate a real exposure of what America is in the world today."† But his department told him he was presenting Marxism unobjectively, and had used his teaching position as a propaganda forum. He had also organized the students and they supported him with a Free Student Movement last January. He was also supported by a petition from the Berkeley campus signed by 814 students and faculty members, led by Mario Savio.

Krebs and another discharged teacher announced that they would form a Free University in New York City, "that would expose students to what

**The Cal Reporter*, *SLATE* publication, Vol. 4, No. 1, May 13, 1963.

†*National Guardian*, March 13, 1965.

is kept from them in most U.S. colleges—Marxian theories.” And he agreed with Robert Armstrong, an Adelphi student, who told the press recently: “You want to know why he’s been fired. He’s been axed because a small-minded university like Adelphi—located in the middle of suburbia and with a lot of rich, conformist businessmen on its board of trustees—can’t tolerate a radical.”*

The student paper at Berkeley carried two items concerning the establishment of a Free University in March, and the massive Communist youth front, International Union of Students, is presently carrying on a propaganda campaign on the campuses of the University of California with its organ *News Service*, which advocates the planting of Free Universities throughout the world.† It will be remembered that the San Francisco DuBois Club sent Carl Bloice to Moscow when he attended the international meeting of Young Communists sponsored by the International Student Union in September, 1964. World headquarters for the ISU is at Vokelova 3, Prague 2, Czechoslovakia, which is the stopover place for American students en route to and from Cuba.

Issues of the ISU publication found in student lounges at Berkeley and UCLA referred to “students of the Free University in Brussels,” and describe radical student movements in Algeria, Cambodia, Brazil, Japan, Mauretania, Morocco, Portugal, Puerto Rico, Sudan, Uruguay and Venezuela. Jacqueline Goldberg, Art Goldberg’s sister, is on the policy committee to make arrangements for the Ninth World Youth Festival to be sponsored in Algeria by ISU.‡

Robert Armstrong’s description of the Adelphi College trustees as “rich, conformist businessmen,” is typical of attacks against authority made by the FSM at Berkeley. Marvin Garson, a Sproul Hall arrestee, wrote a twenty-two-page booklet attacking the Regents, basing his criticism on the fact that they were rich, did not consider themselves accountable to the public, and operated in secret. The fact that successful men control the university is obvious. The other extreme would be to hand the responsibility to unsuccessful men. Private ownership, free competition, and the opportunity to acquire wealth through such competition is not yet an offense in this country. Nor are the unsuccessful people necessarily good while the successful ones are necessarily bad. These concepts belong to class-struggle systems.

Two pages of Garson’s booklet criticize the alleged operation through secret meetings, but the rest of it is an attempt to sow distrust of the Regents because they are wealthy and successful business people.§

The FSM attempted to sell copies of this Garson booklet on the Berkeley campus on April 7, but since they had no permit to operate the tables and were collecting funds for the defense of Sproul Hall sit-in defendants, the campus police seized the tables, whereupon FSM called a protest march to the Dean of Students office, but managed to drum up a following of only twenty students, and the incident passed without attracting any particular attention.

Professor Joseph Tussman, Chairman of the Department of Philosophy at Berkeley, has recently advocated a new educational program for the Berkeley campus. It would consist of sixty units of instruction, to commence in the fall of 1965, and the course would initially be taught by Tussman, Albert Bendich of the speech department, and Norman Jacob-

**National Guardian*, op. cit.

†*News Service*, No. 23, Dec., 1964.

‡*News Service*, op. cit.

§*The Regents*, by Marvin Garson.

son, of the Department of political science. Dr. Tussman has been an ardent supporter of the student rebellion at Berkeley, cancelling his classes out of respect for and in assistance of the strike that followed the invasion of Sproul Hall, and he declared in a speech delivered on April 7, 1964, that he believed Communism must be given a chance to win the American mind. Tussman has also been an advocate of opening the campus to Communist speakers, in accordance with the plan announced by SLATE, and signed a petition circulated by a Communist front known as the Emergency Civil Liberties Committee, protesting the State Department ban against travel to Cuba. This State Department directive was recently upheld by a decision of the Supreme Court of the United States, and the Department of Justice is presently proceeding with prosecution of students who made the pilgrimage to Havana while the prohibition was in effect.

Mr. Bendich came directly from his position as attorney for the American Civil Liberties Union in San Francisco to accept a position as lecturer in the Department of Speech at Berkeley. His course is described as "superb" in a recent SLATE Supplement, and he has not only been active in support of the student rebellion on the Berkeley campus, but has acted in a legal capacity for the FSM and its members.

Bendich worked as a bus boy in the co-operative cafeterias in Berkeley while he was attending the university there, refused to sign a loyalty oath as a prerequisite for obtaining his salary, and brought a suit against the university in that connection. His attorneys were Dreyfus, McTernan & Lubliner, and Vincent Hallinan. In 1952 Bendich signed a letter in behalf of the Rosenberg atom spy defendants, issued by a Communist front known as The Bay Area Committee to Save the Rosenbergs. In 1953 he married Hilary Hancock Solomon, the daughter of Louis Solomon and Wilma Shore. She had been an active member of the East Bay Civil Rights Congress, which has been officially designated as a Communist front organization. Her mother, a motion picture writer whose pen name is Wilma Shore, has been identified by sworn testimony as a member of the Communist Party. In 1955 Mr. Bendich was associated with Richard Gladstein, a San Francisco attorney who has long been counsel for the Communist Party and its many front organizations and Communist-controlled unions. He became counsel for the Northern California Division of the American Civil Liberties Union, replacing Lawrence Speiser when the latter moved to Washington, D.C.

Norman Jacobson was also an ardent supporter of the FSM, having joined with Bendich and others in signing a statement of criticism against the administration at Berkeley for failing to recognize the FSM crisis as a legitimate campaign to secure freedom of speech on the Berkeley campus. He also accompanied Bendich and Jacobus Ten Broeck, Sheldon Wolin, and Howard Schachmen when they presented Judge Crittenden with an eighty-page document on January 21, requesting him to dismiss the cases against the Sproul Hall defendants.

Apparently the suggestion advanced by Dr. Joseph Tussman met with approval by certain elements of the faculty and the administration because it was announced in the *New York Times* on March 21, 1965, that the faculty had approved and President Kerr had promised support for the establishment of the institution suggested by Tussman. It was scheduled to commence operating in September, 1965, with an initial enrollment of 150 incoming freshmen. This is precisely the sort of educational innovation the FSM and FSU have been demanding.

Communist Professors?

With an admirable sense of timing, SLATE issued one of its *Supplemental Reports* in 1965 entitled "Is It Time for Communist Professors?" A few years ago SLATE did not consider the time ripe for such a proposal, but now that the university was open to Communist speakers, since there was a new spirit of liberalism pervading the campus, and with the almost total success of the FSM program, the time appeared more propitious.

In this *SLATE Supplement*, William Mandel, the middle-aged Communist member of the FSM Executive Committee, wrote the affirmative argument, which was reprinted from his debate with Dr. Fred Schwartz. The negative was prepared by Assistant Professor Frank Ficcara from the Department of Philosophy at Chico State College. His was the lone dissenting voice. Mandel, however, was bulwarked by a supporting article from one of Ficcara's colleagues from the Philosophy Department at Chico, Knowle Mottershead.

It was, no doubt, a pure inadvertence that occurred in the preparation of this *SLATE* publication that caused Mandel's article to run smoothly and consecutively for seven pages. Ficcara's reply should have followed but it didn't. Mottershead's did. The reader was asked to skip from page 12 to 19 to find Ficcara's refutation. And even after finding it he could only read one page before being instructed to turn back to page 14 to finish it. By this time the reader's train of thought had been disrupted, and he was weary of puzzling out the chopped-up segments of the lone argument against employing Communist professors at Berkeley. In other words, the arguments in favor of hiring Communists to teach were accorded first place in the booklet, and then the reader was led through a maze of disrupted pages in order to pursue the dissenting opinion.

The editorial comment preceding Mandel's article was entitled "The Next Step Beyond Free Speech." An advertisement for *The Spider* magazine appeared on page 18 of this booklet.*

The matter of Communist faculty members at Berkeley was involved in the appointment of Eli Katz, who held a temporary position as assistant professor in the German department in 1964. He was not re-hired because he refused to answer questions before the House Committee on Un-American Activities, and also refused to give satisfactory answers to the same general questions about his Communist background when interrogated by the Chancellor's office. Katz had taught at San Diego State College, had been active in the Communist youth movement for a number of years, was identified as a member of the Communist Party in Los Angeles, was a delegate to the Los Angeles County Communist Convention in 1957 and also had taught Communist classes in schools operated by the party.

The case was submitted to an appropriate committee of the Academic Senate, and there were four copies of its report rendered. One went to the President's office, one into the archives of the Academic Senate, one went to the office of the university's legal department and the other to the office of the Chancellor.

The highly articulate and insistent left-wing of the faculty immediately took up the action and insisted that Katz be restored to his position. The matter was taken up by the Berkeley Chapter of the Association of University Professors, and Ernest Besig, director of the American Civil Liberties in San Francisco, made threats of bringing a legal action.

**SLATE Supplement*, Vol. II, No. 4, 1965.

Just before Katz was fired, Kerr sent word that he could remain for one more year if he would agree not to go to a lawyer or to the ACLU. But news of this undercover arrangement leaked out, and even many liberal members of the faculty were disgusted at such negotiations and such ridiculous conditions, and the moderate members of the faculty were disgusted because of this undercover deal with a teacher at the expense of the university and its students.

The administration has apparently yielded to pressure from the insistent Left because in late April of this year the President's office sent for all copies of the Katz file, and refuses to release them to anyone.

In stark contrast to prevailing conditions at Berkeley since the late 50's, it is interesting to see how the Committee on Academic Freedom formerly regarded the employment of professors who defied lawfully constituted committees of the state or federal governments when asked to testify about their subversive affiliations and activities. In 1953 the Academic Freedom Committee made a report which read, in part, as follows:

"... The Committee on Academic Freedom believes that a member of the Faculty of the University of California is under an obligation to testify in a cooperative manner in inquiries lawfully conducted by legally constituted State and Federal investigating committees."*

This report was signed by Robert B. Brode, Emily H. Huntington, Kenneth S. Pitzer, William W. Wurster and Wendell M. Stanley, chairman. But the report was made before the new policy of complete freedom and liberalism came to the Berkeley campus, and obviously conditions have vastly changed since this report was rendered in 1953. Dr. Kenneth Pitzer was formerly chairman of the department of chemistry at Berkeley and played a top role in the development of the atomic bomb for the United States. He is now President of Rice College, and shortly before he was appointed to that position the Regents of the University of California desired to offer him the position of Chancellor at Berkeley. They sent word to him by President Kerr, and Pitzer refused. Later, when asked about the matter by one of the Regents, Pitzer stated that Kerr had offered him the Chancellor's position on any of the university campuses *except* Berkeley.

On the question of employing Communist faculty members at the University, it is interesting to review the attitude of Kerr's predecessor, Dr. Robert Gordon Sproul, when he was President of the university. He declared in June of 1954 that the university served blunt notice on the so-called "liberal" forces that had been sniping at the loyalty requirements of the university. There would be no compromise with Communism, and that no Communist would be employed either in the faculty or in any other capacity, Dr. Sproul declared. He was quoted as follows:

"As for the argument, made off campus by a minor faculty member, that 'one or two Communists' should be hired to present the Communist point of view, Dr. Sproul promptly declared it to be utter nonsense. 'It is as ridiculous to suppose we must have Communists as teachers as that we should have astrologers in the astronomy department, or African witch doctors in the medical school,' he said."†

On October 11, 1940, the Regents concluded that adherence to the Communist Party disqualified a person as an objective teacher, and announced the policy of excluding Communists from membership on the

*Report of the Committee on Academic Freedom to the Academic Senate, Northern Division, March 25, 1953.

†Los Angeles Times Editorial, June 1, 1954.

faculty of the university. An excerpt from the minutes of the Regents' meeting on this date read as follows:

"The Regents believe that the Communist Party gives its first loyalty to a foreign political movement and, perhaps, to a foreign government; that, by taking advantage of the idealism and inexperience of youth and by exploiting the distress of underprivileged groups, it breeds suspicion and discord, and thus divides the democratic forces upon which the welfare of our country depends. They believe, therefore, that membership in the Communist Party is incompatible with membership in the faculty of a state university."

President Sproul further emphasized the general policy of the university on August 27, 1934, when he told the Northern Section of the Academic Senate, in substance, that:

"Essentially the freedom of a university is the freedom of a competent person in the classroom. In order to protect this freedom, the university assumes the right to prevent exploitation of its prestige by unqualified persons or by those who would use it as a platform for propaganda. It therefore takes great care in the appointment of its teachers; it must take corresponding care with respect to others who wish to speak in its name."*

The foregoing general statement is incorporated in university regulation No. 5, has been included in each edition of the statewide *Faculty Handbook* to and including the most recent edition, February, 1963. On January 18, 1965, a revised edition of the handbook for faculty members was in process of preparation under the supervision of Virginia Taylor Smith, in the President's office.

The clear and unequivocal statement of the Regents was first included in the faculty manual and other publications of the university on October 11, 1940, and continued to be printed in each issue thereafter *until 1958*. In other words, this statement commenced by declaring that: "The Regents believe that the Communist Party gives its first loyalty to a foreign political movement and, perhaps, to a foreign government; that, by taking advantage of the idealism and inexperience of youth and by exploiting the distress of underprivileged groups, it breeds suspicion and discord, and thus divides the democratic forces upon which the welfare of our country depends." And it continued to state, for these reasons, that membership in the Communist Party was incompatible with membership on the faculty of the state university. This left no possibility of mistake about the firm attitude of the Regents against the employment of Communists.

Since 1958 this clear statement of policy has been omitted, although President Kerr has at times alluded to it in public speeches. The 1958 edition of the faculty handbook, issued from the office of the President, omitted the specific statement, and under the heading of "academic freedom," printed the following:

"Essentially the freedom of a university is the freedom of competent persons in the classroom. In order to protect this freedom, the university assumes the right to prevent exploitation of its prestige by unqualified persons or by those who would use it as a platform for propaganda. It therefore takes great care in the appointment of its teachers; it must take corresponding care with respect to others who wish to speak in its name."

Obviously, these vague and general expressions do not serve to announce the ban against employment of Communists to employees of the uni-

*Proceedings, Academic Senate, Northern Section, August 27, 1934.

versity, nor does it express the firm position of the Regents of the university against Communism in general.

This policy of excluding Communists from university employ received a further dilution when Kerr submitted a report to the Regents suggesting that the rule be applied only to members of the American Communist Party and that foreign Communists, temporarily at the university, be excluded from its provisions although they were compensated from university funds. This suggestion was made despite an opinion submitted on April 30th from the legal department of the university to the Regents, advising them that the rule applied to all Communists, and not just to the members of the organization in any particular country.

On September 24, 1964, Kerr suggested that the Regents might wish to reconsider the wording of the ban against employment of Communists in general, and that he would present his recommendations later. As yet no such recommendations have been submitted.

Omission of the specific anti-Communist language expressed by the Regents would remove any possibility of offending the sensibilities of the more progressive members of the faculty who are not bashful about expressing their resentment against the use of this sort of language in official publications. There is no question about the continuance of the university policy against hiring members of the Communist Party, but it is very clear that since 1958 the provisions have been gradually toned down, the specific language has been lost and has not appeared in any of the books of rules since 1958, and that for political, ideological, or other reasons, the foundation and supporting structure of the policy against hiring Communists has been loose, general, and transitory. It is still in operation, but it is now treated more as custom, subject to modification as the political climates demand, than as the clear and well-established rule of the Regents.

Communists on the Campus

No Communist speakers had been allowed to lecture on university property since January 1952, until President Kerr persuaded the Regents to rescind that prohibition about three months before the Berkeley Rebellion commenced. Said the *California Monthly* alumni magazine:

"Despite this policy, students could and did hear Communist speakers across the street or, at most, a few blocks away from university campuses. Moreover, the ideas of Communists were available to students and the daily press, over radio and television and in books and periodicals in the campus libraries. Political activists in the student body, usually caring less about Communists than about the right to hear all sides of current issues, engaged in intricate series of skirmishes with the administration of the university. Permission to hold meetings featuring speakers of a wide range of controversial persuasions was sought. Whether permission was granted or not, sponsors of such meetings gained campus and public notoriety far out of proportion to their real influence among the students on the campus. One effect of the 'ban,' President Kerr reported to the Regents, was that it 'permitted American Communists to pose as civil liberties martyrs denied the "right" to speak on the campus, rather than presenting them as the puppets which in reality they are.' ***

**California Monthly*, October, 1963, p. 7.

Prior to 1951 there were bans against Communist speakers at the individual campuses of the university, but no protests against the restriction developed during the 1950's, the opposition actually commencing about 1958 or 1959. A campaign was then waged by the Student Civil Liberties Unions at various campuses, by SLATE at Berkeley, by Declare, a similar radical student organization at the Riverside campus, by the Independent Student Union at UCLA, and by groups of petitioning students and members of the faculty.

On December 6, 1962, the Berkeley Chapter of the American Association of University Professors issued a resolution deploring the continued ban against Communist speakers, and asked President Kerr to persuade the Regents to rescind the long-standing prohibition.

Governor Edmund Brown had declared emphatically in a speech delivered on September 19, 1962, that:

"I don't believe we should permit any subversives to speak on our campuses. I don't see any reason why we should give them any platform from which to spread their poison."*

Early in 1962 the student group comparable to SLATE at Berkeley endeavored to arrange a program on the Riverside campus involving a panel discussion including Dorothy Healey, chairman of the Southern Division of the Communist Party of California, and Ben Dobbs, a veteran Communist functionary. They were to be opposed by two anti-Communists. The Chancellor of the university enforced the Regents' rule forbidding Communists to speak on university facilities, and the American Civil Liberties Union filed suit in April 1962 on behalf of a group of the students against the Regents of the university, Herman Speith, Chancellor at Riverside, and its Dean of Students, T. L. Broadbent. The official title of the suit was "Edward J. Lessin, et al, v. Regents, et al." After both sides had been heard, Superior Court Judge John G. Gabbet decided in favor of the Regents, and A. L. Wirin, chief counsel for the American Civil Liberties Union in Southern California, announced that he would immediately file an appeal. His appeal was filed, and the Regents' brief was submitted to the appellate court in January 1963. From that point on this case pursued a very peculiar course. Mr. Wirin, a tenacious and capable lawyer in cases of this type, requested a voluntary dismissal of the ACLU appeal on May 10, 1963, and it was accordingly dismissed three days later. On that day ACLU president Lloyd M. Smith wrote to President Kerr, saying:

"Press reports indicate that the Regents would promptly re-examine their policy if it were not for the fact that the Lessin case is still pending in court."

And on the following day, May 14, the *New York Times* said:

"The American Civil Liberties Union moved today to drop a suit to force the University of California to allow Communist speakers on campuses. The unusual move was understood to be based on the belief that the university Regents may reconsider its policy on speakers."

The Regents had won their suit. The ban against throwing open the university to Communist lecturers now had the firm sanction of the court. What moved the Regents to rescind their prohibition after winning this victory? The answer apparently is found in a statement from one of the appellants, Richard Unwin, who said he received a message by telephone

**Los Angeles Times*, September 20, 1962.

from the ACLU attorneys who told him of a conference between themselves and Dr. Kerr, who had assured them that he would lift the ban if the appeal were withdrawn. Kerr predicted an early decision by the Regents, saying: "Today's college students are not Communist sympathizers. They are pro-civil liberties."**

On May 21, 1963, by a vote of 15 to 2, the Regents opened the university to Communist lecturers on Kerr's recommendation. The new policy provided that a Chancellor "may if he considers it appropriate," require that the meeting be chaired by a faculty member with tenure, that questions from the audience be allowed, and that "the speaker be appropriately balanced in debate with a person of contrary opinion."†

Ron Moskowitz, education editor for the *San Francisco Examiner*, declared that there was some contention to the effect that Communists should be placed in a somewhat different category than other speakers, since the United States Supreme Court had ruled that the Communist Party of the United States was the tool of a foreign power, and advocated the overthrow of our government.‡

Albert J. Lima, Northern California chairman of the Communist Party, was the first to speak at Berkeley under the new "free speech" policy of President Kerr. Then came the deluge. In came Malcolm X, William Buckley, Jr., Mark Lane, Dr. Fred Schwartz—an endless procession of political candidates, folk-singers, and an incredible procession of controversial figures ranging from the extreme right to the extreme left, with heavy emphasis, in our view, on the left. The students no longer had to walk across the street to Stiles Hall, the YMCA facility where Communist speakers had been holding forth for years, because the university was now bringing the Communists to the campus. As might be expected, Lima's appearance was sponsored by SLATE, the Communist-oriented radical movement that we described as a transmission belt for Communism in our 1961 report, and which has since become almost wholly under the influence of the Communist Party, as can be seen from the activities and affiliations of its officers and former officers; by the Young Socialist Alliance, which is the young Trotskyite branch of the Communist movement, and by the DuBois Clubs, which are Communist from top to bottom.

Not all educational administrators are convinced that their institution should be opened to Communist propagandists. In June 1964 Mr. Charles Luckman, chairman of the board of trustees of the California State Colleges, delivered a commencement speech at San Diego State College which provoked considerable wrath from academic circles. He stated:

"There is indeed nothing to choose between Nazism and Communism, except that the latter is far more dangerous because of its seductive intellectual appeal. No teacher should hesitate to condemn both these tyrannies . . . Communist ideology is demonstrably false. Its economic theories have been disproved by history. Its practical applications have been characterized by the imposition of terror; by the complete disregard for human life and liberty; by the rejection of all the traditional moral and spiritual values which underlie Western Civilization."§

It is difficult for us to understand how a disciplined Communist who addresses a crowd of students for 30 minutes can actually teach them anything worthwhile about Communism. Certainly not anything they could

^{*}*San Francisco Chronicle*, May 18, 1963.

[†]*San Francisco Chronicle*, May 22, 1963.

[§]*Los Angeles Times*, July 7, 1964; *National Review*, July 28, 1964, p. 650.

not learn much better from the thousands of books on the subject in the university library. The Communist is obviously there to indoctrinate and recruit, so he benefits. But the student, presumably there to learn, gains nothing except a satisfaction of his morbid curiosity and 30 minutes of entertainment.

If, as a result of several years of exposing students to the propaganda emitted by Communist lecturers, one student is drawn into the Communist conspiracy against his own country, who is really to blame? We conclude it must be the persons who are charged with the high responsibility of caring for and teaching the students entrusted to them. The Communist speaker is clad with the reflected prestige of the university where he is a guest; and we are unable to understand why the people should contribute to their own destruction by making their public institutions available to those who are dedicated to the task of overthrowing our government by any means available.

And what about the political science department at the university? Are there no professors capable of teaching objectively in this field? If not, we are wasting our money. If there are such teachers, and if the students really desire to learn something about Communism, why don't they have these experts deliver the lectures, or why do they not attend their courses? It is our considered view that to throw wide the portals to any controversial speaker who wishes to utilize the opportunity to harangue a college audience, is to put curiosity and entertainment above the educational process, and to appeal to the morbid and emotional rather than to the scholarly and the intellectual.

In 1964, J. Edgar Hoover, testifying before the Committee on Appropriations, House of Representatives, Eighty-Eighth Congress, Second Session, declared:

"One of the primary recruiting targets of the Communist Party, U.S.A., is the youth of America and the party has continued its intensified program aimed and directed at our youth. The intensity of this program is revealed in a statement made by Gus Hall in March 1963 when he spoke on the party's success in placing its speakers on various college campuses throughout the country. The youth program of the party, he said, is so important that he or any other national leader would go anywhere to meet with young students even if but one student is met. Admitting that the old timers are still the backbone of the party, Hall nevertheless concluded that the future depends on the youth.

Subsequently, Hall was optimistic about their possibilities, reasoning that the party would eventually be afforded a fertile field for recruiting youth because millions of young people would be entering the labor market and many would be unable to find employment.

Skillfully imparting the Communist line with espousals paralleling Soviet views, Soviet spokesmen appeared before forty-five student groups, mostly at on-campus sites during the calendar year 1963.

That the party is enjoying some success as a result of expanded contacts with college students is indicated in the comment of Daniel Rubin, National Youth Director of the party, in June 1963, that of the number of young people attracted in its last recruiting drive, sixty-five percent were students."

A table submitted as an exhibit with the testimony of Mr. Hoover, disclosed that on February 20, 1963, Herbert Aptheker spoke at the University of California, and at San Francisco State College the following

day; that Albert Lima spoke at the University of California on July 22, 1963, and at Marin Jr. College on October 8, 1963; that Dorothy Healey spoke at the California Institute of Technology on October 16, 1963, and at the University of California in Los Angeles two days later; that Lima spoke at the University of the Pacific with Herbert Aptheker on October 28, 1963; that Aptheker spoke at San Jose State College on October 29, 1963, University of California at Berkeley on the following day, and also at Oakland City College; and that Dorothy Healey spoke at the Riverside campus of the University of California on November 18, 1963.

Our view of the problem is in complete accord with the sentiments of Governor Brown, whose perceptive statement will bear repeating:

"I don't believe we should permit any subversives to speak on our campuses. I don't see any reason why we should give them a platform from which to spread their poison."

Governor Brown made this statement a little more than a year before the Regents rescinded the ban against Communist lecturers on the campus. We trust the Governor has not changed his attitude in the matter since he made the vehement statement in September 1962.

In conclusion, we wish to point out that if the Regents and President Kerr believe that members of the Communist Party are unfit to teach at the university, it is difficult for us to understand how they can justify allowing Communist officials who are not members of the faculty come on the campus and lecture to the students. It reminds us of the ambivalent attitude of the American Civil Liberties Union. It considers Communists unfit to hold any official position in their organization, but is always eager to file a law suit for the purpose of forcing them into official positions in other organizations.

Security

The Berkeley campus in recent years has been opposed to security measures that would at least help keep it accurately informed concerning problems of subversive infiltration. In cases where projects are operated under contracts with the U.S. Department of Defense, the administration has no choice. It is required to secure Personnel Security Questionnaires from all employees who have access to classified information. In such matters the F.B.I., and occasionally some other governmental agency, will conduct the necessary security investigations.

A member of the university administrative department is usually designated to handle the perfunctory office work involved in seeing that these questionnaire forms are properly executed and filed.

In 1951 representatives of this committee offered its facilities in assisting universities and colleges in California to obtain information concerning subversive front organizations on or near their campuses, and in making an effort to prevent subversive infiltration. Some institutions had little need for such services, as they were not subject to any serious infiltration problems. The larger institutions had contracts with the Department of Defense and were under the obligation to designate some employee for the purpose of seeing that the necessary personnel security questionnaires were distributed and properly filed. These institutions also designated persons whom the committee could contact for the purpose of effective interchange of information in the counter-subversive field. This co-operation did not consist of monitoring classes, maintaining any spies on campuses, or the utilization of university facilities; but it did make

available a source of information and co-operation that in most cases proved exceedingly valuable.

The offer of co-operation was received graciously and enthusiastically by the presidents of universities in this state. Letters in our files attest to this cordial relationship, and we quote brief excerpts from four of these letters, each signed by the president of a university or college, as follows:

"... The university ... is proud of its relationship with you and will continue to co-operate in every way possible in your future work."

"Your method of procedure is far more effective than the televised hearings of some ... committees."

"I wish to congratulate you on the excellent work which has been done by your committee."

"I believe that all of us in the academic world in California are much in debt to you ..."

The Chancellor at the Los Angeles campus of the University of California testified concerning his participation in this cooperative system when he appeared before the committee on December 10, 1956. The testimony was as follows:

"Q. About three or three and a half years ago, the president of the university, Dr. Sproul, designated each chancellor and each provost on each of the eight campuses of the University of California for the purpose of maintaining a liaison with this committee. Is that right?"

"A. Yes, indeed."

"Q. That liaison has been maintained so far as your office is concerned, has it not?"

"A. That is correct. I think that liaison occurred before I arrived. It was in May, 1952."

"Q. Yes."

"A. It preceded me; I picked it up since."

"Q. Pursuant to that directive on the part of the president, contact has been made and maintained between the committee and your office, is that right?"

"A. That is right, but I want to underline this: not in any sense to mean that this committee which is established by the Legislature, the Senate and the Assembly, has intruded one iota into the affairs under my jurisdiction; in terms of management, responsibility and internal organization, we function on our own."

"Q. May I add that the committee will continue to follow that policy."

"A. I know that is the case. You wouldn't want it any differently and I wouldn't want it any differently. In view of the fact that the committee, the State Legislature, the Regents, and myself, and as far as U.C.L.A. is concerned, we are working toward exactly the same end, that there should always be a free America, that conspirators will be uncovered. It only makes good sense that I, as top administrator acting under President Sproul's approval and under the direction of the Regents, shall exchange any information which is of interest and help in achieving the objectives that every honorable American is seeking."*

When Kerr, then Chancellor at Berkeley, learned that all chancellors had been designated as liaison with our committee, his reaction struck

*1957 report, pp. 15 & 16.

us as peculiar, because, instead of communicating with us directly, or at all, he made the following statement in the student paper:

"President Robert Gordon Sproul requested me early in August to serve as the official on the Berkeley campus whom the Burns Committee might approach. I accepted. In the intervening period the committee has not communicated with me nor have I been in communication with the committee. Moreover, I have no plan for communicating with the committee.

Should problems ever arise, from relations with the committee, I shall consult with faculty and student leaders on this campus."*

The committee considered this public declaration supercilious and antagonistic, and for that and other reasons there was a minimum contact with the Chancellor's office on the Berkeley campus, although contact was nonetheless maintained with the situation through other channels.

After Kerr became President, he again disclosed his aversion to loyalty investigations in general when he spoke to the Representative Assembly of the Academic Senate in Berkeley as follows:

"... and I trust, whatever happens, that the faculty will not cease to be concerned with the impact of the pressures for conformity in our society, including some of those expressed in the form of loyalty investigations, upon academic and student freedom and with the search for the best methods by which the University can resist those pressures. I conceive it to be one of the primary duties of university administration to support affirmatively free discussion of all issues within the University and to protect actively students and faculty from any unfair or unwarranted frictions resulting from such discussions."†

And, in 1964, in connection with the controversy over Eli Katz, heretofore mentioned, President Kerr said: "The university has not and does not have a system of security clearance for appointment, except when required for specific federal contracts."‡

There had been a security officer for the statewide university, with headquarters at Berkeley. His duties, in addition to the ministerial function of collecting and filing Security Questionnaires, consisted in maintaining proper contacts with other agencies investigating subversion in general, and in building up an efficient collection of material dealing with problems of infiltration, operation of front organizations, and all of the other pertinent information that would enable an education institution to protect itself against subversive influences. This officer was a graduate of the F.B.I. Academy and a veteran of more than twenty years on the campus police department. When Kerr succeeded Sproul as president, he gave this statewide security officer so much extra work to do in the field of insurance at Berkeley, that he made it impossible for the officer to handle his full statewide security work.

On July 2, 1954, the committee agreed with the university administration that because the security officer had been falsely accused of acting as a "thought policeman," that his duties should be limited to matters concerned with defense contracts, and a public declaration issued to that effect. Thereafter the criticisms died down, and the security officer was thenceforth consulted on all problems pertaining to subversive activities and organizations affecting the university. This practice continued until

**Daily Californian*, October 3, 1952.

†Academic Senate Record, Northern Section, Berkeley, May 25, 1959, Vol. V, No. 6, p. 6.

‡Letter dated June 9, 1964.

after Kerr became president, when the security officer was given so much insurance work to handle that his counter-subversive operation was smothered.

At a meeting on January 17, 1963, Kerr stated to some Regents that a full-time security officer was not necessary, because arrangements had been made to obtain the information from the F.B.I. As we have explained, the F.B.I. had investigated persons working under federal contracts before Kerr became chancellor, and this routine had nothing whatever to do with the investigation of infiltration of the university, or with any other counter-subversive matters in connection with the institution. And that was what concerned the Regents—properly so, in our opinion, as has been amply proved by subsequent events.

We made an inquiry through the appropriate channels and learned that no such information was ever provided to the university by the F.B.I., that no arrangements had been made to obtain it, and that no request to that end had ever been made by the university.

Thus, when the first demonstration occurred in the fall of 1964, the university had no security officer. The title appeared in the directory, but the only work done in the security field was the routine office work of handing out, collecting and filing Personnel Security Questionnaires from those employees who were working on federal contracts. There once had been files of vital information concerning subversion in general, but now there were none, and there had been none for several years.

One high administrative official at Berkeley had assumed that when the rebellion commenced its security facility would be able to furnish vital information, but learned with astonishment that there was no real security officer and there had been none for years. So, having had some experience in intelligence work prior to coming to the Berkeley campus, he functioned as a temporary security officer during the emergency period, but obviously under a great handicap.

A representative from the Berkeley campus had also been sent to the Berkeley Police Department prior to the commencement of the demonstrations and attempted to find out how the department obtained its information concerning subversion on the Berkeley campus. Failing in this effort, the Berkeley Police Chief was asked to discontinue maintaining channels of contact on the campus concerning subversive infiltration. The Chief refused, and we are glad to state that the Berkeley Police Department, noted for being one of the best in the nation, has for many years maintained an excellent counter-subversive division.

At the height of the rebellion there was some attempt on the part of the university administration to find a full-time security officer and put him to work. Even the old one, still working on insurance and questionnaires, was asked if he would like to resume his full-time job. So far as we know, the position has not yet been filled.

Communists in the Rebellion

Conditions at Berkeley in the fall of 1964 provided an ideal situation for Communist activity. The administration was opposed to the maintenance of proper security facilities; there was a militant left-wing element in the faculty; there was a lack of communication between the administration, the faculty and the students; there had been an alarming influx of Communists to the Berkeley area; there had been an easy acceptance of radical student organizations that had become both arrogant and defiant; there was a confusion of rules and directives concerning student

activities; the Regents had been persuaded to rescind their long-standing ban against Communist speakers on the campus; the headquarters for the nationwide Communist youth organization had been established in San Francisco; there was general student resentment of the cold and bureaucratic atmosphere on the Berkeley campus, the inaccessibility of university officials, and obviously weak administration and confusion of rules and restrictions that were constantly being amended, repealed, supplemented, and reinterpreted.

In the early portion of this report we emphasized that we have maintained a continuous investigation of activities of the University of California as well as other educational institutions in the state since the inception of this committee more than twenty-five years ago. During all of this time we have developed our sources of information, added to our files, and endeavored to keep abreast of the situation to the best of our ability, so far as our staff and our finances would permit. We also made it clear that our investigation of the Berkeley Rebellion commenced with the first demonstration in the fall of 1964 and has been continuous thereafter. We found that the original demonstrations represented almost every segment of the student body, that even during the united front period of the Free Speech Movement there was no Communist control of the movement in general or the FSM in particular. But we wish to emphasize with all the force possible, that there *was* increasing Communist control of the FSM immediately prior to and after the invasion of Sproul Hall on December 2, 1964. At that time the movement lost its non-radical support almost entirely, closed its ranks, created its extremely effective organization, and thenceforth operated through the facilities of its executive committee and its even smaller steering committee.

Communists are not hesitant about declaring that they are too weak and disorganized to control anything. They tell the naive and inexperienced that there may have been a few members of the FSM who were somewhat inclined to favor Marxism, but that they actually exercised no influence in the movement. One could hardly expect a subversive organization such as the Communist Party or any of its splinter groups to come forward and admit that they were actually controlling any organization except the Communist Party itself.

By the fall of 1964 the Communists had not only perfected their youth organization in the Bay Area, but there were hundreds of nomadic young radicals living around the perimeter of the campus—a supporting force of agitators and activists. It is incredible that anyone could be so gullible as to believe that these Communist leaders, whose names are listed herein, presented with the opportunity at Berkeley and occupying strategic positions in Communist organizations as well as in the FSM would simply sit on their hands instead of making a determined drive for leadership. Let us take a look at some of the individuals who occupied important roles in the leadership of the FSM and who participated in its demonstrations.

Bettina Aptheker is the daughter of Herbert Aptheker, a member of the national committee of the Communist Party of the United States; leading party theoretician; lecturer at Communist schools and on university campuses throughout the country; former editor-in-chief of the official publication of the National Committee of the Communist Party, *Political Affairs*; presently the head of a Communist school in New York, which is being conducted with the assistance of Vincent Hallinan, the father of the ubiquitous Hallinan brothers, and who is secretary-treasurer

for the school. Bettina Aptheker's father is also one of the alumni of the Communist school in San Francisco. When Bettina came to Berkeley she lived at apartment 18, 6321 Dover Street, Oakland 9, where she received the Communist newspaper during 1963 and 1964. She has been affiliated with SLATE, the DuBois Clubs, and resided for a short time with the family of Albert Lima, whose daughter was also prominent in the FSM demonstrations as an undergraduate at Berkeley, and whose father is the head of the Northern Division of the Communist Party of California. Miss Aptheker has also lived at 1579 Scenic Way, Berkeley, an address which was also the residence of Pat and Mike Hallinan and Kenneth Cloke, all of whom have been heretofore mentioned. Miss Aptheker was a member of both the executive and steering committees of the FSM, and when arrested in connection with the invasion of Sproul Hall on December 3, 1964, was living at 1005 53rd Street, Oakland.

Robert Paul Kaufman, a member of the FSM executive committee, was formerly a member of SLATE during his undergraduate days at Berkeley, was active in the Fair Play for Cuba Committee, and played a leading part in the organization of the DuBois Clubs of America. He is now a teaching assistant in the Department of Social Science at Berkeley.

Jacqueline Goldberg, the sister of Arthur Goldberg, came from Los Angeles to attend the university at Berkeley. She soon became the head of U.C. Women for Peace, a front organization, and was its delegate to a Moscow meeting in 1963. She was also active in the American-Russian Institute at San Francisco, cited by the Attorney General of the United States as a Communist-dominated organization, and is now a member of the Policy Committee for the next World Communist Youth Festival which is scheduled to be held in Algeria. She was a member of both the executive and steering committees of FSM, and was arrested during the invasion of Sproul Hall.

Arthur Goldberg, who was a member of both the executive and steering committees of the FSM, received his early Communist indoctrination as a member of the Youth Action Union in Los Angeles. At Berkeley he identified himself openly with the more militant Peking line of the Communist movement, proclaimed that he was a follower of the Progressive Labor Movement, and was present to hear Mort Scheer, West Coast Representative for the PLM, deliver a lecture at Stiles Hall Y.M.C.A., across the street from the Berkeley campus, in August, 1964. Scheer then resided at 6929 Acton Street, Berkeley, and Goldberg, who had also been chairman of SLATE at Berkeley, lived at 2536 College Avenue. Listed as residing at the same address were Sandor Fuchs, who was also chairman of SLATE; Mario Savio, Jack Weinberg, and Charles Artman, identified with the Filthy Speech Movement, and David L. Goins. All were arrested with Goldberg at the time of the Sproul Hall invasion.

Alex P. Hoffman had been a speaker for the Labor Youth League, young Communist component of the Party, has been acting as an advisor for the FSM, has made no effort to conceal his Marxist convictions, and was a research assistant at the law center on the Berkeley campus. He recently transferred into the Department of Speech.

Phyllis Haberman, East Bay chairman of the DuBois Club, was a former roommate of Bettina Aptheker at 2231 Grant Street in Berkeley, and at 635 51st Street in Oakland.

Mort Scheer, already mentioned, was a former member of the Communist Party, found it too tame and inactive for his taste, and was expelled with several other founders of the Progressive Labor Movement

for what the Communist theoreticians would term "left-wing deviationism." He had been present at all of the FSM demonstrations, is an associate of Arthur Goldberg, and with his adherents has been active in distributing propaganda literature on the Berkeley campus.

William Mandel, is a middle-aged member of the FSM executive committee. He is also Moscow correspondent for radio station KPFA in Berkeley, the recent target of an investigation before the U.S. Senate Internal Security Sub-Committee. He has been identified as a member of the Communist Party, and formerly lived at 545 West 164th Street in New York City. When questioned about his Communist affiliations by the Senate Internal Security Sub-Committee during its investigation of the Institute of Pacific Relations, he invoked protection of the Fifth Amendment. Mr. Mandel has also been present at virtually all of the FSM campus demonstrations, although he has no connection whatever with the university, and has delivered pro-Communist lectures at Berkeley and at schools and colleges elsewhere. He has been exceedingly active as a member of the FSM executive committee.

Sydney Stapleton and his wife, Elizabeth, are typical of the Trotskyist Communist element in the FSM movement. Sydney was a member of the FSM executive and steering committees, and both were arrested during the Sproul Hall invasion.

Margaret Lima, the daughter of Albert J. Lima, was active in SLATE and the U.C. Women for Peace. As we have stated, Bettina Aptheker lived with the Lima family when she first came to Oakland, and Margaret was one of the persons arrested during the Sproul Hall invasion.

Kathleen Grossman, who, like Margaret Lima was a student at the Berkeley campus, is the daughter of Aubrey Grossman, who was active on the Berkeley campus when he was a student at the same institution. He had repeatedly been identified as a member of the Communist Party, has been its legal representative, and was formerly listed on its official stationery as the Party's educational director in San Francisco.

Lee Goldblatt, a student at Berkeley, is the daughter of Lou Goldblatt, and served as secretary-treasurer of the East Bay DuBois Club. Miss Goldblatt was also arrested at the time of the Sproul Hall invasion.

Ann Goldblatt King, sister of Lee Goldblatt, and also active in the FSM, was organizational secretary for the East Bay DuBois Club.

Barbara Garson, the wife of Marvin Garson, who wrote the booklet "The Regents," heretofore mentioned, was a member of the FSM executive committee, was formerly active in the Fair Play for Cuba Committee, was affiliated with the Young Socialist Alliance, the Trotskyist branch of the Communist movement, and was arrested during the invasion of Sproul Hall.

Sandor Fuchs, chairman of SLATE, was also a member of the FSM executive committee, and arrested during the Sproul Hall demonstration.

Larry Barnes, active in SLATE, and a member of the FSM executive committee, was arrested during the Sproul Hall invasion.

James Burnett, head of the Trotskyist movement on the Berkeley campus and formerly national president of that organization, was a member of the FSM executive committee.

Stephanie Koontz, a member of the DuBois Club and also the FSM executive committee, was arrested during the Sproul Hall invasion.

Deward Hastings, was a member of SLATE and also the FSM executive committee.

Louis Lester, arrested during the Sproul Hall invasion, was a member of both the DuBois Club and the FSM executive committee.

Steve Weisman, whom we have heretofore discussed at length, was a member of both the steering and executive committees of the FSM, and was also civil rights chairman of the East Bay DuBois Club.

Jack Weinberg, whom we have also discussed at some length, was a representative of the East Bay DuBois Club on both the executive and steering committees of the FSM, and was arrested during the Sproul Hall invasion on December 3, 1964.

Mike Rossman, a Sproul Hall arrestee, was a member of the FSM steering and executive committees as a representative of the DuBois Club.

David Rynan, formerly active in SLATE, and whose father is a professor in the Speech Department at Berkeley, was a member of the FSM executive committee.

Jan Tangen, also arrested during the Sproul Hall invasion, lived at 1927 Dwight Way in Berkeley, and came from a mountain home ranch near Calistoga. Other FSM activists who lived at the same address were James D. Moon, Bruce Bell, Frank Garfield and Stephen Leonard. All were arrested with Jan Tangen during the Sproul Hall invasion.

Robert Treuhaft, who has been repeatedly identified as a member of the Communist Party and who is the husband of Jessica Mitford Treuhaft, was one of the first to be arrested at Sproul Hall. Since he is attorney for the FSM movement it was hardly necessary for him to be formally listed as a member of its executive or steering committees. Obviously he was in constant communication with the leadership of the FSM, and if he had not had some influence with them, they would undoubtedly have dispensed with his services. The fact that this veteran Communist lawyer was closely associated with the FSM and obviously exerted great influence on it is too clear to warrant further consideration.

Elena Flemming, a Berkeley student, visited Cuba in 1963 and was also one of the Sproul Hall arrestees.

Brian Shannon, a leader of the Young Socialist Alliance, was also active in the FSM demonstrations.

We do not consider it necessary or productive to extend this list further. It would be possible to do so, but we submit that it is perfectly obvious that after December 3, 1964, with the perfection of the FSM system of Centrals, the establishment of its executive and steering committees on a highly effective basis and with the type of leadership we have already mentioned, those who still doubt that there was a Communist domination of the movement after December 3, 1964, could not be convinced even if we produced a document showing that the FSM movement was actually operated by the members of the national committee of the Communist Party of the United States, the heads of the Trotskyist movement, and the leaders of the Progressive Labor organization.

In addition, in March, 1965, the director of the Federal Bureau of Investigation testified that while the FSM movement at Berkeley had not been *originated* by Communists, they had exploited it for their own purposes, and that forty-three persons with subversive backgrounds, including five faculty members, had participated in the demonstrations.

Charles E. Moore, a special agent for the Federal Bureau of Investigation for ten years, now director of public relations for the International Association of Chiefs of Police, testified before the Internal Security Sub-Committee of the U.S. Senate on May 17, 1965, that he personally

investigated the situation at Berkeley, and that he found the entire FSM action was dominated by hard-core Communists.*

The *Los Angeles Times* of May 18 amplified Mr. Hoover's testimony somewhat by quoting him to the effect that of the forty-three individuals with subversive records who were actively involved in FSM activities, thirty-eight of them were "students or otherwise connected with the university." Although he had testified on March 4th of this year, Hoover's testimony was released to the public on May 17th.

During the progress of our own investigation of the Berkeley Rebellion, covering a period of eight months, we contacted every official agency in the area that possessed reliable information concerning the demonstrations. We also conducted interviews with and received statements from university officials. We had sources of confidential information from inside the FSM movement, the DuBois Clubs, the Trotskyist organizations and SLATE, as well as various Communist front organizations that were concerned with the FSM. From all of the sources available to us we came to the inevitable conclusion that while the FSM movement started by many students who were certainly not Communist dupes or members of any subversive organizations, and while some of them were emphatically anti-Communist, that there were experienced and disciplined members of the Communist movement deep in the heart of the FSM from its very inception. We also found as a result of all of our investigations and contacts that members of the Communist organizations on the executive and steering committees of the FSM were in firm control of the situation continuously after December 3, 1964.

Information apparently reached the State Department about the control of conditions at the Berkeley campus because it refused to participate in the so-called "teach-in on Viet Nam," scheduled for May 21 and 22 on the Berkeley campus.

Jerry Rubin, an organizer of the mammoth outdoor rally, said that State Department official John W. Piercy telephoned that there would be no State Department representative on hand, although two had originally been promised. Rubin declared, with some rancor, that the State Department objected that the program was not balanced.

Perhaps Mr. Piercy's sources of information had disclosed that Rubin himself was one of the students who had made an illegal trip to Cuba in defiance of State Department regulations, and that after his return in 1964 he and another student named Jeff Lustig addressed an FSM rally on October 9, 1964, and extolled the virtues of the Communist Cuban regime.* The news media on May 20 also carried statements that Robert Scalapino, chairman of the Department of Political Science at Berkeley, and Eugene Burdick, professor of political science, and well-known author, also declined to participate in the Viet Nam "teach-in" for much the same reasons expressed by the State Department.

The first issue of *Insurgent*, the DuBois Club organ, sneered at the idea that Communists actually exerted any influence in the student rebellion. The utter duplicity of this position is shown by the fact that the editor of the publication, Carl Bloice, is a Communist. He was active in the Independent Student Union at Los Angeles, the DuBois Clubs in San Francisco, is a member of the staff of the Communist newspaper, and had written reams of propaganda publicity for the FSM. We had already discussed his presence in Moscow at the International Communist Youth

**San Francisco Examiner*, May 18, 1965.

Conference immediately prior to the occurrence of the first student demonstration in September 1964.

Mario Savio and Bettina Aptheker are probably the two FSM leaders who received the most publicity. Savio, aside from a mild and unimportant alliance with the youth branch of the Trotskyist Communist organization, Young Socialist Alliance, had no subversive background. Bettina Aptheker, on the other hand, had a background that was virtually nothing else but Communist, and exerted a powerful influence on Savio. We have already referred to her articles in the Communist magazine that her father formerly edited, as well as her articles in the *People's World*.

One of her articles in the Communist magazine was entitled "Free Speech Revolt on Berkeley Campus." She described the events that started in mid-September, 1964, as the commencement of "one of the most significant student movements in the country," she described the birth of the Free Speech Movement, stated that "the Chancellor and President of the University did everything possible to squirm out of the Pact of October Second. Only the threat of renewed demonstrations compelled them to abide by the agreement."

We have described the presence of Joan Baez, folk-singer from Carmel, who appeared on the campus after the demonstrations were well under way, and contributed her music to the festivities. She and Savio led the march into Sproul Hall on December 2, and prior thereto she entertained the assembled multitude during their vigil when the Regents were meeting at Berkeley on November 20, 1964. No representative of this committee has ever had occasion to witness the versatility of Miss Baez, but a surprising account was contributed by Bettina Aptheker in her article when she wrote: "On Friday, November 20, the day of the meeting, the most impressive demonstration ever held on the campus took place. It was a demonstration conducted in the spirit and with the dignity of the March on Washington. The steps of Sproul Hall served as the speaker's podium. Joan Baez sang, her voice whistling through the grass—", a truly remarkable achievement.

After the students had been informed of the results of the Regents' meeting, Miss Aptheker wrote:

"The 6,000 students sat in stunned silence as the decisions of the meetings were read. Then, there was instantaneous indignation and anger. 'We have no voices. We were not heard. We were not seen.' Joan Baez spoke: 'Your voices have never been louder. You are being heard all across the country.' We shall overcome . . . we shall overcome . . . the truth shall make us free.

Now we are setting up our tables wherever we want. We hold our rallies on the steps of Sproul Hall. We advocate whatever we please. The faculty has finally moved to support FSM. The entire campus is organized. The administration knows it. We will continue the battle until our demands are won. We ask for no more than our rights as citizens of the United States. We will never accept less."*

Miss Aptheker also contributed an article to a subsequent edition of *Political Affairs*, entitled "Revolt on the Berkeley Campus," in which she describes events commencing with the Sproul Hall invasion of December 2, 1964. She described the removal of the invaders as "brutal assaults on the eight hundred peacefully demonstrating students, carried out by helmeted police, armed with tear gas (fortunately never used), clubs and

**Political Affairs*, January, 1965, p. 53, et seq.

guns, and the imprisonment of the eight hundred for twenty-four hours in the Santa Rita Prison Farm, formerly used as a concentration camp for Japanese-Americans during World War II." She described the strike that paralyzed the Berkeley campus by stating that on the Monday following the Sproul Hall invasion, "we estimated that the strike was 82 percent effective. For almost a week the FSM brought the University literally to a 'grinding halt,' refusing to end demonstrations until Freedom was a reality. The faculty, appalled by the use of police on the campus, refused to teach. On blackboards, on doors of offices and classrooms, members of the faculty wrote hasty notes to their students: 'I will not teach while 600 police are *on my campus*.'" (Committee's italics.)

Miss Aptheker describes the noon rally on Friday following the Sproul Hall invasion by stating that "thousands attended the FSM rally. State Assemblymen John Burton, Willie Brown and Bill Stanton spoke. Joan Baez sang. Messages of support poured into FSM centrals on Friday, Saturday and Sunday, and for weeks following. The state board of the California Democratic Clubs (CDC) condemned the Governor for calling out the police, in support of the FSM. CDC clubs in the Bay Area, for example the Seventh Congressional District and the Sixteenth Assembly District, came out with equally strong statements. Democratic congressmen and assemblymen—Phil Burton, Nick Petris, James Roosevelt, Don Edwards and others condemned the Governor. Bill Stanton called for a revision of the board of Regents and that a Negro leader like Martin Luther King be appointed."

The article refers sarcastically to President Kerr and Robert Scalapino as "Kerr and Robert Scalapino," and stated that "Kerr spoke noble words, but granted none of the substantive demands of the student protest. His speech represented no plan for the future, and no peace for the present."

Borrowing from the booklet entitled "The Regents," by Marvin Garson, Miss Aptheker states that the Regents were "not easily subject to the political pressure of an enraged faculty or student body." Concluding her article on a note of optimism, Miss Aptheker wrote:

"At Berkeley, it appears that the appointment of a new Chancellor, we have won the political fight. Hopefully, at the start of the Spring Semester, there will be new regulations that will maximize political freedom. The alliance between the faculty and the students, and the coalition between all the student groups, represent new possibilities for moving in the direction of a transformation of the university into a truly free community of scholars and students."*

The description of faculty co-operation during the campus-wide strike described by Miss Aptheker, is emphasized by the fact that in an examination given by Assistant Professor Clyde D. Wilson, in Biochemistry No. 213, one of the questions asked the students was whether they were familiar with civil disobedience, which is a matter that may in some way be related to biochemistry, but appears to us more like an instance of using a teaching position to violate a most basic rule of academic freedom. In another Biochemistry examination, Charles A. Dekker asked the following question: "In your opinion what were the events, conditions, acts and/or other factors which led to the campus turmoil of the past seven months, in particular the sit-in at Sproul Hall and the campus-wide strike?"

**Political Affairs*, March, 1965, p. 10, et seq.

As we prepare this concluding portion of our report, Mario Savio, who had been suspended from the campus, has just been readmitted, although the matter still is not finally determined, as it provoked considerable controversy on the campus. When the Forbes Committee, headed by attorney Jerome C. Byrne, first went to the Berkeley campus in February, 1964, it inserted a statement in the student newspaper asking for any interested individuals with pertinent information to contact Mr. Byrne at Pauley Auditorium. Savio stood in the back of the room and made audible sarcastic remarks about the Regents and their committee headed by Regent Forbes that was undertaking to investigate the general administration of the university and the immediate causes for the student demonstrations. When the report was made public on May 12, 1965, Savio exclaimed: "It sounds like a great report. It represents a tactical defeat for the Regents."*

Jack Weinberg's remarks, together with those of Art Goldberg, were quoted in the same issue of the *San Francisco Examiner*. Weinberg said: "I'm only surprised that the Regents allowed such a report to be published." Goldberg said: "I'm delighted to hear about this report. I was one of the FSM leaders interviewed. I'm glad the committee took notice of what we had to say."

We do not know what Goldberg told the committee, but we do know that there has been considerable controversy concerning whether or not any follower of the Peking line of the Communist Party, the line of militance and violence, played any important role in influencing the activities of the FSM. Arthur Goldberg certainly was a follower of this line, by his own statements. It may be contended that he exerted little influence in the FSM, but he was a member of its executive committee, and his influence is attested by a respectable authority, Mario Savio. Savio stated that over the "marathon week-end meeting of October 3 and 4," when the FSM was actually created, the sessions were held in the two-room residence of Arthur Goldberg. On many occasions there were as many as fifty people participating, and Savio said he spent forty-eight hours there with Goldberg putting the FSM together. So here, assuredly, was at least one Maoist who exerted considerable influence in the FSM.†

About a month before the Byrne Report was published, a preview of it appeared in another magazine, *Science*, which published a series of two articles entitled "Crisis at Berkeley; The Civil War, The Second Front." These articles were written in the same general vein as the report itself, and reached much the same conclusions concerning the reasons for the Berkeley Rebellion. The articles were written by Mrs. Christopher Jencks, wife of one of the more prominent staff members of the Byrne Committee. She wrote the articles under the name of Elinor Langer. Apparently Mrs. Jencks had interviewed President Kerr, as she quoted him as follows:

" 'There were tensions before,' Kerr commented. 'Underneath the great public support for university expansion under the master plan there were always political resentments. On a wide variety of issues running from the lifting of the ban on Communist speakers to the abolition of compulsory ROTC we were usually able to persuade the Regents to go along—usually on the argument that it was best for the university. But the sit-ins and the strike really provoked the

**San Francisco Examiner*, May 12, 1965; *Daily Californian*, February 10, 1965.

†*The New Yorker*, March 13, 1965; *Oakland Tribune*, May 19, 1965.

public, and the obscenity issue was simply the last straw. I believed it when I argued that giving the students freedom would lead them to act responsibly,' he concluded, 'and it has been a great personal disappointment to me that it didn't.' ""*

In addition to the support and advice given to the student rebellion by adult Communists in the United States, such as Herbert Aptheker, Lou Goldblatt, and William Mandel, there was also support from international Communist movements. In the second issue of *Insurgent*, recently published, is this statement:

"The Secretariat of the International Union of Students has expressed solidarity with the Free Speech Movement at Berkeley, California, in a telegram sent to FSM leader Mario Savio. This action indicates the world-wide attention that has been given to the FSM."†

The same issue of this publication contains a long and favorable account of World Youth Festivals by Kenneth Cloke, heretofore mentioned, urging students and other young people to attend the Ninth World Youth Festival which is scheduled to be held in Algeria, July 27 to August 7.

One of the most recent activities of the FSU consisted of a meeting with President Kerr by Bettina Aptheker and James Burton. He suggested that they meet with Regents McLaughlin and Heller, so they might voice their objections to the Meyer Report. This report, recommending new and tough rules for student conduct, would obviously be a great obstacle to future demonstrations. Whether or not the two Regents mentioned have consented to meet informally with these students has not been disclosed at the time of this portion of the report is being written.

The Chairman of the Board of Regents, Edward Carter, rejected a wire from the FSU for a meeting with the Regents, stating that: "We find no reason now to make an exception for your group and particularly because of the threatening tone of your telegraphic request." The wire had said: "If this demand is not met the only conclusion which we and other citizens of California can make is that the legitimate channels for negotiations are closed to us." The FSU wished to discuss the Meyer Report, with which they disagree, and the Byrne Report with which they do agree.‡

The Critics Chorus

There have been, as one might expect, numerous magazine articles, surveys, questionnaires and booklets, dealing with the Berkeley Rebellion. All agree that weak and irresolute administration was responsible, in that it allowed the situation to develop that presented the Berkeley campus as an irresistible target for radicals of all varieties. There is also agreement that when the demonstrations commenced they drew wide support from students who were not connected with any organization—certainly none with the Marxist and outright Communist groups.

It is important to observe how the vast majority of Berkeley's 27,500 students were largely ignored by the administration and the press during these long months of incredible rebellion. At least 23,000 students who were trying to get an education were subjected to brainwashing in their classrooms; were excluded from their classes during the campus-wide strike in early December; were subjected to a barrage of filth and pornography, and *their* civil rights were not deemed worthy of attention by the

**Science*, Vol. 148, April 9, 1965, pp. 198-202; April 16, 1965, pp. 346-349.

†*Insurgent*, Vol. 1, No. 2, May-June, 1965, p. 8.

‡*San Francisco Chronicle*, May 19, 1965.

ACLU, or the administration, or the press. Certainly one of these was the right to pursue their studies, without undue interference.

This vast student majority was not organized as was the FSM. It was not sensational, and therefore not newsworthy. But who can say it was unimportant? It *was* the university, an institution operated at public expense and entrusted to the administration of the Regents for one purpose: the education of our young students. During these eight months of demonstrations and disruptions the official student government was paralyzed and utterly incapable of coping with this brash minority of activists. It represented all the students, but when its duly elected president pleaded with the FSM to desist its tactics of violence and disruption, the lovers of free speech drowned his pleas with jeers of derision.

For those who may wish to study the growing literature dealing with the rebellion, we have included a bibliography of sources. They are, mostly, magazine articles written by close observers of and some participants in the scene at Berkeley. Some are university professors, some are students in and out of the FSM, others are experts in the field of education, and yet others are professional journalists. The list is by no means exhaustive, but it does present many important aspects of the subject in broad terms.

Some of these writers believe that the Regents and the university administrators have fallen into the belief that since the university was big and had the most students, the largest faculty, the most campuses and lots of money, that it must, therefore, be the best of all educational institutions. They point out that President Kerr indicated an awareness that size and quality were not necessarily synonymous when he delivered the Godkin Lectures at Harvard in 1963.* But, they insist, the problem should have been anticipated long ago, and then something should have been done to solve the difficulties instead of accepting them as inevitable and waiting patiently for the campus to explode.

One writer, a sociologist, has described the concentration of Communists and their supporters at Berkeley:

"During 1963-64, my first year as a teacher at Berkeley, student political activity was vigorous beyond anything I had recently seen at any other American college." "There was," he said, "a grand chaos of oratory, advocacy and action . . . in 1951, when I visited Berkeley for the first time, a number of socialist youth leaders from the East had just migrated here, because they found the political climate peculiarly congenial to their work. In addition, it was my impression that Communism, too, retained more life and relevance in the Bay Area than in the East. Some of these socialist youth leaders became students; some worked at the university; others worked in the community, becoming part of the perambula of campus life which, at Berkeley, involves many people who are neither students, faculty, nor staff . . ."†

Mr. Glazer is the author of "The Social Basis of American Communism," Harcourt, Brace & World, Inc., N.Y., 1961. This was a volume in the series called Communism in American Life, which was financed by the Fund for the Republic. Dr. Glazer was professor of Sociology at Berkeley during the rebellion and observed it at first hand.

Some of the writers reject the concept that because the university is big, it will lose contact with its students, who will then become unhappy

*See: "The Uses of the University," Harvard University Press, 1963.

†"What Happened at Berkeley," by Nathan Glazer, *Commentary*, February, 1965, p. 39, et seq.

and take over the buildings by force. These observers point out that only a relatively small minority of the students reacted in such a manner, and that spoon-feeding on a campus will not necessarily insure student serenity.

Fred M. Hechinger, education expert for the *New York Times*, observed that "... the administrators, instead of mediating daily, let themselves be cut off from their constituents—the students, the faculty, and even the Regents. They mediated—like labor mediators—after the breakdown of communications. At that point, with the balance of power upset, the faculty, either troubled by its own conscience or intent on increasing its power, joined forces with the students against the administration."*

An article in the *Washington Post*, February 18, 1965, stated that: "... the key role played by the Communist Party and several of its splinter groups has somehow become obscured," and quoted Mort Scheer as declaring after he moved to Berkeley that he was going to forge "a new revolutionary movement," based on "pure Marxist-Leninist principles."

Aside from attacks by the FSM and FSU, perhaps the most critical anti-Kerr article appeared in the liberal *Frontier* magazine. It was written by Colin Miller, who was sent to study the rebellion by the Center for the Study of Democratic Institutions (formerly The Fund for the Republic). Clark Kerr has acted as a co-author and consultant for the Center and the Fund on occasion. The article was entitled "The Student Revolt," and is a "... distillation of Miller's long report for the Santa Barbara Center," and appeared in *Frontier* for the first time. Miller proceeds without delay to his theme. In the first paragraph of the article he wrote:

"Despite widely held conclusions drawn from the March 13 meeting of the University of California Board of Regents, the resignation of Clark Kerr is inevitable. His ultimate retirement is an unscheduled appointment on the University calendar for three reasons: (1) The divisions between the Kerr administration and the faculty have broadened rather than narrowed since the crises of last fall; (2) the absence of a flow of trust from student body to the Kerr presidency makes the Berkeley campus subject to sudden dissensions; (3) Kerr's failure to prove he can stabilize the University by techniques of mediation rather than leadership have given the Regents cause for a lack of security in his administration."

"Without solid faculty, student or Regent support, the Kerr regime cannot be considered in control of the University. The actions of March 13, when Kerr withdrew his abrupt resignation of four days earlier, are no more than a temporary extension of his stay in office. This is true although his departure may be as much as a full year away."

"Both the proposal to increase Forbes Committee Funds, which passed, and the Meyer Resolution (calling for stern measures against students thenceforth) which didn't, were implicitly critical of Clark Kerr. His March 9 resignation before a hurriedly called press conference was no less precipitate than the unexpected acts of civil disobedience perpetrated by FSM last fall. How secure can the Regents be with the administration of nine campuses in what may be regarded as unpredictable hands?"

"On two successive days Clark Kerr released statements of apology to the press. The first, on March 12, was to the faculty for his accusa-

*"Campus Dispute," *New York Times*, Dec. 20, 1964.

tion two days before that faculty committees had sought to 'avoid responsibility' in disciplinary problems. The second was to the Regents for his resignation via the press instead of through customary channels. These messages of regret are temporary palliatives without precedent in Kerr's career as President."

Miller contended in his article that Kerr understood all about the complex multiversity of which he wrote, except his own role as chief administrative officer. Thus in commenting on the closing of the Telegraph-Bancroft entrance area to tables manned by students, Kerr told the press, according to Miller: "I thought it was a mistake and that we should return this area to the students, but that was difficult. It had just been taken away—we could hardly turn around and hand it right back." But, Miller points out, "had he chosen to assume command he might have averted the most sizable manifestation of civil disobedience ever seen on a university campus."*

THE FRONTS AND THE FAR LEFT

As the new and vigorous Communist youth organizations developed, they not only drew heavily on the old CPUSA, but their bold attitude operated to eclipse many of the front groups. These fronts had always been set up in such a manner that the handful of Communists who really controlled them functioned from far behind the scenes. They invariably advocated some worthy cause that would be attractive to liberals, and the front would then serve as a medium for the passing of party line resolutions, the gathering of petitions, placing advertisements in various publications and generally furthering the Communist cause. They were also used to spread Communist ideology in small and subtle doses, and recruit more members to the movement. Exposure has been the nemesis of the fronts, for as the true nature of these organizations and their leaders is made public, they lose their members and their financial support.

The U.S. Department of Justice has published a list of subversive organizations as a guide for the public, and as a group is placed on this list, it is certified to the Subversive Activities Control Board and may appear before that body and resist the listing. If an adverse decision is made, the alleged front has the right of appeal through the courts. The listings are made after investigations by the FBI.

In May only twenty of the 274 organizations formerly listed by the Attorney General were still active, and there was some indication that the list might be discontinued. According to testimony given to a Congressional committee by J. W. Yeagley, head of the Department of Justice's Division of Internal Security, the FBI had been so successful in penetrating these fronts that the Government might have more to lose than gain if the listings were resisted and it was forced to produce evidence before the Subversive Activities Control Board to support its charge of Communist control.

The Constitutional Liberties Information Center, a new and exceptionally active front in Los Angeles, was described at length in our last report. It is now dormant. But there are a few other front groups of long standing that are still operating in California. The most prominent are the Committee for Protection of the Foreign Born, Citizens Committee to Preserve American Freedoms, American Russian Institute and the National Committee to Abolish the House Un-American Activities Committee (NCAHUAC). This last-named front is now more active than ever in California.

The House Committee has been accumulating its expertise and its files for some twenty-six years, and the dissemination of information about the affiliations and activities of Communists and fellow travelers is a source of immense discomfort to the Communist groups. The massive proportions of the propaganda campaign against the House Committee is amazing, continuous and relentless. And this particular front organization, NCAHUAC, will therefore continue to operate as long as the House Committee continues to exist.

Frank Wilkinson has been the leader of the effort to liquidate the House Committee for years, commuting between California and Washington, speaking at meetings and rallies throughout the country, and

carrying on a campaign of correspondence and propaganda. Headquarters for this front with the awkward name, more conveniently known as NCAHUAC, is at 555 North Western Avenue, Los Angeles, and its facilities have also been used by another front, The Citizens Committee to Preserve American Freedom.

Wilkinson's efforts to bring about the liquidation of the House Committee have been futile. Indeed, it has been given larger appropriations in recent years than ever before, although there are always a handful of votes opposing its appropriations. When the negative vote increases a little, the NCAHUAC spreads the news with alacrity through Communist propaganda machinery; when the vote decreases, there is silence. Wilkinson has been spending less time in Washington lately, and his duties have been largely taken over by Dale Gronemir, who presides over the San Francisco office, which was opened in March, 1965, and who seems to have been making all of the important decisions lately. Just as the Bay Area was selected for the massive demonstration against the House Committee in 1960, and as the Berkeley campus of the university was selected for the demonstrations of 1964-1965, so San Francisco was apparently selected as the new base of operations for the NCAHUAC. The letterhead still proclaims that Los Angeles is the main office, but our own sources, which we consider reliable, indicate that the decisions are now being made in San Francisco. As recently as last February the operations in the Bay Area were being run from Post Office Box 77201, San Francisco. The move to the present San Francisco headquarters at 1005 Market Street was made in March. It is estimated that the San Francisco mailing list has now reached a total of approximately 4,000 names.

The Socialist Workers Party is the Trotskyite branch of the Communist movement, and its youth divisions are known as Young People's Socialist League and Young Socialist Alliance. All three of these groups are active, although not large in membership. The youth divisions are almost entirely restricted to university students, while the SWP has, like the CPUSA, become noted for its elderly rank and file members and their love of long and contentious arguments on ideological matters. A few years ago the SWP was noted for the fiery nature of its program and its advocacy of permanent revolution through direct action. Now much of this has been appropriated by the Progressive Labor Party, with its militant adherence to the Peking-Castro line.

The so called *ad hoc* fronts will always be with us, as they spring into existence for some special cause and then vanish again when their purpose has been fulfilled. Most of them are created to raise defense funds, wage a petition-signing campaign, solicit names for newspaper protests of one sort or another, to organize marches, sit-ins and the like. This sort of activity was formerly handled by permanent Communist fronts, but their very permanence rendered them vulnerable to exposure, and it is now considered a more elastic and reliable tactic to create these temporary fronts and then liquidate them quickly when their function has been performed.

THE FAR RIGHT

There has been considerable discussion about the Minutemen in California. J. Edgar Hoover has stated that the F.B.I. has penetrated the organization and is keeping abreast of its activities, but that there was "little real evidence that the Minutemen are anything more than essentially a paper organization with just enough followers over the country so that they can occasionally attract a headline."

The complete list of the twenty organizations on the Attorney General's list which are still regarded as active subversive front organizations by the U.S. Department of Justice are as follows: The American Committee for the Protection of the Foreign Born; American Russian Institute, New York (also known as the American Russian Institute for Cultural Relations with the Soviet Union); American Russian Institute of San Francisco; American Russian Institute of Southern California; Armenian Progressive League of America; Chopin Cultural Center; Communist Party, U.S.A., its subdivisions, subsidiaries and affiliates; Industrial Workers of the World (IWW); Jewish Culture Society; Johnson-Forrest Group of Johnsonites; Ku Klux Klan (including all present versions); Labor Research Association, Inc.; National Council of American-Soviet Friendship; Nationalist Party of Puerto Rico; Nature Friends of America; Proletarian Party of America; Socialist Workers Party; Veterans of the Abraham Lincoln Brigade; Yiddisher Kultur Farband; Yugoslav-American Cooperative Home, Inc., and Yugoslav Seamen's Club, Inc.

In connection with a bill pending before the California Legislature which seeks to outlaw paramilitary organizations in California, Thomas C. Lynch, Attorney General, submitted a report on such organizations, including the American Nazi Party, The National States Rights Party, The California Rangers, The Minutemen, and The Black Muslims. We discussed all of these organizations in our 1963 report. To those who are interested in pursuing the subject further, we recommend that they write to the Attorney General's office for copies of his report which was issued on April 12, 1965.

We regret that space does not permit us to include detailed reports concerning these organizations from 1963 to 1965, but the situation at the University of California in Berkeley was considered of far more importance. As was stated by J. Edgar Hoover, the Minutemen organization consists largely of a paper group, interested in sensational publicity; the American Nazi Party activities in California has never amounted to much, and the Attorney General agrees that in California it has "never been represented by more than a handful of members."

The Attorney General also agrees with our findings in 1963 that the National States Rights Party is probably more active and dangerous than any other ultra-right organization, and states that the incident that we reported as involving the leaders of the NSRP in charges of disturbing the peace and assault and battery, and their subsequent conviction on those charges, marked the end of the organizational drive by the movement in California.

All of these far right organizations advocating violence, provided with arms and ammunition, and some of them obsessed with the idea that

hordes of Communist forces are poised and ready for invasion of the Pacific Coast area at any moment, will always pose an imminent source of domestic danger regardless of the size of their memberships. This type of organization inevitably attracts a highly emotional, fanatic type of follower—often anti-Negro and anti-Semitic—who are inclined to make anonymous telephone calls, scrawl swastikas on places of worship, use home-made bombs, and commit similar acts of violence and lawlessness. The danger potential from this type of organization is, obviously, out of all proportion to its size. Neither the Attorney General's investigators nor our own have found any serious organization of the Ku Klux Klan in this state, although there are evidences of collaboration between the KKK and the National States Rights Party. This knowledge was developed through statements made at a meeting in the William Penn Hotel, Whittier, California, on Tuesday, October 15, 1963. Col. William P. Gale declared on that occasion that he was the founder of the California Rangers, which had been inactive during the past three years; that Conrad Lynch, NSRP organizer in California, was also a minister in Church of Jesus Christ, Christian, headed by Wesley Swift, and that there was close collaboration between the church, the NSRP, the KKK, and the Minutemen. Only twelve people attended this meeting, and at least two of them were undercover agents for official government agencies. The general tone of the meeting was anti-Negro and anti-Semitic.

THE PROGRESSIVE LABOR PARTY

Our last report contained a section which explained the origin and development of the Sino-Soviet split, and its effect upon the Communist Party in the United States, and especially in California. During the last two years that split has deepened, and with the opening of the Red Chinese propaganda outlet in San Francisco, and the establishment of the Progressive Labor Movement in the Bay Area, the effect has been serious and far-reaching.

Realizing that an adequate discussion of the Berkeley Rebellion would necessarily include a discussion of Communist front organizations in the vicinity of Berkeley, the activities of the Communist Party in general, an explanation of the reasons for the concentration of Communist power in Northern California, and the general vulnerability of the Berkeley campus to Communist infiltration; and realizing that such discussions would occupy so much of the present report that there would be little space for other subjects, we have endeavored to incorporate most of them in the section dealing with the demonstrations at Berkeley.

It is necessary, however, to devote some special attention to this new and most militant wing of the Communist movement which was created as an indirect result of the Sino-Soviet split, and which is now rapidly growing throughout the country.

The expulsion of Earl Browder from the American Communist Party in the mid-forties was a signal for the decline of that organization from a top membership of approximately one hundred thousand immediately after World War II, to its present status of about ten to fifteen thousand formal members in the United States. In 1957 John Gates, former editor of the *Daily Worker*, not only resigned but wrote a book entitled "The Story of an American Communist." (Thomas Nelson & Sons, New York, 1958) In the acknowledgements the author expresses his gratitude to Joseph Starobin for help in its preparation. Starobin's son, Robert, is a graduate student at the University of California in Berkeley and participated in the FSM demonstrations. His father, like Gates and many other party leaders, became disillusioned with the general decline and ineffectiveness of the Communist Party, and left. Some of them, like Gates and Howard Fast, wrote books that expressed the reasons for their disillusionment, and explained the causes for the party's stagnation. With the establishment of a Communist regime in Cuba, with the declarations from Red China that Moscow had deviated from the Communist cause, and repudiated the basic principles of Marxism-Leninism, and with a growing split between these two great Communist countries, the Peking line of tough, militant action caught the fancy of many young members of the Communist Party. They then advocated a line of force, action, demonstrations and direct agitation in this country that led to their expulsion from the CPUSA.

Among those who were expelled were Levi Laub, Milt Rosen and Mort Scheer. They were the founders of the Progressive Labor Movement in 1962, and were soon organizing trips of young people to Cuba for revolutionary indoctrination. These travelers returned to make sarcastic and critical comments about the old CPUSA with its aged members, its inflexi-

bility, and its insistence on clinging to the Moscow line of peaceful coexistence.

Richard Armstrong, *Saturday Evening Post* writer, spent a period of eight months interviewing members of the various organizations of the far left throughout the country, and described the Progressive Labor Movement in an article entitled "The Explosive Revival of the Far Left," *Saturday Evening Post*, May 8, 1965. He stated that whereas the membership of the old CPUSA is composed of people who are both elderly and bound by faith in a movement that was out-dated years ago, they are unable to concede the fact of change. The belligerent new Communist movement is composed of members 90% of whom are under thirty years of age, and "when these young radical groups get together, as they did in the leadership of the student riot at Berkeley, California, last December, they can turn the town upside down."

The impact of the Sino-Soviet split in the Communist Party in California is eloquently proclaimed in a statement made by the late Elizabeth Gurley Flynn, former chairman of the Communist Party of the United States, when she wrote in the party organ, referring to a collection of editorials from the Red Chinese paper *Jenmin Jih Pao*, and a booklet entitled "Long Live Leninism," both published in Red China, that: "... I had also received a letter from the Party representative in California who said that these publications were causing a great deal of confusion among our comrades there."*

The Progressive Labor Movement quickly spread from New York to other cities throughout the country. Milt Rosen had been labor secretary of the CPUSA for the State of New York, and Mort Scheer had been its organizer in Buffalo. Soon it had a publication called *Progressive Labor*, edited by Fred Jerome, the son of V. J. Jerome, who was active with John Howard Lawson in the infiltration of the motion picture industry in California several years ago. Scheer came to California, as we have seen, in the early summer of 1964, as West Coast organizer, and established a residence at 2629 Acton Street, Berkeley. He soon built the nucleus of a PLM group in the Bay Area around Lee Coe, Rose Jersawitz, Edward Lee, Stanley and Jane Gow, Larry Harris and John Thomas. The organization soon began to penetrate other left-wing activities, and to broaden its circle of influence. In August, 1964, Scheer was instrumental in organizing a rally of about a hundred people who marched to Union Square, San Francisco, and demanded an end to foreign intervention by the United States. His appearance at Stiles Hall, which we have already described, was attended on August 4, 1964, by Art Goldberg, then chairman of SLATE, John Thomas, Leonard Glaser and Michael Klein, who was active in the FSM, and who was chairman for the meeting. From these activities emerged a PLM organization known as the Committee for Independent Political Action, which became one of the organizing groups of the Free Speech Movement, and which further negates any concept that the PLM had no influence in the FSM.

The May Second Movement (M-2-M), is another national youth group with headquarters at 640 Broadway, New York City, and which is an outgrowth of the PLM. Deriving its name from the first demonstration it staged, a protest in New York at the United Nations building against U.S. policies in Viet Nam, it publishes *Free Student*, which is directed to the youth of America, especially its students. Its founder-chairman is

**Political Affairs*, November, 1963, pp. 24 & 25.

Russell Stetler, and its representative on the West Coast is Rick Manderfield, P.O. Box 583, San Francisco, 94101. On the back page of the issue of this publication for April 1965 there is a statement signed by a long list of young Americans of draft age who signify their opposition to United States participation in the Viet Nam war by stating that "we herewith state our refusal to fight against the people of *South* (sic) Viet Nam." We presume that in their zeal to rush their sentiments into print—or for some more obscure purpose—this slip passed the editors and was printed in too many issues of the publication to be changed. Since the people of *South* Viet Nam, in collaboration with the forces of the United States, are fighting the communist Viet Cong, from *North* Viet Nam, the mistake is interesting, indeed. The list includes 82 young men of draft age from California, most of them from the Bay Area, and many of them, including Mario Savio, who were active in the FSM demonstrations.

The heroes of the PLM, the May Second Movement, and the Committee for Independent Political Action, are admirers and followers of Mao Tse-tung, Ho Chi Minh, the Communist leaders of North Viet Nam, and Fidel Castro. The PLM has also been extremely active in organizing illegal trips by students to Cuba by way of Czechoslovakia, as we have heretofore described.

On March 27, 1965, on the sixth floor of the Hotel Shattuck in Berkeley, there was a highly secret conference of about fifty delegates from various localities on the West Coast, assembled to prepare for the national organizing convention for a Progressive Labor Party in New York. Notice of the Berkeley meeting was given by word of mouth, the only printed material used being a mimeographed agenda prepared by David J. Rike, and which was closely guarded.

Over the week-end of April 17 and 18, 1965, the Progressive Labor Party replaced the Progressive Labor Movement, claimed fifteen hundred members at the end of its four-day convention, and announced that Milton Rosen, 38, had been elected president. Mortimer Scheer of Berkeley and William Epton of New York, were elected vice-presidents, and a national executive committee of twenty was created.

It is already apparent that the new Progressive Labor Party is not only the most militant and aggressive Communist organization in this country, but that it is drawing younger members of the old CPUSA out of the ranks, and attracting large numbers of radical youth from all parts of the country. Some of its propaganda outlets have been located at Box 137, Planitarium Station, New York City; Box 996, Chicago 90, Illinois; Box 6604, Cleveland 1, Ohio; Box 8442, Philadelphia, Pennsylvania, and Box 72112 Watts Station, Los Angeles. The revelations of Phillip Abbott Luce who left the PLM when he was sufficiently trusted to learn about its program for terror and violence, have already been set forth herein. Vice-President William Epton of the new Progressive Labor Party, is now under indictment for directing acts of violence in New York, and one of the conditions for his release on bail was a stern restrictive order by the court forbidding him from coming to California on a projected campus lecture tour.

On March 9, 1965, New York police arrested five young men and women charged with criminal contempt of a grand jury investigating the role of the PLM in last summer's ghetto riots. The persons arrested were: Robert Apter, PLM member in New York; Michael Brown, New York organizer and member of the National Coordinating Committee of the May Second Movement; Susan Karp, Otis Chestnut, Jerry Gellis, Levi

Laub, and Ellen Shallit, secretary of PLM's Student Committee for Travel to Cuba.*

The PLM and the PLP have been repeatedly condemned and repudiated by responsible Negro leaders, especially Roy Wilkins, the executive director of the NAACP. Nevertheless, the PLP is finding enthusiastic support from the more irresponsible and violent elements in various Negro organizations, is continuing to attract large numbers of members, and, as pointed out by Victor Riesel in a recent newspaper column, the movement apparently had a source of ample funds from its very inception. He pointed out that to keep the one hundred and ten out-of-state delegates for a week would cost at least \$2,000 a day, and that additional thousands of dollars were needed for the printing of the leaflets, booklets, and a forty-eight-page convention agenda. "Whatever the mysterious sources are," Riesel wrote, "they're also providing thousands of dollars for the maintenance of headquarters . . . in Berkeley, San Francisco, Chicago, Buffalo, Louisville, and Williamsport, in addition to three major offices in New York City. Apparently there is no doubt of the gold flow. PLP leaders are planning to publish not only a Marxist-Leninist quarterly, the national newspaper and a series of anti-imperialist booklets, but also a slick magazine fashioned after the pro-Chinese Communist 'Revolution' now issued in Paris for the European continent . . . The party is made up of young people . . . dedicated to stirring wildcat action in the factories and on the streets. They are a very successful and militant band of young revolutionists and had ample money since the first day they went into business . . . in 1962."†

During the last two or three years there has been a great deal of talk about the ineffectiveness of the Communist movement in the United States. Every professional source has pointed out the utter nonsense of this conception. As long as there is a global contest between the forces of Communism and the free world and as long as the United States remains the most powerful and successful example of the free enterprise system, it will also be the main target for Communist subversion. We have stated many times that without an understanding of the international Communist movement, it is utterly impossible to understand the Communist movement in this country. The Sino-Soviet split has exerted a profound effect on every Communist organization in the world, and when the CPUSA was regarded as too mild and inactive, a number of new, potent, pro-Peking Communist organizations sprang into existence with a program of direct and forceful action.

To those who contend that we should forget all about the perils of domestic Communism, we would point out that many venerable and effective propaganda outlets for the CPUSA are still in business, despite the fact they all operate at a considerable deficit. They are: *The Worker*, *People's World*, *Communist Viewpoint*, *National Guardian*, *Political Affairs*, and a group of pro-Communist and ultra-liberal publications, each of which carries recommended reading lists of Communist propaganda that is available at various California outlets. In addition, as we have stated, the Red Chinese propaganda outlet in San Francisco is doing a rushing business, as are the amply-financed publications of the new Progressive Labor Movement.

We would also point out that when William C. Taylor ran on the open Communist Party ticket and as a Communist member, for the office of

**National Guardian*, March 13, 1965.

†*Oakland Tribune*, April 26, 1965.

supervisor of Los Angeles County in the last election for that office, he received 33,576 votes, a support out of all proportion to the estimated strength of the formal Communist Party membership in this state. The same sort of large and disproportionate vote was received by Bernadette Doyle, a Communist Party member, and Holland Roberts, former director of the Communist School in San Francisco, when they ran for state offices in California several years ago.

THE JOHN BIRCH SOCIETY

In 1963 we devoted sixty-one pages of our report to the John Birch Society. Much of the report was highly critical, but because we did not find the society subversive, we were accused in some quarters of having given it a thick whitewashing. It was natural to expect that the extreme Right would view the report with favor, the extreme Left with disfavor, and that the John Birch Society would utilize the favorable statements and ignore our more pointed criticisms. This is precisely what happened, although we were glad to find that J. Edgar Hoover, when asked whether or not the F.B.I. had investigated the society, replied that it had not because it only investigated subversive organizations.

Surprisingly, many liberals who analyzed our conclusions about the society with care, found the report fair and objective. Among these are Dr. H. A. and Bonaro Overstreet, who have written three anti-Communist books that earned for them the criticism of the far Left, and in 1964 published a book called "The Strange Tactics of Extremism," which earned them an equally savage attack from the far Right. The Overstreets devote pages 25 to 112 in their book to the John Birch Society, and although their criticisms are far more emphatic than ours, they do not find the organization subversive.

On page 8 of our 1963 report we concluded our discussion of *The Politician*, with the following statement:

"We are dealing at length with the allegations contained in *The Politician* because it set off the criticism of the John Birch Society when its contents became known, because most of the top officials of the John Birch Society attribute the attacks against it to the contents of *The Politician* and because it serves to highlight the character of Robert Welch as the founder and present leader of the movement. Furthermore, it will be necessary to refer to the document hereafter, in distinguishing between the critics of the statements contained in it and efforts to attribute the statements of its author to all the members of the Society."

The Politician was issued as a letter of three hundred sixty-eight pages by Robert Welch, in 1954. This was four years before the founding of the John Birch Society. In this extraordinary document Welch made the accusations that described President Eisenhower, John Foster Dulles, and other high members of our government as either Communists or Communist dupes. We characterized these and similar assertions contained in this 1954 Welch letter as not only ridiculous, but entirely unsupported by proof, and as statements that the members of the John Birch Society as a whole had repudiated. We pointed out that the statements were made four years before the society was even founded, that Mr. Welch assumed all responsibility for them, and that he had repeatedly declared that they had nothing to do with the membership of the John Birch Society.

But since our report was published, and after long and stormy sessions with the National Council of the John Birch Society, Welch decided to publish *The Politician* again. His insistence in this regard led to the resignation of several members of the National Council, but the entire

document was re-published on October 31, 1963. There was now no escaping the fact, despite slight modifications and tempering of some of the more rash statements in the original edition, that it was published at a time when the John Birch Society was active, and was published after sessions with the National Council of the Society, and either with its approval or in spite of its disapproval. Thus there was a repetition of the old controversial accusations and assumptions, and once again the original document was given a far wider circulation with its charges against Milton Eisenhower, described as a Communist of thirty years standing; former President Eisenhower as a "dedicated, conscious agent of the Communist conspiracy," and former Presidents Roosevelt and Truman, Chief Justice Earl Warren, John Foster Dulles and his brother Allen, as aiding the Communist conspiracy, consciously or otherwise.

The private circulation of *The Politician* in the form of a multi-paged letter in 1954 is one thing, because it was then the work of one man, was circulated to his close friends and acquaintances only, and there was no John Birch Society in existence at the time. But its re-publication late in 1963, after a session with the National Council of the Society, is something else again, and in our opinion merits the most serious criticism. We are not alone in our view, because, as we pointed out, some members of the National Council agree with us as evidenced by their resignations when it became clear that Welch was determined to proceed with his project.

Another matter which occurred since the publication of our 1963 report, and which brought added criticism to the Society, was a series of two articles that appeared in *American Opinion*, a monthly magazine issued under the aegis of the Society, by Revilo Oliver, dealing with the assassination of former President Kennedy.* Mr. Oliver had stated at a speech delivered at Santa Ana Valley High School, that the assassination of President Kennedy was anticipated by the government because he had double-crossed the Communists, and had been "executed by the Communist conspiracy because he was planning to turn American."† Oliver declared that an army unit had been rehearsing Mr. Kennedy's funeral in Washington for a full week before the assassination. But when Oliver was called before the Warren Commission and examined under oath, and was pressed for proof of this assertion, he produced an item from the Jackson Mississippi *Clarion-Ledger* of February 24, 1964, which was an interview with a Captain Richard C. Cloy. Mr. Oliver was then asked: "... in the article what Captain Cloy says is not what you state in your speech. He said that before the assassination his special unit had been rehearsing for the anticipated possible death of President Hoover, who was ill." And Mr. Oliver replied: "That is right. . . ."

The two-part article in the *American Opinion* was in such bad taste, and so crammed with undocumented statements, inferences, conclusions, and accusations of disloyalty on the part of the dead President, that it filled its readers with revulsion.

There have been some changes in the organizational structure of the John Birch Society in California. Richard Pine is now the Major California Coordinator, and resides in Rialto, near San Bernardino. Working under his direction are a number of Area Coordinators, as follows: four in Los Angeles County; two in San Diego County; one for San Bernardino and Riverside Counties; one for the San Joaquin Valley, whose area runs

*"Marxmanship in Dallas," *American Opinion*, February-March, 1964.

†*American Opinion*, February 1964, p. 18.

from Bakersfield to Stockton; one in San Jose; one in Marin County, whose jurisdiction extends to Humboldt County; one in Sacramento, whose territory runs to the state line, and two in Orange County. Each chapter in California averages from fifteen to thirty members at present, the California Regional office is located at San Marino, and has recently moved to larger quarters.

Edward Griffin, formerly the major coordinator for California, now heads the Society's National Audio-Visual program, and supervises the circulation of books, movies, tapes, and speakers' programs. Former Congressman John Rousselot became National Director of Public Relations for the Society as of July 1, 1964, and maintains his chief office at the San Marino headquarters, where Robert Welch plans to spend approximately one-third of his time. There are two hundred and ninety-five book stores operated nationally by or through the Society, fifteen of which are situated in California. Other book stores also carry the literature of the Society, and our agents recently visited some of these outlets for the purpose of sampling the sort of materials being sold. One booklet entitled "We Shall Fight in the Streets; A Guide to Street Fighting," by Captain S. J. Cuthbert, was printed in Great Britain. Our copy is the sixth edition, issued in December, 1953, and bears a sticker on which appears "Minutemen, P.O. Box 68, Norborne, Missouri. We Will Never Surrender." Another booklet was entitled "Blaster's Handbook," fourteenth edition, issued by E. I. Du Pont De Nemours & Company, Explosives Department, Wilmington, Delaware, 1963.

These books may, of course, be purchased by anyone, including members of the Minutemen, National States Rights Party, American Nazi Party, or any of the other groups, ultra-right or ultra-left, that may believe they have some practical use for this type of material. We need not point out that if the John Birch Society wishes to disavow any connection with the Minutemen, its literature outlets should not be handling publications bearing the stamps or imprints of the Minutemen.

The John Birch Society *Bulletin* for August, 1964, attacks Robert D. De Pugh, leader of the Minutemen, who was once a member of the Society, and who made "about two years ago the most continuous and determined effort to bring about extensive collaboration of the Minutemen with the John Birch Society that we have experienced with any group." De Pugh is about forty years old, lived in Norborne, Missouri, and organized the Minutemen in 1960 as a military-type underground organization trained in the use of firearms and guerilla warfare. He was once an ardent admirer of Robert Welch and the John Birch Society and became a member. De Pugh later decided that the Birchers were much too gentlemanly and conservative. And at about the same time, the Society decided that De Pugh was a trifle too impulsive and rash, and there came a parting of the ways. De Pugh declared that he resigned, and the John Birch Society declared that it decided to drop him from membership and has a cancelled check for the refund of his dues.

There is no question that the John Birch Society has grown considerably since 1964, when there were one hundred and twenty people on the payroll at the main office at Belmont, Massachusetts; there were sixty coordinators, and the total staff of about two hundred employees cost the Society approximately thirty thousand dollars per week. Its income in 1962 was \$1,200,000.00; in 1963, \$1,621,844.91; in 1964, \$3,000,000. The membership almost doubled between January 1, 1964 and December 31 of that

year. The 1964 budget amounted to approximately \$2,500,000.00 of which twenty per cent was earmarked for California.

According to reliable sources, we would estimate that the Society has grown so rapidly that it has attracted a lunatic fringe that is now assuming serious proportions. We find very little anti-Negro sentiment among the members, but we do find a growing incidence of anti-Semitism, although the Society as a whole is far from anti-Semitic.

We stated on page 35 of our 1963 report that it was too early to predict the outcome of the growing pressures against the continuance of one man rule by Mr. Welch. His insistence upon the re-publication of *The Politician* and the resignation of some members of the National Council now indicate that the authority of Mr. Welch is absolute, and that if members of his National Council become so obdurate that they persist in opposing his projects, then they are either overruled or resign and are replaced by individuals who are more tractable.

During 1964 and early in 1965, the participation of members of the John Birch Society and the activities of young Republican organizations in California drew considerable criticism from Republican party leaders, both young and old. To these critics the Society, usually through its director of public relations, Mr. Rousselot, replied that there were both Democrats and Republicans in the Society, that they were politically active, and had a right to engage in partisan politics.

On page 53 of our 1963 report we observed that "as this movement steadily becomes larger it finds itself facing the problems that inevitably beset any organization of national proportion that is sustained on a high degree of emotionalism. As efforts are made to recruit more members, and as more subordinate officers are sent out into the field, there is an increasing probability that among the new members will be a fringe of unstable, chauvinist people who are prone to accept as accurate the most irresponsible charges of Communist activity. This is the sort of person who is quick to accuse an innocent liberal of being a Communist, and of forever damning anyone who was trapped into joining a Communist front group. Some of these members have been making accusations that are impossible to sustain, and as a result have found themselves facing legal actions for libel or slander."

The John Birch Society is certainly charged with a high degree of emotionalism, and it certainly has grown enormously since 1963. It has, as we predicted, been beset by an influx of emotionally unstable people, some of whom have been prosecuted in the courts for their hoodlum tactics in disrupting meetings, and heckling speakers with whom they disagree.

We do not disavow any of the findings we made in our 1963 report, but we make the foregoing observations for the purpose of bringing that report to date. We are more critical of the Society now than we were then for the reason that it has, in our opinion, merited such criticism by reason of its activities as exemplified by the irresponsible articles by a member of its National Council, the re-publication of *The Politician*, the inexcusable actions of its minority of irresponsible members, and dangerous increase of anti-Semitism among a minority of the membership.

We again emphasize that the F.B.I. has not seen fit to undertake an investigation of the Society because it only investigates organizations suspected of being subversive, and that even the Society's most outspoken critics, H. A. and Bonaro Overstreet, agree with our conclusion that the John Birch Society is not a subversive organization.

In conclusion it should be observed that Mr. John Rousselot was appointed director of public relations for the purpose of presenting a more dignified image of the society to the public. His diligent efforts to that end have apparently been satisfactory, as the John Birch Society *Bulletin* for April, 1965, stated that "... the attitude of the American press as a whole is definitely invisibly becoming less unfair to the Society ..."

LETTERS AND STATEMENTS

On the evening of July 17, 1953, agents of the committee observed a number of individuals leaving their parked automobiles and entering the premises at 2016 Seventh Street, Berkeley, which we described in our 1961 report as the Herman Sons Hall. The meeting was addressed by Joseph Clark, Moscow representative for the *People's World*. Our account on page 30 of the 1961 report listed the names of the registered owners of those vehicles from which individuals were seen to emerge and enter the hall where the meeting was being held, and among them were A. C. Scott and wife. Mr. and Mrs. Scott wrote to us on July 3, 1963, stating that they were not in Berkeley on July 15, 1963, and were at a loss to know how a vehicle registered to them could have been included in the list. We advised them to send us a signed statement, which we would publish in our next report. We accordingly received the statement, as follows:

"Thank you for answering our letter of March 5, 1963. Regarding the meeting held in Berkeley on July 17, 1953, we wish to make the following statement for publication in your next report:

We, Alger Chamberlain Scott and Alice Howard Scott, state that we did not attend a meeting at the Sons of Herman Hall, 2016 Seventh Street, Berkeley, on July seventeenth, 1963; that we are not now or ever have been communists or in sympathy with the cause of communism; and that we are loyal citizens of the United States of America under its present system of government and will do everything in our power to preserve that system of government.

Alger Chamberlain Scott
Alice Howard Scott."

On September 1, 1963, the committee received a letter from Bonaro W. Overstreet, the wife of H. A. Overstreet, which read, in part, as follows, and which we quote with Mrs. Overstreet's permission:

"It is a matter of record that the committee's reports for a number of years—from 1948 to 1953, I believe—contained items about Mr. Overstreet's 'affiliation' with certain front groups: All these items adding up to an approximation of the list in the House Committee files. It is a matter of record, also, that there was a carry-over of membership on the (California) committee from the 1948-1953, to 1959. The committee, in brief, that issued the 1959 report was not by any means a new, inexperienced group that had never had its attention focused on Mr. Overstreet's 'record.' Rather, it was a group that showed its willingness and its capacity to recognize that a citizen not previously alert to sense the presence of Communist influence could become aware of the nature of the Communist menace.

"This is why we are so appreciative of this report. It gives us a concrete, documented chance to say to cynical 'liberals' that it is simply not true that the committee, having once 'branded' a person as pro-Communist, 'hounds' him for ever after. And even more important, it gives us a chance to say that the committee sees a

function that can be usefully performed by non-Communist liberals who, having been unwarily attracted, at some stage of their lives, to one or more Communist fronts, are *not* 'content to remain silent when by speaking boldly they could strike an effective blow against the menace that attracted them to its periphery.' That phrasing from the 1959 report is the best that we have come across for the expression of this necessary point of view . . . our own double aim, for the past ten years and more, has been, first, to make unmistakably clear to the widest possible public the nature of international Communisms aims and methods; and, second, to bring into being, in this country, a broad, solid liberal-conservative anti-Communist front: one broad enough to embrace persons of many different viewpoints, on many different subjects, but unanimous in its firm rejection of totalitarian, conspiratorial Communism."

On pages 39 and 40 of our 1963 report we listed 175 names of members of the John Birch Society from whom we had received letters or statements. The name of B. G. Chynoweth was listed on page 40. He thereafter advised us that he was not a member of the Society, and we gladly make the correction herewith at his request.

In describing a meeting of the National States Rights Party held at the Embassy Auditorium, Los Angeles, on February 8, 1963, we referred to a reporter for the *People's World* as follows:

" . . . As the meeting ended, a minor scuffle occurred when one of the NSRP members recognized Lionel Rolfe, *People's World* reporter, who had been taking notes. Both Rolfe and the young lady who accompanied him (a UCLA student) were threatened with injury if they came to another NSRP meeting. The *People's World* published an account of this affair in its issue for February 15, but neglected to give the name of the reporter."

The committee recently received the following letter, dated May 7, 1965, from Mr. Rolfe, addressed to R. E. Combs, Committee Counsel, as follows:

"Dear Sir: On page 198 of the 1963 Un-American Activities in California Report, I am listed as a reporter for the *People's World*. I severed my connection with this publication and the group that controls it on August 14, 1963.

Sincerely,
Lionel F. M. Rolfe."

REPORT OF PROPOSED TRANSFER OF NORTHERN BRANCH OF THE DEPARTMENT OF WATER RESOURCES TO RED BLUFF

September 21, 1965

Committee Hearing

The Senate Fact Finding Committee on Water Resources held a hearing on August 27, 1965, on the proposed move of the Northern Branch of the Department of Water Resources to Red Bluff. During the 1965 First Extraordinary Session, three Senate resolutions¹ were introduced which requested the department to study "the feasibility and timing of the transfer of the Northern Branch of the Department of Water Resources" to either Chico, Redding, or Red Bluff. Each study was to "consider particularly the preferability of locating said branch . . . in terms of services and advantages to the state as a whole as well as to the operations and functions of the department." The Director of Water Resources was requested to report on the subject of the resolution not later than the fifth legislative day of the 1966 Regular Session.

On July 15, 1965, the Director of Water Resources by memorandum advised the chairman that he had selected Red Bluff as the site for the northern district and proposed to establish the district there on or about October 15, 1965. Because it is customary for departments to report during the following session on legislative resolutions requesting studies so that the Legislature can act on the information derived from the study, several members of this committee and other affected senators felt that a public hearing should be held on the matter. A hearing was scheduled by the committee chairman and all interested parties were invited to testify. Members of the Assembly Interim Committee on Water were invited to sit with the Senate committee and several did participate in the hearing.

Testimony was received from the Department of Water Resources, the senators and citizens representing the Cities of Chico, Red Bluff, Redding, Willits and Eureka, the Legislative Analyst, as well as representatives of the California State Employees Association representing the employees of the Northern Branch.

History of Departmental Decentralization

The Department of Water Resources first officially proposed in 1961 to decentralize its activities to four districts in northern and central California based on the pattern of the existing district office in Los Angeles. The Legislature disapproved of this decentralization and by

¹ Senate Resolution No. 11 (Pittman) as amended, page 23, *Senate Journal*, June 28, 1965. Senate Resolution No. 12 (Marler) as amended, page 53, *Senate Journal*, June 29, 1965. Senate Resolution No. 24 (O'Sullivan) as amended, page 64, *Senate Journal*, June 30, 1965.

limiting language in the Budget Bill, prevented its execution. In 1963 the department supported a concurrent resolution which the Legislature adopted recommending a district office in Fresno. In 1964 and again in 1965 the department recommended establishing its second district office—the one for the bay area—in San Jose. On the last day of the 1965 General Session, the Senate by Senate Resolution No. 302 (page 4503, *Senate Journal*, June 18, 1965), approved such a district office but recommended its location in the north bay area rather than the south bay area. In the very brief special session thereafter, resolutions were adopted requesting the study of Chico, Redding and Red Bluff as possible locations for the northern district office of the department.

The committee notes that the just-mentioned Senate Resolution No. 302, pertaining to the San Francisco bay area office, was adopted on June 18, 1965. Although as just stated, it merely requested the Director of Water Resources to establish a branch office somewhere in the north bay area, the department suddenly announced on July 16th that the City of Vallejo had been selected and presented the Legislature with a fait accompli in this respect.

Members of the Assembly Interim Committee on Water who attended the August 27th hearing observed that the Assembly had not formally taken any position on the Vallejo location. Moreover, at this date the Assembly has not taken any position on the selection of a site for the northern district office among the Cities of Chico, Redding and Red Bluff; but on the basis of resolutions adopted by it at the general session²; it obviously favors the establishment by the department of a northern district office.

Testimony

The Department of Water Resources testified at the committee's hearing that the City of Red Bluff is favorably located for the execution of the department's work in northern California. Since this work centers around the planning activities of the Eel River and flood control activities along the Sacramento River, the department has concluded that Red Bluff is the most appropriate site. The department expressed the opinion that living conditions would be adequate for its employees although conceding that in this regard Chico and Redding had some advantages.

Senators Pittman, O'Sullivan, Marler, Christensen, and Petersen presented testimony on the merits and desirability of cities within their respective senatorial districts as prospective sites for the office. Representatives of local government and other interested parties assisted in presenting this data. In addition, the committee received many communications and requests from individual parties, business firms, and public agencies expressing an interest in having the department locate in their respective areas. Considerable testimony was presented regarding the availability of housing, office space, airports, public transportation, educational institutions, and other factors of

² House Resolution No. 606 (Davis), page 4998, *Assembly Journal*, June 7, 1965. House Resolution No. 51 (Davis) as amended, pages 5092, 5101, 5102, *Assembly Journal*, June 7, 1965. House Resolution No. 8 (Ray E. Johnson), 1965 1st Extraordinary Session, pages 10-11, *Assembly Journal*, June 25, 1965.

interest to the department's employees who may be transferred to the area.

Representatives of the California State Employees Association spoke on behalf of the employees of the proposed northern district and indicated a strong preference for Redding over Red Bluff existed among the employees. This preference was based largely on living conditions and particularly the availability of housing. The spokesman noted that, currently, there is an excess of private housing available in Sacramento with the result that prices are depressed and a "buyers' market" exists in Sacramento. This means that some employees who may transfer would be required to sell their homes in Sacramento during unfavorable market conditions and may sustain considerable loss compared to purchase prices in recent years. On the other hand, the influx of approximately 100 departmental employees in a city of about 8,000 population, such as Red Bluff, would tend to create a "sellers' market" in housing there which would also be adverse to the employees' interest.

Testimony from the office of the Legislative Analyst described some of the organization and management problems of the department's headquarters in Sacramento which confront the department in supervising district offices. This testimony noted that progress has been made in solving these problems but, upon specific questioning, the analyst's office was unable to indicate whether the department could successfully establish and administer an office in Red Bluff. The success of such an endeavor, it was noted, is largely dependent on the personnel and management policies of the department in carrying out the relocation and on the future management practices of the department in overcoming certain disadvantages inherent in locating specialized personnel in smaller communities.

Relocation Considerations

In 1963 when the Department of Water Resources first proposed to establish a district office in Fresno, members of this committee questioned the department about the existence of an overall departmental plan for decentralization. The department did not produce such a plan in 1963 but, instead, cited decisions it made in 1961 at the time the original decentralization was proposed. On subsequent occasions, as decentralization questions have arisen, the committee has found that it was necessary to approach each proposed move by itself. It is, therefore, difficult to review the history of departmental decentralization efforts and arrive at any conclusions which reflect any consistent patterns or set of management objectives. Because the move to Red Bluff is the last of the proposed decentralization moves and the Senate has itself given prior approval to preceding moves, the committee does not feel it is appropriate at this time to reconsider the basic problem of the lack of an overall plan for such decentralization.

The testimony presented at the hearing did not indicate a clear advantage for any one of the five cities proposed for a departmental office. In terms of size, possible availability of office space, and the location of a state college, Chico appeared to be preferable. However, Chico is on the extreme eastern edge of the district. Similarly, Eureka is on the opposite edge of the district. Since the department emphasized in its presentation that the travel to and from the northern

branch office would be mainly by air, comparative distances from Sacramento to the various cities are not of major importance timewise, but air accessibility obviously is. The City of Willets was proposed for a field headquarters rather than a district office but the department does not propose to establish this type of an office.

The remaining two cities, Red Bluff and Redding, have both advantages and disadvantages. Red Bluff is located somewhat more favorably for the department's work but Redding is preferred by the employees as a headquarters city. It is difficult for the committee to evaluate the desirability of a particular location from the employees' point of view since this can be heavily influenced by many subjective factors. The committee points out, however, that the department faces serious difficulties in locating at Red Bluff in view of the statements from employee representatives at the hearing and the letters received from individual employees by the committee that the employees prefer Redding to Red Bluff.

The department has indicated that desirable office space is not available in either Redding or Red Bluff. It, therefore, anticipates that the state will eventually need to construct an office building to house the northern district or provide space through lease arrangement. The department is confronted with a somewhat similar problem in Vallejo and its Fresno office is currently situated in three different buildings.

Conclusions

Legislative Counsel Opinion No. 280 (requested by the chairman), indicates that the Director of Water Resources and the Governor are specifically authorized to select branch or district office sites and that under the present provisions of Section 125 of the Water Code, the Legislature does not have any power to determine the site by action of any of its duly constituted committees.

Furthermore, under the separation of powers provided in our Constitution, it is not the Legislature's function to direct particular solutions to departmental management problems—particularly where, as here, discretion to solve those problems has been expressly vested in the department by the Legislature. In such a situation neither the Legislature nor this committee should substitute its administrative judgment for that of the department.

The committee in this matter has, through its hearing and this public report, served well its role of being a sounding board to all localities and persons interested in this matter.

In closing, the department's administrative responsibility for making such a selection wisely and equitably must be stressed. It is the clear responsibility of the department to manage any relocation in such manner that the interests of the public, the department, and particularly the employees of the northern branch are both respected and advanced. The department's decision-making and legislative relations on the entire decentralization effort since 1961 appears to represent capriciousness more than sound management. In view of the testimony developed at the hearing, the committee believes there is room for distinct improvement in both its decision-making and legislative relations in this area.

SEPARATE COMMENT BY SENATOR JOHN G. SCHMITZ

Senator Schmitz disagrees with the statement found in this report under the heading of "Relocation Considerations," which reads: "The testimony presented at the hearing did not indicate a clear advantage for any one of the five cities proposed for a departmental office."

Senator Schmitz, who sat throughout the entire hearing, believes that the evidence establishes that Redding is the most advantageous site.

COMMENT BY SENATOR STAN PITTMAN ON THE REPORT OF "PROPOSED TRANSFER OF NORTHERN BRANCH OF THE DEPARTMENT OF WATER RESOURCES TO RED BLUFF," OF THE SENATE FACT FINDING COMMITTEE ON WATER RESOURCES

"I should like to take exception to the mention in the report, quote-- "However, Chico is on the eastern edge of the district."

"While it is not the intent of the committee to specifically name a particular site, I felt it necessary to point out that from the testimony presented, showing the current and future workload of the Northern Branch of the Department of Water Resources in terms of number of personnel and budget expenditures, it appeared obvious that Chico is centrally located."

"The City of Chico has more than met the other stated criteria of the department and has also offered the State of California a \$60,000 parcel of land—gratis—and/or immediate office space at an airport with scheduled as well as charter service available."

LETTER OF TRANSMITTAL

Senate Chamber, State Capitol
Sacramento, June 10, 1965

Honorable Glenn M. Anderson
President of the Senate,
and
Gentlemen of the Senate
Senate Chamber, Sacramento

MR. PRESIDENT AND GENTLEMEN OF THE SENATE:

The Senate Fact Finding Committee on Water Resources, as authorized by Section 12.5 of the Rules of the Senate, submits herewith a partial report on its interim activities.

Respectfully submitted,

JAMES A. COBEY, *Chairman*
CARL L. CHRISTENSEN
HUGH P. DONNELLY
JOHN F. MCCARTHY *
GEORGE MILLER, JR.†

EUGENE G. NISBET
STAN PITTMAN
JACK SCHRADER
HAROLD T. SEDGWICK
HOWARD WAY

* With reservations.

† I signed the letter of transmittal for this report on the San Joaquin Valley Drain only to assure its printing and public distribution. I *do not* agree with the conclusions and recommendations contained herein.

CONCLUSIONS

The San Joaquin Valley of California, one of the nation's most fertile and highly productive agricultural areas, is presently in danger of being seriously damaged through the accumulation of drainage water containing excessive amounts of dissolved salts. The introduction in the near future of additional irrigation water through federal and state water development projects will serve to complicate seriously and aggravate the present problem unless drainage facilities are provided in conjunction with such development. The immediate construction of adequate drainage facilities is imperative if the Valley's productivity is to be maintained.

Tentative agreement for immediate construction of such facilities has been reached between the U.S. Department of the Interior, Bureau of Reclamation, and the California State Department of Water Resources. These facilities would consist of a single, two-stage drain to be built by the state with substantial financial participation provided by the federal government through the Bureau of Reclamation. The two organizations are now in general accord on all details of the project.

The decision to build a single, joint drain eliminates the necessity of two drains—an interceptor drain required by the USBR under provisions of the federal San Luis Act of 1960, from Kettleman City to a point near Antioch Bridge, and a larger capacity master drain by the State Department of Water Resources, from a point near Bakersfield to the Antioch Bridge, authorized in the Burns-Porter Act of 1960. The routes to be traversed from Kettleman City to the north are, for all practical purposes, identical.

Legislative guarantees at both the federal and state levels against damage to San Francisco Bay and adjacent waters have been demanded by Bay area interests, since they fear that the agricultural waste water to be discharged from the proposed drain at Antioch will cause serious pollution damage to those receiving waters.

The initial appropriation of two million dollars for the joint drain has now been approved by Congress. Amendments, however, specify terms and conditions on the construction or operation of an interceptor drain.* The limitations specified in the budget bill will prevail for the duration of the fiscal year. However, its passage has served to commit the administration and the Congress to the joint drain.

* Amendments provide that the final point of discharge will not be determined until:
"1. Completion of the pollution study by the Department of Health, Education, and Welfare;

"2. Development of a plan to minimize any detrimental effect of the San Luis drainage water on San Francisco Bay;

"3. Agreement is reached between the State of California, subject to approval of the President, limiting the federal share of the cost of the drain to Antioch to not more than 60 percent thereof and if found necessary to extend the drain beyond Antioch, the federal share of such extension shall be determined on the basis of an acceptable apportionment of the additional costs between the federal government and the nonfederal entities who are to use these facilities; and,

"4. No funds shall be made available under this appropriation for the construction in Contra Costa County of any portion of an interceptor drain in connection with the San Luis unit which terminates at any point east of Port Chicago."

A construction agreement for the joint drain between the state and the federal government appears imminent inasmuch as the final stages of negotiation have been reached. On the other hand, no more than a start has been made in the development of a comprehensive plan to solve the bay area's pollution problems.

The evidence before this committee indicates that the discharge of the proposed joint drain into the bay area will probably, at the worst, be a relatively minor addition to the bay area's pollution problem and, at best, a negligible one. Furthermore, the bay area is presently receiving about two-thirds of the agricultural waste water from the Central Valley, and the initial discharge of the drain in quantity does not equal that of one oil refinery in the Richmond district.*

At the moment no more than *mere possibilities* of significant damage to the quality of the receiving waters appear to exist, and even at full capacity 20 years hence the discharge of the drain cannot now be considered as a probable major cause of pollution in the bay area.

Both the Department of Water Resources and the USBR, which have conducted intensive studies on all phases of the drain, deny that the receiving waters in the delta will be affected adversely by the drain. In fact, they have repeatedly asserted that the drain in its early years cannot damage such waters in any way, but concede the possibility that nutrients and perhaps pesticides might cause some damage when the volume of waste discharge increases substantially sometime after—but not before—1985. They have promised careful monitoring procedures from the start, both for the drain itself and for the waters into which it would discharge. They have also promised to support and participate in extension of the drain westward from the Antioch Bridge if significant pollution damage is found to be caused by the drain's waste waters.

It is generally conceded by all concerned that eventually it may be advisable for all bay area wastes to be discharged into the Pacific Ocean and that such action will probably be ultimately necessary regardless of the construction of the San Joaquin Valley Drain.

However, bay area interests, with support from representatives of the U.S. Department of Health, Education, and Welfare, still maintain that significant damage from an agricultural waste discharge at Antioch Bridge is a serious pollution threat, and object to the foregoing methods of safeguarding the bay waters proposed by the state and the USBR.

Instead, they urge adoption of a five-year interim solution to solve the admittedly serious problem of agriculturists in the lower San Joaquin Valley.†

Such a delay of approximately five years in drain construction, they contend, would allow time for a comprehensive study of the entire

* At this committee's hearing in Los Banos, October 8-9, 1964, Mr. Harry Anderson, Deputy Director of the Department of Fish and Game, testified that "it may be 10 years before the drain carries as much water into the bay system as now enters from the waste discharge of a single oil refinery."

Questioned on this point, Mr. Anderson referred it to Mr. Arthur Inerfield, Water Quality Specialist of the Department of Water Resources. Mr. Inerfield quoted a University of California report as stating that No. 41 Standard Oil Company of Richmond will discharge or has discharged 143 million gallons a day. See: "A Comprehensive Study of San Francisco Bay, 1961-62," University of California, SERL Report 63-3, April 1963, p. 70.

† Several interim solutions were suggested by the USBR in 1964, at the request of Congressmen and Department of the Interior officials, but were studied and declared unacceptable by the valley interests. See pages 16 and 17 of this report for summary of these plans.

bay-delta pollution problem. In such a study of the bay waters, they propose to include a study of the effects upon these waters of the San Joaquin Valley Drain. This, it is maintained, would prove the need of a terminus at least as far west as Port Chicago.

In considering this request for a five-year delay, it must be kept in mind that the San Luis Project, on the federal level, and the San Joaquin Valley Master Drain, on the state level, have already been authorized for several years and immediate initiation of construction of the joint drain is required in order to keep in production many thousands of acres of highly productive agricultural land in the San Joaquin Valley.

Despite the controversy over the drain, which at times has been extremely bitter, it is now apparent that the drain has actually served as a catalyst in the San Francisco Bay pollution situation. The fears caused by the imminence of its construction, heightened by some emotional exaggeration of its possible perils on the part of the bay area press, have served to focus the attention of the bay area residents on their own vast problem of waste disposal of which the proposed drain is a very small part.

In view of these circumstances and in view of the urgent and critical need for drainage facilities in certain areas of the San Joaquin Valley now and upon completion of the federal San Luis Project, in the committee's opinion, the wisest and soundest course for both state and federal governments would be to press forward with all possible speed in the immediate construction of the joint drain with appropriate safeguards for the delta receiving waters and also with the immediate initiation of comprehensive studies of the total bay-delta pollution problem.

This committee believes that the establishment of a San Joaquin Valley Drainage District to repay the Burns-Porter bond proceeds used by the state to defray its share of the cost of construction of the drain is premature at this time. The first stage of the drain can be immediately financed from Burns-Porter bond funds and by federal appropriations. The proposal by the Department of Water Resources for the creation of a repayment district has been presented only in broad general terms and has not provided the basic information essential for proper public consideration and understanding of the matter.

It is difficult for this committee to understand how the creation of such a district can be now considered when the department has not developed reliable maximum costs of the drain and has failed to define what portion of those maximum costs are nonreimbursable. It appears to us to be essential not only that the people of the San Joaquin Valley have a reliable maximum cost figure for the drain, but also that they be informed of the basis upon which the allocation is made to them of their portion of such maximum cost.

The acute need for drainage facilities is presently centered in the federal San Luis and Delta-Mendota Canal service areas, and will be solved by construction of the first stage of the joint drain. Drainage conditions elsewhere in the valley will not be significantly changed by the introduction of state water during the initial years. The latest construction cost estimate for the first stage drain (DWR Bulletin No. 127, January 1965) is \$49,000,000; of this, the federal government is ex-

pected to finance approximately 60 percent, leaving 40 percent to be funded by the state from Burns-Porter bond proceeds and from user charges.

In this connection, it is to be noted that the Governor's contracting principles, established to provide guidelines for water development under the Burns-Porter Act require in relevant part that the "construction of any transportation facility financed wholly or in part through the sale of bonds, will not be started unless water service contracts have been executed which will insure recovery of at least 75 percent of the cost of such facility." But this particular principle, properly read, does not apply to the San Joaquin Valley Drain as it is not a transportation facility *for water service* as such. Furthermore, the Legislature as a whole has never approved the Governor's contracting principles. It may well be that the federal contribution plus user charges may provide for the state the 75% of the cost of the first stage of the facility without the necessity of resorting at this time to the formation of a district and the assessment and collection of taxes by it.*

The committee nevertheless agrees completely with the Department of Water Resources that a San Joaquin Valley Drainage Repayment District eventually will be needed. However, in the committee's opinion, such need will not occur until the time is approaching for the construction of the second stage of the drain or it has been established that the drain's initial terminus *must* be moved westward from Antioch Bridge.

Finally, the formation of a repayment district within the valley at the present time is politically impossible.† The people of the valley generally are just not aware enough yet of the urgency, gravity and economic valley-wide implications of the necessity for the drain if the valley's agriculturally based economy is to survive and grow at a healthy rate. A lengthy and effective program of public education must take place before the people of the San Joaquin Valley will vote to form a taxing district for this purpose. An unsuccessful attempt at this time would set back the formation of such a district for years and might well jeopardize irreparably the prospect of its ultimate formation.

RECOMMENDATIONS

1. The San Joaquin Valley Drain should be constructed according to the existing schedule of the state and federal agencies involved, which designates the start of work on the first stage in 1966, to be in operation by mid-1970, when the first irrigation water is to be released from the federal San Luis Project.

2. This committee strongly urges that no San Joaquin Valley Drainage Repayment District be created except by popular vote in the

* The Legislative Analyst's report, discussed later, raises several questions as to how far the state can go in establishing user and beneficiary charges in view of the federal user charge pattern which already has been established in the federal San Luis Project and the other large federal service areas in the valley. The Bureau of Reclamation has included a charge of 50 cents per acre-foot in its water supply contract to finance the cost of the drainage system required by the federal San Luis Act. Additionally, the bureau is permitted to consider drainage costs as an irrigation feature which can be interest free and may receive assistance in the repayment of drainage costs from other project purposes.

† Recommendation No. 2 of this committee which immediately follows calls for formation of the district *only* by a valley-wide election.

area to be served by such a district. It is a vital necessity that public acceptance of the proposed repayment district be achieved before formation is attempted. In view of the fact that the primary need for drainage facilities is centered in the federal San Luis and Delta-Mendota Canal service areas, which will be serviced by the first stage of the joint drain, there appears to be little need to form a repayment district until such time as it becomes necessary to provide drainage on the state service area. Until such a necessity exists in fact, it will be difficult to convince the residents of the San Joaquin Valley generally that it is to their advantage to participate heavily in the repayment of drainage costs.

This emphasizes the absolute necessity of a long-range educational program before steps are taken to create a San Joaquin Valley Drainage Repayment District.

3. This committee is fully in support of the State Department of Water Resources and United States Bureau of Reclamation recommendation that the first stage drain be constructed to an initial terminal discharge point near the Antioch Bridge. The committee emphasizes the point that the *initial* terminus of the drain is to be considered *only* as an *interim* discharge point and in no way is to be construed as a decision upon the final location of the discharge point.

Legislation introduced at the 1965 Regular Session—Assembly Bill 2380 (Porter)—authorizes the start of a comprehensive study of bay-delta waste disposal. This is a program which, in this committee's opinion, is not only desirable but long overdue. Although the San Joaquin Valley Drain rightfully should be included in this study, its role is small in the vast array of factors which have contributed to the serious pollution in this immense area. In order to put the extent of this problem in proper perspective, it must be kept in mind that we are talking of the entire geographic area which drains through the Golden Gate, or some 40 percent of the total area of California.

The current federal budget act, which includes a \$2,000,000 appropriation for the federal Interceptor Drain, also contains limiting amendments, which have been previously mentioned, to provide safeguards and guarantees as desired by the Bay area interests. Such limitations apply for the duration of the 1965-66 fiscal year.

It is the belief of this committee that all essential safeguards would be provided in legislation similar to H.R. 5144 (Rep. George Miller), 89th Congress, 1st Session.* This bill calls for a monitoring program to be conducted essentially as proposed in this recommendation of the committee.

If such a monitoring program fails to solve the problem, further legislation can then be considered.

4. It is also recommended that the San Joaquin Valley Drain be used solely for the disposal of agricultural waste water until such time as it is demonstrated that the addition of other wastes to the waters of the drain will not have an adverse effect upon the delta receiving waters. At the present time no plans have been advanced either by the Bureau of Reclamation or the state to utilize the drain for exportation of municipal, industrial, or other wastes and, indeed, there is no apparent necessity for such disposal in the immediate future.

* Full text of H.R. 5144 appears in Appendix.

5. It is the responsibility of the users and beneficiaries of the San Joaquin Valley Drain to pay all the reimbursable costs of the drainage facilities as now planned. However, as previously mentioned, no repayment district should be formed until such time as the reimbursable and nonreimbursable costs have been adequately defined and the necessity for its immediate creation firmly established. In the event monitoring and surveillance program indicate significant pollution damage to the bay waters and establish the necessity of moving the discharge point westward, the valley users and beneficiaries should participate in the expense of such an extension according to the extent, if any, which the drain is shown to add to the pollution of the bay and delta waters beyond what existed without it, and in strict proportion to its contribution in waste to the total waste to be eliminated.

6. Department of Water Resources Bulletin No. 127 is only a "preliminary" report of the department's findings with respect to the San Joaquin Valley Drainage investigation. The report does *not* contain the detailed analyses required of all study items which were specified in Senate Concurrent Resolution No. 27.

Several of the specified areas of study for which the department was directed to prepare comprehensive reports were dealt with only superficially in Bulletin No. 127, and detailed reports have not been submitted. The need presently exists for additional analyses of the benefits which will accrue to the areas served by the San Joaquin Valley Drain and to the state as a whole as a result of project construction and as previously mentioned, the important matter of determining the reimbursable and nonreimbursable project costs is still unresolved. Logically, this particular matter should have been resolved long ago. Moreover, it also appears that additional consideration must be given to the possible ways and means of recovering the reimbursable costs of the project.

The department in Bulletin No. 127 stated that supplemental reports covering these subjects would be issued during 1965. However, such reports have not been forthcoming. The department should make every effort to complete these studies and submit the required reports as soon as possible as it is essential that all such data be made available for public scrutiny at the earliest possible date.

JUSTIFICATION FOR THE DRAIN

A state master drain was authorized as a part of the California Water Plan by the Burns-Porter Act of 1960, which specifically includes:

"(4) Facilities for removal of drainage water from the San Joaquin Valley." (Section 12934, Water Code.)

As early as 1956, San Joaquin Valley water users testified before Congress that a San Luis interceptor drain was essential to the agricultural areas affected by the federal San Luis Project. Authorization for the construction of such drainage facilities was included in Public Law 86-488, the San Luis authorizing act, which was approved by Congress in June 1960.

The Department of Water Resources initiated a continuing study of drainage problems in the San Joaquin Valley in 1957 as a result of studies of drainage problems and water quality degradation in the

valley by the Joint Committee on Water Resources of the California State Legislation. The committee hearing was held in Los Banos in October 1956 at the request of Senator James A. Cobey.

The department investigation, reported in Bulletin No. 127, issued in January 1965, fully supports the premise that a master drain is the best way to remove agricultural waste water from the San Joaquin Valley.

The department has concluded that, "The San Joaquin Master Drain is the most practicable means to protect the water supplies and agricultural soils of the valley. As a result of its investigation to date, the Department of Water Resources recommends:

"1. That the San Joaquin Master Drain be operated as a feature of the State Water Facilities; that it be constructed in stages; that the first stage, from Kettleman City to the discharge point near Antioch Bridge, be completed and in operation by 1970; and that later stages be constructed to extend the drain to meet the needs of contracts for drainage executed by the state, such stages to include an extension to the vicinity of Bakersfield, enlargement of the first stage to full capacity, and facilities to change the point of discharge, if such a change is found to be necessary.

"2. That the terminal capacity of the master drain, in its first stage, be 400 cubic feet per second, sufficient to serve the Bureau of Reclamation and others who will contract with the department for waste water disposal.

"3. That the beneficiaries of the master drain and all other dischargers of waste waters in the San Francisco Bay and the Central Valley drainage basins share equitably in the existing and future regional water quality control programs, which could include either additional treatment of all discharges or the export of waste waters or both.

"4. That a valleywide district, the proposed San Joaquin Valley Drainage District, be created to contract with the state for drainage service and for the repayment of the state reimbursable costs of construction, operation, maintenance and replacement of facilities needed to provide such service to the district.

"5. That the Department of Water Resources be directed and authorized to take the lead in planning a waste water disposal system to serve the entire San Francisco Bay region."

". . . There is no alternative to draining the San Joaquin Valley except its eventual ruin, and that a lot sooner than some might think," testified William E. Warne, Director of the State Department of Water Resources, at the Los Banos hearing conducted by this committee October 8 and 9, 1964.

He referred to examples of the havoc wrought in ancient civilizations because of lack of proper drainage, saying, "Many of the ancient irrigated lands, including Chaldea, Goshen, Israel, Egypt and the Salt River Valley in Arizona were once very fertile, but were abandoned for centuries because of the accumulation of salts . . . Many cases are on record in which lack of drainage in our modern world has caused abandonment of once highly productive lands.

"West Pakistan has salinity and waterlogging problems that arose in the last 20 to 40 years, and it is estimated that 30,000 acres of land are going out of production in that area each year . . . In our own State of California the farmers of the Imperial Valley did not consider drainage when water was diverted from the Colorado River shortly after 1900. Yet by mid-1962 about 9,300 miles of tile drain, serving 290,000 acres, had been installed to relieve the drainage problems of that area. In the intervening period, before drainage ditches were dug 40 years ago, families were bankrupted . . ."

OCCASION FOR THE PROBLEM

It was the federal San Luis Project, with its specific requirement for an interceptor drain, and the State Water Project requirement for facilities to remove drainage water from the San Joaquin Valley, which brought about the crisis in the valley drainage situation.

The service area of the federal portion of the joint San Luis Project, comprising roughly some 500,000 acres, largely in Fresno County, is immediately above 350,000 acres of highly developed croplands lying in the western trough of the valley.

One million acre feet of delta water will begin to be applied to these 500,000 acres in 1970, when the San Luis Project is completed. This will almost certainly cause the root zone of these 350,000 acres below the service area to become saturated with subsurface waters of dangerously high salt and boron content.

In the valley trough, farmers have built extensive drainage systems, but arrival of the tremendous volume of additional irrigation water to be provided in the federal service area of the San Luis Project will create problems on a larger scale than ever before.

Approximately 330 miles of tile drains now provide subsurface drainage for individual farms on the valley floor. Chief concentration of these drains is in western Fresno County between Mendota and Dos Palos. In addition, there are 750 miles of open ditch drains, many of which were originally built to handle storm waters but which are now used to transport agricultural drainage waters to natural stream courses.

Obviously, these individual efforts are limited in scope since they provide no way to take the agricultural waste waters out of the valley.

The department's Bulletin No. 127 points out: "The developing waste water disposal problem in the San Joaquin Valley transcends farm and district proportions . . . The discharge of collected drainage waters into irrigation canals or streams and their percolation into the ground water body relieves the field but not the valley. The once local waste water disposal problems, scattered, isolated, have grown as a cancer until they threaten areas throughout the length of the valley. Nothing less than a massive group effort will solve these waste water disposal problems."

All evidence indicates that the San Joaquin Valley must have its waste waters removed by drainage or other means in order to survive.

In the federal San Luis authorizing act, Congress required the Secretary of the Interior either (1) to secure satisfactory assurances that the State of California would provide a master drainage outlet and

disposal channel for the San Joaquin Valley which would adequately serve by connection therewith the drainage system for the San Luis unit; or (2) to provide for the construction of the San Luis Interceptor Drain to the delta, with this facility designed to meet only the more limited drainage requirements of the federal San Luis service area.

The California Department of Water Resources on June 21, 1961, advised the bureau that the state was not yet in a position to build the master drain authorized by the Burns-Porter Act. Thereupon, the Bureau of Reclamation made plans to proceed under the second alternative mentioned.

However, two years later, widespread opposition developed to the "separate drain" plan for federal and state projects. It was brought out repeatedly that the expense of an interceptor drain and a master drain built over virtually the same routes would be needlessly high and would present the threat of further dissecting the West side of the San Joaquin Valley by having two drains in the same area rather than a single drain large enough to handle the combined agricultural waste water load.

So vehement was the opposition to two parallel drains, that the Department of Water Resources reconsidered its position and expressed willingness to take over construction of a two-stage master drain with federal participation and in accordance with the USBR schedule established by the federal San Luis Act.

SECTIONAL DISPUTE

Meanwhile, a dispute between the bay area and the San Joaquin Valley arose—a controversy which at this time is still unresolved.

This dispute suddenly entered the spotlight when bay area governmental agencies and industrial interests, especially in Contra Costa County, became alarmed by the imminence of construction of the drain, fearing that this agricultural waste facility would cause serious damage to the water quality of the bay-delta area.

The proposed discharge point at Antioch Bridge was violently attacked, with suggestions made that the terminus be moved at least as far west as Port Chicago, and preferably into the ocean.

Here matters stood at the time of a March 4, 1964, meeting in Washington, D.C., called by Assistant Secretary of the Interior, Kenneth Holum.

In attendance were California congressmen; U.S. Department of the Interior officials; California State Department of Water Resources officials; State Senator James A. Cobey, as chairman of this committee; and representatives of interested organizations from Contra Costa and San Joaquin Valley counties.

Members of Congress attending the Washington meeting included John J. McFall, B. F. Sisk, John Baldwin, Harlan Hagen and Harold T. "Bizz" Johnson, as well as representatives from the offices of Senators Thomas H. Kuchel and Clair Engle. Robert J. Pafford, Jr., regional director, headed the Bureau of Reclamation delegation from Sacramento, and Director William E. Warne that of the State Department of Water Resources.

Assistant Secretary Holum presided and conflicting viewpoints on the major issues were presented in considerable detail.

BASIC PROBLEMS

Three basic problems existed at the time of the Washington meeting.

I. The question of a joint federal-state master drain, or two separate drains—one a federal drain of limited capacity to handle the immediate problems of the federal service area, as required by the San Luis Act, and the other, a state master drain covering more territory and involving, ultimately, greater capacity.

This was resolved to the general satisfaction of all concerned with a decision favoring a staged joint drain to be constructed by the state with federal financial participation.

II. The second problem concerned the location of the terminus of the drain. Both the USBR and the State Department of Water Resources—the two major agencies which had conducted full-scale investigations—favored a point near Antioch Bridge. Bay area interests, fearing contamination of the bay waters and their tributaries, advocated a discharge point farther west.

Assistant Secretary Holm, at the behest of congressmen concerned, asked Mr. Pafford to draw up possible interim solutions which might solve the San Joaquin Valley drainage problem temporarily while additional studies were conducted to satisfy the bay area interests.

Soon afterward (April 1964) the Bureau of Reclamation issued a report entitled "Alternative Solutions for Drainage, San Luis Unit, Central Valley Project, California." An addendum was issued in May 1964.

It was pointed out at the time that any interim plan could not be utilized without amendatory legislation of the San Luis Act, "prior to early 1965." It was also emphasized that such plans, if implemented, would not be effective beyond 1975 at the latest.

In these reports two dilution plans and two evaporation plans were proposed as possible temporary solutions on the basis outlined above. These suggestions, summarized briefly:

1. *First Dilution Plan.* This plan would consist of an interceptor drain of 25 cfs. capacity and a length of 82 miles to the San Joaquin River, with terminus below Sack Dam. A holding reservoir of 2,400 acre-feet capacity would be constructed in case of continuous dilution (plan 1-a) or 7,000 acre-feet with programmed flushing (plan 1-b). The net costs for five-year period were \$6,600,000 for plan 1-a and \$5,400,000 for plan 1-b.

2. *Salt Slough Dilution Plan.* This plan would convey drainage flows beyond the limits of the seriously affected areas and then store them for 11 months in a holding reservoir with 7,000 acre-feet capacity for subsequent release under programmed flushing. The cost estimates for this plan with three possible alternative capacities would be: \$7,620,000 with 25 cfs. capacity; \$29,660,000 with 400 cfs. capacity; \$31,680,000 with 1,100 cfs. capacity.

3. *Grasslands Evaporation.* This plan would convey drainage waters to an evaporating pond in the grasslands area for disposal by evaporation. The salts would be retained until the master drain is constructed, when they could be flushed out. The net cost for a five-year period is estimated to be \$2,900,000.

4. *Local Evaporation.* The service area drainage waters would be conveyed to evaporating ponds within the service area. Flushing would be handled in same manner as in the plan for grasslands evaporation. The net cost for a five-year period would be \$2,900,000.

As previously mentioned, bureau officials were lukewarm, to say the least, on these suggestions, which they never regarded as actual recommendations. All of the temporary solutions were declared unacceptable by the interests in the San Joaquin Valley concerned with the construction of adequate drainage facilities. However, such suggestions have been prominently mentioned by the San Francisco Bay interests as practical temporary solutions for the San Joaquin Valley pending completion of San Francisco Bay pollution studies.

III. Financing, including the definition of reimbursable and non-reimbursable items involved in the drain construction and the question of cost-sharing by direct and indirect beneficiaries, was the third problem area. Additionally, in the background of the financial picture was the matter of cost-sharing in case of an extremely expensive extension of the drain westward from Antioch.

This matter is still largely undetermined. The investigation by the Department of Water Resources reported in Bulletin No. 127 stresses the point that theirs is a continuing study, with 10 items to be considered during the next three fiscal years.*

LEGAL CONSIDERATIONS

There was a significant legal background to the status of the San Joaquin Drain which received considerable attention at the Washington meeting. Such considerations are still pertinent.

As noted earlier in this report, the San Luis Project Act as approved by Congress in 1960 included provision for construction of drainage facilities into the Delta.

The owners of agricultural lands in the San Joaquin Valley, late in 1962, became concerned because of information indicating the opening of bids on the San Luis Project with no provision for a drain, and hired legal counsel.

Mr. C. Ray Robinson of Merced was hired as counsel for this group, which included not only the large Central California Irrigation District, but also other organizations and individuals with a total of 200,000 acres of land. Mr. Robinson's activities in their behalf are summarized as follows:

The landowners claimed that failure to provide for a drain would constitute breach of faith on the part of the Department of the Interior. Consequently, Mr. Robinson sought an injunction to enforce "the plain language requirements of the act."

On December 20, 1962, a complaint for preliminary and permanent injunction was filed to restrain building of the unit until provision was made for a drain to the delta of the San Joaquin River.

In January 1963 depositions of USBR officials were taken which indicated that alternate routes for a drain were still being studied, "in-

* See Appendix for full context of this study. Also see Appendix for Department of Water Resources letter of transmittal, Bulletin No. 127, and full text of Senate Concurrent Resolution No. 27, Calif. Stats. 1963, calling for the drainage study.

cluding one to Monterey Bay . . . and that the bureau was investigating other possible means of disposal, including evaporative ponds."

An amicus curiae brief was filed by the State Department of Water Resources on January 20, 1963. The brief contended that delay in construction of the dam would be an economic threat to the areas served through proposed joint facilities. The key point of the legal action appeared to be interpretation of the language "has made provision for . . ." the drain.

A court order was issued July 15, 1963, by U.S. District Judge M. D. Crocker in Fresno, under which the plaintiff was denied immediate relief. However, the order contained language which left the matter open to further consideration by the court at a later date. The order stated, "*However, should it later appear that the defendants have not provided a drainage system as required by the act and that plaintiffs are threatened with injury, they may again ask this court for an injunction.*"

The Department of the Interior, considering itself bound by this court order, at once made plans to proceed with an interceptor drain.

Statements to this effect were made repeatedly by USBR representatives during 1964 discussions of the San Joaquin drainage problem. Only the state's decision to join with the bureau in making the drain a joint project prevented the USBR from handling the interceptor drain on its own. According to bureau spokesmen, this course of action would be taken under existing legislation, if final agreement on a contract between the two agencies should not be reached in time to maintain the existing schedule. However, such a possibility is now remote.

STAGED, JOINT DRAIN

No objection remained to the drain's construction on a joint basis, in two stages, after the Washington meeting and the two agencies concerned quickly reached general agreement.

The fundamental outline of the two stages follows:

1. *First stage:* From Kettleman City to Antioch, a distance of 188 miles, with a capacity of about 120 cubic feet per second at Kettleman City and 400 cfs. at the terminal end.

This would serve the federal service area, plus a portion of the Tulare lakebed area together with some of the land under the Delta-Mendota canal and would discharge the obligations of the USBR under the San Luis Act.

Estimates of both the department and the USBR show that a drain of this capacity would be fully adequate for the first 10 to 15 years after completion of the first stage in mid-1970. It is expected to carry not more than 10,000 acre feet of waste water per year during that period.

The total construction cost of the San Joaquin Valley Master Drain will be about \$92 million, according to Department of Water Resources Bulletin No. 127 of January 1965—a figure which has not been changed since that time.

The total project cost (worth, 1970) including construction, operation, maintenance, and replacement is about \$105 million. The cost of constructing the first stage of the project from Kettleman City to

Antioch will be about \$49 million, including \$6 million for storage and dilution facilities.

Benefits are estimated by the department as follows: Primary agricultural benefits, more than \$471 million (worth, 1970); estimated benefit by decrease in the cost of public services such as county roads and mosquito abatement, more than \$40 million (worth, 1970). The recreation and fish and wildlife benefits have not been completely evaluated as yet.

Before this route was agreed upon by the state and the USBR several alternate routes received careful consideration. According to Director Warne's testimony at the October 1964 Los Banos hearing, these included the following: (1) Transportation of the wastes to Cayucos Point in San Luis Obispo County; (2) to Monterey Bay; (3) to San Gregorio or Monterey Bay via Livermore and Santa Clara Valleys; (4) to the western delta area. All were rejected, primarily because of cost factors.*

Two other methods of disposal also were considered. These were: (1) Reclamation of agricultural wastes, which was found far too expensive to be practical; and (2) evaporation, whose limited and temporary nature was regarded as a major disadvantage in long-range planning to solve the valley problems.

2. *Second Stage:* The drain would be extended from Kettleman City southward to the vicinity of the Kern and Buena Vista lakebeds near Bakersfield, making the distance from the southern terminus to Antioch 286 miles.

The capacity of the drain would be gradually increased in accordance with drainage requirements. The tentative schedule is for expansion of capacity at Kettleman City to 270 cfs. and 900 cfs. at the Antioch Bridge discharge point. The capacity at the southern end would be 60 cfs.; however, this will not take place until sometime between 15 and 20 years after the first stage goes into operation. The operational date for this portion of the drain is as yet undetermined, but will be sometime after 1975.

Estimates place the maximum capacity at 603,200 acre-feet per year but capacity would not be reached before 1995 at the earliest. The programmed discharge will gradually taper off thereafter to approximately 440,800 acre-feet per year. However, these estimates are based upon information presently available. Conditions of full agricultural development in the San Joaquin Valley may be reached as early as the year 1990, or as late as 2050.

TERMINUS OF THE DRAIN

The designation of a point near the Antioch Bridge as the drain's discharge point aroused a storm of criticism in the bay area with many groups concerned at the possibility of substantial pollution.

Much of this alarm was and is not founded on fact. Objections in the metropolitan press revealed a complete lack of understanding of the type of waste discharge to be carried in an agricultural drain. Although spokesmen for the Department of Water Resources and the USBR made this clear at many meetings, the press as well as repre-

* See comparative cost table, Appendix.

sentatives of some bay area interests continued to charge that the drain would turn the bay into a "cesspool."

Edgar P. Price, San Luis liaison engineer for the USBR, when he testified before this committee submitted the following clarifying statement:

"... The simplest way to characterize the valley drain flow is as a mixture of ocean water and fresh water. In the early years it will be perhaps a mixture of one-fourth ocean water and three-fourths fresh water and in the ultimate years will be perhaps one-tenth ocean water and nine-tenths fresh water. We cannot conceive of this type of water harming the bay. Indeed, quite the contrary, we believe these waters will add to the outflow and help the bay to dispose of its own sewage effluent . . ."

No municipal, industrial, or oil field waste waters are included in the state or USBR plans. Such wastes do not require disposal from the valley at this time, nor are they expected to do so for years to come. The Cities of Fresno and Bakersfield, for example—two of the major local entities concerned—now treat and reuse their municipal waste for irrigation, and have accomplished this with a high degree of success.

As to the quality of municipal and industrial waste effluents throughout the valley, Director Warne has this to say: "... Generally speaking, these waste waters are of a quality after treatment that makes them suitable for reuse either directly as an irrigation supply or indirectly by percolation into the ground water basin . . . We do anticipate that eventually a master disposal system will be required for the municipal, industrial, and oil field wastes of the valley . . . but not for several decades."

State estimates of the quality of agricultural waste waters requiring disposal show that initially the waters will have a total dissolved solids concentration of approximately 6,500 parts per million, decreasing with time to approximately 2,500 parts per million. The waste waters will also contain nutrients, traces of pesticides, and other materials.*

As stated earlier in this report, the drain controversy has served to alert the bay area to its own vastly greater problem—the overall bay pollution situation. Authorities unanimously agree that a comprehensive plan for bay-delta waste disposal is long overdue. However, they do not agree on the extent to which, if any, the San Joaquin Valley Drain will aggravate the existing problem.

It is this committee's belief that the final choice of a drain terminus could well be postponed, but with construction of the drain to the Antioch Bridge discharge point utilized as an interim measure. All published studies by the Department of Water Resources and the USBR indicate clearly that the small quantity of agricultural waste water to be disposed of by the drain in its early years will not significantly harm the quality of the receiving waters, and, therefore, there is ample time to study the entire situation and make a final choice on the terminal point without postponing construction of the acutely needed drain.

Storage reservoirs for regulating the drain's flow are contemplated by the department—one in the Tulare lakebed area and another in the Dos Palos area with a definite decision on the latter site still to be made.

* For tabulation of chemical concentrations in waste waters, see Appendix.

Congressman Baldwin and most of the bay area interests opposed to immediate construction of the drain are on record as favoring one of the interim plans suggested by the USBR after the March 1964 meeting in Washington. These plans, which were described earlier, proposed several methods of dilution and ponding for such disposal.

Not only did the San Joaquin interests find all these proposals unacceptable, but the USBR regional officials themselves expressed belief that they were not desirable.

During this committee's hearing, Mr. Edgar P. Price, San Luis liaison engineer of the bureau, in response to questioning as to why the bureau now preferred immediate construction of the first phase of the joint drain in preference to the four alternative interim solutions which it proposed earlier, stated, in part:

"... The bureau, I think, has always preferred this interceptor drain or the first phase drain. The interim solution proposals came about when one of these meetings ... was held in Washington, D.C. ... The thought came up that it might be possible or desirable to amend the San Luis Act and produce and use an interim solution, and the Assistant Secretary of the Interior directed the Bureau of Reclamation to prepare a report on what interim solutions might be possible ... so the bureau did just that.

"It turned out a report on possibilities of using evaporation ponds in the service area, evaporation ponds located north of the service area and dilution, and submitting the economic comparisons and physical characteristics for the consideration of the people who were considering the advisability of amending the San Luis Act to adopt one of these interim solutions.

"The bureau never at that time proposed these solutions in the sense of recommending one of them. The bureau feels that there is a commitment to the people of the San Joaquin Valley that was arrived at in open democratic process, and it should be lived up to. The bureau further feels that if, for example, the dilution plan were adopted, there is not clear-cut indication of who would pay the costs associated—and these would be appreciable with the dilution plan ... When we computed costs there, we did this on the basis that there was surplus water available. This is not necessarily true. We now have demands ... for water service for more water than we have available in the San Luis on the long-term basis. If we apply the selling price of water as one of the costs of an interim solution dilution plan, the cost goes up.

"But another reason ... is this business of time ... It just does not seem to us as though within five years you can hope to have the way cleared for the kind of thing that is being talked about, which is a comprehensive waste disposal plan for everything tributary to the Golden Gate ... Our feeling about the ponding plans is just the same as the dilution plan with the exception of the cost ... There are other objections."

This committee also notes that there is no triggering device to assure a permanent valley drainage solution at the end of any of these interim plans. Such plans would adequately serve the needs of the San Joaquin Valley for a five-to-seven-year period at the most. This is a particularly important consideration.

OFFICIAL VIEWS

Department of Water Resources

Consistently a strong advocate of the vital necessity for drainage of the San Joaquin Valley now, Director William E. Warne of the Department of Water Resources has conducted extensive investigations of the valley's agricultural waste disposal problem, as directed by the Joint Legislative Committee on Water Problems' report to the Legislature in 1957.

Included in that committee report was the following statement: "The evidence presented to the committee . . . showed conclusively and without dissent that the drainage and degradation in water quality conditions in the San Joaquin Valley are now seriously impairing agricultural production, forcing changes in crop patterns, and generally adversely affecting the economy of the valley."

Regarding the effect of drain discharges upon the San Francisco Bay-delta waters, the department's studies, as did those of the USBR, substantiated the conclusion that the drain would not cause pollution of these waters to any significant degree.

In commenting on departmental pollution investigations, Director Warne stated:

"Our studies indicated that the drain waters will contain mineral salts, pesticides, and nutrients. Our studies of the effects of the drain, which are still going on, indicate that the mineral salts will not create problems if storage and dilution facilities are provided. Our present planning includes both types of facilities as part of the first stage of the drain.

"The studies also indicate that *the pesticides in the drain waters are not greater than those in the receiving waters.* (Emphasis added.) In general, we are finding pesticides in waters from agricultural sumps and drains in about the same concentration as exist in delta and bay waters and as in the waters of most rivers in the central portion of the state. The concentrations found are exceedingly small, and seldom exceed one-half part per billion . . . We believe that the nationwide pesticide problem will eventually be solved by the use of less persistent compounds."

Mr. Warne concedes, however, that nutrients pose a more serious problem. They stimulate algae growth in receiving waters and evidence from other areas indicates that luxuriant algae growth can cause unsuitable conditions for fish life. Describing state studies, including one of feasibility of treatment to remove nutrients from the drain waters, Mr. Warne expressed confidence that they will not cause "massive problems" in the receiving waters.

The department did not select Antioch Bridge as the initial discharge point without careful study of alternate routes by which the drain might convey the waste water out of the valley.

In Bulletin No. 127, it is pointed out that:

"The department has selected a point near Antioch Bridge as an initial terminus for the San Joaquin Master Drain. This terminus has been selected because it accomplishes all project purposes at the least cost and presents the greatest latitude and flexibility for possible future modifications. The department is confident that the drain can dis-

charge safely at Antioch Bridge, as an interim solution, for at least 10 years and probably longer. The use of this terminus is safe and sane. From this point the drain can be extended further into the bay system without wasteful expenditure of funds if and when it is found desirable to do so. The master drain can be integrated with the future overall waste disposal plan to serve the entire San Francisco Bay region if this becomes feasible."

With regard to the protection of delta and bay waters, the department's Bulletin No. 127 has this to say:

"The project will include a detention reservoir with sufficient capacity to store the entire annual waste water outflow from the San Joaquin Valley during the early years of project operation. The State of California will monitor discharges into the western delta and will determine their effects upon delta and bay waters. If delta water conditions are such that discharges from the master drain might prove detrimental, the detention reservoir would hold back the waste waters until those conditions changed to permit discharges. If necessary, waste waters that could not be stored would be diluted to a satisfactory concentration. Biological treatment could provide additional protection by removing nutrients, such as fertilizers. Many federal, state, and local agencies are concerned with the protection of the delta and bay waters."

Quoting again from Director Warne's remarks at this committee's hearing in Los Banos:

"I am sure no one . . . expects the San Joaquin Valley to saddle itself to carry another's load. The valley has real problems of its own. All of us will expect and demand that the valley does not merely hand its problems downstream to its neighbors."

The Resources Agency

Mr. Hugo Fisher, Resources Agency Administrator, under whose direction four major departments of the state operate (including the Department of Water Resources and that of Fish and Game) pointed out that the agency and its member departments "have firmly stated that they will take any and all steps necessary to maintain suitable water quality for the protection of beneficial uses of the bay and delta . . . To this end, the several departments within the agency are earnestly and cooperatively conducting studies of potential water quality problems associated with the San Joaquin Valley Master Drain. Collectively, it is intended that these studies will provide us with the knowledge necessary to avoid water quality degradation in the future both as to the delta and as to San Francisco Bay . . .

"The Resources Agency does not subscribe to solving a problem in one area by creating one somewhere else . . ."

On April 11, 1965, Mr. Fisher issued a set of interim water quality objectives for San Francisco Bay and the delta to govern units of the Resources Agency.*

His statement of that date reads as follows:

"All units of the agency will operate the waste discharge facilities under their control so as not to exceed the objectives at the points in the delta and bay where the various beneficial uses exist.

* Table of Interim Water Quality objectives attached to Resources Agency Order No. 18 appears in Appendix.

"Because negotiations are currently underway between federal, state, and local interests concerning salinity control and important water rights considerations in many parts of the delta, I will defer setting interim objectives for mineral constituents, salinity, and total dissolved solids (TDS) in those areas. However, when objectives for mineral constituents, salinity, and total dissolved solids have been agreed in those negotiations, they will be adopted as interim objectives to be adhered to by the organizations of this agency.

"The interim water quality objectives herein set forth are applicable only to operations of units within the Resources Agency of the State of California for the interim period preceding the establishment of permanent objectives by the State Water Quality Control Board. Should the state board or regional boards establish higher or lower standards during this period applicable to *all* waste discharges, this agency's water quality objectives will be adjusted accordingly.

"These objectives are not intended to specify *what* beneficial uses should be protected in any particular area. Specification of such beneficial uses will presumably be made by the State Water Quality Control Board and appropriate regional water pollution control boards on the basis of study and consultation with federal, state, and local interests. Until specific beneficial uses are established by the State Water Quality Control Board or by an appropriate regional board, these objectives are intended to protect all possible beneficial uses. The proposed interim water quality objectives are those I believe desirable to maintain beneficial uses *wherever* these uses are to be protected."

United States Bureau of Reclamation

This federal agency's views as to an interim terminus of the San Joaquin Valley Drain at Antioch Bridge correspond closely to those of the State Department of Water Resources.

Mr. Robert J. Pafford, Jr., regional director of the U.S. Bureau of Reclamation, and Mr. Edgar P. Price, San Luis liaison engineer for the bureau's Region 2, have expressed themselves even more emphatically in remarks of the same general tenor.

Mr. Price told this committee that while the bureau welcomes leadership of the Association of Bay Area Governments in development of a comprehensive plan for waste disposal, "We do not agree with ABAG on the desirability of delaying construction of a valley drain at this time."

Comprehensive plans often take many years, Mr. Price warned, in contrasting this course of action with solution of immediate problems.

"Under present conditions, some 3,400,000 acres drain through the delta and lower bays. There are today, a million and a quarter people living and working in the area above Suisun Bay and nearly 4,000,000 people in the nine bay area counties and the sewage disposal from most of these people now passes into and through San Francisco Bay. Consequently, we cannot see that a valley drain could possibly have any significant effect whatsoever on the waters of the bay for perhaps 15 to 25 years."

Citing figures which show the economic basis for designating the terminus for the drain at Antioch Bridge, Mr. Price said: "In round numbers we would save more than \$2 million per year in interest and

operating costs by going to Antioch Bridge . . . When we think of the money which would be saved if the master drain waters would be tolerated in the bay for 20 years, we can pay for the whole first stage of the drain. When we think that possibly the drainage waters can be tolerated in the bay indefinitely, which appears to us to be a reasonable possibility, the annual savings go on without limit.”*

Similarly, Mr. Jack B. Lindeman, a member of the Project Development Division of Region 2, USBR, told the State Water Quality Control Board on August 5, 1964:

“The effects of drainage water nutrients on the receiving waters cannot be predicted at this time. It may turn out to be either beneficial or detrimental . . . Pesticides present a serious problem throughout the nation and not one which can be appreciably affected by alternative methods of drainage disposal . . .

“There is no reliable evidence showing that early San Joaquin Valley Drain flows will significantly affect the waters of Suisun or San Francisco Bays.”

During questioning by Senator George Miller, Jr., on the subject of the drain's possible effects upon municipal and industrial water supplies in the Antioch area, Mr. Price stated, in part:

“. . . I am talking now about the 10 miles of reach, say, from Antioch Bridge to Pittsburg. Some months of the year they now take fresh water from there and use it for municipal and industrial purposes. In other portions of the year this water is too saline and they have to give up that use . . . As it now stands, on the average, they might be able to divert this water some six months of the year and the remaining six months they could not . . . I think that in the early years of the drain they will have to stop (taking the water out of the channel and switching to an alternative water supply) earlier because the drain operates. In other words, they will have to stop using the channel water sooner than they would if the drain weren't there, but I think this is a matter of a week's time, something on that order.”

U.S. Department of Health, Education and Welfare

Mr. Paul W. Eastman, program director, Water Supply and Pollution Control for the U.S. Department of Health, Education and Welfare, Public Health Service in San Francisco, has expressed a strongly dissenting viewpoint.

Future pollution might be caused by the drain discharge in the delta and San Francisco Bay system, particularly in the waters of the western delta, Suisun and San Pablo Bays, he claims.

He has pointed repeatedly to the expected tremendous increase in population of the bay and western delta area and to bay filling, which will reduce the assimilative capacity of bay waters. Additional factors to be considered are state and federal plans to transport water from northern California to the south. Such plans will significantly reduce the amount of water which presently goes out of the delta into the bay and thereby will reduce the existing capacity for dilution and flushing of pollutants.

Mr. Eastman emphasized hazards of nutrients and pesticides in delta and bay waters, pointing out that large concentrations of nutrients or

* For a comparison of costs for alternative routes for drain, see Appendix.

even an imbalance of nutrients could cause overproduction of undesirable aquatic plants, which would lower dissolved oxygen levels and damage fish life.

"Just how much additional nutrients (and in what proportions) can be added without damaging the aquatic environment is not known at this time," he told this committee.

Continuing, Mr. Eastman added: "The significance of the pesticide problem is another unknown at this time . . . It may well add a much greater threat to the aquatic and human environment than can currently be assessed . . ."

Mr. Eastman favored one of USBR's interim solutions for the valley agriculturists, contending that this would meet the federal service area's drainage needs and still postpone a decision on the final point of drain discharge for as much as five years. Such a delay would allow time for the completion of studies concerning San Francisco Bay pollution.

He recommended that a nine-point study program be undertaken, which he regards as necessary for a comprehensive drainage and pollution program for the entire bay area. It should be noted that such studies are now underway.

His testimony concluded:

"With regard to future programs of the Department of Health, Education, and Welfare, Public Health Service, the proposed Central Pacific Basins Water Pollution Control program is now scheduled to begin in July 1965 . . . This study tentatively is estimated to cost \$300,000 for the first of possibly seven years necessary to complete the job. A share of this project will be concerned with pollution problems of the San Joaquin Valley, the delta area, and the San Francisco Bay system you are facing today. We realize that such a small amount will not allow detailed analysis of every localized problem within the project area. The problems and necessary studies are such that all appropriate local, state and federal agencies must participate . . ."

Department of Fish and Game

The California Department of Fish and Game has no objection to routing the drain through the San Joaquin Valley with the discharge at Antioch Bridge, provided that water quality in the delta is not reduced to levels detrimental to fish and wildlife.

This department desires specific provision for waste treatment including the possibility of moving the drain as far seaward as may be necessary to maintain appropriate water quality, and asks specific commitments for surveillance and monitoring programs to facilitate the detection of potential problems and to allow correction long before damage can be done.

"Our present attitude on future water quality effects of drain water in the delta is one of cautious optimism," stated Harry Anderson, deputy director of the department.

The department notes that agricultural drain waters in the Central Valley are known to be of suitable quality to support sizeable fish and wildlife populations; that for perhaps 10 years after initial operation the volume of discharged water will remain "very low and highly controllable" and that "there should be no reason to believe that the people of the State of California will be less resolute (in providing

water quality protection) than municipalities or industries in meeting their own obligations.”

The California Department of Fish and Game has in recent years become quite concerned over the continual decrease of waterfowl habitat in the San Joaquin Valley—a decline which has been primarily due to agricultural development and the reclamation of vast wetland areas.

At the present time, there are approximately 204,000 acres of public and private lands within the San Joaquin Valley dedicated to some aspect of wildlife management. The vast majority of this land (some 172,000 acres) is owned and managed by private gun clubs within the valley. The remaining 32,000 acres are under the control of public agencies.

Obviously, the department would and should be concerned over any activity which would result in the loss of additional wetlands, whether they be publicly or privately owned, for in the preservation of such wetlands lies the fate of waterfowl in the San Joaquin Valley. While it has been recognized by fish and game authorities that some additional loss of wetlands will inevitably be the end result of drain construction, they have recommended that the drain be located in a manner which will minimize damage to public and private wetlands to the maximum extent possible. This suggestion has been accepted by the Department of Water Resources.

The additional factor of mitigation for actual damage by drain construction is also of concern to the department and the two agencies are working closely in this regard.

Logically, such considerations are essential if waterfowl populations, as they are known today, are to be perpetuated in the valley.

Department of Public Health

The State Department of Public Health has not assumed any role in the drain controversy. While departmental officials have participated in Resources Agency deliberations on this subject, they have not appeared during Senate or Assembly committee discussions.

Bay Area Disapproval

Chief among the spokesmen for bay area interests at the many meetings held during 1964 was Mr. Mel F. Nielsen, then a member of the Contra Costa County Board of Supervisors which serves as the ex officio governing board of the Contra Costa County Water Agency.

The Association of Bay Area Governments, which includes representatives from virtually all major San Francisco Bay area cities, reached similar conclusions, and joined in seeking a delay of San Joaquin Valley Drain construction in order to allow time for additional studies of bay pollution. Other organizations in the area have expressed themselves similarly.

Mr. Nielsen's views on the drain, presented in a detailed statement before the San Francisco Bay Regional Water Pollution Control Board on August 20, 1964, included the following:

He called the potential increase in toxicity, as well as salinity and nutrients, from the agricultural return drainage and sewage effluents discharging from the San Joaquin and Sacramento Valleys into the delta the “greatest present threat to the beneficial use of tidal waters east of Port Chicago.”

Pesticides, nutrients, and significant concentrations of dissolved salts, to be discharged from the interceptor drain and the master drain, were termed the major dangers.

Three resolutions concerning San Joaquin Valley drainage were passed by the Contra Costa County Board of Supervisors—on November 26, 1963; March 17, 1964; and April 14, 1964—all of which expressed strong objection to any discharge of an agricultural drain at the Antioch Bridge. The final resolution declared the monitoring program proposed by state and federal agencies to be "meaningless as a determinant of long-range effects." Belief was expressed that adoption of one of the interim plans proposed by the USBR would in no way adversely affect the agricultural interests in Fresno, Merced and Stanislaus Counties.

Such action, said the resolution, would provide time for "proper investigation and planning of the whole problem of collection, treatment, and disposal of wastes from the entire Central Valley, Sacramento-San Joaquin Delta, and the San Francisco Bay area."

The board further urged adoption of a comprehensive plan to handle the problems of this entire area, and demanded that the Sacramento-San Joaquin Delta "be eliminated as a place of discharge for San Joaquin Valley drainage."

The Association of Bay Area Governments (ABAG), representing 8 counties and 72 cities in the San Francisco Bay area, also is on record opposing construction of the drain as proposed "pending completion of adequate studies of and planning for the future consequences of the proposed discharges." It has asked implementation of an interim solution to solve the immediate problems of the San Joaquin Valley and urged state legislation giving regional water pollution control boards the same authority over state agencies as they had possessed with respect to cities, counties, and private organizations.

Legislation (AB 1092—Meyers) to accomplish this objective was adopted during the 1965 Regular Session and was supported by the Resources Agency and the Department of Water Resources. This legislation brought the state and its agencies under the waste water discharge requirements established by regional water quality central boards.

Another 1965 legislative measure (AJR 13, Meyers) memorialized the Congress of the United States to favorably consider legislation which would place controls, such as contained in S 560 and HR 982, over federal agencies disposing of wastes into waters of the United States. These measures would require federal agencies to discharge wastes only in compliance with standards established by the Secretary of Health, Education, and Welfare. Such standards would be established after consultation with appropriate state officials.

AJR 13 also includes a "resolved" clause noting that the State Legislature does not intend, by passage of this resolution, that the immediate construction of the San Luis drain be delayed in any way. This provision was added as an amendment offered by the chairman of this committee.

This committee does not object to elimination of governmental immunity from standards of waste disposal. Indeed, agricultural, as well as

industrial waste, should be carefully regulated in order to prevent pollution damage.

Regional Pollution Boards

On February 20, 1964, the Central Valley and San Francisco Bay Regional Water Pollution Control Boards passed separate but similar resolutions * prohibiting waste waters from the interceptor drain being discharged in the receiving waters of the bay area until "reasonable assurance" is given as to the absence of adverse effects from such discharge.

The San Francisco Regional Board's prohibition was applied to "the San Francisco Bay region;" the Central Valley Board specifically designated "the Antioch or Antioch Bridge area."

However, the State Attorney General's office then issued an opinion to the effect that prohibitions against drainage discharges by regional boards had no validity in the case of state and/or federal projects, or a combination of the two. (However, the passage of AB 1092, as noted, brought the state under such regulation.)

Mr. Grant Burton, chairman of the San Francisco Bay Board, appeared at this committee's October hearing and emphasized the importance of "satisfactory evidence and assurances" concerning the quality of the drain discharge. "To date no such evidence has been produced, nor have any valid assurances been forthcoming from any source in a position to make good on such assurances," Mr. Burton told this committee.

In the matter of assurances, bay area interests have often commented that "good intentions and promises" made by the Bureau of Reclamation and the State Department of Water Resources are "meaningless."

Metcalf and Eddy Report

An engineering report was made to the Contra Costa County Water Agency by Metcalf and Eddy, engineers of Boston, New York and Palo Alto, in October 1964, supporting the agency's objections to the location of the northern terminus of the drain.

The report concluded that a delay in drain construction was essential and cited several points to support this position. The report predicted that a serious deterioration in the quality of offshore waters in the bay area could be expected by 1975, with conditions gradually growing worse until 1995.

Additionally, it was pointed out that aquatic life and recreational use of the offshore waters could be seriously affected by the discharge of nutrients and pesticides from the drain, with nutrients being the greater danger.

The cumulative annual value of the recreational facilities of the region would amount to \$4 billion to residents of the state from now until the year 2020—one billion dollars of which represents the value to present and future residents of Contra Costa County. A loss in value of from 5 to 10 percent, or \$50 million to \$100 million, to residents of Contra Costa County is highly probable, the report asserts.

* Resolution No. 535 of the San Francisco Bay Regional Water Pollution Board and Resolution No. 64-25 of the Central Valley Regional Water Pollution Board appear in full in Appendix.

The assimilative capacity of the offshore waters is more than adequate to absorb the present BOD load of municipal and industrial wastes. However, the report contends that the nutrients in the drain will produce algae growths which would decrease the assimilative capacity so greatly that more intensive treatment of municipal and industrial wastes would be necessary.

"A conservative estimate of the cost of additional treatment required varies from \$1,500,000 per year in 1975 to \$2,300,000 per year in 1995 . . . Sometime shortly after the year 2000, complete treatment of municipal and industrial wastes . . . will be required in order to meet the assimilative capacity unless satisfactory and economical methods of reducing the effect of nutrients are developed in the meantime. This would hold true if the drain is not built, but with the drain, complete treatment will be required sooner. Unless methods of alleviating the effects of nutrients are developed, their effect on the assimilative capacity may establish an upper limit of industrial and municipal growth of Contra Costa County . . ." the report concludes.

Discharge of the drain at Antioch Bridge will cause deterioration of the quality of the offshore water, resulting in increased costs to industry amounting to \$19,800 in 1969 and increasing to \$472,000 per year by 1995, it is claimed.

Deterioration in the quality of offshore water will cause increased costs to the City of Antioch and to the Treated Water Division of the Contra Costa County Water District amounting to \$3,600 per year in 1969, and an estimated \$50,500 per year in 1995, the report continues.

Studies of nutrients by the state with the intention of eliminating them from the drain will accomplish little toward finding a solution, in the opinion of Metcalf and Eddy.

The Valley Interest

C. W. Bates, secretary-manager of the Central California Irrigation District, Los Banos, was chief spokesman for most of the valley interests at many meetings, consistently upholding the need for constructing the drainage facilities as planned with no delay in schedule.

He attacked opponents for "last minute" opposition to a plan already approved and authorized "after full discussion . . . Everyone affected by the San Luis Project, and State Water Project had more than ample opportunity to present their case during the five years of drafts and redrafts, hearings and rehearings on the San Luis Act . . . Eight years ago, the State of California was fully cognizant of the drainage problem . . ."

Mr. Bates differentiated strongly between the point of discharge required for the San Joaquin Valley agricultural waste waters and the point of discharge required for a multipurpose drain "capable of carrying off agricultural sewage from the eastern part of Contra Costa County and industrial waste water from the northern part of the county" as advocated in a Contra Costa County Water District resolution.

He quoted a Bureau of Reclamation statement, as follows: "Actually, the bay area faces a tremendous and rapidly growing problem of water pollution quite aside from any consideration of San Joaquin Valley drainage. . . . The extent of the participation (by the valley) would be

proportionate to the degree by which the valley drain waters aggravated the bay problem if, in fact, they aggravated it at all."

Halting or even delaying the joint drainage plan for the valley would mean, ultimately, two parallel drains through San Joaquin County and also through Contra Costa County, Mr. Bates warned.

He urged swift action in the preparation of a comprehensive plan for eliminating damaging pollution from the bay without an accompanying fight to prevent essential San Joaquin drain construction.

Mr. Warren R. Schoonover, consultant on soil and water resources, several times testified in behalf of the agricultural interests of the San Joaquin Valley.

In April 1965 he wrote a detailed analysis of the drain situation, which indicated that:

"In summary, one must logically conclude:

"1. That the drain is needed now to prevent irreparable damage to agriculture.

"2. The drainage problem will become acute directly following the application of water to the San Luis Project service area.

"3. The San Joaquin River is now and has been for decades, serving as a drain for agricultural lands. Twenty-five thousand to 30,000 acre-feet per year of drainage waters have entered the sloughs and the river between Temple Slough and Fremont Ford Bridge. The quantity of drainage will increase with the delivery of more irrigation water and the rising water table will damage thousands of acres of additional lands if the drain is not provided.

"4. The delta and bay now receive agricultural wastes in unregulated flows in the natural water courses. These wastes contain the same sort of constituents that will be carried in the drain. Some of these are carried now in excessive amounts because the sloughs and rivers receive surface water, silt, etc., while the drain will be limited to subsurface drainage. With a dilution factor of about 30 to 1 for a decade, it is not to be expected that the drain can have a measurable adverse effect on the waters of the delta and bay if discharged at Antioch in regulated flow.

"5. The drain will contain nutrients, particularly nitrogen and phosphates. These are now going into the delta and bay from other sources. It has not been shown that the drain will increase a nuisance which already exists.

"6. The drain will contain pesticide residues, but, according to hundreds of analyses, the concentrations are expected to be similar to those already found in the lower portions of the rivers and in the bay. Pesticides are found everywhere; they blow in the dust; they are used on farms, and in home gardens. They come into the rivers in surface runoff. They build up in the biocycle, causing a national problem which must have national attention. The drain itself will have no material influence on this pollution problem.

"7. The drain can be built with a discharge at Antioch Bridge without any significant contribution to delta and bay pollution for a decade at least. As volume builds up, it will become a small, and from a constituent standpoint, a simple component of a very large and very complex problem. The whole problem can be studied dur-

ing the decade of construction and of small flows. The drain can then be integrated into the ultimate solution for waste disposal in the entire basin. Thus, it becomes a practical and economical interim solution to a vital problem which exists now and will exist—drain or no drain.”

In his presentation, he emphasized the local drainage problem, which, he said, “is now serious in land being irrigated on the west side of the San Joaquin River in central California. The water table is now high on 20,000 acres of the San Luis Project service area. It is also high in some land being irrigated by local districts such as the Firebaugh Canal Company, Central California Irrigation District, Panoche Water District and others, largely as a result of new water supplies introduced onto higher elevation lands by the Delta Mendota Canal starting in 1951 without any provisions being made for the resultant drainage problem. . . . The situation will become worse rapidly on this area, as well as on new lands to be irrigated with the new water supply.”

San Joaquin County

San Joaquin County's attitude on the drain situation was presented at the Los Banos hearing by Mr. William Gianelli, consulting engineer for the San Joaquin County Flood Control and Water Conservation District, a countywide district governed by the board of supervisors of that county.

Great concern was expressed as to the disadvantages of dual drains, but with final agreement apparently attained on a single staged drain development, this particular objection was resolved.

The point of discharge was referred to in Mr. Gianelli's testimony thus: “. . . San Joaquin County comprises much of the area in the Sacramento-San Joaquin Delta, and we are interested in having the point of discharge of any proposed drain located far enough to the west to make certain that the tidal influences in the delta would not cause drainage effluents to adversely affect the county's delta interests. Accordingly, we would hope that this (Senate) committee would support studies such as those proposed by the Public Health Service which would go into the matter of the effect of drainage discharges into the receiving waters of the delta and bay areas.”

Repayment of reimbursable costs to the state for the drain is another matter of concern to San Joaquin County. Referring to a bill introduced in the 1961 legislative session proposing to extend the Sacramento-San Joaquin Drainage District, San Joaquin noted its opposition, and its wish for assurance of “1. The drainage facilities which might be constructed and which would be paid for by such an assessment; 2. Some assurance that cost for the drainage facilities would not be assessed merely against the people who had the problem, as opposed to the people who created the problem; 3. Whether or not local interests would have anything to say about the costs to be incurred.”

Mr. Gianelli also referred to certain areas along the lower reaches of the San Joaquin River, particularly in the vicinity of Mossdale, where water users have actually lost some crops because of poor water quality. “This area,” said Mr. Gianelli, “wishes to be assured that any solu-

tion is not assessed against it merely because it is faced with the problem."

FINANCING

The Department of Water Resources proposes the establishment of a valleywide drainage district as the major vehicle of financing costs of the drain.

This proposed district would include virtually the entire San Joaquin Valley Drainage Basin, including nine full counties and portions of several others, as shown on the map of the proposed district set forth on the page following page xi of Appendix A, Bulletin No. 127, of the Department of Water Resources, Preliminary Edition, January 1965.

Creation of the district would have been provided in AB 2506 (Garrigus) * of the 1965 Regular Session, which was sent to interim study.

This committee's recommendations, listed earlier, presented the view that formation of the district is not yet necessary because of the two-stage construction of the drain, with the first stage including substantial federal financial participation. It was also recommended that no drainage district be formed under any circumstances except by popular vote within the district. (Such an election was called for in AB 2506 (Garrigus).)

If ratified, the proposed district would be set up in nine divisions with the first board of directors to be appointed by the Governor. Thereafter, directors would be elected according to divisions and would have wide jurisdiction in setting up the exact repayment plan to be followed.

The Department of Water Resources favors levying fixed service charges upon the direct users of the drain in addition to ad valorem taxation of residents of the entire district. This, it is contended, would establish the broadest possible base for distributing repayment costs and would prevent an unduly heavy burden on the direct users alone. For the purposes of the act, indirect beneficiaries include those whose activities have caused the conditions necessitating the drainage of accumulated salts.

Consideration has been given to the possibility of participation by the entire state in the repayment of reimbursable costs of the drain. However, it was concluded that the benefits could not be considered as being statewide in scope but are confined to the valley drainage basin.

In the first phase of drain construction, the federal government's share will be approximately 60 percent. There are additional nonreimbursables which have not been fully analyzed, including recreational benefits and those for the enhancement of fish and wildlife. These factors will certainly serve to reduce the total costs of the state. Furthermore, the state portion of such nonreimbursables, which are those incurred for recreation and enhancement of fish and wildlife, should be paid from the State General Fund in accordance with present policy and practice since such expenditures are for the general welfare.

The federal government has established fixed charges for removing drainage from the federal service area at 50 cents per acre-foot, which immediately brings up this point: Can the state charge more—an action which at this time seems inevitable if the policy of reimbursable costs

* For full text of AB 2506, see Appendix.

is to be fully carried out—and gain acceptance? Additionally, farmers in the service area, who already have signed contracts with the bureau, will not readily accept any additional charges or taxes.

This viewpoint received considerable support in the report of Don Benedict, principal administrative analyst of the legislative analyst's office, which he presented to this committee at its October hearing.

Mr. Benedict noted that there were no demands for drainage projects in the valley comparable to those for projects to supply water "... except from the landowners who already have a drainage problem ... No similar facility has ever been planned before, and, therefore, the problems confronting the Department of Water Resources have been unusually difficult in both a technical sense and with respect to repayment.

"... Introduction of state water will not drastically change present operations during initial years ... The department has not included drainage services in its water sales contracts and, as a result, will have to negotiate separate contracts for drainage services after the landowners have already paid what some consider to be too much for a water supply. The Bureau of Reclamation, however, is not confronted with this problem since it has included 50 cents per acre-foot in its water supply contract to repay the costs of its drainage system. In addition the bureau has greater flexibility than the department in its repayment structure, since drainage is generally considered to be an irrigation feature and, therefore, can be interest-free and perhaps even receive some repayment assistance from other project purposes."

The cost of installing drainage lines on individual farms will be "very high," said Mr. Benedict. "... it is likely that many acres in the valley would not economically justify this expenditure for drainage lines and that some owners of lands now being profitably farmed might not be able to incur these additional costs."

The analyst suggested reconsideration of fundamental decisions to the effect that the Bureau of Reclamation might construct the first stage of the drain and the state the subsequent stages. This, he says, "would eliminate the need for the department to make a substantial investment at this time," as well as what might be premature decisions on repayment policy.

Since contractual negotiations between the bureau and the state have advanced rapidly, such a partial reversal of roles would not seem practicable at the present time. However, Mr. Benedict's views reinforce the idea that there is no basis for immediate establishment of a drainage district or other repayment plan.

Friant Water Users

The opinion that formation of a master district is premature, since no overall San Joaquin Valley drainage problem now exists, was also advanced by the Friant Water Users Association.

This organization is composed of long-term contractors from the Friant unit of the Central Valley Project serving 800,000 acres of irrigated lands in Madera, Fresno, Tulare, and Kern Counties.

Mr. James F. Sorensen, secretary of the association, expressed the view that some of the lands concerned may never have a drainage problem, "or, if they were to have drainage needs, they would be in-

cluded in a future Central Valley Project drainage program." He called for a "cautious approach" to any overall financing or assessment arrangement.

However, like the other valley interests, the Friant spokesman urged that there should be no delay in the construction of the initial phases of the drain.

District Problem Summarized

For all practical purposes, we will be dealing only with the first stage of the drain for many years to come. When the second stage of the drain becomes imminent, perhaps in 1985-1990, there will be a more general need which, in view of the benefits to be gained, may well bring about a willingness to finance the reimbursable costs of the project.

In any event, the second stage, with its greater area and greater capacity, is far in the future.

This committee, however, fully agrees that a drainage district along the lines of that proposed in AB 2506 is an eventual necessity. It believes, also, that a thorough and concerted effort must be made to convince the valley agriculturalists that this step is, in the long run, inevitable. Only by such an educational campaign will it be possible to obtain a favorable vote for the organization of a drainage district when it becomes necessary.

The committee recognizes that by far the larger part of the drain's cost must be paid for by beneficiaries in the San Joaquin Valley. Except for the incidental recreational enhancement and the indirect benefits derived from continued agricultural prosperity of the valley, the major hinterland of the state's two chief metropolitan areas, there appear at this time to be no statewide interests to be served by the drain.

Another factor which could conceivably expedite the necessity for a master drainage district is the possibility of a serious pollution problem at the planned point of the drain's discharge. If future investigations prove that pollution would occur at the Antioch Bridge, immediate action on formation of such a district might have to be launched.

Extension of the drain westward in Contra Costa County would be an expensive undertaking, since it would pass through some of the most valuable industrial land in that county. As yet, no one has proposed any definite division of costs of such a program. Logically, the valley's share of such costs should depend upon the amount of pollution damage inflicted on the receiving waters by the waste waters of the agricultural drain, over the above what would have occurred without it from all other sources.

BAY WASTE DISPOSAL

Strange as it seems, the disagreement on the point of discharge for the San Joaquin Valley Drain actually had much to do with bringing about full realization of the much greater pollution problems facing the bay-delta area.

The start of a comprehensive plan for waste disposal affecting this extremely large area was given by AB 2380 (Porter) during the 1965 Regular Session of the Legislature. This bill established the means by

which the entire bay pollution problem may be studied on a comprehensive basis.

The study is to be directed by the State Water Quality Control Board with municipal, industrial, and agricultural water supplies, fish and wildlife, recreation, and navigation to be considered. A steering committee and a technical coordinating committee have been established to assist the Water Quality Board. Reports are required in 1966, 1967, and 1969, with the last report to provide full guidelines for the systematic development of a comprehensive pollution control program, including cost estimates.

A total of \$170,000—\$100,000 from the state general fund and \$70,000 from federal sources—was made available to implement the first year's study.

This committee supports such a comprehensive pollution study, with the single reservation that it should not be pointedly directed against the drain. Amendments to AB 2380 brought about the desired result and prevented the drain from appearing as "whipping boy" for the overall pollution situation which faces the bay area.

In commenting on the comprehensive study of waste disposal, when he appeared before the State Water Commission on January 8, 1965, in San Francisco, as requested by that body, Department Director Warne noted considerable improvement in the condition of the bay waters over the past decade but was critical of moves to halt planning and construction of the valley drain. He pointed out that approximately 700,000,000 gallons of sewage and industrial waste were discharged from the surrounding areas into the bay system daily in 1960, with this quantity expected to more than double by 1990.

"By contrast," said the director, "The San Joaquin Master Drain will discharge 58,000,000 gallons per day when it commences operation in 1970, increasing to 350 million gallons per day by 1990."

Director Warne at the time of his appearance before the Water Commission estimated the cost of the comprehensive studies at \$100,000 for the first year—the exact amount appropriated from state funds by AB 2380 in its final form. He originally proposed that his department conduct the study. However, AB 2380 gave that responsibility, instead, to the State Water Quality Control Board, which will proceed to carry out the study as called for in the legislation.

Another legislative measure, not connected with the valley drain, but one which is highly important to the bay's future, was SB 309 (McAteer), to create a San Francisco Bay Conservation Commission charged with the responsibility of regulating filling and preparing a master plan for shoreline development. Piecemeal, unregulated filling of the bay over many decades has created a "terrible problem" in the words of the bill's author, and the establishment of a 27-member commission in September 1965 should do much to protect the public interest. The new commission will submit a master plan of dredging and filling operations to the 1967 Legislature.

The need for this step is emphasized by the fact that 70 percent of the bay is only six feet deep, or less, at the present time. Action to control bay filling, experts agree, is late in coming, but still soon enough to bring about a tremendous improvement in the situation.

APPENDICES

APPENDIX A

89th Congress

1st Session

H. R. 5144

IN THE HOUSE OF REPRESENTATIVES
FEBRUARY 18, 1965

MR. MILLER introduced the following bill; which was referred to
the Committee on Public Works

A BILL

To amend the Federal Water Pollution Control Act to require certain studies of the pollution of the San Francisco Bay and adjacent waters, and to prohibit the operation of any interceptor drain so as to pollute such waters.

1 *Be it enacted by the Senate and House of Representatives*
2 *of the United States of America in Congress assembled, That*
3 *section 4 of the Federal Water Pollution Control Act (33*
4 *U.S.C. 466c) is hereby amended by adding at the end thereof*
5 *the following new subsection:*

6 “(g) The Secretary of Health, Education, and Welfare
7 and the Secretary of the Interior, in cooperation with the State
8 of California, shall jointly conduct a continuing investigation
9 and study of the causes, control, and prevention of water pol-
10 lution (including possible future pollution), in the waters of
11 the San Francisco Bay, the San Pablo Bay, the Suisun Bay,
12 the waters of the Sacramento-San Joaquin Delta, and any
13 channels lying between those bodies of water.”

14 SEC. 2. Section 9 of the Federal Water Pollution Control
15 Act (33 U.S.C. 466h) is hereby amended by inserting “(a)”
16 after “SEC. 9” and by inserting at the end of such section the
17 following:

18 “(b) No interceptor drain financed, in whole or in part,
19 by any department, bureau, agency, or instrumentality of the
20 United States for the purpose of carrying waste or drainage
21 water from the service area of any reclamation project, con-

1 structed in whole or in part by the Secretary of the Interior
2 within the State of California, to a termination point in the
3 San Francisco Bay, the San Pablo Bay, the Suisun Bay, the
4 waters of the Sacramento-San Joaquin Delta, or any channels
5 lying between those bodies of water, shall be operated so as to
6 discharge waters which are harmful or deleterious to the re-
7 ceiving waters. The Secretary of the Interior and the Secre-
8 tary of Health, Education, and Welfare, in cooperation with
9 the State of California, shall conduct a continuing monitoring
10 system to observe and measure the effect of the discharge of
11 such interceptor drainage on the receiving waters. Should the
12 Secretary of Health, Education, and Welfare, in consultation
13 with the Secretary of the Interior and the Governor of the
14 State of California, at any time determine, as the result of
15 such monitoring, that the discharge of such drainage water
16 would be harmful or deleterious to the receiving waters for
17 domestic, industrial, irrigation, fish and wildlife, recreation or
18 other beneficial uses, he shall order the halting of the opera-
19 tion of, and the discharge into such receiving waters of such
20 drainage water from, said interceptor drain. The Secretary of
21 the Interior thereupon shall cease such operation and dis-
22 charge for the aforementioned purpose and shall either relo-
23 cate the discharge point of said drain or take other measures
24 which eliminate such harmful or deleterious effects before re-
25 suming such operation and discharge. If any such interceptor
26 drain is to be constructed or operated by the State of Califor-
27 nia, the Secretary of the Interior shall before expending any
28 Federal funds for such drain, require such State to agree to
29 be subject to the same terms and conditions with respect to
30 such construction or operation as are imposed on the Secre-
31 tary by this subsection."

APPENDIX B

DEPARTMENT OF WATER RESOURCES

BULLETIN No. 127 JANUARY 1965

A Continuing Investigation

The San Joaquin Valley drainage investigation is not completed. During the next three fiscal years the Department of Water Resources must consider in further detail each of the items listed in this section. Further, the department will issue supplemental reports in 1965 to cover items 1 and 2 below, which Senate Concurrent Resolution No. 27, 1963 General Session (Calif. Stats. Res. Ch. 119, p. 4892), has specified for thorough and exhaustive study. The department will:

1) Complete the determination of the recreation, fish, and wildlife benefits—national, statewide, and local—and complete the evaluation of secondary benefits to accrue from the project.

2) Determine that portion of the costs of the multiple-purpose project which should be nonreimbursable—such as the costs assignable for use of project facilities and waters for wildlife, fisheries, and recreation—and the portion of reimbursable costs to be shared by the federal government.

3) Complete plans for the final alignment of the first stage of the master drain from Kettleman City to Antioch, the most efficient design and specifications for its construction and the precise method of its operation.

4) Determine the best use of the master drain and its water for the management of wildlife areas, the establishment of sport fisheries, and the encouragement of recreation; and specific ways to preserve waterfowl wetland habitat that might indirectly be affected by the drain.

5) Determine the economic justification of evaporation facilities to provide for local disposal of waste waters in isolated areas, either permanently or until such time as they may be served by the master drain.

6) Determine feasibility of valley entities joining in a comprehensive plan for the disposal of waste waters from the valley and the San Francisco Bay region by way of a yet-unplanned regional disposal system.

In giving further consideration to the subject of water quality, the department will:

7) Continue studies of the potential nutrient and pesticide content and general quality of waste waters to be discharged into the master drain.

- 8) Study the need for and ways of removing nutrients from waste waters in the drain.
- 9) Cooperate in monitoring water conditions in the San Francisco Bay and western delta both before and after the master drain begins operating.
- 10) Determine the probable effect of waste water discharges from the master drain upon the San Francisco Bay and waters of the western delta and cooperate in the development of quality standards to which such discharges should adhere.

APPENDIX C
(LETTER OF TRANSMITTAL—Bulletin No. 127)

State of California—Resources Agency

William E. Warne, *Director*

DEPARTMENT OF WATER RESOURCES

P.O. Box 388
Sacramento

December 9, 1964

Honorable Edmund G. Brown, *Governor*
and Members of the Legislature
of the State of California

GENTLEMEN :

Bulletin No. 127, "The San Joaquin Valley Drainage Investigation," reports on a Department of Water Resources investigation of drainage problems in the San Joaquin Valley. The investigation was initiated in 1957 as a result of studies of drainage problems and water quality degradation in the San Joaquin Valley by the Joint Legislative Committee on Water Problems.

The bulletin recommends construction of the San Joaquin Master Drain in stages from the vicinity of Bakersfield to Antioch Bridge. The first stage would consist of the reach from Kettleman City to Antioch Bridge, including storage and dilution facilities, and would be operational in 1970.

The presentation of this bulletin complies with the request of the 1963 session of the California Legislature as stated in Senate Concurrent Resolution No. 27 (see facing page). All items contained in the resolution are discussed; however, some portions of items f, g, and h require further analysis. Additional analyses of benefits to accrue from the project (item f), of that portion of the costs of the multiple-purpose project which should be nonreimbursable (item g), and of the portion of the reimbursable costs to be shared by the federal government (item h) will be presented in supplemental reports during 1965.

The Department of Water Resources finds that waste water disposal problems exist in the valley today and will spread and intensify in the future. The disposal of salts from soils in the plant root zone and from waters of the valley is necessary if the productivity of the valley is to be maintained or increased to higher levels.

The most feasible means of disposing of these salts is by the removal of the agricultural waste waters from the valley. The most practicable method of removal is a master drain extending from near Bakersfield to the San Joaquin River at Antioch Bridge in Contra Costa County.

The terminus of the master drain at Antioch Bridge has been selected because it accomplishes all project purposes for the least cost and presents the greatest latitude and flexibility for possible future modifications. The department is confident that the drain can discharge safely at Antioch Bridge, as an interim solution, for at least 10 years and probably longer. If necessary, the terminus could be extended westward.

This bulletin will be followed, during 1965, by technical appendices covering detailed aspects of the investigation.

Sincerely yours,
/s/ WILLIAM E. WARNE
Director

APPENDIX D

(SENATE CONCURRENT RESOLUTION No. 27)

CALIFORNIA STATUTES OF 1963

Volume II. Page 4892

Resolution Chapter 119

Resolved by the Senate of the State of California, the Assembly thereof concurring. That the Department of Water Resources is urged to complete its San Joaquin Valley Drainage Investigation at the earliest possible time; and be it further

Resolved, That the Department of Water Resources is requested to prepare a comprehensive report on the facilities for the removal of drainage water from the San Joaquin Valley, which facilities comprise a part of the State Water Facilities, and to report thereon to the Legislature not later than the fifth legislative day of the 1965 Regular Session; and be it further

Resolved, That in preparing such report, the department shall thoroughly and exhaustively study the following matters:

(a) The purposes for which the drainage facilities, or alternatives thereto, should be built, including such purposes as the disposal of degraded irrigation water, oilfield wastes, and municipal and industrial wastes;

(b) Ways and means of effectively coordinating the responsibilities of the United States Secretary of Interior with respect to drainage facilities to be provided under Public Law 86-488 with the state's responsibility to provide facilities for removal of drainage water from the San Joaquin Valley as provided in the Burns-Porter Act; and ways and means of coordinating the responsibility of the state and federal agencies pursuant to the Federal Water Pollution Control Act as amended by Public Law 87-88;

(c) Alternative routing of drainage facilities and alternatives to the disposal of waste water other than through drainage facilities, such as reclamation, evaporation, or the removal of harmful constituents;

(d) The nature of the drainage facilities and alternatives proposed, if any, including preliminary design, staging of construction, recommended capacities, and alternate termini proposed, if any;

(e) The costs involved, including adequate allowances for escalation and all other contingencies, taking into account whatever staging or construction is proposed; and what portion of such costs should be nonreimbursable;

(f) The benefits to accrue from the project, both statewide and local;

(g) The engineering feasibility, the economic justification, and the financial feasibility of the project ;

(h) Ways and means of fairly and equitably recovering the costs of the project, in whole or in part, from the direct and indirect statewide and local beneficiaries of the project and from those contributing to the conditions requiring the removal of waste water, including the creation of an overall drainage district for such purpose ;
and be it further

Resolved, That the Department of Water Resources is further requested, in the course of the preparation of the comprehensive report called for herein, to carry out the directives contained in Assembly Concurrent Resolution 92, Resolution Chapter 214 of the 1961 session, and Sections 12230 to 12233 of the Water Code; and be it further

Resolved, That the Secretary of the Senate transmit a copy of this resolution to the Director of the Department of Water Resources.

APPENDIX E

COSTS OF ALTERNATE TRANSPORTATION PLANS

(In millions of dollars)

Alignment ^a	Costs ^b			
	Capital	Operation, maintenance, general expense	Power	Total
Alternatives ^c				
Cayucos	318	54	162	534
Monterey	149	24	62	235
Santa Clara ^d	430	53	143	626
San Gregorio ^d	408	59	388	855
San Joaquin Master Drain ^e Antioch	81.3 ^f	20.0 ^g	0.3	104.6
Costs of westward extensions ^h				
Chippis Island	29	3	5	37
Middle Point	40	4	6	50
Middle Point ⁱ	58	6	6	70
Martinez	63	7	8	78
Martinez ⁱ	92	10	8	110
Rodeo	102	10	17	129
Rodeo ⁱ	140	14	23	177

^a All facilities carry agricultural waste waters from the San Joaquin Valley.

^b Present worth to January, 1970, 4% interest, 100-year project life.

^c Construction of alternatives is staged on the valley floor and is not staged elsewhere.

^d A drain following this alignment also would carry municipal and industrial waste waters from Livermore and Santa Clara Valleys.

^e Construction of the San Joaquin Master Drain and its westward extensions is staged.

^f Includes costs of dilution facilities, a regulating and a detention reservoir.

^g Includes costs of a surveillance program.

^h Additional costs to those of a San Joaquin Master Drain terminating at Antioch.

ⁱ Includes municipal and industrial waste waters from northern Contra Costa County.

APPENDIX F

Chemical Concentrations in Waste Water ^a at the San Joaquin Master Drain Terminus

(Estimated parts per million)

Constituents	Concentrations	
	Initial	After 50 years operation
<i>Salts</i>		
Calcium	330	120
Magnesium	180	40
Sodium	1,600	720
Potassium	20	10
Carbonate	0	0
Bicarbonate	180	110
Sulfate	3,100	650
Chloride	1,200	900
Boron	10	3
Total dissolved solids	6,500	2,500
<i>Nutrients</i>		
Total nitrogen	21	21

<i>Pesticides</i>	0.001	0.001
<i>Others</i>		
Phenolic material	0.001	0.001
Grease and oil	0.5	0.5

^a Agricultural waste water only.

Export.....	As per applicable contract and/or agreement	As per applicable contract and/or agreement	None	None visible	400 ppm ¹	5 ppm	6.5-8.5	Coliform mpn 5,000 >20% time; fecal coliform mpn 200 median	Plankton 1 ppm, filtrate 1 ppb	Total nitrogen 3.0 ppm PO ₄ -0.5 ppm	No ³ bloom	100	*	As per applicable contract
Scenic enjoyment			None							Total nitrogen 3.0 ppm, PO ₄ -0.5 ppm	No ³ bloom			

* Means that numbers are to be added.

¹ The objectives indicated above shall not apply to areas subject to salinity intrusion from the bay nor to waterways within the delta where the inchannel quality is a subject of current negotiations.

² The standard for "Total Nitrogen" is intended to serve as a measure of the potential for algal growth and as a control on the development of an algal bloom (see note 3). The dry weight of algae divided by 13.3 gives the approximate quantity of nitrogen which has been incorporated into the living cell material. The assumption (supported by studies) is made that 50-60 ppm of algae on a dry weight basis will produce a green color in water. The number used, 3 ppm (N—in all

its forms), appears to be considerably on the safe side since this concentration creates a maximum potential growth of about only 40 ppm assuming that all the other growth factors are present and assuming further that the conversion of nitrogen into cell material is 100% efficient, which it decidedly is not. This objective is to be applied to water having a temperature of 60° F or more. Higher concentrations will be set for lower temperatures when information is available.

³ An algal bloom is defined as that quantity of growth which produces an undesirable effect. The purpose of the nitrogen objective is to prevent an algal bloom. Further study may well show that the nitrogen objective specified above should be modified either up or down.

APPENDIX H

STATE OF CALIFORNIA REGIONAL WATER POLLUTION CONTROL BOARD SAN FRANCISCO BAY REGION

RESOLUTION No. 535

Prescribing requirements as to the nature of waste discharge by Department of the Interior, Bureau of Reclamation from proposed San Luis interceptor drain discharging into tidal waters of the state at Pittsburg or Port Chicago, Contra Costa County.

- I. WHEREAS, The Department of the Interior, Bureau of Reclamation, hereinafter referred to as the discharger, has, in a letter dated November 19, 1963, requested "any discharge recommendations which the San Francisco Bay Regional Water Pollution Control Board desires to make for the San Luis interceptor drain discharging at Pittsburg or Port Chicago"; and
- II. WHEREAS, the discharger has also requested corresponding recommendations from the Central Valley Regional Water Pollution Control Board for an alternate discharge point at Antioch Bridge, Contra Costa County; and
- III. WHEREAS, the discharger did, in his letter of November 19, 1963, give information relative to the anticipated volume of waste flow, quality of the waste in terms of total dissolved solids and location of the proposed drains and discharge points; and
- IV. WHEREAS, this regional board has received and considered copies of the following correspondence addressed to the Central Valley Regional Water Pollution Control Board in response to that board's request for comments and suggestions for the formulation of waste discharge requirements for the three alternate discharge points:
 - A. Letter from Department of the Interior, Fish and Wildlife Service, dated November 19, 1963;
 - B. Letter from Department of Health, Education and Welfare, Public Health Service, dated November 20, 1963;
 - C. Letter from Contra Costa County Health Department, dated November 29, 1963;
 - D. Memorandum from State Department of Fish and Game, dated December 4, 1963;
 - E. Letter from W. J. O'Connell and Associates, dated December 3, 1963;
 - F. Memorandum from State Department of Water Resources, dated December 24, 1963; and

- V. WHEREAS, this regional board received reports relative to the proposed discharges from its chairman and its executive officer at its regular meeting on December 19, 1963; and
- VI. WHEREAS, a committee of the whole of this regional board met with a committee of the Central Valley Regional Water Pollution Control Board on January 9, 1964, and received further reports relative to this matter from the staffs of the boards and from other interested parties present; now
- VII. *Therefore be it resolved*, that this regional board finds that there is serious doubt about the effects that the proposed waste discharges would have upon the beneficial uses of the receiving waters within the San Francisco Bay Region which are now being protected or which will be protected in the future by this Regional Board;
- VIII. *Be it further resolved*, that pursuant to Sections 13054 and 13054.3, California Water Code, this regional board prohibits the proposed waste discharges in the San Francisco Bay region until the discharger has submitted evidence and assurances satisfactory to this board that the proposed discharges will not adversely and unreasonably affect the receiving waters for any of the beneficial uses which are now being protected or which will be protected by this board;
- IX. *Be it further resolved*, that the staff of the board is directed to prepare recommendations relative to the beneficial water uses to be protected and the receiving water conditions needed to protect said uses; to present these recommendations to the board at the earliest practicable date, and to present progress reports to the board at each regular meeting until said recommendations are finalized.

GRANT BURTON
Chairman

February 20, 1964

I, John B. Harrison, hereby certify the foregoing is a true and correct copy of Resolution No. 535, as adopted by the Regional Water Pollution Control Board of Region No. 2, at its regular meeting on February 20, 1964.

JOHN B. HARRISON
Executive Officer
Regional Water Pollution
Control Board No. 2

APPENDIX I
RESOLUTION
WASTE DISCHARGE REQUIREMENTS

San Luis Interceptor Drain
Antioch Bridge Area

Contra Costa County

Resolution No. 64-25

Adopted: 2/20/64

WHEREAS, the United States Department of the Interior, Bureau of Reclamation (hereinafter referred to as "USBR" has requested discharge recommendations from the Central Valley Regional Water Pollution Control Board (hereinafter called the "Board") for an agricultural drain to empty into the San Joaquin River in the vicinity of Antioch Bridge; and,

WHEREAS, corresponding recommendations have been requested of the San Francisco Bay Regional Water Pollution Control Board for alternate discharge points at Pittsburg or Port Chicago; and,

WHEREAS, the USBR has described drainage flows as follows:

"We expect ultimately that this drain will discharge 240,000 acre feet of water annually at a maximum rate of 400 cfs. During the first 10 years, flows of 10,000 acre feet annually are expected, increasing uniformly from the 10th to the 25th year. The quality of flows in the interceptor drain is expected to be 7,000 parts per million total dissolved solids initially and 3,000 parts per million total dissolved solids ultimately. These flows would originate primarily in the agricultural areas of the San Luis Unit service area, but part of them would originate on adjacent agricultural areas in Tulare Lake Basin and another part on the agricultural areas between San Luis Unit and the Delta."

WHEREAS, potential waste materials include mineral salts, pesticides, and plant nutrient materials; and,

WHEREAS, various agencies have informed this office that such materials could, in sufficient quantity, and depending upon receiving water conditions, cause undesirable changes in the water quality of this river reach; and

WHEREAS, committees from the Board and the San Francisco Bay Regional Water Pollution Control Board met on 9 January 1964, to review the several facets of the drainage discharge; and,

WHEREAS, the waters of the San Joaquin River, in the reach from Antioch Point upstream to Lights 23 and 24, are used for municipal and

domestic water, irrigation, industrial process and cooling water supply, recreation, navigation, for the support of fish and wildlife resources, and for waste disposal; and,

WHEREAS, this reach of the San Joaquin River is surrounded by expanding industrial and residential communities, and all existing uses of these waters are being developed to the maximum extent; and,

WHEREAS, these waters support a resident game fish population; and the entire run of Central Valley salmon, steelhead, striped bass, and other species must pass through this area in their migrations; and,

WHEREAS, the net outflow of San Joaquin River water through this area varies from a maximum during the winter and spring when storm run-off is high and consumptive use is low, to a negative or upstream flow when consumptive use is high and stream flow is low; and,

WHEREAS, salinity of these waters increases above domestic and industrial tolerances at times of low flow due to sea water intrusion; whereas the high net outflow required to repel sea water provides considerable dilution for waste waters into this reach; and,

WHEREAS, salinity of the San Joaquin River waters in this reach, during the normal low outflow period, is governed by releases of water from upstream control projects; and is further related to downstream diversions; and,

WHEREAS, "Conditions to be Maintained" in this reach are established in Resolution No. 64-24, adopted by the Board on 20 February 1964; and,

WHEREAS, it is the intent of the Central Valley Regional Water Pollution Control Board to protect the quality of the waters of the San Joaquin River for the existing beneficial uses; and,

WHEREAS, the Board finds that the limited data provided to date do not:

- A. Adequately define the nature of the discharge;
- B. Adequately depict the impact on receiving waters; and,
- C. Do not demonstrate the ability or intent of USBR to regulate or treat such wastes such that desired receiving water quality is maintained; therefore be it

RESOLVED, that pursuant to Section 13054.3 of Division 7, California Water Code, the discharge of San Luis Interceptor Drain wastes is prohibited in the Antioch or Antioch Bridge Area of the San Joaquin River; and be it further

RESOLVED, that such prohibition may be rescinded by the Board upon a showing by USBR that discharge quantities and concentrations are controllable, through treatment and regulation (such as continuing studies may indicate) such that reasonable assurance and evidence is

given that provisions of the Board's Resolution No. 64-24 (Conditions to be Maintained in San Joaquin River) will not be exceeded as a result of this discharge.

Executive Officer

Revised 2/20/64

APPENDIX J

CALIFORNIA LEGISLATURE—1965 REGULAR (GENERAL) SESSION

ASSEMBLY BILL

No. 2506

Introduced by Assemblymen Garrigus and Williamson

April 15, 1965

REFERRED TO COMMITTEE ON WATER

An act to amend Section 8501 of, and to add Chapter 6.5 (commencing with Section 8900) to Part 4 of Division 5 of the Water Code, relating to the San Joaquin-San Luis Waste Way.

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 8501 of the Water Code is amended
- 2 to read:
- 3 8501. The boundaries of the district are set forth and de-
- 4 scribed in Chapter 170, Statutes and Amendments to the
- 5 Codes, California, of 1913, and the description is hereby in-
- 6 corporated herein by reference as there set out, *except that*

LEGISLATIVE COUNSEL'S DIGEST

AB 2506, as introduced, Garrigus (Water). Sacramento-San Joaquin Drainage District.

Amends Sec. 8501, adds Ch. 6.5 (commencing with Sec. 8900), Pt. 4, Div. 5, Wat.C.

Modifies the description of the Sacramento-San Joaquin Drainage District.

Authorizes Reclamation Board, in name of district, to contract with Department of Water Resources under California Water Resources Development Bond Act, after an election so authorizing, re construction, operation and maintenance of any drainage facilities authorized to be constructed under bond act. Also authorizes board to contract with United States in connection with the construction and operation of drainage facilities for a designated area. Provides that the district shall have the powers, rights, and privileges possessed by irrigation districts in order to carry out these powers.

Authorizes the establishment of assessment zones and subzones in district after an election for purpose of levying and collecting assessments on land and improvements found by board to be specially benefited by any activity of board, and prescribes procedure re establishment thereof, levying of assessments therein, and dissolution thereof.

1 *the boundaries of the district are extended to include that area*
2 *within the boundaries designated on the map of the proposed*
3 *district set forth on the page following page xi of Appendix A*
4 *to Bulletin No. 127 of the Department of Water Resources,*
5 *Preliminary Edition, January, 1965.*

6 SEC. 2. Chapter 6.5 (commencing with Section 8900) is
7 added to Part 4 of Division 5 of said code, to read:

8

9

CHAPTER 6.5. ASSESSMENT ZONES

10

11

Article 1. Drainage Facilities

12

13

14 8900. The board may, in the name of the drainage district,
15 contract with the department under the California Water Re-
16 sources Development Bond Act (Chapter 8 (commencing with
17 Section 12930), Part 6, Division 6, of this code) in connection
18 with the construction, operation, and maintenance of any
19 drainage facilities, including facilities for drainage of return
20 flow, authorized to be constructed under Section 12934(d)(4)
21 of said bond act, and may also contract with the United States
22 in connection with the construction, operation, and mainte-
23 nance of any drainage facilities for the area lying southerly
24 of a line joining the southeast corner of section 16, township
25 2 south, range 5 east and the northeast corner of section 24,
26 township 2 north, range 6 east. Such contracts shall include
27 provisions limiting the payment of the costs of operation and
28 maintenance of such facilities, and the repayment of the capi-
29 tal costs of such facilities, to payment from assessments levied
30 within zones or subzones created pursuant to this chapter.

31 Prior to entering into such a contract or contracts, the board
32 shall establish the area which is proposed to be included in
33 zones or subzones for such purposes and shall call and hold
34 an election in that part of the drainage district to submit to
35 the owners of tracts of land therein the proposition of whether
36 such contract or contracts should be executed and the proposed
37 zones or subzones established.

38 The election shall be called and conducted and results de-
39 termined, insofar as practicable, in the same manner as a bond
40 election pursuant to Chapter 5 (commencing with Section
41 9330), Part 5 of this division.

42 If a majority of votes cast at such election are in favor of
43 the proposition the board may proceed with the negotiation of
44 such contract or contracts and may proceed with the estab-
45 lishment of the proposed zones or subzones in the manner pro-
46 vided in this chapter.

47 8901. To carry out Section 8900, the district has all powers,
48 rights, and privileges possessed by irrigation districts and
49 may exercise these powers, rights, and privileges in the same
50 manner as irrigation districts as provided in the Irrigation
51 District Federal Cooperation Law (commencing with Section
23175).

Article 2. Establishment of Zones

8902. The board may, pursuant to this chapter, establish zones and subzones within the drainage district for the purpose of levying and collecting assessments upon land therein found by the board to be specially benefited by any activity within the jurisdiction of the board under the provisions of Section 8900 or which contributes to the condition for which the activity is being undertaken.

As used in this chapter, "land" includes improvements, and "activity" includes any construction, operation, maintenance or other work which the board is authorized to undertake pursuant to Section 8900 and any payments required under any contract with the department thereunder.

As used in this chapter "zone benefited" or "benefit" includes but is not limited to, land which contributes to the condition for which the activity is being undertaken.

8903. Whenever the board proposes to establish a zone or zones, it shall prepare a description of the proposed boundaries together with a map thereof for each zone to be formed. For the purpose of preparing these boundaries and this map, the board shall make such investigations as may be necessary and may utilize any and all books, maps, or other relevant records, whether or not on file in the offices of the board or department or any other office or agency of the state. All officers or agencies of the state shall render whatever assistance may be required to facilitate the work of the board pursuant to the provisions of this chapter.

8904. Any zone may be divided into subzones when it is determined by the investigation that the benefit to the land in the area is not uniform throughout the zone.

8905. If a zone is divided into subzones, the subzones shall be given a numerical designation starting with Subzone 1 which shall be the subzone which receives the greatest proportional benefit. This benefit shall be expressed as 100 percent and the benefits received by the other subzones shall be expressed in terms of relatively smaller percentages as such benefits compare with those received by Subzone 1. The map of the proposed boundaries of the zone shall also show the boundaries of the subzones, if any, therein and the percentages of benefits to each such subzone. The amount to be collected from each subzone of a zone shall be determined by the following formula: the assessed valuation of the land within the subzone, multiplied by the percentage of benefit for that subzone, multiplied by the total amount to be collected in the zone; divided by the sum of the various products obtained by multiplying the assessed valuation of each subzone in the zone by its corresponding percentage of benefit.

8906. Upon completion of the said description and map, the board shall schedule a hearing to be held either at some convenient place within the proposed boundaries of the zone

1 or at Sacramento, whichever appears to the board to be more
2 convenient for all interested parties.

3 8907. Notice of the hearing shall be given by publication
4 in at least one newspaper of general circulation within the
5 proposed boundaries of the zone for at least once a week for
6 two successive weeks, or if there is no such newspaper pub-
7 lished within the said boundaries then in the county seat of
8 the county or counties in which the zone is located.

9 8908. The notice shall state the time and place of hearing,
10 that the purpose of the hearing is to establish the boundaries
11 of the zone benefited by the proposed activity, and the location
12 of the place or places where the map showing the proposed
13 boundaries as determined by the board may be inspected by
14 any interested person. The notice shall include a description
15 of the zone, which may be brief and in general terms.

16 8909. At the hearing any owner of land within the pro-
17 posed boundaries of the zone or other interested person may
18 offer, and the board shall receive, any relevant evidence or
19 testimony relating to the establishment of the boundaries of
20 the zone, the subzones therein, or the benefits to be received
21 by the proposed activity. Any such owner or interested person
22 may object to the inclusion of land within the zone or any
23 subzone therein or may request the inclusion of any other land
24 within the zone or a change in the boundaries or percentage
25 of benefits of any subzone.

26 8910. Land lying without the exterior boundaries of the
27 proposed zone as shown on the map prepared by the board
28 shall not be included within the zone unless at the hearing the
29 owner thereof consents or the owner is given notice and an
30 opportunity to object to such inclusion and to be heard thereon.

31 8911. When any such additional land is proposed to be
32 included and the owner's consent is not given, the hearing
33 shall be adjourned to a specified time and place.

34 8912. Notice of such adjourned hearing, where additional
35 land is to be included, and the purpose thereof shall be given
36 by publication of notice at least once a week for two successive
37 weeks in a newspaper of general circulation in the county in
38 which the land, or the greater portion of the land, sought to be
39 included is situated, or, in lieu of such publication, by service
40 by registered mail upon the owner of such land as determined
41 by the last equalized assessment roll in accordance with which
42 such land was assessed.

43 8913. Upon the final conclusion of such hearing the board
44 shall establish the boundaries of the zone and of the subzones
45 therein and the percentages of benefits of the respective sub-
46 zones, in such manner that all of the lands benefited by the
47 activity will be included in the zone and that all land within
48 the area will be classified in proportion to the benefits received
49 by it.

8914. Land benefited by more than one activity may be included within as many zones as there are activities by which it is benefited.

8915. The establishment of a zone pursuant to this chapter shall be evidenced by an order or resolution of the board creating such zone. The order or resolution shall describe the boundaries of the zone and of the subzones and the percentage of benefits for each subzone, if any, and each such zone shall be given a name, which may include a number, by which the zone shall be known and designated. Such name shall be as brief as circumstances permit.

8916. The order or resolution determining and establishing the boundaries of a zone shall be filed for record in the office of the county recorder of each county within which any portion of the zone is located. Thereupon the determination and establishment of such zone shall be complete.

Article 3. Dissolution of Zones

8917. The board may dissolve any zone established pursuant to this chapter, after a hearing, if it finds and determines that the land in the zone is no longer specially benefited by the activity for which it was established and that there is no outstanding indebtedness for the payment of which the lands therein are subject to assessment.

Article 4. Modification of Zones

8918. The boundaries of any established zone or subzones therein, the description of the activity for which the zone is established, and the determination of relative benefits within any subzone may be modified by the board.

8919. The board shall conduct such modification proceedings as near as may be in the manner provided in this chapter for the formation of zones, and may make such modification if in its discretion and judgment the best interests of the State and the zones affected will be served thereby.

Article 5. Assessments

8920. The land within each subzone, and the land within each zone, if no subzones are established therein, shall be conclusively presumed to be benefited by the activity in accordance with the assessed valuation of the land and shall be subject to assessment as provided in this article.

8921. Each zone is a district within which assessments are collected according to the value of the land therein, and the provisions of Chapter 8 (commencing with Section 54900), Part 1, Division 2, Title 5 of the Government Code shall be complied with.

1 8922. The board shall, prior to the first day of April of
2 each year, estimate the amount of money necessary for the
3 activity during the ensuing fiscal year and during the current
4 fiscal year where no assessment has been levied or collected for
5 the current fiscal year.

6 8923. Following the first day of April of each year, the
7 board shall hold a hearing at Sacramento on the matter of
8 fixing the estimates and assessments for all zones and subzones.

9 8924. Notice of the hearing shall be given by publication
10 in at least one newspaper of general circulation in each zone
11 affected for at least once a week for two successive weeks, or
12 if there is no such newspaper published within the said bound-
13 aries then in the county seat of the county or counties in which
14 the zone is located.

15 8925. The notice shall set the time and place of the hearing
16 which shall be held not less than 10 days following the com-
17 pletion of publication as to all zones, and shall state that the
18 purpose of the hearing is to confirm or modify or revise the
19 program of activity to be performed in the zones for which
20 estimates have been made pursuant to Section 8920, and to
21 determine the necessity for such activity and the amount of
22 the estimates therefor.

23 8926. At the hearing any owner of land in any zone af-
24 fected, or other interested person, may offer, and the board
25 shall receive, any relevant evidence or testimony concerning
26 the proposed program of activity relating to any such zone, the
27 necessity for such activity, or the estimate of the cost thereof.

28 8927. Upon the final conclusion of such hearing the board
29 shall fix the amount of the estimate for each such zone for all
30 purposes of the assessments provided for in this article.

31 8928. If any zone or subzone lies within more than one
32 county, the board shall divide the amount of the estimate in
33 the proportion of the assessed valuation of the land in the zone
34 or subzone lying in each county. The assessed valuation shall
35 be determined on the basis of the last equalized assessment roll
36 of the respective counties.

37 8929. The board shall certify to the auditor and board of
38 supervisors of each county in which each zone, or part thereof,
39 lies, the amount required, in order to pay the estimate for the
40 ensuing fiscal year or the current fiscal year where no assess-
41 ment has been levied or collected for the current fiscal year,
42 to be levied in each zone, and if the zone is divided into sub-
43 zones, the amount required to be levied for such purposes in
44 each subzone.

45 8930. The board of supervisors of each county in which
46 there lies a zone or any portion thereof shall annually, and at
47 the time of levying county taxes, levy on the land within the
48 county and within the zone, or if subzones are established,
49 within each subzone, and ad valorem assessment sufficient to
50 raise the amount or amounts certified by the board.

1 8931. Each assessment shall be identified by the name and
2 number, if any, of the zone, and by the number of the subzone,
3 if a subzone is involved.

4 8932. The board of supervisors shall determine a rate of
5 assessment sufficient to cover the amount of the estimate for
6 each zone or subzone, making reasonable allowance for antici-
7 pated delinquencies. If a fraction of a cent occurs in a valua-
8 tion of one hundred dollars (\$100), it shall be taken as a full
9 cent. The assessment shall be computed and entered upon the
10 assessment roll by the auditor.

11 8933. Assessments levied pursuant to this article shall be
12 collected at the same time and in the same manner as county
13 taxes. So far as applicable, all provisions of law relating to
14 the equalization, levy, payment, and collection of county taxes
15 shall apply to such assessments and all provisions of law relat-
16 ing to the duties of county officers in relation to county taxes
17 shall apply to such assessments, except as otherwise expressly
18 provided by this chapter, so far as the same are or may be
19 made applicable.

20 8934. All money raised by such assessments shall be ac-
21 counted for separately as to each zone and subzone. All such
22 money shall be transmitted by January 1st and July 1st of
23 each year to the board and shall be deposited by it in the State
24 Treasury to the credit of special zone accounts which shall be
25 established in the Sacramento and San Joaquin Drainage Dis-
26 trict Fund. The money in such accounts shall be available to
27 the board for expenditure for the activity for which the zone
28 was established and from which the money in the account was
29 derived.

LETTER OF TRANSMITTAL

March 15, 1965

HON. GEORGE MILLER, JR., *Chairman*,
and Members, Joint Legislative Budget Committee
State Capitol, Sacramento

Gentlemen :

Since the end of World War II, California's population has very nearly doubled—from 9.5 million in 1945 to 18.8 million in 1965. More than any other single factor, population growth determines the scope and nature of the state's building program.

This increase, plus projected future increases, combined with the accumulated need to modernize and replace existing older facilities, has required a building program of a magnitude unmatched by any other state. With California's population expected to rise to almost 21.2 million by July of 1969, a continued high level of investment in facilities for education, mental health, and rehabilitation will be necessary to maintain existing standards of service.

Through the use of accumulated reserves, current revenues, and bond proceeds, the state now has modern, efficient facilities for programs in the fields mentioned above. As California's population continues to increase, however, the building investment necessary to adequately meet this growth must be maintained. So that the requirements thus generated can be met in a timely and orderly way, the state has planned its building program within a moving five-year framework which is regularly reevaluated and extended so that future building needs may be properly coordinated, financial requirements studied, and an appropriate balance between obligations and resources maintained.

This report, the Sixth Revision of the Five-year State Building Program, has been prepared in accordance with the principles enumerated above. All projects have been classified into one of two categories:

(1) Minimum basic facilities, including related auxiliary services, needed to provide the capacity to meet the needs generated by forecast population. In the absence of changes in existing law or revision of generally accepted concepts and principles, these projects are deemed to be obligatory. Only through such drastic actions as limiting enrollments at the colleges and the university or reducing the level of care of the mentally ill and mentally retarded could the mandatory classification of these projects be modified. In terms of dollar cost, laboratories, classrooms, ward buildings, and custodial housing constitute the predominant share of projects in this category.

Also included within this grouping is the cost of state assistance for the construction of public junior college facilities. Although the estimated expenditures during 1965-66 for this purpose are reported under Local Assistance in the Governor's Budget, these costs are included in this report because of the close, interdependent relationship among the

junior colleges, the state colleges, and the university in the construction requirements for higher education.

(2) Facilities to provide for the necessary, continued improvement in the capabilities and effectiveness of agencies of the state. In part, these projects will serve to further progress in areas already recognized by the Legislature and in part to permit the extension of some programs into new areas. As a general rule, projects in this grouping are those which will be beneficial on a long-range basis.

Although projects in this category merit inclusion in the program and full consideration, these projects do involve questions of policy which can be resolved only by further study and consideration. Appropriate methods of financing, relative interprogram priorities, the impact on future operational costs, and alternative means of achieving the desired ends are some of the issues yet to be resolved. Such projects are designated by footnote "a" on amounts in the schedules of projects.

The recommendations and conclusions contained in this report are predicated on the following basic assumptions.

1. The population of the state will continue to increase at the rate of approximately 600,000 persons per year.
2. No major change in economic conditions or policies will occur.
3. The policy of maintaining high standards in state institutions and services, consistent with the need for all practicable economies, will be continued.

This report excludes certain capital improvement programs which are distinct from the general five-year state building program and are financed primarily from special sources. These are:

1. State highway program.
2. Parks and recreation acquisition and development program.
3. California water facilities program.
4. The State Fair and Exposition and district fairs which are subject to special financing arrangements.
5. Wildlife conservation program.

Construction and improvement projects estimated to cost less than \$50,000 have also been excluded from programs of the several state agencies. These minor projects are related to ongoing operational programs and should, therefore, be programed on an annual basis and financed entirely from current revenues.

Respectfully submitted,

Director of Finance

POPULATION FORECASTS

California's population is expected to reach 18,815,000 by July 1, 1965, an increase of 45 percent over the 13,004,000 present 10 years earlier. Current forecasts show that the next 10 years will bring an even greater numerical gain. The state's population is projected at 24,909,000 by 1975.

A comparison of the rates of growth of the various age groups with that of the population as a whole is shown in Table 2. The decline in birth rates in evidence since 1957 will result in a growth rate in the younger age group which is less than that of the population as a whole. The number under age 18 is expected to increase from approximately 5,519,000 on July 1, 1960, to 7,500,000 on the corresponding date in 1970 and to 9,201,000 by mid-1980.

The sharp increase in births experienced after World War II is now being reflected in a corresponding increase in the rate of new entrants into the "productive" 18- to 49-year age group. For the next few years, this shift will be experienced predominantly at the younger end of this span, the years during which opportunities for higher education are most in demand. As this population wave progresses more completely into the working ages, the benefits of its contribution to the labor force may be anticipated.

During the remainder of the current decade, the rate of increase in the population 65 years and over is expected to remain below that of the population as a whole. The increasing development of retirement attractions in the state and the "aging" of the population of the nation and of the state will alter these relative rates of increase after 1970. There were 1,368,000 Californians 65 and over in 1960; this number will increase to 1,841,000 in 1970 and to 2,443,000 in 1980.

Underlying the new projections are the usual assumptions of basic stability, the absence of war or large-scale catastrophe and maintenance of the economic growth at rates which have enabled us to adjust to rapid population increase in the past. More specifically, the following assumptions form a basis for the projections.

- (a) The nation's economy will show only minor fluctuations. Growth of the western market should produce a level of economic activity in California capable of sustaining an annual net civilian migration of at least 325,000.
- (b) California's role in the national defense effort and aerospace production will continue to be an important one but a change in its relative importance is occurring. Approximately 325,000 members of the armed forces will serve at California installations or aboard ships stationed in California ports.
- (c) The crude rate of natural increase (the excess of births over deaths) will decline slightly from the substantial levels of the past few years. As in the past, migrants to the state will be responsible for the major share of population growth until about 1975.

POPULATION FORECASTS—Continued

The following tables summarize recent trends in California's population and attempt to show what lies ahead.

Table 1. CALIFORNIA'S POPULATION, 1950-1980

<i>Census:</i>	<i>Total</i>	<i>Civilian</i>
April 1, 1950	10,586,223	10,412,988
April 1, 1960	15,717,204	15,416,889
<i>Estimated and Projected:</i>		
July 1, 1960	15,863,000	15,567,000
July 1, 1961	16,453,000	16,163,000
July 1, 1962	17,044,000	16,737,000
July 1, 1963	17,670,000	17,349,000
July 1, 1964	18,234,000	17,912,000
July 1, 1965	18,815,000	18,492,000
July 1, 1966	19,389,000	19,065,000
July 1, 1970	21,787,000	21,462,000
July 1, 1975	24,909,000	24,584,000
July 1, 1980	28,205,000	27,880,000

Table 2. CALIFORNIA'S TOTAL POPULATION BY BROAD AGE GROUPS, 1960-1980

HIGHER EDUCATION

During December, 1964 the Coordinating Council for Higher Education¹ published the study "California's Needs for Additional Centers of Public Higher Education." This study made the following recommendations:

(1) The council advise the Legislature that it should authorize in 1965 a California state college in Kern County.

(2) The council on November 24, 1964, adopted the following policy:

Where the council finds there is a definite ultimate need for a campus, acquisition of sites in advance of authorization to start a campus may be justified in carefully restricted circumstances, as found by the council, such as where land may not subsequently be available without excessive cost or where there may be special opportunity to obtain the land.

In conjunction with the above stated policy, current data show that:

(a) A "definite ultimate need" exists for new California state colleges to serve students in the following areas, listed alphabetically: Contra Costa County, the San Mateo County-Santa Clara County area, and in Ventura County in a location to serve students from both the cities of Ventura and Oxnard as well as from cities in northern Los Angeles County. It appears at this time that authorization for the establishment of one of these three campuses may be recommended by the Coordinating Council to the Legislature prior to 1969 and the second and third campuses in 1969 or thereafter.

(b) A "definite ultimate need" exists for a university campus in the Los Angeles area (the counties of Los Angeles, Ventura, San Bernardino, Riverside and Orange) and for one in the San Francisco Bay metropolitan area (the counties of San Francisco, Marin, Solano, Sonoma, Napa, Contra Costa, Alameda, Santa Clara and San Mateo). It appears at this time authorization for the establishment of one of these campuses may be recommended by the Coordinating Council to the Legislature in 1969 and recommendation for the second campus approximately in 1975.

(3) The council further advise the Legislature that sites for institutions of public higher education should be acquired in advance of legislative authorization of the institutions through use of the following procedures:

(a) Advance acquisition of sites for a state college located in Contra Costa County, for a state college located to serve students from San Mateo and Santa Clara Counties, and for a state college located to serve students from Ventura County and Los Angeles County will be justified in each instance where the Trustees of the California State Colleges present evidence, and the council finds that "carefully restricted circumstances" warrant it, "such as where land may not subsequently be available without excessive cost or

¹ Approved by the council on November 24, 1964.

where there may be special opportunity to obtain the land," and upon such findings the council will recommend appropriations for the acquisition of such sites.

(b) Advance acquisition of sites for a University of California campus in either the Los Angeles or San Francisco Bay area would be justified when the Regents of the University present evidence and the council finds that "carefully restricted circumstances" warrant it, "such as where land may not subsequently be available without excessive cost or where there may be special opportunity to obtain the land," and upon such findings the council will recommend appropriations for the acquisition of such sites.

(4) And the council further advise the Legislature not later than 1969 and each five years thereafter until all needs have been met, it will conduct a statewide survey of the then existing needs for additional centers of public higher education and the need for advanced acquisition of sites.

(5) And the council further advise the Legislature to expedite the inclusion of all areas of the state within junior college districts.

(6) In the light of the request of the University of California, the council indicate that it will consider a staff report on the need for specialized programs such as graduate agriculture and graduate health science programs in the San Joaquin Valley at its December 15 [1964] meeting or at such subsequent meeting as the data may be available.

No provision has been made in this five-year program for either a new state college in Kern County or for the advance acquisition of sites because at this time the Legislature has not had an opportunity to establish such a college or express itself on the advance acquisition of future college sites.

Auxiliary Enterprise Facilities:

The Master Plan For Higher Education made recommendations in relation to noninstructional costs; "Although the survey team endorses tuition-free education, nevertheless, it believes that students should assume greater responsibility for financing their education by paying fees sufficient to cover the operating costs of services not directly related to instruction. Such services would include laboratory fees, health, intercollegiate athletics, and student activities. Moreover, the team believes that ancillary services such as housing, feeding, and parking should be entirely self-supporting."

As a result of these recommendations the staff of the Coordinating Council presented a report to the council entitled Financing of Additional Auxiliary Enterprise Facilities on state college and university campuses. These recommendations were accepted by the Coordinating Council in September 1963 and this program has been prepared considering the recommendations of the Coordinating Council. While the actions reflected in this five-year building program do not match in exact degree all the recommendations of the Coordinating Council, we believe it represents the substance of the recommendations and is another step forward in achieving the goals of the Master Plan. The recommendations are as follows:

Auxiliary Enterprise Facilities—(Continued)

Residence Halls, Dining Facilities, and Student Unions

It is recommended that:

1. "The Trustees of the California State Colleges and the Regents of the University of California be commended upon and supported in their plans to finance residence halls and student unions on a full self-supporting basis and to further reduce the state subsidy for construction of residential dining facilities."
2. "The Trustees of the California State Colleges and the Regents of the University of California adopt as a goal the financing of all future dining facilities on a fully self-supporting basis as soon as possible and, in any event, earlier than the conclusion of the 1964-69 building program."

This building program makes no provision for any of these facilities with the exception of dining facilities. It is the policy of the Department of Finance in the preparation of this five-year building program and the 1965-66 Governor's Budget to provide an initial complement of dining facilities on new campuses. The profits from such facilities would thereafter be devoted to any replacement or expansion necessitated by expanding student enrollments. The initial allowance of dining or cafeteria facilities could be utilized in conjunction with a residence hall program or a dining commons; however, the allowance once made for either of these purposes will not be repeated.

Parking Facilities

It is recommended that:

"The authority for all parking operations and financing thereof be assigned to the Trustees of the California State Colleges, that the assignment include the responsibility to finance all future parking construction and operation expenditures out of parking fee receipts, and that the assignment be accomplished in an orderly manner in keeping with the following considerations:

- A. Parking facilities be excluded from any future general state obligation bond issue for the financing of higher education facilities.
- B. A uniform definition of types of operating expense be charged to all parking operations to be developed.
- C. Any net loss in parking fee reimbursements to the college support budget be offset by equivalent increases in the General Fund support appropriation."

At the present time the operating portion of the parking program of the University of California is carried on entirely from nonstate funds. The state does, however, provide initial increments of parking facilities on new campuses of the university. Subsequent facilities for parking are then constructed from receipts from the operation of the pro-

Auxiliary Enterprise Facilities—(Continued)

gram. By way of comparison, the parking program of the California state colleges has been supported from bond proceeds, however, offsetting receipts received in their support appropriations from the charging of parking fees offset this expenditure. It has been the practice to estimate the receipts from parking within the California state college system and then subtract the operating costs of the year under consideration and budget the balance of this money from bond funds for necessary parking programs. The Department of Finance is essentially in agreement with the Coordinating Council in relation to the operation of parking programs and would support legislation in the 1965 General Session which would place the parking program of the state colleges on the same basis as State College Housing Facilities, thereby providing the trustees with the latitude necessary to operate their parking program and at the same time providing information to the Legislature by the inclusion of the program within the Governor's Budget. No parking program for the State College Trustees has been shown in this five-year building program because of the lack of a fund source pending legislative determination of the program's status.

Student Health Buildings and Intercollegiate Athletic Facilities

It is recommended that:

"Both segments now explore the feasibility of including amortization and interest payments for the construction of health service buildings and facilities used primarily for intercollegiate athletic purposes within those costs to be covered by the incidental and materials fee income and that such deliberations be completed in time for any positive decision to be reflected in any future General Fund obligation bond issue by excluding such physical facilities."

All student health facilities where specific construction is required have been excluded from this program, and only instructional athletic facilities have been provided.

Revenue Bond Financing Prospects

It is recommended: "That the Trustees of the California State Colleges and the Regents of the University of California make definite measures to attract private investor purchases of revenue bonds for all types of auxiliary enterprise facilities."

Higher Education Facilities Act of 1963:

As a result of legislation enacted by the 88th Congress, federal funds will be available to all three segments of higher education in California for support of construction of facilities housing instruction and research in the academic disciplines of natural or physical sciences, mathematics, modern foreign languages and engineering, and for libraries. A total of \$1,195,000,000 for grants and loans has been provided by the act and appropriated by Congress.

Higher Education Facilities Act of 1963—(Continued)

The legislation, enacted as Public Law 88-204, consists of four titles which provide for:

- I. \$690 million for grants to undergraduate institutions and public community colleges and technical schools;
- II. a five-year program with \$145 million authorized for grants to establish and improve institutions devoted to graduate instruction;
- III. an authorization of \$360 million for a five-year program of loans for construction of academic facilities; and
- IV. general provisions outlining the methods of administration of the act.

While the Title I grant program is authorized for five years, the appropriation authorization extends for three years at \$230 million per year. The allotment of these funds among the several states is determined as follows: Twenty-two percent of the appropriation is based upon a state's relative per capita income and number of high school graduates; this allotment may be used only for public community colleges and public technical institutes. The remaining 78 percent will be allotted one-half on the basis of the relative number of students enrolled in grades 9 through 12 in the state and one-half on the basis of the relative number of students enrolled in institutions of higher education in the state. By such a formula it has been determined by the Federal Office of Education that California's share of this \$230 million for fiscal year 1964-65 would amount to \$3,770,269 for public community colleges and public technical institutes and \$19,877,204 for other undergraduate institutions, a total of \$23,647,473.

To be eligible to receive grants under this title each state must designate a commission to develop and administer a plan for distribution of federal moneys within that state. The Coordinating Council for Higher Education has been named by Chapter 94, Statutes of 1964, as the body to carry out this function for California. Under the requirements of the act, the council has the responsibility for developing a plan for California's participation in this grant program including recommendation of:

1. relative priorities of eligible projects for construction of academic facilities submitted by institutions of higher education in the state and;
2. the federal share of the development cost of each such project under basic criteria set forth by the Commissioner of Education.

The council has the further responsibility of allocating funds granted to California under the auspices of this act once the plan has been approved. The cost of administration is to be paid out of funds provided for by the act. A total of \$3 million per year is authorized for this purpose, of which \$120,000 has been allocated to California.

The state plan referred to above was developed by council staff during 1964, approved by the council on November 24, 1964 and received federal approval December 28, 1964. Applications under

Higher Education Facilities Act of 1963—(Continued)

Title I are being accumulated by the Council and rated with the first statewide priority list for the four-year institutions to be issued at the end of March, 1965 and the public community colleges during April of 1965.

The grant program for graduate institutions authorizes \$145 million over three years. Applications for moneys under this program will be considered by the Commissioner of Education with the assistance of an advisory committee created specifically to consult on the administration of the program.

Under the loan program for construction of academic facilities, \$120 million per year for three years has been authorized with not more than 12.5 percent of the total loan appropriation going to any one state in any given fiscal year. Federal loan participation may not amount to more than 75 percent of a project.

At the present time there are no plans to participate in the Federal Loan Program under Title III.

Health Professions Educational Assistance Act of 1963:

This legislation, Public Law 88-129, provides for a three-year program of federal grants to assist in constructing facilities on a nationwide basis for the training of physicians, pharmacists, optometrists, podiatrists, nurses or public health personnel. Also provided are federal grants to assist in the replacement or rehabilitation of such facilities.

Subject to later appropriation of funds, this act authorized, over a three-year period:

1. \$35 million for construction of new dental facilities;
2. \$105 million for construction of new facilities for the rest of the professions indicated above; and
3. \$35 million for use in rehabilitation of existing facilities.

The Surgeon General is authorized under the act to review requests for grants with the assistance of an advisory council set up specifically by the act for this purpose. Where grants are sought for projects which will increase the training capacity of the institution, up to two-thirds of the cost may be borne by federal funds. If there is to be no resultant increase in capacity the matching is reduced to 50 percent federal grant participation. An exception to these degrees of federal participation exists for facilities to be constructed for training public health personnel. Federal grants for such facilities may be as much as 75 percent of project cost.

By February, 1965, the University had received grants of \$9,000,000 under this program. Therefore, with a general indication of the size of grants which may be forthcoming, federal participation has been applied to potential recipients in the five-year program. For eligible

Health Professions Educational Assistance Act of 1963—(Continued)

projects it is assumed that the federal grant will average 60 percent of project cost. This funding ratio has been arrived at in light of the fact that while it is presently impossible to predict the precise amount of the federal appropriation that will be allotted to California, experience to date provides a relatively valid base upon which to estimate. The assumed funding split reflects some eligible projects receiving two-thirds federal support, and others receiving proportionately less or no federal support. There has been no reflection of possible federal grants for state college or junior college projects under PL 88-129 due to a lack of eligible projects in the building programs of those segments at this time.

UNIVERSITY OF CALIFORNIA

The University of California is a statewide educational institution responsible for university level instruction including primary responsibility for state-supported academic research and instruction relating to the professions. The existing facilities of the university consist of five general campuses located at Berkeley, Davis, Los Angeles, Riverside and Santa Barbara; two medical centers located at San Francisco and Los Angeles; a graduate school of science and engineering at San Diego; two research centers located at Mount Hamilton (astronomy) and San Diego (oceanography); 10 agricultural field stations aggregating 10,836 acres and 3 departmental experimental areas containing 13,270 acres, and farm advisors' offices in 52 counties.

New facilities under construction consist of three general campuses located at San Diego, Santa Cruz, and Irvine (Orange County); and one medical center to be located at San Diego.

Two campuses of the university have been designated by the regents as having primary responsibility for carrying on programs of instruction and research in the various fields of agriculture; they are Davis in northern California and Riverside in southern California. Hastings College of the Law in San Francisco and the California College of Medicine in Los Angeles are also affiliated with the university.

SUMMARY OF PROPOSED PROJECTS

A total of \$649,648,075 is included in this five-year building program for major construction projects for the University of California composed of \$136,239,847 from bond proceeds or the General Fund and \$293,408,228 from other funds. Of the state funds, a total of \$69,740,300 represents projects which are not yet resolved as to timing and/or method of financing. The types of projects included in the five-year program are summarized in Table III below together with the source of funding:

TABLE III. UNIVERSITY OF CALIFORNIA—TABULATION OF PROJECTS BY CATEGORY

	<i>State Funds</i>		<i>Nonstate funds^b</i>	<i>Total expenditures</i>	<i>Percentage</i>
	<i>Proposed</i>	<i>Policy unresolved^a</i>

^a Projects requiring further policy considerations as to relative urgency, timing or method of financing.

^b To be financed from Federal or other nonstate funds.

Instruction and Research:

This includes projects of which the majority is for classrooms, laboratories or research facilities for the teaching staff and graduate students.

Projects include \$74 million for physical sciences, \$52 million for the life sciences, \$39 million for the social sciences, and \$34 million for the humanities.

Also included are \$110 million for expansion of the existing medical schools at Los Angeles and San Francisco and for new medical schools at San Diego and Davis. This program will provide for an increase of more than 1,400 students in the medical schools between 1966-67 and 1971-72.

In addition, projects totaling \$27 million for new libraries and additions to existing libraries are provided.

Projects in support of the extension program total \$8 million. These units are either proposed for nonstate funding or are subject to further policy consideration. Also included in the five-year program is \$9.8 million for physical education facilities most of which are also subject to further policy consideration.

Land Acquisition:

Purchases of land will provide the necessary sites for enrollment growth at Santa Barbara to 15,000 students. At San Francisco provision is made for expansion of instruction and research programs and at other campuses for residence halls and administration facilities.

Administration and Service:

This includes administration buildings and service facilities such as student health centers, student activity, maintenance, storage, and parking.

For administration buildings, approximately \$14 million is proposed from state funds. Also proposed is \$3,275,000 of nonstate funds for student health centers. The state currently supplies new university campuses with an initial increment of parking for which funds are budgeted under site development. Later increments of parking facilities are to be built from the operating revenues of the parking program. \$23.8 million is planned for this purpose during the five-year program.

Also included in the program is \$6.7 million for maintenance facilities and corporation yards.

Organized Research:

Included are facilities for research directed toward advancing the understanding of the natural world and the interpretation of human history and of the great creations of human insight and imagination. The five-year program includes facilities for research in the following fields: agriculture, \$8.5 million; medicine, \$12.7 million; the life sciences, \$14.8 million; and the physical sciences, \$18.4 million. Also included are \$1,795,700 in state funds for the development of agricultural field stations.

Utilities and Site Development:

Included are provisions for heating plants, utility lines, erosion protection, and roads. A total of \$10 million or 6.2 percent of the five-year program is required for this purpose.

Residence Halls and Dining Commons:

Residence halls are proposed to provide student housing on the new campuses and on existing campuses where such facilities are lacking. The program is now supported primarily from nonstate sources. State funds are limited to providing an initial increment of dining facilities on a campus either in the form of a central dining commons or in connection with individual residence halls. University planning goals will provide residential capacities for 25 percent of the student enrollments in densely populated areas and up to 50 percent for those campuses located in less densely populated areas.

DIVERSION

In the Master Plan for Higher Education, adopted by the 1960 Legislature, certain recommendations appeared regarding the methods of selection and retention of students. The following recommendations affected university policy:

1. "In order to raise materially standards for admission to the lower division, the state colleges select first-time freshmen from the top one-third (33 $\frac{1}{3}$ %) and the university from the top one-eighth (12 $\frac{1}{2}$ %) of all graduates of California public high schools."
2. "For both the state colleges and the university, freshmen admissions through special procedures outside the basic requirements of recommending units of high school work and/or aptitude tests (such as specials and exceptions to the rule) be limited to 2 percent of all freshmen admissions in each system for a given year. Furthermore, that all 'limited' students be required to meet regular admission standards."
3. "'The University of California emphasizes policies leading to the reduction of lower division enrollments in relation to those of the upper and graduate divisions, and that state colleges pursue policies which will have a similar effect'. The percentage of graduates in the lower division of both the state colleges and the university to be gradually decreased 10 percentage points below that existing in 1960 (estimated to be 51 percent in both segments) by 1975. It is further recommended that the determination of the means by which this recommendation can best be carried out is the responsibility of the governing boards."

A footnote to recommendation 3 above stated in addition that: "It is estimated that this recommendation would result in the transfer of some 10,000 lower division students to the junior colleges by 1975. It is expected that recommendations to select state college students from the upper 31 percent of all public high school

Diversion—(Continued)

graduates and the university from the upper 12½ percent, together with the recommendation that all 'limited' students be required to meet regular admission requirements, will make up another 10,000."

Since the initiation of the master plan in 1960, the Regents of the University of California have taken steps to comply with the recommendations outlined above by revision of their admission standards. These new standards were put into effect in the fall of 1962, thereby limiting the students who could in theory be admitted to the university to the upper 12½ percent. The university has made little progress, however, since 1960 in meeting the proposed goal of a 40 : 60 ratio of lower division to upper division enrollment by 1975. The enrollment of lower division has in fact shown a relative increase since 1960, rising from 49 percent of undergraduate enrollment to 51.1 percent of that total by the fall of 1964.

The recommendations of the master plan relative to diversion were reaffirmed by the Coordinating Council for Higher Education in December 1963. The University is currently working on procedures whereby the recommended lower division-upper division relationship may be achieved. As a result, the proposed 5-year plant expansion program of the university is based upon enrollment estimates which reflect accomplishment of this goal.

YEAR-ROUND OPERATION

A further recommendation of the Master Plan for Higher Education was made in relation to plant utilization as follows:

"In order to provide calendar arrangements that will both fit the public school year and permit fuller use of the state's higher education facilities:

Every public higher educational institution and private institutions as able offer academic programs in the summer months on unit value equivalent to one-quarter of a year, one-half or three quarters of a semester. State funds be provided for the state colleges and the University of California to offer the full summer period academic programs on one or more of the patterns indicated above for regular degree and credential candidates who have met basic admission requirements. The coordinating agency (or a continuing committee which it might create) study during 1960 the relative merits of three semester and four-quarter plans for year-round use of the physical plants of both public and private institutions; and on the basis of that study, recommend a calendar for higher education in California."

Considering the recommendation above the Coordinating Council for Higher Education on June 25, 1963, expressed itself as definitely in

Year-round Operation—(Continued)

favor of a greater utilization of all higher education facilities and personnel through enhanced year-round operations and ordered a study of this matter. After the receipt and review of the study the council on January 28, 1964, adopted the following resolution:

“The Coordinating Council for Higher Education resolves:

1. That the Coordinating Council reaffirms its desire that the Regents of the University of California and the trustees of the California State Colleges proceed with the year-round operations, either campus-by-campus or systemwide as feasible and as needed to meet student demands with the optimum use of existing buildings and facilities.
2. That the Coordinating Council considers the quarter system to be the best method of achieving year-round operations and that the final calendars adopted by the University of California and the California State Colleges be sufficiently articulated to provide ease of transfer from junior colleges and the high schools.
3. That the Regents of the University of California and the Trustees of the California State Colleges develop a tentative schedule for achieving year-round operations, on selected or all campuses and colleges; and such a schedule and statement of reason supporting it be transmitted to the Coordinating Council for its information and comment as appropriate.
4. That since two years of advance lead time are required to place year-round operations into effect, and consequently that if year-round operations are to begin in 1966-67 at selected campuses and colleges, it is necessary for the 1964 Legislature to declare its intent to support year-round operations at the full level of quality.
5. That the Coordinating Council, on behalf of the University of California and the California state colleges, seek to determine the intent of the Legislature with respect to financing year-round operations at the 1964 session of the Legislature.
6. That each segment determine whether it will augment the summer quarter at campuses on full four-quarter operations by the addition of special summer school offerings designed primarily for teachers and other special groups.
7. That the junior colleges, the State Department of Education, the State Board of Education, and the Legislature cooperate in bringing about the necessary statutory modifications to permit junior colleges to change their academic calendars should they determine that to be desirable.
8. That in the light of recommendation 1 above, each junior college governing board appraise the recommendation's impact upon the transfer of its students, articulation with other segments of education, and other related matters; and on that basis determine the advisability of conversion to a four-quarter calendar.
9. That the governing authorities of such private colleges and universities in the state as now operate on calendars different from that recommended above be invited to consider the advantages that

Funding From Nonstate Sources—(Continued)

might accrue to their institutions if they were on the same academic calendar as public segments.

10. That not later than five years after the first campus of the University of California and the state colleges have a full four-quarter plan in operation the council carefully review the operation of such plan for the purpose of such modifications of those recommendations as may be appropriate, this review to pay particular attention to the degree to which balance enrollments among the quarters has been achieved."

Since the above recommendations, the regents have approved the use of a quarter system at San Diego, Santa Cruz, and Irvine in 1965-66. All other campuses will convert to the same system the following year. The regents have also indicated that one or more campuses will begin year-round operation (full operation of four quarters) in 1966-67. No specific campuses have been named although it is contemplated that such scheduling will begin in 1966-67 at Berkeley, 1967-68 at Los Angeles and, possibly, Santa Barbara with Davis and Riverside utilizing four quarters when their enrollments reach 10,000 (if suitable air-conditioning is provided in buildings at these campuses during the summer quarter).

The proposed five-year building program is based upon the assumption that the above timing will be realized for the most part. The University has estimated that by 1970-71 year-round operation in this manner would produce \$37.3 million in capital outlay savings and \$55.0 million by 1975-76. While such estimates are highly theoretical, it is certain that very significant savings are to be gained by such a calendar.

Year-round operation will not mean less expensive operation in the short run, however, as more students will be on campus in a year, more courses will be offered, more teachers and other staff will be needed, and the wear on many facilities will be greater than at present. It is already apparent that having greater numbers on campus in a year will require augmenting present faculty offices, laboratories, and other facilities; how much has not yet been determined. Moreover, experience at other universities indicates that summer enrollments cannot be expected to equal those in other terms. Studies by the University and the Co-ordinating Council for Higher Education have indicated, however, that added operating costs in the short run will be more than offset by the long-run economies in plant expansion due to the greater utilization possible under year-round use. The 1965-70 capital outlay program reflects such savings inasmuch as plant requirements are reduced as enrollment is spread over the entire year rather than two or three terms. In addition, added plant capacity is gained by using existing buildings during an additional three months of the year.

FUNDING FROM NONSTATE SOURCES

Nonstate funds are generally used by the University for the purpose of establishing facilities designed for organized research, student housing, and parking. The majority of nonstate funds projected in the five-year program are derived from the federal government.

Funding From Nonstate Source—(Continued)

During 1963 the 88th Congress passed two acts which will have an impact on the five-year university capital outlay program. These acts are Public Law 88-129, Health Professions Educational Assistance Act of 1963, and Public Law 88-204, Higher Education Facilities Act of 1963. Both of these acts authorize federal funds to assist the various states in providing physical facilities to meet the needs of the nation's youth who aspire to a higher education.

Public Law 88-204 provides federal support for construction of facilities housing the academic disciplines of natural or physical sciences, mathematics, modern foreign languages, engineering and libraries. The act provides for grants to undergraduate institutions and public community colleges and technical schools; a grant program for facilities devoted to graduate instruction; and a program of federal loans for the construction of academic facilities.

Public Law 88-129 provides for federal grants to assist in constructing facilities for the training of physicians, pharmacists, optometrists, podiatrists, nurses, or public health personnel. Also provided are grants to assist in the replacement or rehabilitation of such facilities.

Funds to fulfill both authorizations were appropriated by Congress during 1964. A number of grants to the University have been approved under PL 88-129 and federal funds have been applied in the 1965-66 budget to these medical facilities. In other cases of proposals for facilities at the medical centers where there is reasonable assurance that federal participation will be realized, estimated grant funds have been deducted from total project cost leaving the estimated state participation as proposed for appropriation.

No federal participation under PL 88-204 has been reflected in the five-year estimate due to the impossibility, at this time, of determining which projects may receive such assistance and what the funding amounts might total.

More detailed descriptions of the programs authorized by PL 88-204 and PL 88-129 and the assumptions used in determining future federal participation in eligible projects are presented above.

As in past years, various federal agencies such as the National Institutes of Health, National Science Foundation, National Aeronautics and Space Administration, and Atomic Energy Commission will grant funds to the university for the construction of facilities devoted to specific research endeavors. Very often, the state participates in such facilities by providing matching funds to cover related instructional areas which may be appropriately located adjacent to the research units. Several such proposals are included in the 1965-70 building program.

The development of adequate student housing and parking at the University is accomplished through the use of revenue bonds although initial increments of both types of facility have been funded in the past from state sources.

An additional, though smaller, source of funds to be used in the 1965-70 period for university construction will be that of gifts. It is planned that a significant portion of these areas planned for student accommodations (as opposed to instruction) in the residential colleges at Santa Cruz will be funded in this manner.

NEW UNIVERSITY CAMPUSES AND FACILITIES

As the result of a request by the California State Legislature in 1955 the Joint Staff of the Liaison Committee of the State Board of Education and the Regents of the University of California were assigned two responsibilities with respect to the future needs for expanding publicly supported higher education in California. They were:

- (1) To develop a priority list for areas of the State inadequately served by junior colleges, state colleges, and campuses of the University of California;
- (2) To show the effect which the establishment of new institutions would have on existing institutions.

The liaison committee's report, titled "A Study of the Needs for Additional Centers of Public Higher Education in California," published in 1957, divided the State into service areas and indicated the enrollment potential for each area in order of magnitude. From this report the regents of the university in 1957 selected the three service areas offering the greatest enrollment potential, which were not served by university facilities, and requested three new university campuses in the selected service areas. The Legislature appropriated \$800,000 for acquisition of sites for the three new campuses. Subsequently site studies were undertaken and new general campuses were established at San Diego, Santa Cruz, and Irvine. The Legislature in 1960 appropriated an additional \$3,000,000 for campus planning and development so that the campuses might be able to meet the potential enrollments of 1,000 FTE students at San Diego and Irvine and 600 students at Santa Cruz.

Both Santa Cruz and Irvine will open in the fall of 1965. At Santa Cruz 600 students are expected at the opening, while at Irvine 1,300 students are expected to be on hand. San Diego opened with 181 undergraduate and 379 graduate students on the general campus in the fall of 1964. Also at San Diego, it is now planned that the first medical class will be accepted in the fall of 1968.

The five-year program provides \$108,168,347 in state funds to continue the funding for initial and subsequent operation of the new campuses at Santa Cruz, Irvine, and the San Diego medical and general campuses. This expenditure, approximately 30 percent of the total five-year program funded from state sources, will provide instructional and related facilities for a capacity of 13,030 FTE students at these institutions by 1971-72.

In 1963, the State Legislature designated the California College of Medicine, formerly a private school, as a medical department of the University of California. The 1964-65 Governor's Budget provides planning money for a new basic science unit on that campus. While a total five-year building program has not yet been developed for the college, planning for the first building is described in this report.

The development of the new campuses and continued expansion of the existing campuses, as proposed in this five-year building program,

New University Campuses and Facilities—(Continued)

will provide the physical facilities which will enable the University of California to meet enrollment increases unprecedented in the history of the institution while at the same time accomplishing the tasks set forth for it in the "Master Plan for Higher Education in California 1960-1975," with the same high level of accomplishment that the citizens of California have come to expect from their university.

Table IV, reproduced below, shows the distribution by campus of the funds requested for the five-year capital outlay program.

Table IV
UNIVERSITY OF CALIFORNIA—RECAPITULATION OF FIVE-YEAR
CAPITAL OUTLAY PROGRAM BY CAMPUS¹

	<i>State funds</i>		<i>Nonstate funds</i>	<i>Total expenditures</i>

Statewide	8,502,100 ³	8,985,800	17,067,900	34,555,800
Subtotals	\$284,958,047	\$69,740,300	\$293,408,228	\$648,106,575
Hastings	1,541,500 ³	—	—	1,541,500
Totals, All Campuses	\$286,499,547	\$69,740,300	\$293,408,228	\$649,648,075

¹ Includes field stations for agricultural research.

² The timing and method of financing for these projects are unresolved. Projects of this nature are designated by footnote "a" in the five-year program.

³ These figures are combined in the listing of statewide projects totaling \$10,043,600.

ENROLLMENT PROJECTIONS AND PLANT CAPACITIES

The five-year building program for the University is based upon an estimated increase of 12,588 full-time equivalent students (FTE) between the 1966-67 academic year and 1971-72. This is an increase of 15.5 percent from the 81,247 FTE estimated to be enrolled in 1966-67 to 93,825 FTE estimated for 1971-72.

Full-time equivalent enrollment of undergraduate students is based on dividing the aggregate number of student credit hours in the actual past year by a standard unit load for the students of the university. A ratio of FTE to regular enrollment is developed for the actual past year. This ratio is then projected against future regular enrollment to arrive at projected FTE. Graduate students are computed on a head-count basis.

The enrollment projection reflects several operating policies to be put into effect in the university system during the five-year span covered

Enrollment Projections and Plant Capacities—(Continued)

by this program. The first policy is the limiting of enrollment at Berkeley and Los Angeles to 27,500 regular students. This policy stems from a recommendation of the Master Plan for Higher Education in 1960 and is embodied in the current university master plans for both of these campuses. A second policy, reflected in the projected enrollments for the five-year building program, is a gradual relative reduction of lower division enrollment as a percentage of total undergraduate enrollment so that by 1975 the former will constitute 40 percent of the latter. The background of this policy is discussed more fully above. The estimates on which the building program is based reflect also the Master Plan recommendation that the university tighten its admission requirements so that only the top 12.5 percent scholastically of high school graduates in the state, rather than the top 15 percent, be eligible for admission. This policy was implemented by the university in 1962.

The enrollment projections are also based on the assumption that a portion of those students diverted from Berkeley and Los Angeles will enroll at another institution within the university system and that a portion will go outside the system. Under the move toward reducing the lower division enrollment percentage to 40 percent of total undergraduate enrollment, a portion of those students initially excluded from admission by this policy would reappear in the university system in subsequent years as transfers thereby reducing slightly the absolute effect of this type of diversion.

The effect of year-round operation is also incorporated in the projections in accordance with the schedule discussed above. It is assumed that a certain portion of the students will accelerate (that is, attend each quarter, thus completing their work in less than four years) while others will attend the university in the traditional manner, utilizing three months of the year for nonacademic pursuits. Such assumptions must of necessity be somewhat arbitrary due to the lack of experience from which to draw.

For purposes of meeting physical plant requirements, the capital outlay budget for the university is developed on the average annual enrollment (an average of fall and spring enrollment or the three-quarter average when the university switches to the quarter system) base in a manner similar to the operating budget. Average annual enrollment more appropriately indicates plant need than does the fall enrollment since the latter would overstate space needs over the long run while the former base provides for improved utilization in the fall (heavy enrollment) session counterbalanced by some excess capacity (light enrollments) during other sessions of the year for an average closely approximating long run need.

Determination of the needed capacity to house the increase in students is based upon a total standard floor area required for the direct and indirect instruction of the student: classrooms and seminars, class laboratories, research and office space for graduate students and faculty, and the necessary supporting space. This standard varies between level of student and between academic discipline. For example, graduate students in the natural sciences require more space than do

Enrollment Projections and Plant Capacities—(Continued)

undergraduate students in the social sciences due to the greater use by the former of laboratories housing more and larger pieces of equipment.

The space standards in use at the present time are based upon the utilization rates developed by the "Restudy of the Needs of California in Higher Education" prepared by the Liaison Committee of the Regents of the University of California and the State Board of Education, and published in 1955. The Coordinating Council for Higher Education is currently studying physical plant utilization in all three segments with the intention of examining the utilization of existing facilities, and developing appropriate standards which could be used in determining the future capital outlay needs of the institutions of higher education in California.

The standard space areas per student have been applied to the projected increase of student enrollment to arrive at a yearly space need on each campus. This need is then compared to the existing capacity and projects are placed in the five-year program with the intent of providing physical plant sufficient to meet the calculated campus need for the aggregate as well as the individual disciplines and specialized laboratories.

The needed capacities are calculated only for that space associated with student instruction and related departmental research. The standards do not include space for medical facilities or organized research activities. The need for such facilities is determined on the basis of considerations applicable to the particular program areas involved. Table V provides a summary of projected enrollments and their relationship to the physical plant capacity which will be provided by the building projects proposed in the five-year program.

It may be noted that slightly more than 100 percent of the needed capacity (instructional load) is provided by the program by 1971-72. This situation results primarily because of two factors. As noted above, graduate instruction requires more plant support than undergraduate instruction. Over the five years included in this program there will be a gradual relative increase in graduate and upper division enrollment accompanied by a relative decline in the lower division. More space per full time equivalent student will thus be required in 1971-72 than was required in 1963-64. As a result, plant capacity based upon the 1963-64 enrollment mix (the basis for this five-year program) is overstated and actual capacity will not turn out to be 100 percent of need in the latter years of the program. This will be especially true at the Berkeley and Los Angeles campuses. In addition, the greatest growth will occur at the smaller campuses. In these cases it is imperative that the entire estimated need be planned for due to the inflexible nature of the plant on a small campus where there may be relatively little non-capacity area and a few very large buildings. This concept was developed in detail in the physical plant standards proposed in the Restudy. It often occurs that capacity for more than 100 percent of enrollment is provided at a smaller campus for a period of time since to exclude any one building might leave that campus far below its required need.

^a Projects requiring further policy consideration as to relative urgency, timing or method of financing.

^b To be financed from federal or other nonstate funds.

^c Projects may be subsequently proposed for amendment into the 1965-66 Budget Act subject to the development of adequate financing.

CALIFORNIA COLLEGE OF MEDICINE

The California College of Medicine trains qualified students in the essential skills of the basic sciences and clinical medicine leading to the conferment by the college of the degree Doctor of Medicine. The college is located adjacent to the Los Angeles County Hospital in that city and makes use of the hospital's facilities for the necessary clinical training during the latter part of the medical student's instructional program.

Formerly known as the College of Osteopathic Physicians and Surgeons, the institution changed its corporate name to the California College of Medicine in 1961 and was accredited as a medical school in February 1962. In 1963, the State Legislature designated the college as a medical department of the University of California effective January 1, 1965 by Chapter 1933, Statutes of 1963.

The basic sciences project in the five-year program for the college represents the most urgent of those needs for facilities to insure that the college obtains permanent accreditation and to provide for further expansion of the student body from the existing 96 student-class. The basic sciences unit will replace outmoded facilities currently in use at the college and provide for part of the mentioned expansion.

Further projects are contemplated to increase the instructional potential of the college during the period covered by the five-year program. Planning for these projects, however, has not progressed sufficiently that the projects, along with valid cost estimates, could be included as part of this five-year program.

STATE COLLEGES

Currently there are 17 state colleges operating on 18 campuses (State Polytechnic College has two campuses, one located in San Luis Obispo and the second in the City of Pomona) with two new colleges recently established. The 1965-66 Governor's Budget includes funds for opening one of these colleges and continues the planning staff for the other.

To administer this great educational complex the Board of Trustees of the California State Colleges was created by Chapter 49, Statutes of 1960, First Extraordinary Session. One of the major functions of this board and its administrative staff is the planning to accommodate the increasing numbers of students in an orderly fashion. This five-year capital outlay program for the California state colleges totals \$287,361,830, of which \$244,275,930 is proposed and \$43,085,900 is deferred for reasons noted in the detailed project listing.

The state college program is summarized by category of facility required in Table VI below:

TABLE VI
TABULATION OF PROGRAM BY CATEGORY

<i>Category</i>	<i>State funds</i>		<i>State funds</i>	
	<i>Proposed</i>	<i>Percent-age</i>	<i>Policy unresoloved ^a</i>	<i>Total expenditures</i>

¹ Effect of year round operation reflected in increased capacity. Actual capacity is shown in parentheses below the compared capacity.

² Enrollment projections for this college exceed capacity due to master plan limitation of 13,000 students (PTE). Projects needed to reach projected enrollment have been deferred pending adoption of new master plan limit by Trustees of the California State Colleges.

The great problem facing the state colleges in the future is one of numbers. In 1964-65 the full-time equivalents (FTE) 8 a.m. to 5 p.m. students totals 92,580. By fall of 1971, capacity will be needed for 147,910 students (FTE), an increase of 55,330 students (FTE) or 59.8 percent. This capital outlay program is designed to meet that volume of students as shown in Table VII. Projects either in existence or funded for construction will produce a capacity of 111,183 students in the fall of 1966. Those projects included in the 1965-66 Governor's Budget for construction are scheduled to produce a total capacity of 117,047 for a student body of 117,420 students (FTE) in the fall of 1967.

A summary of the proposed projects by college is included in Table VIII. A brief description of each category is included in the material following.

Stanislaus State College -----	3,504,000	649,000	4,153,000
California State Polytechnic College			
Kellogg-Voorhis Campus -----	6,637,500	2,994,000	9,631,500
San Luis Obispo Campus -----	8,517,000	--	8,517,000
Total, all campuses -----	\$244,275,930	\$43,085,900	\$287,361,830

The rapid growth of the college population has resulted in the establishment of six new state colleges since 1957. Thirty-four percent of the five-year capital outlay program, amounting to \$82,364,900, will be needed to continue the development of the initial instructional facilities at these colleges, which will be generally of the multiple-purpose type. Construction of specialized facilities at these new colleges, as well as many of the older colleges, will depend largely upon the needs of the areas served by the college and the curriculum studies now being made by the staff of the Board of Trustees. The following breakdown by category includes all proposed funds.

^a Projects requiring further policy consideration as to relative urgency, timing or method of financing.

STATE COLLEGES

Project planning ----- \$3,361,950

These funds will provide the preliminary plans and special studies necessary to bring the projects outlined in this five-year program to the working drawing stage. The funds will be allocated and expended by the Trustees of the California State Colleges on a project basis.

Land acquisition ----- \$11,655,000

These projects include land acquisition for Chico, Humboldt, Los Angeles, San Diego, San Jose, and Sonoma. The projects are needed to provide sites for the future building requirements of the state colleges. Land acquisition is included only when it has been determined that it will be necessary for the building program. A total of \$1,000,000 is included in the total for opportunity land purchases by the Trustees of the California State Colleges in those areas of the state where the Coordinating Council for Higher Education and the Legislature have recommended and/or authorized establishment of new state colleges.

Site development ----- \$17,603,000

These projects include utilities and land development projects which are necessary for the campuses to function efficiently. Projects are included for all the state colleges. On the older campuses many of these projects are necessary to develop new vehicle and pedestrian traffic patterns to handle increased enrollments.

Equipment ----- \$28,828,700

These projects include equipment for the various types of instructional buildings and auxiliary facilities such as administration buildings and corporation yards. Where applicable, equipment is phased over a two- or three-year period.

General classroom buildings ----- \$19,913,900

These facilities consist of general classrooms, multiple-purpose rooms, and some highly specialized facilities which do not fit into the other categories listed here. This group of projects also includes faculty office buildings when such facilities are combined with general classroom buildings.

Physical education facilities ----- \$9,610,500

These projects, including gymnasiums, outdoor physical education areas (including all-purpose fields, tennis courts and pools), are included in the instructional program. Gymnasium seating up to 5,000 seats at any one institution is provided.

Music-speech-drama buildings ----- \$12,321,400

These projects include the classrooms and auxiliary areas necessary for the music-speech-drama curricula. In addition, a number of the projects include little theaters of 500-seat capacity and the necessary production facilities.

Engineering buildings ----- \$7,126,000

These projects are for the construction of facilities, primarily laboratories, for instruction in the engineering and industrial arts curricula.

Science buildings ----- \$33,693,000

A number of science building projects are included to serve the increasing enrollments in the science fields. In many cases these buildings are used initially for other instructional purposes and as the enrollments of the college grow, these facilities are remodeled for science laboratory use. The cost of such remodeling is minimized by installing in science buildings at the outset all the utilities and other services that will be needed when the facility is used entirely for science instruction.

Other instructional facilities ----- \$25,658,000

These projects represent highly specialized facilities many of which are provided only once on each campus. The volume of the projects reflects the colleges efforts to specialize in subject matter disciplines and develop the kinds of facilities needed to support expanded graduate programs pursuant to the Master Plan for High Education.

Libraries ----- \$58,341,000

The expanding state college libraries require these projects to provide sufficient seating and stack areas to meet the requirements of the enrollments that are estimated in relation to the college's master plan enrollment. A number of the projects provide classroom space as an interim use of the building until the space is needed for library purposes.

Administration buildings ----- \$4,974,000

Administration buildings are planned to house the administrative staff that will be employed at the time of the completion of the project. In addition, classrooms are interspersed within the building to serve initially as instructional facilities and will later be remodeled for the expanded administrative functions as the enrollment of the college increases.

Boiler plants and corporation yards ----- \$2,771,400

These projects serve the entire campus and provide a central maintenance and storage shop for various maintenance activities. In most cases, new boiler plants are constructed to accommodate more equipment than is needed to serve the first buildings on a campus. As more buildings are constructed, additional equipment can be installed without the delay and cost of adding to the existing building.

Air-conditioning ----- \$5,824,080

These projects are included for most of the colleges and are designed to air-condition both instructional and noninstructional buildings so as to increase the utilization of these facilities during the months of extremely high temperatures. Where possible, and within funds available, it is desirable to air-condition as many instruction, library and administrative facilities as possible in those geographical areas where the high temperatures cause extreme discomfort and loss of efficiency.

Cafeterias

\$2,594,000

Cafeteria projects are included in this program where justified on the basis of the increased enrollments. A cafeteria serving full-meal menus is provided on each of the state college campuses. In addition there are snackbar operations, and in some cases, vending machine operations. This category does not include those cafeterias necessary for the operation of the residence halls. Except for the initial dining facility on each state college campus, cafeterias are built from nonstate funds.

BASIC FACTORS AFFECTING CAPITAL OUTLAY***Objectives of State Colleges***

As defined in the Education Code Section 22606, the primary function of the state colleges is the provision for instruction for undergraduate students, and for graduate students through the master degree in the liberal arts and sciences, and in applied fields and certain professions, including teaching. Agricultural programs are provided at State Polytechnic, Chico State, and Fresno State Colleges. The code also provides that doctoral degrees may be awarded jointly with the University of California and that faculty research is authorized to the extent that it is consistent with the primary function of the state colleges and the facilities provided for that function.

Enrollment

Enrollment trends have been developed from cumulative statistical data which indicate the progression experience of students from high schools to the colleges and through the collegiate-level grades. The data include a compilation of numbers of students by college or university area. The construction of facilities at each college is related to the proportionate distribution (or "mix") of the enrollment by division level (lower, upper and graduate).

The enrollment figures used in projecting the five-year construction program reflect diversion of lower division students as proposed by the "Master Plan for Higher Education in California."

Adjustments for the impact of new colleges have been made at those existing colleges which seem most likely to be affected by the proximity of the presently authorized new institutions. Where colleges are approaching their master planning limits (see Table IX below), the projections are adjusted to reflect this limit. This affects the estimates for the state college located at San Francisco.

TABLE IX
MASTER PLANNED ENROLLMENT LIMITS FOR CAPITAL OUTLAY PURPOSES
OF THE CALIFORNIA STATE COLLEGES

<i>State colleges</i>	<i>FTE enrollment limit</i>
Chico State College	6,000
Fresno State College	20,000
State College at Fullerton	20,000
State College at Hayward	15,000
Humboldt State College	5,000
State College at Long Beach	20,000
State College at Los Angeles	16,800
State College at Palos Verdes	16,000
Sacramento State College	20,000
State College at San Bernardino	20,000
San Diego State College	20,000
San Fernando Valley State College	20,000
San Francisco State College	13,000
San Jose State College	17,000
Sonoma State College	12,000
Stanislaus State College	12,000
State Polytechnic College:	
Kellogg-Voorhis Campus	20,000
San Luis Obispo Campus	12,000

Full-time equivalent enrollment of regular students (FTE) is used in determining the need for capacity in instructional facilities. The full-time equivalent enrollment of regular students is determined by dividing by 15 the aggregate number of credit units earned by students taking more than six units. Regular individual enrollment, which is the total number of individuals enrolled for more than six units, is used in determining the need for cafeteria seating. Office capacity is based on needs developed by the application of existing staffing criteria to the various enrollment bases.

Diversion:

On December 18, 1959, the State Board of Education, then the governing board for the California State Colleges, approved the recommendations regarding diversion included in the report entitled, "A Master Plan For Higher Education In California, 1960-1975." Among the recommendations approved were a number which had to do with the selection and the retention of students; and they are as follows:

1. "In order to raise materially standards for admission to the lower division, the state colleges select first-time freshmen from the top one-third (33 $\frac{1}{3}$ %) and the university from the top one-eighth (12 $\frac{1}{2}$ %) of all graduates of California public high schools."
2. "For both the state colleges and the university, freshmen admissions through special procedures outside the basic requirements of recommending units of high school work and/or aptitude tests (such as specials and exceptions to the rule) be limited to 2 percent of all freshmen admissions in each system for a given year. Furthermore, that all 'limited' students be required to meet regular admission standards."
3. "'The University of California emphasize policies leading to the reduction of lower division enrollments in relation to those of the

Diversion—(Continued)

upper and graduate divisions, and that state colleges pursue policies which will have a similar effect'. The percentage of graduates in the lower division of both the state colleges and the university to be gradually decreased 10 percentage points below that existing in 1960 (estimated to be 51 percent in both segments) by 1975. It is further recommended that the determination of the means by which this recommendation can best be carried out is the responsibility of the governing boards."

A footnote to recommendation 3 above stated in addition that: "It is estimated that this recommendation would result in the transfer of some 40,000 lower division students to the junior colleges by 1975. It is expected that recommendations to select state college students from the upper 33 percent of all public high school graduates and the university from the upper 12½ percent, together with the recommendation that all 'limited' students be required to meet regular admission requirements, will make up another 10,000."

Since the initiation of the master plan in 1960, the Trustees of the California State Colleges approved a partial revision of their admission standards in 1963 and in January of 1965 adopted the final phase of their revised admission standards which should meet the master plan limitation of drawing from the upper 33½ percent of all public high school graduates in California.

The diversion of students which was to be brought about by the establishment of a 60-40 relationship between upper and lower division by 1975 has made relatively little progress to date. Since 1960, lower division enrollment as a percentage of the total undergraduate enrollment has been reduced less than two percent. Thus, it appears that little diversion of students has been accomplished since agreement to the master plan recommendations in 1960.

Because of this situation in December 1963 the staff of the Coordinating Council for Higher Education submitted a report to the Council which made the following recommendations:

- (1) "With the advice and assistance of the council, the governing boards of the University of California and the California state colleges should adopt as a goal an undergraduate distribution percentage ratio of 40 percent lower division to 60 percent upper division in the four-year colleges to be achieved by 1975."
- (2) "Diversion procedures should be developed by the University of California and the California state colleges with the advice and assistance of the Committee on Student Admissions, Retention, and Transfer and the council staff so that the 50,000 student goal of the master plan can be achieved by 1975 taking into account the diversion possible in achieving the 40-60 relationship between lower division and upper division enrollments."

Diversion—(Continued)

- (3) "An intermediate goal of 46-54 percent distribution of undergraduate students can be achieved by both segments by the fall of 1969 and the resultant diversion should be reflected in the 1964-67 state appropriations for capital outlay for the California state colleges and the University of California."

The recommendations noted above were adopted by the Coordinating Council in December 1963. As a result of these recommendations this five-year building program has been developed considering the diversion principles which have been set forth above. The enrollment projections included in Table VII reflect the trustees estimate of the effect of diversion principles in the state colleges. It is anticipated that the annual adjustment which will be achieved in moving toward the 60-40 goal in 1975 will amount to between one-half and one percentage point per fiscal period.

Full-Year Operation:

Pursuant to the recommendations of the Coordinating Council for Higher Education the Trustees of the California State Colleges have adopted policies which will lead ultimately to placing all the colleges on year round operation. The first two colleges to attempt year round operation will be the California State Colleges at Hayward and Los Angeles. The college at Hayward will begin operation in the summer of 1965 and Los Angeles in the summer of 1967. Funds to initiate these programs are included in the 1965-66 Governor's Budget.

The effect of year round operation on the colleges' five-year building program has been shown in Table VII. The principal effect has been to lessen the need for additional new facilities. This has been expressed in this program by the deferral of projects and the reduction in size of those that remain. In this way it is anticipated that the state will realize significant savings in the capital outlay program.

The calculation of the effect of year-round operation was based on the assumption that a certain portion of the students will accelerate (that is, attend each quarter thus completing their work in less than four years) while others will attend the colleges in the traditional manner, utilizing three months of the year for nonacademic pursuits. Such assumptions must of necessity be somewhat arbitrary due to the lack of experience from which to draw.

MARITIME ACADEMY

The Maritime Academy trains qualified men to become officers in the merchant marine and for commissions in the United States Naval Reserve. The school receives policy direction from a board of governors whose members are appointed by the Governor, and administrative supervision from the Department of Education. The present capacity of the school is 250 students. During the three-year course of instruction, students earn a bachelor of science degree with a specialization in either the deck or the engineering field.

Four projects are proposed to correct deficiencies in the educational program or in the physical plant of the academy. A corporation yard is included to correct deficiencies in the maintenance of the facilities. An assembly hall is included, as the present facilities are not adequate for general school lectures and meetings. A planetarium is included to provide a teaching station and training area for celestial navigation and astronomy. Finally, a nuclear simulator is included to prepare students in the operation of nuclear powered ships.

DEPARTMENT OF EDUCATION

The department administers the following residential schools for physically handicapped children :

School for the Blind

School for Cerebral Palsied Children, Northern California

School for Cerebral Palsied Children, Southern California

School for the Deaf, Berkeley

School for the Deaf, Riverside

These schools offer special education, diagnosis and treatment for children ranging from preschool age through high school.

Four projects are included to expand the educational program or to correct deficiencies in the physical plants of the schools. The first unit of a new school for physically handicapped deaf is proposed on the grounds of the School for the Deaf, Riverside. This unit is proposed to provide diagnosis, treatment and educational opportunities for deaf children who are multihandicapped. A project is included to expand the vocational training facilities at the School for the Deaf, Berkeley. Two projects are included to improve the assembly and meeting facilities at the two deaf schools.

PUBLIC JUNIOR COLLEGE PROGRAM

The public junior colleges of California were first recognized as a part of public higher education by Chapter 49, Statutes of 1960, First Extraordinary Session (Donahoe Act). Under this act, the junior colleges were assigned the function of instruction through, but not beyond, the 14th grade in the fields of standard collegiate courses and vocational or technical training.

In recognition of the growth needs of the junior colleges in meeting their obligations under the Master Plan for Higher Education, the Legislature established a temporary program for junior college tax relief for capital outlay purposes through Chapter 1006, Statutes of 1961, which appropriated \$5,000,000 for this purpose, a similar amount was approved in the 1962-63 Governor's Budget. These tax relief grants were utilized for:

- (a) Payment of interest and redemption of outstanding bonds issued for junior college purposes or for loans from the County School Service Fund for capital outlay purposes.
- (b) Purchase or improvement of junior college sites or the planning or construction for junior college buildings on a matching basis not to exceed 1 part state funds for 4 parts district funds.

Since the 1961 tax relief program offered no permanent solution to the shared responsibility of the state and junior college districts in meeting the expanded role of these schools under the Master Plan for Higher Education, funds were included for junior college construction in the State Construction Program Fund bond program approved in November of 1962.

The Legislature in 1963 enacted the Junior College Facility Construction Law to meet the interim needs of the junior colleges until a permanent program of state assistance could be developed. The Legislature also appropriated \$20 million from the bond fund to be distributed under the Junior College Facility Construction Law providing for state and local participation on the average of one dollar of state funds to two of local for the construction of necessary educational facilities. Ten million dollars of this appropriation will be available to finance the program needs in the 1965-66 fiscal year.

An additional fifty million dollars for junior college construction assistance was included in the state bond issue for capital outlay approved at the November 1964 election.

The Junior College Facility Construction Law also included a provision for a study to develop a continuing program of state assistance for junior college capital outlay taking into account the need, effort, and ability of the various junior colleges. This study has been completed and the report has been submitted by the Department of Education to the 1965 Regular Session of the Legislature.

This report estimates the cost of needed junior college facilities for the 10-year period 1965-1975 and further recommends that the state share equally in the cost of the new facilities. The level of state participation and the method of determining priorities must still be acceptably resolved and will be matters for policy consideration by the Legislature. The projections of junior college construction needs are as follows:

<i>Budget year</i>	<i>Building occupancy date</i>	<i>Total cost of construction</i>
—	1966-67	\$76,106,000
1965-66	1967-68	50,245,000
1966-67	1968-69	25,600,000
1967-68	1969-70	58,495,000
1968-69	1970-71	77,192,000

1 Subject to formulation and approval of a plan of state participation and method of determining priorities by the legislature.

DEPARTMENT OF MENTAL HYGIENE

Major Construction Program Statement

1965-66-1969-70

This department administers: (1) state hospitals for the treatment and care of mentally ill, mentally retarded, and other persons suffering from mental disorders; (2) outpatient clinics for early diagnosis and treatment of mental illness; (3) day hospitals for treating mentally ill patients during the day while permitting them to return to their homes and family for the night; (4) research in cause and treatment of mental disorders; and (5) regulation of private institutions for mental cases and program for public education and development of improved Mental Hygiene facilities. It can care for 34,000 patients in general psychiatric hospitals; 13,000 in hospitals for the retarded; 4,400 in outpatient clinics and day treatment centers and 17,300 patients on indefinite leave. Patients on indefinite leave are supervised by the Bureau of Social Work, which has some 13,800 patients on home leave, 300 on work leave and 3,200 in family care.

The department is authorized to operate the following facilities:

RESIDENT INSTITUTIONS

Mentally ill

Agnews State Hospital
Atascadero State Hospital
Camarillo State Hospital
DeWitt State Hospital
Mendocino State Hospital
Metropolitan State Hospital
Modesto State Hospital
Napa State Hospital
Patton State Hospital
Stockton State Hospital

Mentally retarded

DeWitt State Hospital
Fairview State Hospital
Modesto State Hospital
Pacific State Hospital
Porterville State Hospital
Sonoma State Hospital

RESEARCH, TEACHING AND CLINIC FACILITIES

Langley Porter Neuropsychiatric Institute in San Francisco
Neuropsychiatric Institute at UCLA

INTRODUCTION

Program Summary

This five-year building construction program of the Department of Mental Hygiene reflects the department's desire to upgrade its existing facilities and to provide additional specialized facilities in keeping with the attack on the problem of mental retardation and mental illness being made in the areas of diagnosis, treatment, training, research, rehabilitation and prevention.

This program proposes a total expenditure of \$122,277,518 for new construction, remodeling and modernization and replacement of existing facilities. Maximum effort has been made to obtain nonstate funds in those projects which qualify for federal participation.

This will provide for specialized treatment units for the mentally retarded, two all-purpose mental health centers, four medical centers for the mentally retarded, the replacement of Langley Porter Neuropsychiatric Institute, a mental retardation unit addition to the Neuro-

psychiatric Institute at U.C.L.A., various ancillary structures for hospital operation improvement and projects to transform existing deactivated wards to other programed uses.

Program Analysis

Additional construction of specialized facilities for the mentally retarded will provide additional beds. A study is currently being made to decrease the capacity of the mentally ill and mentally retarded hospitals by replacing some bed areas with facilities for treatment program improvement.

The four 500-bed medical centers for the mentally retarded are located geographically to limit the driving time for patient service and visiting to two hours from most locations.

This department recognizes and places special emphasis on diagnosis, research, training and education in the fields of mental retardation, mental illness, addiction and problems of the young and aged.

It is proposed to replace the present Langley Porter Neuropsychiatric Institute with a larger, more comprehensive institute to be located adjacent to the University of California Hospital, San Francisco. The program calls for increasing the existing 105-bed capacity to 244-bed capacity.

The proposed 60-bed capacity mental retardation addition to the Neuropsychiatric Institute at U.C.L.A. will provide facilities to accommodate the training of 128 medical students, an increase of 56 over the present 72, and a corresponding increase in training of students of other allied professions.

These two institutes, one in northern California and the other in southern California, will help to meet the department's need for trained professional people as well as the university's need for training facilities in the psychiatric field.

The mental health units planned for construction at both Modesto and DeWitt State Hospitals will be facilities designed to meet the population needs of the area served. A master plan study to be completed in 1965-66 fiscal year of the department's ward capacity needs and structure remodeling will serve as the base for the deactivation and demolition of the existing Army-type, temporary units.

Plans to provide alternates to state institutional residential care of the mentally retarded are currently being studied which may eventually reduce the capacity of the mentally retarded hospitals.

A survey to determine our future remodeling program is presently being conducted.

Summary

On June 30, 1964, all facilities of the Department of Mental Hygiene had a capacity of 47,301. The proposed program will reduce the capacity to 46,452 by June 30, 1970.

DEPARTMENT OF CORRECTIONS

The Department of Corrections is responsible for the administration of the state's correctional system for adults convicted of felonies and the nonfelon narcotic addict program. It also houses and treats Youth Authority wards who have been determined by the Youth Authority as being best treated in an adult institution.

As a part of the correctional program, the department operates 14 major institutions and 41 camps which are distributed throughout the state. These institutions and camps comprise a diversified correctional system with facilities to provide varying degrees of custodial control and provisions for emphasis on special or general treatment programs. The heterogeneity of those committed to the department make it necessary to provide for diversified programs.

Custodial requirements range from maximum-close to minimum security facilities. Programs include academic and vocational education, group counseling, medical and psychiatric treatment, religious and recreational activities. Constructive work programs are provided by factories, maintenance and culinary sections, farms, and forestry and road camps. A program for the rehabilitation of nonfelon narcotic addicts is provided at the Rehabilitation Center.

The following institutions are currently operated by the department:

1. California Conservation Center near Susanville.
2. Sierra Conservation Center near Jamestown (to be opened June 1965).
3. Southern Conservation Center near Chino.
4. Correctional Institution near Tehachapi.
5. Correctional Training Facility at Soledad.
6. Deuel Vocational Institution near Tracy.
7. State Prison at Folsom.
8. Institution for Men near Chino.
9. Medical Facility near Vacaville.
10. Mens Colony—East Facility at Los Padres.
11. Mens Colony—West Facility at Los Padres.
12. Rehabilitation Center near Corona.
13. State Prison at San Quentin.
14. Institution for Women near Corona.

PROGRAM SUMMARY

When the Department of Corrections was created in 1944 there were three prisons for adult males and one for adult females. Prison population totaled 6,000 inmates. The tremendous increase in California population during the succeeding years has resulted in a corresponding increase in the prison population.

The estimated population increase for this department for the period 1965-70 is 5,880, an average increase of 1,176 inmates per year. To provide for increased population during this period the construction program proposes capacity increases at the Correctional Training Facility at Soledad, the Correctional Institution at Tehachapi, Institution for Men, Chino, and the Reception Guidance Centers at Chino and Vacaville. The program also proposes the construction of a Special

Security Facility and a Medical Correctional Institution to be activated during this five-year period. The Special Security Facility is planned for construction on the Medical Facility site at Vacaville. The Medical Correctional Institution will be located on a site in southern California with master planning to activate an Industrial Training Unit in 1971 and a Correctional Training Unit in 1972 to form a Correctional Center Complex with central facilities for economy. The department also proposes to increase the industrial and program facilities when the capacity of existing institutions are increased. This will provide programs and work assignments to eliminate idleness caused by a larger population.

BASIC FACTORS AFFECTING CAPITAL OUTLAY

Population assumptions continue to assume economic and employment conditions will remain at reasonably high levels; criminal law penalties and dispositions of convicted defendants by superior courts will not be changed materially to affect prison population trends; the Department of Corrections will be providing facilities in 1970 for about one-third of the superior court committed male Youth Authority wards; and a progressive rehabilitation and parole system will be continued.

Population Projections

To provide adequate assurance that state facilities are not overconstructed, this program assumes a factor of overcrowding. Depending on the need and type of facility constructed throughout the five-year period, this overcrowding factor will be adjusted to actual experience by annual review and revision. The estimated population figures are shown in the table, "Summary of Population and Capacities at End of Year (June 30th)."

INSTITUTIONAL PROGRAM

Approximately 25-30 percent of the persons convicted of a crime for which they could be sent to prison are actually committed to the Department of Corrections. Those committed to state institutions represent the most serious behavior and rehabilitative problems.

When a prisoner is committed to the Director of Corrections, he goes first to one of the department's reception-guidance centers. At the reception-guidance center a detailed classification study of the prisoner is made to formulate a program which will best accomplish the in-

dividual inmate's rehabilitation. From the reception-guidance center the inmate is transferred to an appropriate institution.

The institutions and camps under the control of the department comprise a diversified correctional system with facilities having varying degrees of custodial control of inmates and provision for special and general programs of training and treatment for different types of prisoner groups. Accordingly, maximum-close, medium, and minimum security facilities have been established in which the various work programs and training are conducted.

The California Conservation Center near Susanville is a medium-minimum security institution which receives, trains, and transfers inmates to the various conservation camps for work in the state's conservation program. This institution is the staging, training and supply center for the overall conservation program in the northeastern area of the state.

The Sierra Conservation Center near Jamestown, which will open in June 1965, is a medium-minimum security institution similar to the center at Susanville. It will function in the same way for camps located in central California.

The Southern Conservation Center at Chino is a medium-minimum security institution which functions for the southern area of the state as the center at Susanville does for the northeastern area.

The Correctional Institution at Tehachapi is a medium-minimum security institution which provides industrial, vocational, academic and other training. Group counseling and community living programs are stressed.

The Correctional Training Facility at Soledad is a medium-minimum security institution with agricultural operations, vocational training and forestry camps. The north unit with 600 Youth Authority wards and 600 young adult felon offenders strongly stresses academic and vocational training, as well as intensive efforts toward resocialization of these youths.

The Deuel Vocational Institution near Tracy is a medium security institution which provides industrial, vocational and other training, guidance and reformatory help for young men too mature to be benefited by the juvenile correctional schools and too immature in crime for confinement in prisons. Inmates include both Youth Authority wards and Department of Corrections inmates. A 300-bed reception and guidance center cares primarily for Youth Authority wards committed by criminal courts.

The State Prison at Folsom is a maximum security prison which houses inmates serving long sentences and those who are habitual criminals, recidivists, or severe disciplinary problems.

The Institution for Men at Chino is a minimum security facility primarily for inmates with high parole success potentials. Academic and vocational education, community living, and other new treatment programs are stressed. A reception-guidance center is operated by this institution.

The Medical Facility near Vacaville is the psychiatric, diagnostic and treatment center of the department. It confines and treats adult male felons who are mentally ill or who have severe emotional or personality

INSTITUTIONAL PROGRAM—(Continued)

disorders. (These include psychotics, psychopaths, sex offenders, and homosexuals.) A reception-guidance center is also operated by this institution.

The Mens Colony at Los Padres is composed of two units. The West Facility is a minimum security institution that houses older and chronically infirm inmates. The East Facility, activated in 1961, is a medium security institution with four segregated units, each with a program designed for the occupants.

The Rehabilitation Center near Corona is utilized to house nonfelon narcotic addicts. The program for the nonfelon addicts consists of treatment through intensive counseling, vocational and academic work projects, intensive physical conditioning, and research into the cause, effect and cure of addiction.

The State Prison at San Quentin is the oldest and largest prison in the state's correctional system. It is operated as a close-medium security institution with extensive industrial and educational facilities, and because of its overpopulation retains all classifications and age groups of prisoners. An extensive program of highway and forestry camps is operated by the San Quentin institution.

The Institution for Women at Corona is a medium security prison and is the only correctional institution in the State which receives women and houses all custody classifications. It has a reception-guidance center in addition to the regular institutional custody and treatment programs.

Forestry camps are operated by conservation centers in conjunction with the Division of Forestry and U.S. Forest Service for conservation and development of the state's forests and parks.

Capacities and Standards

The type of prisoner committed to the department governs the type of major construction project to provide institutional capacities. Maximum-close security prisons are walled institutions where the majority of prisoners are housed in cells and employed within the walls, and are so guarded and restricted as to minimize the danger of escape. Medium security prisons are not walled—a wire chain-link fence sufficing for boundary restrictions. Most prisoners are housed in outside cells, in cell buildings or dormitories and employment may be inside or outside the enclosure. Personal supervision is emphasized for prevention of escapes. Minimum security prisoners are not under lock. They feature work outdoors or elsewhere under supervision of correctional officers and foremen.

The department believes that prisons with a capacity beyond 1200 are cumbersome and as a result the facilities are less efficient in attaining treatment goals. This thinking is shared by those responsible for leadership in the field of penology.

In the past, population pressures and financial considerations have made necessary a compromise between the cost advantages of a large prison and the safety and rehabilitative value of a small one. This has resulted in the limitation of such facilities as the Correctional Training

Facility and Mens Colony East to 3,000 capacity or under. This capacity limitation recognizes that peak loads will cause the inmate count to go higher.

The facilities proposed in this five-year program are limited to 1,200 capacity generally composed of two units of 600 each.

¹ Camp capacity of 640 is being transferred from San Quentin to the California Conservation Center. In addition, that center is transferring 26 camp capacity to the Sierra Conservation Center.

² Camp capacity of 220 is being transferred from the California Conservation Center to the Sierra Conservation Center.

³ Camp capacity of 340 is being transferred from the Correctional Training Facility to the Sierra Conservation Center. In addition, the California Conservation Center is transferring 26 capacity to the Sierra Center.

DEPARTMENT OF THE YOUTH AUTHORITY

This department is responsible for the custody and rehabilitation of youths committed by the juvenile and criminal courts for delinquent behavior. It operates two institutions for reception, diagnosis, and classification of these boys and girls plus seven training institutions and four conservation camps. The eighth training school is under construction.

Consistent with accepted national practices, the department has developed institutions based upon a philosophy of working with homogeneous groups. In accordance with this principle, the department prefers to develop small institutions, 150-200 capacity for the youngest wards and 300-400 capacity for the older wards. Difficulties in financing state institutions have compelled the construction of institutions larger than these capacities. In order to achieve the economies of larger institutions together with the benefits derived from smaller institutions, the department has embarked upon a program of constructing the Northern California Youth Center and the Southern California Youth Center. These will be large clusters of institutions with each unit providing a 400-ward capacity. Each cluster will be developed around a central administration and services core.

The department operates the following facilities:

TRAINING AND TREATMENT (SCHOOLS AND CAMPS)

<i>Boys</i>	<i>Girls</i>
Conservation Camps	Los Guillicos School
Fricot Ranch School	Ventura School
Fred C. Nelles School	
Northern California Youth Center	
Paso Robles School

PROGRAM SUMMARY

The construction program for the 1965-70 period is designed to provide institution capacity of 8,122 beds plus 606 hospital and detention beds to accommodate an estimated total institution population of 8,277 boys and girls by June 30, 1970. This program, at a total esti-

* This institution is still in the planning stage.

mated cost of \$53,990,872, provides for initial development and construction of the Southern California Youth Center and construction of essential auxiliary facilities at existing institutions. Construction of two youth conservation camps and replacement of one are proposed by the Division of Forestry in its construction program.

BASIC FACTORS AFFECTING AGENCY PROGRAM POPULATION ESTIMATES

Commitments are classified as juvenile court wards or as young persons convicted in the criminal courts, and include only persons who are at least 8 years of age or less than 21 years of age at the time of the offense resulting in commitment to the department. For the past five years, the court referral rate to the department for boys in the 12-17 age group has remained relatively stable at about 360 per 100,000 boys in this age group of the state population. This same rate has been projected for estimating admissions in the next five years. Recent experience indicates upward revisions in these estimates may be necessary in planning the department's long-range construction program.

The referral rate for girls has gradually increased to 67 per 100,000 girls in the 12-20 age group. This rate has been used in estimated institution capacity requirements for girls.

The referral rate per 100,000 males to both the Department of the Youth Authority and Department of Corrections in the 18-20 age group has fluctuated considerably over the last nine years varying from a rate of 317 in 1955-56 to 557 in 1960-61 and declining to 374 in 1963-64. This building program is based on a projected rate of 450 per 100,000 males in this age group.

The Youth Authority construction program is based on an overall length of stay at Youth Authority institutions (including reception center processing time) of 12 months for those 14 years of age and under and 9 months for youths 15 years of age and older. The overall average length of stay for older boys transferred to the Department of Corrections institutions is 12 months.

INSTITUTIONAL PROGRAM

The following institutions, with capacity as indicated, have been developed or planned and incorporate the general principles for institution construction and operation of the Department of the Youth Authority:

Youth Conservation Camps for Boys are operated in conjunction with the Division of Forestry. These provide additional capacity and afford an opportunity for older boys to acquire good work habits in a minimum security situation. Construction of two additional camps and replacement of one existing camp is included in the Division of Forestry program bringing the total capacity to 540.

Fricot Ranch School for Boys is used for placement of the youngest boys (13 years of age and under) in a program designed for full time elementary school level education. Dependency needs of this group are recognized and provided for to a much greater degree than is necessary for older boys. Projected capacity is 220 plus 12 hospital beds.

Fred C. Nelles School for Boys is for boys of 14-year maturity level, some of whom are approaching their limits in academic achievement.

INSTITUTIONAL PROGRAMS—(Continued)

All boys of this age group must be prepared for public school training because of the compulsory school attendance law. Regular and remedial academic teaching plays an important part in the program. Some emphasis is placed on a program of exploratory and prevocational training. Most of these wards are old enough to move in groups and require limited physical security. Projected capacity is 620 plus 35 hospital and detention beds.

Northern California Youth Center is to be located on a 935-acre site which has been acquired near Stockton. It is planned to construct a complex of 12 400-capacity institutions served by central service and administration units. Construction of the first institution for boys began in May 1964 with occupancy expected in June 1966. This institution is known as the O. H. Close School for Boys. The second institution for boys in the 15-year-old age group will be under construction in the spring of 1965 with occupancy expected about two years later. Construction funds are available for the third institution, a 400-bed older boys facility. Construction of this institution is expected to begin in early 1966 with occupancy in early 1968. An ultimate capacity of approximately 4,800 is planned for this youth center. Current and already funded construction will provide a projected capacity of 1,180 plus 77 hospital and detention beds.

Paso Robles School for Boys is for boys of the adolescent 15-16 year age group where a program of extensive remedial and academic training is provided in compliance with compulsory school attendance laws. An increasing emphasis is placed on prevocational training. Security is of an intermediate degree. Projected capacity is 453 plus 38 hospital and detention beds.

Preston School of Industry is for older boys providing a combination of academic and vocational training programs with greater emphasis on trades training and work experience. An agricultural education program is operated at this institution to meet the needs of many of these boys who will eventually be placed in agricultural employment. Greater security is provided at Preston School of Industry with the youths being moved about in groups under supervision. Projected capacity is 846 plus 94 hospital and detention beds.

Southern California Youth Center is planned as a complex of institutions at the Youth Training School site. This construction program includes a reception center for older boys a medical-psychiatric institution for boys and other institutions for boys together with central services and administration units. The existing Youth Training School will be a part of the complex. This building program includes a projected additional capacity of 1,591 plus 109 hospital and detention beds.

Youth Training School is for older boys who can profit from trades training and a related work experience program. The institution has an extensive vocational trades training program with related academic training. Almost all institution maintenance is carried out by vocational training classes. Projected capacity is 1,200 plus 72 hospital and detention beds.

INSTITUTIONAL PROGRAMS—(Continued)

Los Guilucos School for Girls is a school for immature girls of the 8-12 age group and for northern California girls, ages 13-15, with a program of education emphasizing remedial and regular academic teaching. Recreation, arts and crafts, and homemaking programs assist in the development of these girls. Projected capacity is 259 plus hospital and detention beds.

Ventura School for Girls houses Southern California girls of the 13-15 age group and older girls of the 16-21 age group from anywhere in the state. A program of education emphasizing remedial and regular academic teaching is supplemented with prevocational training for the older girls. A temporary 50-bed reception center for southern California girls is operating at this institution. Plans are being developed for a 100-bed reception center at Ventura School for Girls for girls received from southern California. Construction funds are already available. Projected capacity is 550 plus 74 hospital and detention beds.

The Youth Authority operates two reception centers and clinics, one located in Northern and one in Southern California. They afford diagnostic and clinical services for all juvenile court commitments prior to transfer to a training institution. After careful study, some wards are paroled directly from the reception centers. Reception and diagnosis of both boys and girls has been the function of these reception centers since occupancy in 1954. In January, 1964, the Southern California girls reception function was transferred to Ventura School for Girls. Total projected capacity at present reception centers is 663 plus 60 hospital and detention beds.

DEFINITIONS OF CAPACITIES

The dormitory sleeping area space standard allows an average of 54 square feet per ward, or 6 feet x 9 feet per bed. This provides space for each bed plus 3 feet between beds and a 5-foot aisle. In determining total institutional capacity, all beds and regular sleeping facilities excluding detention and hospital beds but including segregation units, are counted. Detention beds are used for control and discipline of wards and therefore are not considered in computing net institutional capacity. There is overcrowding at the present time in the Youth Authority institutions for boys.

DEPARTMENT OF VETERANS AFFAIRS**Veterans' Home of California**

The Veterans' Home of California provides domiciliary and medical care for California veterans. At the present time the domiciliary bed capacity of the home is 1,531. Hospital and nursing home facilities of 881 beds are also provided to care for the needs of veterans housed at the home.

PROGRAM SUMMARY

The five-year program for the Veterans' Home is proposed subject to further policy consideration. Additional hospital beds are included to provide for the increasing number of veterans in the home requiring hospitalization due to advanced age and degenerate diseases and to provide capacity for California veterans from outside the home who may require hospitalization for chronic disabilities.

A bill proposing federal sharing in the construction of nursing home care facilities for veterans is now before the United States Congress. Facilities for this type of care have been shown with a 50 percent federal cooperative sharing of construction and equipment cost.

Other facilities are proposed to improve the physical plant and to replace old buildings which will deteriorate.

^a Projects requiring further policy consideration as to relative urgency, timing or method of financing.
^b To be financed from federal and other nonstate funds.
^c Projects may be subsequently proposed for amendment into the 1965-66 Budget Act subject to the development of adequate financing.

DEPARTMENT OF GENERAL SERVICES

The Department of General Services is responsible for providing space for all state agencies except those such as the Department of Employment, Motor Vehicles, and Highway Patrol which normally furnish their own facilities. These are agencies with operations that are not necessarily best served in downtown, centralized office space types of facilities. The facilities necessary for state operations may be acquired either by constructing state-owned facilities or by leasing facilities.

The types of facilities furnished include office buildings, warehouses, and radio communication facilities such as sites for vaults for housing microwave and other radio installations.

TABULATION OF FIVE-YEAR PROJECTS BY CATEGORY

<i>Category</i>	<i>Amount</i>	<i>Percent of total</i>
New facilities	\$59,046,275	79.7
Site acquisition	12,111,609	16.4
Alterations	2,951,200	3.9
Total	\$74,109,084	100.0

BASIC FACTORS AFFECTING THE PROGRAM

Many economies are realized through centralization of facilities. These include more efficient arrangement of space, lower maintenance and service costs and the elimination of duplicate services and facilities.

The factors considered in determining space requirements for each city include the number of state agencies involved, the amount of space currently occupied, the degree of present overcrowding, and anticipated agency growth. Projected population of the surrounding area is examined, as is the expected appreciation of land values.

Construction of state-owned facilities is limited by the availability of funds. Existing lease arrangements are normally extended until the priority becomes high enough to warrant construction of state-owned facilities.

When the construction of state-owned facilities is financed from special funds the special funds are repaid with interest from rental charges to occupying state agencies.

The following table describes the space needs and availability of state-owned space in the various cities throughout the state. Capacity figures for state buildings are based upon anticipated completion dates of projected construction.

DEPARTMENT OF AGRICULTURE

The Department of Agriculture engages in the enforcement of plant quarantine and fruit and vegetable standardization laws and regulations to protect the agricultural industry of the state against the introduction of plant pests and diseases, and to insure quality standards for produce marketed. Enforcement of these laws requires inspection stations at strategic locations within the state.

Trends in the design and size of meters used for liquid petroleum products and liquefied petroleum gas indicate the need for establishment of a facility in a remote area in Sacramento County or east Yolo County capable of handling these products at high rates of flow and varying temperatures.

PROGRAM SUMMARY

The 1965-66 budget proposes \$225,000 for a plant quarantine inspection station on Highway 66 east of Needles and \$1,000 to acquire the site for a plant quarantine inspection station on Highway 95 at Searchlight Junction.

During 1966-67 two projects are requested. The first is the construction of the Searchlight Junction plant quarantine inspection station, and the second is the construction of the Livermore fruit and vegetable standardization inspection station.

The Searchlight Junction inspection station will allow for the relocation of the present Twentynine Palms station. This station will operate in conjunction with the new Needles station just east of Needles on US Highway 66.

The Livermore fruit and vegetable standardization inspection station is made necessary by the relocation of US Highway 50 in the vicinity of Livermore.

In 1967-68 the reconstruction of the Vidal inspection station provides replacement of the present Vidal border station. This station, situated at the crossroads of the highway entering California from Parker, Arizona, and the highway leading south to the Blythe area from Needles, is needed to cover traffic coming into California from Parker, Arizona. It was originally constructed in 1938 as a temporary structure and by 1967-68 will be in such condition as to make any attempt to maintain it in a reasonable condition uneconomical.

In 1968-69 land acquisition and construction in a remote section of Sacramento County or east Yolo County is proposed to provide for a liquid petroleum products testing station.

Information from the Division of Highways indicates that relocation of Highway 99 at Hornbrook will require reconstruction of that plant quarantine inspection station in 1969-70. The same situation applies to the reconstruction of Pacheco Pass fruit and vegetable standardization inspection station. Construction funds will be required in 1969-70 because of highway relocation.

DEPARTMENT OF EMPLOYMENT
PROGRAM SUMMARY

The long-term building program of the Department of Employment proposes to replace leased premises with state-owned buildings with the exception of offices located in communities where there may not be a permanent need for a local office. This is a continuation of the program the department embarked upon during the 1948-49 fiscal year. An expenditure of \$7,094,100 is proposed for the five-year period 1965-66 through 1969-70.

The department is presently leasing office space in many communities throughout the state. The acquiring of state-owned buildings would represent a substantial savings in rent paid by the department. The Federal Bureau of Employment Security will provide a rental grant to the Department of Employment which will be used to amortize the cost of the building projects over a reasonable number of years. Similar grants will also be made for maintenance and repair costs both during and after amortization.

Acquisition and preliminary planning funds for the various projects are to be provided from the Department of Employment Contingent Fund. Federal grants to the Unemployment Trust Fund under provisions of Public Law 88-31, which extended availability of Reed Act grants, will be used for construction purposes.

The proposed projects would provide sufficient working space correctly designed to meet the specific needs and would be designed to provide for expansion. The department is continuing its efforts to build an outstanding employment service in California; and experience here and elsewhere in the nation indicates that suitable premises definitely contribute to employer and applicant acceptance of the program. With properly designed facilities, the department should give better service to employers, applicants, and claimants.

The priorities established for the various projects and the recommendations for consideration in specific fiscal years represent consideration of a number of factors including:

1. Condition and flexibility of present leased space.
2. Size of leased space with relationship to staff and workload.
3. Present workload factors and anticipated growth.
4. Key position of office in overall agency program.
5. Location of present office.
6. Expiration of leases.
7. Availability of rental properties.
8. Rental costs.
9. Consolidation of multiple leases.

DEPARTMENT OF PUBLIC HEALTH

The Department of Public Health, in cooperation with local health departments, is responsible for the prevention of disease and the provision of a healthful environment for the people of California.

PROGRAM SUMMARY

The 1965-66 capital outlay budget provides \$450,000 for working drawings to construct an addition to the laboratory facilities in Berkeley. This annex would add approximately 34,000 net square feet of laboratory space and approximately 20,732 net square feet of office space not related to the laboratory function. The office space will be designed to allow for future conversion to laboratory space when needed. Construction is contemplated for 1966-67 and would require an additional appropriation of approximately \$5,675,000.

Also budgeted for 1965-66 is \$535,000 to replace the existing boilers and expand the boiler room in order to meet the increased needs of the departmental headquarters building and laboratory addition. The present boilers are at maximum capacity and because of their poor condition should be replaced from a safety standpoint.

No additional major construction projects are contemplated for the Department of Public Health through 1969-70.

DEPARTMENT OF THE CALIFORNIA HIGHWAY PATROL

PROGRAM SUMMARY

The program of the California Highway Patrol is oriented to the prevention of traffic accidents through enforcement of laws regulating the operation of motor vehicles.

The major portion of the projects included in the proposed building program for the Highway Patrol are for office space and related facilities for the area and zone functions.

Space requirements are directly related to traffic volume, population, accident frequency and the flow of traffic. The general policy of the department is to lease offices throughout the State wherever possible. This permits flexibility for moving to new locations as traffic conditions warrant without abandoning expensive state-owned capital investments. In this manner the operational efficiency of the field forces can be maintained at a high level. The department contemplates the continuation of this leasing policy.

Under the agency concept of state government it is possible to take advantage of similar needs for various departments at a single location. In this regard, the department has programed a number of new area offices for sites adjacent to freeways. Scheduled for completion along with the freeway, these buildings will share sites, utilities, parking, communications and other facilities with other members of the Highway Transportation Agency.

A study of the present Highway Patrol Academy is now underway. The goal of the study is to determine whether the academy should be removed from its present urban location. If this is recommended the study will also indicate what other uses could be made of the existing academy plant. The results of this study will appear in a subsequent five-year program as the needs are determined.

All expenditures for this department are from the Motor Vehicle Fund.

DEPARTMENT OF MOTOR VEHICLES

PROGRAM SUMMARY

The program of the Department of Motor Vehicles is directed toward registering and licensing all motor vehicles, licensing drivers, and administration of the Financial Responsibility Law. The capital outlay needs of the department are generally influenced by the location of population centers and the workload created by the use of motor vehicles.

Generally, the construction program of the department is limited to the replacement of rental properties in those areas where suitable leased facilities are not available or where it is deemed more economical for the department to construct its own building.

BUILDING STANDARDS

All projects shown in the capital outlay program are tied to expiration of leases and other conditions related to the departmental housing needs.

Several basic factors govern the location and area of real property and the size of the building that is constructed thereon:

These factors are:

1. Population and estimated workload in the area.
2. Proximity to other branch offices.
3. Traffic conditions adjacent to the proposed office.
4. Amount of offstreet parking required.

Capital outlay expenditures for this department are from the Motor Vehicle Fund.

DEPARTMENT OF PROFESSIONAL AND VOCATIONAL STANDARDS

The purpose of this department is to protect the public health, welfare and safety by licensing only persons and firms in certain professions and vocations who have demonstrated knowledge and abilities to perform services for the public, to prevent unauthorized practices upon the public, and to discipline those licensees who fail in their public trust.

There are 30 boards, bureaus and commissions of this department which are responsible for regulating in excess of 600,000 persons practicing more than 50 professions and vocations in the State of California.

The department operates two state office buildings in Sacramento. These buildings house a majority of the member boards, bureaus and commissions and also the Division of Corporations and the State Board of Equalization.

Included in 1965-66 are funds to automate the three passenger elevators in the main building. The lack of safety devices and the condition of the equipment present a hazardous situation. There have been several instances of passengers being injured and frequent occasions of the elevators stalling between floors.

DEPARTMENT OF CONSERVATION

Division of Forestry

The Division of Forestry has the primary function of the protection of over 39 million acres of state and private lands having statewide interest with regard to timber production, rangelands, recreational uses and watershed values. Fire control and prevention is the primary role of the division. In addition, a major function of the division's program is maintenance and operation of 34 conservation camps (as of July 1, 1965). These camps are used cooperatively with the Youth and Adult Corrections Agency for useful conservation projects through the use of inmates from various correctional institutions of the state.

PROGRAM SUMMARY

The following program for the Division of Forestry consists of relocation and replacement of inadequate forest fire stations; additions to stations lacking the normal complement of facilities; construction of two training centers to replace existing substandard plants; establishment, replacement and expansion of county headquarters and ranger unit offices and accompanying facilities where necessary; and site acquisition for all types of facilities including lookouts and fire stations.

With the 1965-66 fiscal year program funds will be available to complete all authorized conservation camps. In the late years of this five-year program the conservation camp concept for two new camps a year is reinstituted. This is based upon current eligible inmate population estimates and will be subject to close review at that time. In addition to the new camps, replacement or addition to some existing conservation is also proposed.

Total conservation camps	\$9,090,582	100.0
Grand total	\$18,477,650	

BASIC FACTORS AFFECTING CAPITAL OUTLAY NEED

The Division of Forestry's construction needs are governed by the authorized level of personnel and equipment. At the present time the division operates 234 forest fire stations, 81 lookouts and 15 primary and 14 secondary air attack bases. The division maintains 32 ranger unit headquarters (all but Owens Valley have fire stations), 6 district headquarters, 34 conservation camps, a headquarters nursery at Davis

along with three branch nurseries, equipment shops, 7 state forests and numerous radio repeater sites. In addition the division is responsible for maintenance of 1,776 miles of telephone lines, 3,586 miles of fire access roads, 69 bridges and 16.3 miles of powerlines.

The Division of Forestry constructs and maintains forestry conservation camps for the use of the Department of Corrections and Department of Youth Authority. Inmates living in these special camps engage in conservation work projects such as fire hazard reduction; construction and maintenance of fire access roads and trails, powerlines and other projects beneficial to the enhancement and management of natural resources. The inmate capacities of these camps are reflected in the capacity figures for the respective departments.

STATUTORY BASIS FOR COMMITTEE

CALIFORNIA STATE AGRICULTURAL CODE

Section 92.7 as Amended by Chapter 2057, Statutes of 1959

92.7. There is hereby created the Fairs Allocation and Classification Committee which shall consist of seven Members of the Senate and seven Members of the Assembly.

To the extent that it is feasible, appointments shall be made so that there is one Member of the Senate and one Member of the Assembly on the committee from each of the following areas:

- Area 1. Siskiyou, Modoc, Trinity, Shasta, Lassen, Tehama, Plumas, and Sierra Counties.
- Area 2. Butte, Yuba, Sutter, Glenn, Colusa, Yolo, Sacramento, and Solano Counties.
- Area 3. Del Norte, Humboldt, Mendocino, Lake, Sonoma, Napa, and Marin Counties.
- Area 4. El Dorado, Amador, Calaveras, Tuolumne, Mariposa, Nevada, and Placer Counties.
- Area 5. San Joaquin, Stanislaus, Merced, Madera, Fresno, Kings, Tulare, and Kern Counties.
- Area 6. San Francisco, Contra Costa, Alameda, San Mateo, Santa Clara, Santa Cruz, San Benito, Monterey, and San Luis Obispo Counties.
- Area 7. Santa Barbara, Ventura, Los Angeles, Orange, San Diego, Imperial, San Bernardino, Inyo, Mono, Alpine, and Riverside Counties.

The first meeting of the committee shall be at the call of that Member of the Senate on the committee who is senior in point of service in the Senate. If two or more Members of the Senate on the committee have equal seniority, the one whose name would appear first if the surnames of such members were arranged in alphabetical order shall be deemed to be the senior. The committee shall, at its first meeting and thereafter from time to time, elect its chairman and vice chairman. The committee may meet at any time, whether or not the Legislature is in session, and shall continue in existence until otherwise provided by law.

The committee shall have authority to investigate, study, and analyze any or all facts and matters relating to the operation and financing of fairs which are subject to Section 92.6, and the effect and operation of the laws relating thereto.

The committee shall report to the Legislature at the commencement of each regular session and may report thereto at any time, including in such reports its recommendations, if any, as to necessary or desirable legislative action. The provisions of the Joint Rules of the Senate and Assembly, as they may exist from time to time, which relate to joint investigating committees shall apply to the committee created by this section.

SUMMARY OF RECOMMENDATIONS

1. Educational Coordination Group

The Joint Committee on Fairs Allocation and Classification recommends that there be established a permanent educational coordination group to assist the district, county, and other fairs develop their full potentials in the field of education. Such a group should include, but need not be limited to, representatives of fairs themselves, the Division of Fairs and Expositions, the Department of Education, the Universities and the State Colleges.

2. Interim Usage of Fair Facilities

The committee recommends that each fair which is required to submit an annual report under Section 92.6 of the Agricultural Code be required to include in that report pertinent information as to the kinds of organization making use of its facilities during the interim between fairs, the types of such usage, and the number of people participating in such usage.

3. Increase the Statutory Ceiling on Capital Outlay

The committee renews its previous recommendation that the statutory ceiling of \$2,250,000 on the amount of state funds which can be allocated to district, county, and citrus fairs be increased to \$4,000,000 for a period of four fiscal years.

4. Bring Other Fairs Within Jurisdiction of Committee

The committee renews its recommendation that all of the fairs receiving state support which are not now within its jurisdiction, such as the State Fair and Exposition, the Los Angeles County Fair, District 1-A Cow Palace, and the 48th District Fair, be brought within its purview by law.

INTRODUCTION

The Fairs Allocation and Classification Committee, pursuant to provision of the law under which it was created, carried on its responsibilities of analyzing and investigating the financing and operations of the 71 district and county fairs which are subject to Section 92.6 of the Agricultural Code during the interim following adjournment of the 1963 session of the Legislature.

The committee has met three times since the submission of its 1963 report, on September 6, 1963, November 8, 1963, and on December 4, 1964. At these meetings, it received statements and testimony from many individuals interested in fairs. Directors and managers from many fairs located in all parts of the state offered facts about their experiences in the operations of their fairs. Representatives of the State Departments of Finance and Agriculture furnished pertinent and valuable information on many matters of concern to those in fairs management.

During the interim, the committee staff and consultants devoted itself to the collection and compilation of factual material from individual fairs, the Division of Fairs and Expositions, and the Western Fairs Association, to aid the committee in arriving at its findings and recommendations.

Major Change in State Supervision of Fairs

The 1963 Legislature enacted a law which made a major change in the position of supervisory responsibility for fairs matters within our state government. From 1929 on, control over the allocation of state funds to local fairs has been within the Department of Finance. However, over the years so many "housekeeping" functions had been added to the department's duties that its purely fiscal responsibilities were in some danger of being overwhelmed. To correct this situation, the state administration sponsored a bill in the 1963 Session, which created a new Department of General Services, and transferred to it from Finance these housekeeping functions.

Obviously, supervision of local fairs could not be classified as "housekeeping." In addition, there were objections to leaving fairs matters in the hands of an agency primarily fiscal in nature. To resolve this dilemma, the measure also provided that the Division of Fairs and Expositions should be transferred to the Department of Agriculture as of October 1, 1963. At the committee meeting of November 8, 1963, representatives of both Finance and Agriculture were present to discuss the changeover.

Since the only foreseeable problem which could result from the changeover is related to the annual allocation of state funds for fair operations, the two departments have worked out a practical system so that local fairs would not be compelled to deal with two different agencies in the matter. Under this arrangement, the Division of Fairs and Expositions reviews the budget of each local fair to determine

how much of the maximum grant of \$65,000 will be allocated to it, and the Department of Finance accepts the decision.

Legal Distinctions Between District and County Fairs

There are significant legal distinctions between the district and county fairs with which this committee is concerned. These differences relate to the organization and management of the fairs, to their status as governmental entities, and to their authority to undertake certain activities.

District fairs are governed by, and may be organized under Sections 80 through 98.3 of the Agricultural Code. Section 81 provides that 50 or more persons, residents of the county, or of all of the counties or parts of counties intended to form an agricultural district, may form a district agricultural association, for the purpose of holding fairs and exhibitions of all of the industries and industrial enterprises, resources and products of every kind or nature of the state, in order to improve, exploit, encourage, and stimulate them. The officers of such an association shall be a board of directors of nine resident citizens of the district. The directors are appointed by the Governor for four years, and their terms of office overlap.

Section 86 provides that each district agricultural association is a state institution. With the approval of the Department of Agriculture, each district may: (a) contract, or sue; (b) purchase, hold, sell or convey real and personal property, or improve it; (c) lease its property to any person or public body for any purpose approved by the board of directors and the department; (d) use or manage its property jointly with any lessee; (e) lease its real property for public park, recreational or playground purposes; (f) rent, or permit the use of its premises for purposes beneficial to the agricultural industry; and (g) do everything necessary to carry out the purposes for which the association is formed.

The statutory provisions for county fairs differ considerably from those for their district counterparts. They are contained in Sections 25900 through 25908 of the Government Code.

The law authorizes the board of supervisors of any county to erect and maintain permanent county fair buildings within the county on land owned by the county, or by any other local government agency. It also authorizes each board to levy a special property tax, not to exceed 4 cents on each \$100 of assessed value, proceeds of which are to be used to encourage immigration, increase trade, and promote the "industrial, livestock, agricultural, horticultural, viticultural, and pastoral pursuits of the county."

Specifically, the code authorizes the use of funds raised through this tax for: (a) the preparation and maintenance of an exhibition of the products and industries of the county at any domestic or foreign exposition; and (b) contribution to the support of any local fair maintained by any public agency, county agricultural association, county fair association, or chamber of commerce in the county. If there is no such local fair, contribution may be made to the support of a fair maintained by a group of counties. Funds contributed may be used for general operations of the fair, including premiums for excellent exhibits of all types of county products.

Two alternate methods of managing county fairs are provided in the Government Code, in addition to direct management by the county government itself. Both involve contracting by the board of supervisors with a nonprofit corporation or association for operation of a fair. Section 25905 permits such contracting for periods not to exceed five years, allows advance contributions of county funds to the operating corporation, and requires deposit of all net proceeds from operation of the fair to be deposited in the county treasury to the credit of the fair fund. Section 25906 permits such contracts "for such period and under such conditions as the board may determine." Most county fairs are now operated under such contracts. Only 2 of the 23 county fairs with which this committee is concerned, Lassen and Trinity, are managed directly by their county governments.

The law is silent as to the organization of the nonprofit corporations or associations which are permitted to manage county fairs under contract. Apart from the provisions of the Corporations Code relating to nonprofit organizations, there are apparently no general legal dicta as to requirements for membership, the selection, terms and powers of directors, or the relationship between directors and staff.

These legal lacunae with respect to the organization of county fair corporations or associations should not be interpreted as implying that county fairs are less subject to state fiscal control than district fairs. Since all county fairs, with the exception of San Benito, receive state allocations, either for operating expenses, or for capital outlay, or both, they are subject to the same reporting and budgetary controls as are the district fairs. San Benito County Fair has for several years been operating on only its cash income and accumulated reserves, but complies fully with state requirements.

The differences in status between district and county fairs have occasionally caused problems in the relationships between the fairs and the municipal or other local governments within which the fair plants are located. Problems have arisen with respect to the application of local revenue, health, safety, and building code ordinances. The status of district fairs as state agencies has sometimes resulted in their receiving one form of treatment, while county fairs under similar circumstances received another. A new Section 87.2 of the Agricultural Code enacted in 1963 prohibits the imposition of any city tax, except a sales or use tax, upon any district agricultural association which represents more than one county, or upon any concessionaires or rental contractors of such a district. Application of this section is at present limited to District 1-A, the Cow Palace, but it is significant to note that no similar statutory protection has been provided for county fairs.

Broadening the Scope of District and County Fairs

During its meeting in September 1963, it was suggested that the joint committee explore the possibility of developing greater support for fairs by business and industry generally, so as to broaden the scope of fair presentations, and to assist them to draw as visitors a greater proportion of the state's urban population. The committee's consultants were instructed to explore this matter with executives of individual industries, of trade associations and chambers of commerce, and

to report findings and suggestions to the next committee meeting. The further work of the committee in this important area is discussed at length in the body of this report.

Other matters which were also approved for committee study and action were: (1) enlarging the educational functions of fairs; (2) encourage more interim use of fair facilities; (3) evaluation of entertainment and other attractions staged by fairs; (4) continue work for an acceptable legislative solution to the pressing problem of the existing restrictive limitation on state allocations to fairs for capital outlay; (5) effective and meaningful classification of fairs; (6) the proper location within the framework of state government for state administration of fairs matters; and (7) extension of committee authority to study and report on the operations of the several fairs now outside its jurisdiction.

THE GROWTH OF DISTRICT AND COUNTY FAIRS

The fiscal data and statistics published by the Division of Audits, Department of Finance, in its annual "California Fairs, Report on Operations" reveal a continued healthy growth of district and county fairs from 1963 to 1964. This is true in all major respects except one—most of these fairs still do not break even, so far as revenues from operations and expenditures are concerned.

Financial Results

The record discloses that total revenues from all operations for the 71 fairs increased 5.5 percent to \$9,134,486 from 1963 to 1964. Total expenditures rose less than half as much, 2.5 percent to \$12,840,439.

Once again, five fairs, all with horseracing, had revenues which exceeded their expenditures in 1964. They are the 21st (Fresno) and the 22nd (Del Mar) District fairs, and the Alameda, Solano and Sonoma county fairs. Together, they had surpluses totaling \$301,614 over expenses. The remaining 66 fairs together had revenues \$4,007,567 less than their total expenditures during the year, but this total deficit was down slightly, 0.5 percent, from that for 1963. The deficits of most fairs were covered by the allocations of state funds for operating expenses (maximum, \$65,000 per fair per year), but 16 fairs had deficits larger than their allocations, and so had to make them up partially from reserves, or local funds.

Attendance Growth

More people attended the district and county fairs in 1964 than did in the previous year. The total for all fairs rose 4.9 percent, to 5,282,497. This includes attendance at the 10 fairs which charge no admission. Paid admissions increased 4.1 percent, to 2,747,397.

Since total attendance at fairs of all kinds is a matter of public interest, and is as well an indicator of the viability of fairs generally, information about attendance at fairs not under jurisdiction of the Joint Committee has been obtained from the Audit Division's reports. These fairs are the California State Fair, the Los Angeles County Fair, Agricultural District 1-A (Cow Palace), 48th District, the San Bernardino Orange Show, and the Cloverdale Citrus Fair.

These six fairs attracted practically the same number of visitors in 1964 as they did in 1963, 2,630,289 as compared to 2,629,806. Adding these totals to the similar ones for district and county fairs gives a grand total attendance at all fairs in 1964 of 7,912,786, up 3.2 percent over the previous year. It should be noted, however, that admissions to the California State Fair and to the Los Angeles County Fair account for almost 80 percent of the total at all six fairs. Increase in admissions to the Los Angeles Fair to 1,109,151, or 8.7 percent, more than offset the decrease in those to the State Fair, from 914,311 in 1963 to 864,766 in 1964, or 5.4 percent.

Exhibitors and Entries

The record with respect to the number of exhibitors and their entries in district and county fairs in 1963 and 1964 is mixed, and for that reason may be indicative of some of the transitional problems now confronting such fairs. The number of senior exhibitors in all classes declined 0.4 percent, to 46,087 in 1964, but the decrease in their entries was even more marked, down 2.4 percent to 284,650.

The number of Future Farmers of America exhibitors, the high school youths enrolled in classes in agriculture, dropped 2 percent to 9,450, but the slump in the number of their entries was even greater than that in senior entries. FFA entries skidded 3.7 percent, and totaled only 20,446 in 1964. Experts in agricultural vocational education attribute this decline primarily to recent change in federal law, which no longer requires that a student carry on a "farm production project" as a condition precedent to his admission into FFA. The number of students enrolled in agricultural courses has increased substantially during the past two years, but they are taking up other aspects of agribusiness in their classes.

In contrast to these decreases, the 4-H classes at district and county fairs have continued to grow in healthy fashion. The number of 4-H exhibitors was 32,911 in 1964, up 4.3 percent over the preceding year. The number of their exhibits rose to 81,835, 3.2 percent higher than for a year earlier.

Both the number of exhibitors and entries in "Other Junior Departments" categories increased substantially between 1963 and 1964. Youths participating rose 7.5 percent, to 6,123. Their entries climbed to 15,081, up 14.4 percent. Part of this rise is attributed to the continuing Division of Fairs' program to separate junior classes in such areas as horticulture, floriculture, and minerals and metals, completely from senior classes in the same areas in the master premium list, and thus to give these junior classes their own identities. However, the remarkable growth in number, both of these junior exhibitors and their entries far exceeds in magnitude any reductions observed in the senior classes.

Other Growth Factors

There are a number of other factors in the operations of the district and county fairs which also serve to illustrate their growth between 1963 and 1964. Revenues from horse racing at the seven district and county fairs which conducted it totaled \$2,822,189 in 1964, up 3.3 percent from the previous year. Direct expenses of conducting the racing went up even more, 4.6 percent to \$2,205,101. Attendance at fairs' horse races jumped 5.9 percent to 380,990, but continued to average about 25 percent of total admissions to the fairs having racing.

Revenue from concessions rose to \$1,417,144 in 1964, topping the preceding year by 7.7 percent. Revenue from carnivals constituted the major portion of this, about 56 percent, and grew even faster than overall concessions revenue. Nonfair revenue from rental of buildings, rental of other facilities, and rental of equipment, jumped 16.1 percent, to \$737,021 in 1964. This figure is probably the closest approximate possible to the revenue derived from interim uses for which charges were made.

Rental of industrial and commercial display space increased 4.8 percent to \$475,594 in 1964. Income from attractions such as shows, dances, and rodeos was barely larger in 1964 than it was in 1963. It accounted for \$349,895 in the later year.

Very Satisfactory Growth

The various statistics cited above certainly demonstrate that the district and county fairs enjoyed a very satisfactory rate of growth between 1963 and 1964. In the majority of instances the rate exceeded considerably the growth rate for our state's population, which was 3.2 percent during the period. While wide variations in the results obviously exist between individual fairs, there can be no doubt that in the overall, the fairs made a very worthwhile contribution to our state's economy.

THE EDUCATIONAL FUNCTIONS OF FAIRS

The committee has devoted a large part of its efforts since the submission of its last report to a study of the educational functions of the district and county fairs, its goal being their improvement and expansion. Early in its work on this subject, it became evident that there is no general understanding among all the people of California as to the importance of these functions to our economy. Those directly connected with administration of fairs, with Western Fairs Association and allied organizations, with agricultural and industrial arts education, and with all kinds of agriculture are, of course, thoroughly imbued with the educational possibilities and responsibilities of fairs, and labor to advance them.

However, these groups in the aggregate constitute a small minority of our total population. It is regrettable that the vast majority of Californians, particularly the urban and suburban residents, look upon fairs as almost exclusively entertainment enterprises. It is especially disturbing that among this group are a majority of our teachers at all levels, elementary, secondary, and college. From this it follows that a major task confronting those interested in fairs is to develop and carry out a broad program to convince the general public of the importance of fairs in our overall educational process.

Specific recognition of this need was voiced at the committee's meeting on November 8, 1963 by Louis S. Merrill, general manager of Western Fairs Association. In reviewing discussions with administrators of the state college system about possible participation of the state colleges in the educational work of fairs, Mr. Merrill said that several suggestions were advanced. "One is the participation of the state colleges in actual preparation of exhibits as well as the lending of their staff aids for educational displays at fairs. We ourselves (WFA) are contemplating the development of such a program with two colleges with whom we are negotiating. Two educational displays, one of the effect of the (European) common market on California agriculture, to be displayed at three major fairs, if possible. *Another is an exhibit of the educational functions of fairs themselves, especially for those fairs near metropolitan areas.* Sometimes livestock is becoming a zoo rarity almost in some of our areas, *so we need to tell the story of the fairs themselves.*"

Addressing the committee, President Julian McPhee of California Polytechnic College in San Luis Obispo stressed education as one of the primary purposes of fairs:

Although I'm not actually connected with fairs at all, as you probably know, I have had a lot of background of fairs over my many years with the state, particularly in organizing the Future Farmers, and encouraging Future Farmers Exhibits at the various fairs throughout the state. Also at one time, I encouraged 4-H Club exhibits, because I had been a 4-H Club leader at one time.

We had a lot in common over the years, because the fairs and Cal Poly shared in the Fair and Exposition Fund. I suppose that Cal Poly got too large for the Fair and Exposition Fund in one way or another, but we don't get that money anymore, but it did give us a big start at Cal Poly, that we would not have got otherwise. We are very much interested in participating with fairs, and assisting with any educational programs they have in conjunction with schools, and of course we have a lot of our former students connected with fairs at the present time.

In my early days with fairs, I had two things in mind. First of all, the fairs basically are for educational purposes. That is the only justification I see for the expenditure of state funds for the fairs. I think entertainment is secondary, although it does have a big part in attracting people to get an education at the fair, which they probably would not come to otherwise. I think there are two types of education at the fair. I think one type is the improving of the individual's participation in agriculture, and in raising better livestock, raising better crops, and the housewife doing a better job herself at home, and giving her an opportunity to exhibit her product in competition with others in order to build up that excellence. That is the individual's participation, and we can go on and see that most of the fairs in the early days, emphasized that part of the fair.

I think a more important type of education is the education of the public who visit the fairs. I don't think they get as much education themselves visiting the individual exhibits, and they may or may not be interested in them, but they do have an opportunity to get educated in many other things than just those of their everyday life. Going back over the years, I have participated in programs of this kind before. I have talked to various legislative committees over the years, and I got figures together and some of the things I am very proud of is the fact that our Future Farmers and 4-H Clubs and even our open class groups have raised the quality and quantity of our livestock, and other crops in agriculture over the years, because of their participation in seeking of excellence in that type of work through competition for which they got ribbons and cash benefits.

I can remember in the early days we were importing into the state a lot of fine dairy cattle. I personally sent some people out to bring in dairy calves from Wisconsin, Michigan, Oregon and Washington, and in the early days they brought them in by the trainload to distribute to the Future Farmers and the 4-H Clubs, so as to raise their quality. I think it had a big impact on the early history of our agriculture. It had a lot to do with the great progress we made in agriculture in the State of California, that has been done just through that program.

We of Cal Poly, when I first went there, had in mind the distribution of livestock, the best we had, the best we had in hatching eggs, baby chicks or seed to the Future Farmers and others throughout the state and most of them were encouraged because of the fairs, which had a very definite part in it. I think that we can go back and see that that has been a wonderful thing.

We know right now there has been a change. First of all, these exhibits cost money if you are going to give premiums, if you are going to prepare for them at the fairs, I think a lot of the money of the Fairs and Expositions Fund has been used for that purpose and has done a wonderful job, but it is getting kind of expensive when you get more exhibitors, and you are getting higher premiums and more classifications. And then, of course, we have had some problems, I have problems with people who got into the fair business with individual exhibits, not from the standpoint of their agricultural interest, but more to make the money out of these premiums, and we got some of them in connection with the program I had something to do with. That, I think, is something we have to keep in mind in the changing of agriculture.

I think that we must remember California is the richest state, agriculturally in the union. In spite of the fact that only five to six percent of our total population are engaged in productive agriculture. However, one person out of three has got a job connected some way with agriculture or agricultural business. I heard the other day there are 70 firms in the state that buy and sell 70 percent of our agricultural products through supermarkets or places of that kind, the outlets to the consumer. We also know that the competition in agriculture is getting terrific, and right now the farmer gets only 37 cents out of every consumer's dollar that the consumer pays. It used to be 50 cents that he got, but it is getting less and less all the time, and that means it is difficult to go ahead with our total agricultural problem.

I remember that the fat hogs and the fat steers that we usually showed in the fairs are not now the ideal for the market, for their consumer. The supermarkets don't take that type of animal anymore, yet we emphasized that over the years at some of these individual exhibits.

Our farmers are getting into the problem of their surpluses. The cost of land and equipment is getting very, very high and we know from our graduates at Cal Poly, very few of them can go into agriculture from college, unless they inherit a farm, or unless they marry a farm. Usually a farm costs about \$100,000 to get started now, and it is difficult to do it at the present time. What I am trying to say, is agriculture is becoming big business. Big business with problems of taxes, problems of land cost getting so high that it is almost not economical to raise crops and get the receipts from them. We know that the labor problems—I got involved somehow—someone around this table started to set up a commission, of which I was elected chairman to solve the problem of agricultural labor, and I know some of the difficulties in that area. It is a difficult problem that we have in the State of California.

But with all that, we have been keeping in mind that the farm family still exists, and still is very important, and still does a lot of the agriculture in the state. In fact, the competition is so great that agriculture today isn't what it was before. I think that we should not only continue these exhibits we had, these individual exhibits, and encourage them, but we should also tell the people of the state some of these farm problems that they have.

I think we can put before the people some of the myths that they have about agriculture—that all the farmers are very, very wealthy, some of them have the idea that these pesticides are killing everybody; they ought to know it isn't true, and what is being done. You people know because you are having hearings at the present time on that problem. They think that they get all the subsidies out of the government in agriculture, they ought to know about the farmer's problems in taxes, and high price of land, and what he has to come out with on that program. And then we ought to let them know that farming is important, and I think it ought to be shown.

If these fairs are to be what they are, should be in education, they should tell the people the story the best they possibly can. When I went to Cal Poly in 1933, 80 percent of the students came there to go back on to some farm in production. Today, it is reversed; only about 20 percent go back on the farm. The others go into agribusiness, and I think that can be told to the people so that they can better understand the things they should know.

I think it is also important that the farmers be alert, and hold the ground that they have won over these 30 years. I think that the fairs have done a wonderful job, and I think the primary thing they should keep in mind is to not lose any of what they have gained. I think that they should educate the public to the rapidly changing society. I think that is very, very important.

I think the fairs have never been the product of agriculture, but that they are the product of the people who attend the fairs. The future is going to be shaped around what those people think. Another thing which I think is important to the fairs, we touched on this previously, is our whole change of economy in this country. The change is being brought about by automation and technology. We are raising our standard of living very rapidly, but we are also causing problems which need to be solved, and one of the big problems is unemployment.

I was reading in *Look* magazine just the other day that there are over 12½ million people in this country that are destitute, and they are destitute because of unemployment. First of all, there are about 4½ or 5 million unemployed, then there is the unemployable; they can't get jobs because they have not been trained, and I think that there is the underemployed. They meant those people who get salaries or annual wages for families of three thousand dollars or less, and that has been brought about and it is being emphasized because of automation and technology. I think that there are some areas in which there are shortages of labor. There is a lot of overtime being paid and if you look at any Sunday paper from any of the large cities you find page after page of ads looking for people of certain types of training, and yet we have the unemployment.

I think that our schools up to now have not done the best job of taking care of this problem. I think they have been looking and training more for college and not for the elite type of thing, I think more vocational education should be put into the schools, and that is being corrected more now than it has been over the years, because more money is being expended. If the fairs are to be part of this, if they are to be a part of our educational program I think they can do a

wonderful job by exhibits, by telling the people, by showing opportunities in these fields where they can get employment, and how to train for that employment, and I think the people deserve that kind of an opportunity.

Some of the other countries, like Sweden, are trying to solve their problem by anticipating what the problems are of unemployment and spending some money in that direction, rather than to spend money on relief, for people on relief or for unemployment wages. I think that thing could be worked out and brought together by a little thought and planning.

I think that in our fairs of tomorrow, much can be done in this direction. There must be a revolutionized method of presenting exhibits and displays; no longer can we show our whole fair by this 10 x 10 booth that we have had over the years, and not be very interesting to the public. We must compete for the interest of the people—with good color, lighting and motion. I think we must show products and progress through exciting exhibits used to the fullest extent of the modern knowledge of the techniques that we have, and already been mentioned as far as audiovisual education is concerned. Then we can emphasize the cooperative displays, where we can get groups of people together to display educational exhibits. I think that an important one is the traveling display. We had one down at our Poly Royal this year that attracted the most attention of any exhibit we had, and that was set up by the Army. It showed the people are very much interested. We have to show the product of course in these fairs, but we must tell the story of that product, where it comes from, and how it is grown, by whom, under what conditions, how it reaches the ultimate supermarket, and how it reaches the consumer. And so, with these eight million Californians who visit the fairs this year, we want to tell them what is new, not tell them what is old in the new package, we must tell them what is new, and what they can anticipate.

I think that industry can come in and play a very definite part in the future of fairs, and Don Muchmore gave an example yesterday—when he was down in the museum in Los Angeles, he succeeded in getting hundreds of thousands of dollars from IBM to put up an arithmetic-type of display that educates the people. They became interested and set up that exhibit. Right now I am going down to the trustees after I leave here to ask them if we can accept the \$300,000 computer that the company is giving us. They will give you these things if you can get it out to the public, and get it before the people, and the colleges are willing to go ahead because their interest in education, not only education of regular all day students, but educating through any means possible. I think that is one of our programs. One of the things that I think Cal Poly can continue to do is to try to educate people to be fair managers, and do work with the fairs and to get through this other means of education, as well as the classroom that we have another outlet for our whole program.

As I say, I'm not an expert on fairs, I don't know why I was asked to be here, but those are some of my ideas as to what can be done in the future. I think it important that the opportunity for the future be given a lot of thought, a lot of investigation, and I think with a lot

of cooperation they can continue to improve as they have over the past 30 years.

Wesley P. Smith, Chief of the Bureau of Vocational Education, State Department of Education, concurred generally with Mr. McPhee's opinions, but added some recommendations of his own for improvement of the educational functions of fairs:

Mr. Smith: Mr. Chairman and members of the committee: I have a four minute presentation here . . . I would like to read it for the reason that it says some of the same things that have been said three or four times here already this morning. I haven't seen Mr. McPhee for four months, until I just walked in here and he has said something that is in this statement, and for this reason, I would like to read it. County and district fairs in California are educational institutions. They are so intended in their origin, they have been so over the years, and they must remain so in the future. As educational institutions, our fairs have contributed significantly to the mass knowledge of our people, and especially has this been true in the area of occupational intelligence. Indisputable proof of this fact is found in the capacity of our agricultural industry, and in the efficiency of its practitioners. Nowhere in the world is there an agricultural industry more productive, and nowhere in the world is there a system of fairs that can compare with ours. Now, I have only one purpose in this short testimony today and that is to make a plea for the extension of the occupational education contributions of our fairs to the other production and service occupations. In the same manner as the fairs have increased the competency of those who work in the production, the processing and distribution facets of agriculture, so should these same fairs increasingly serve all other businesses and industries. The task of meeting the demands of the upward spiral of skilled requirements of all occupations is a problem we have yet to solve. To the degree that it goes unsolved, is the degree that our economy will falter.

As educational institutions our fairs should join in a sustained effort to contribute to other occupations the steady constructive learnings that have been so beneficial to agriculture. The uniqueness of such a new education of new educational contributions means that there are no prototypes that can be super imposed in premium books or in rules and regulations. Instead, it seems paramount that some method or policy ought to be approved whereby our fairs may have open-ended opportunity to exploit ideas, to experiment, to test, to invent, yes, even to spend. Career planning, vocational guidance, and occupational information are essential elements of occupational intelligence. It is possible that our fairs may become inspirational centers for these necessities both during and between exhibition dates.

One of the two often missing ingredients in education these days is ambition or incentive. The absence of desire creates dropouts from our schools. The absence of incentive produces unemployment and underemployment. The absence of ambition reduces our productive capacity.

A few years ago our fairs joined together in not only extending opportunities for physical fitness in our population, but assumed an active role in popularizing physical fitness. In a similar manner, it seems

entirely possible that fairs might well join together now in a concerted effort to increase occupational fitness in our population.

On previous occasions I have discussed with this committee suggested possible means, asking the committee to take every advantage of every opportunity to increase attention upon all phases of vocational education. Some minor break throughs have been possible and some progress has been noted. I hope that your committee will do all in its power to bolster any efforts that are taken to make maximum use of the physical facilities that are available in the talents of the fair people in meeting the critical needs for the training and retraining of California's school force. Thank you for the opportunity to make that statement.

Mr. Chairman: Thank you very much, Wesley. I know of no one in the state more qualified than you on vocational education. It has been a pleasure to have you before the committee this morning. Are there any questions from the committee of Mr. Smith?

Assemblyman Williamson: I don't have a question; I just want to compliment Mr. Smith on his statement, and say I really think he has hit on the big problem of fairs here. We always look at our own fair, the one we are most familiar with and we think we have a very good agricultural fair, particularly the one for the youngsters to participate in. This is where the real education takes place—in the participation and preparation by these kids in their projects for the fair. I don't think we can kid ourselves that the people who yearly go to the fair learn a heck of a lot from going out and looking at the animals. It's the people who actually prepare them and show them are the ones who do. This is where we are falling down, I believe in the other aspects. We are not encouraging other types of participation in fairs to the same degree that we are those of agriculture.

Mr. Smith: This is difficult, and Mr. McPhee could have told you he brought me up as an ag teacher—I have exhibited in fairs, they have been part of me all my life too. When people hear me talk about extending or bringing more balance to our fairs they think immediately one way to bring balance is to eliminate or cut down the emphasis on agriculture, and this is the last thing I ever want to see done. But I think there is another way of bringing balance, and that is increasing the emphasis on some of the other areas. This is hard, and I think if you were able to make a tabulation of progress that has been made you would find lots of progress. It moves a little slowly, but I think with a little more patience and a little bit more bolstering along the way, it will come.

Assemblyman Williamson: I would like to see something dramatic take place once in a while.

Senator O'Sullivan: It has occurred to me that in the changing nature of the society in California that perhaps the position of the agricultural fairs is even more important than it was years ago. The necessity is great for impressing upon the growing metropolitan and suburban areas, and their population, the importance of agriculture, and informing them as to what farming is. It has caused us, will cause, or should cause us to stress the use of fairs or extend the use of fairs in the metropolitan areas. Now the same thing I think pertains in the field of agricultural education. We are finding that fewer and fewer

people in relation to the entire population of our educational institutions are entering the study of agriculture. It seems to me that for a broad education, that some of these courses ought to be available, and some advantage should be taken of them by almost everyone who gets an education. Bringing to mind here—the curriculum that Thomas Jefferson had in his education which was not formalized as it is today. But it seems to me this facet of education is becoming less and less in our society. And I think that, instead of deemphasizing fairs in the metropolitan and suburban areas, we should give them extra emphasis in such areas, so that the children and grandchildren and the people who left the country and went to the city will at least have some idea of what a farm is and what the agricultural nature of America is.

It would appear from Mr. Smith's reference to the active part which fairs took in popularizing physical fitness some years ago, and from Mr. Merrill's earlier mention of Western Fairs Association's efforts to upgrade the educational functions of fairs by the development of traveling exhibits which would demonstrate to the fairs public the many functions of state government in areas such as education, health, safety, recreation, social welfare and water, that several attempts have been made to improve the performance of fairs in education during the past dozen years or so. However, as indicated in Mr. Smith's statement quoted above, success of these efforts has at best been sporadic, and only some "minor break throughs have been possible."

Apparently, the inability to achieve lasting results from these efforts stems primarily from failure to develop firm, permanent cooperative arrangements with agencies of state government whose assistance is necessary to success. The committee is strongly of the opinion that the district and county fairs, taken together as an agency of government, offer such a practical and valuable means of extending the educational services of the state that every effort appropriate should be made to create a permanent organizational structure which can work effectively to reach the desired goals. The committee will continue its study of the problem until an adequate solution is developed.

INTERIM USAGE OF FAIRS

The committee has devoted considerable attention to the problems involved in fostering greater interim usage of fair facilities. Potentially, every district and county fair is a community service center with facilities available on a year-round basis for use by various elements of its community.

Since the first enabling legislation was passed by the Legislature to authorize and encourage interim uses of fair facilities, considerable progress has been made by most fairs in developing such use. The individual fairs have received much encouragement and assistance from the Division of Fairs and Expositions, and the Western Fairs Association has had an active committee on interim uses for some time.

The few statistics available on a comparative basis would seem to indicate that interim use of fair facilities has grown even faster than has attendance during the official fair periods themselves. A survey made by Western Fairs Association in 1959, in which 50 of the 71 fairs replied, placed the total number of days of interim use of facilities of the fairs responding at 12,310. The number of persons attending interim events at those fairs was fixed at 924,634.

Recently, the Division of Fairs and Expositions released a report on an exhaustive study of 1963 interim usage of fair facilities which covered all of the fairs except the California State Fair and the 6th District California Museum of Science and Industry. According to this report, during that year, the total number of days of interim use at all covered fairs was 39,542. The number of participants in interim activities was 9,354,306. A rough idea of the astonishing growth in interim usage between 1959 and 1963 may be obtained if the totals for the earlier year are increased by 50 percent to allow for such usage at the 24 fairs not reporting, and for underreporting. On this basis, the number of days of interim usage more than doubled over the four-year period. The number of individuals involved, however, increased sevenfold during this same short span of years. Such a rate of growth is really remarkable.

The division's report comments that in order to achieve this magnitude of community service, it has been necessary to construct fair facilities which are second to none, to require maintenance of a very high standard, and to employ competent personnel on a year-round basis at salary rates sufficiently attractive. Meeting these needs has resulted in high investments in fair properties, and relatively high operating costs. The report points out that many critics of our fair system, both in and out of state government, have in mind the mistaken idea that fair plants are utilized only for the relatively few days each year in which the fairs themselves are staged.

The report contains a broad range of statistical material which support the undeniable fact that our California system of fairs is, on the whole, doing a competent job of serving the communities in which

fairs are located. "Its services to youth alone constitute a considerable contribution to the solution of the problem of juvenile discontent and delinquency."

The many types of organizations which use fair facilities during the interims indicate the breadth of fair services to all segments of the population:

SUMMARY OF NONFAIR USAGE OF FAIRGROUNDS BY GROUPS

<i>Group</i>	<i>No. of Days used</i>	<i>Approximate No. of people</i>
Clubs or lodges -----	3,821	1,300,488
Churches -----	1,358	630,323
Junior groups -----	2,774	547,348
Commercial organizations -----	8,568	1,725,486
Entertainment organizations -----	1,189	938,744
Schools -----	4,361	850,524
Athletic contests -----	1,599	871,329
Agriculture groups -----	2,776	936,402
Other -----	13,096	1,553,662
Total -----	39,542	9,354,306

One very valuable feature of the report is the information it contains about the recreational facilities of the various fairs and their interim usage. The inventory of existing recreational facilities at the 73 fairs, including the two orange shows, reveals the following varied list:

<i>Type of facility</i>	<i>Number of fairs</i>
Picnic grounds -----	39
Swimming pools -----	3
Playgrounds -----	15
Golf courses -----	5
Driving ranges -----	8
Campgrounds -----	14
Football fields -----	13
Baseball diamonds -----	22
Museums -----	4
Skating rinks -----	6
Miscellaneous -----	34

The value of these recreational facilities is amply demonstrated by their use. They account for 16,151 days of the total interim use. The number of people using them during 1963 is estimated at 1,793,948.

In its conclusions, the division's report stresses the importance of the fair system to the overall recreational needs of California. "Fair-ground facilities are able to offer potential recreation to both the local community resident and the urban dweller using modern highways and automobiles to visit rural areas away from the city. This function alone will more than justify the continued utilization of the present fair system."

The report recognizes that problems exist with respect to interim usage which must be resolved by the management of each fair. The cost of maintaining the fairgrounds, and keeping it open on a year-round basis, is an important budgetary factor. Charges for interim uses offset part of the additional cost, but are difficult to establish on a uniform basis, applicable to all users. In some areas, civic groups, charitable organizations, and other community groups can find no other

location than the fairgrounds from which to operate. Such organizations are generally granted use of the facilities either free, or with only a nominal charge, so their use adds to the drain on fair operating funds. Sometimes, complaints arise about competition between fairs and available private facilities, especially with respect to entertainment and commercial activities.

An interesting and thought-provocative enumeration of additional recreational facilities on a fair-by-fair basis, which would be provided under existing policies, or changed policies and increased capital outlay appropriations, is included in the report. The possibility of enlarging each fair's recreational facilities is broken down into eight different categories, ranging from picnic and court game (tennis, basketball) uses, through water sports, the performing arts, night recreation centers, and horsemanship, to tent and trailer camping facilities. Every fair could expand in at least one of the categories, and many of them in all eight. No estimate of the cost of this suggested expansion is given, but it obviously could run into millions.

The joint committee is completely in accord with the program of the Division of Fairs and Expositions to assist the fairs in increasing interim use of their facilities. Whether or not the revenue from interim events covers the direct costs which they create is primarily a matter for decision by the board and management of each fair. Service to the community and public relations are factors which must be weighed in establishing a scale of charges for interim uses. Not to be overlooked, however, is the fact that the state and the community have a considerable investment in every fair plant, and that investment can only be justified by the use to which the plant is put.

In order to assist the fairs to reach the maximum potential of interim use, the committee feels that the division should continue, and perhaps even enlarge its work on interim usage. Fair managers need to be informed of the many different types of such usage, of the problems encountered, and of the successes achieved by fairs in all parts of the state. This kind of information can most efficiently be collected and disseminated by the division. Managers should be encouraged to prepare and use descriptive and informational materials about the various facilities of their fairs.

The study and report on interim uses by the division give us the first well-rounded picture of such usage. Yet, as this is being written, the information in the report is almost two years old, and many changes have undoubtedly occurred. It would seem advisable that pertinent information on interim usage be required of each fair which must submit an annual report under Section 92.6 of the Agricultural Code. Since interim uses will continue to grow in relative as well as in absolute importance, information about them in some detail will be of great value.

CAPITAL OUTLAY

In its two previous reports to the Legislature, the Joint Committee on Fairs Allocation and Classification has described and commented strongly on the serious problem which confronts district and county fairs because of the existing statutory ceiling of \$2,250,000 per year on the total amount which may be allocated to all such fairs for capital outlay purposes from horse racing revenues. In the 1961 report, the committee stated that on the basis of the evidence then available it was apparent the ceiling would prove too low to meet the basic growth and development needs of the fairs. It was recommended that the amount be raised to a more realistic figure between \$3 and \$5 million annually for an experimental five-year period, the exact amount to be decided after study of actual experience under the ceiling.

In its 1963 report, the committee recited portions of the transcripts taken at two of its hearings concerning the difficulties encountered by three fairs under the ceiling: the Marin County Fair, having to move to a new, larger, and more suitable site, but unable to obtain enough in capital outlay allocations to start construction of even the first building; the Alameda County Fair, whose old grandstand constituted a safety hazard, but with the cost of a replacement estimated at \$1,300,000; and the 37th District Fair, unable to accept a gift of valuable land from the City of Santa Maria because lack of capital outlay funds would prevent it from erecting an exhibit hall-convention center in which to operate.

The testimony of Mr. Roy Bell, Assistant Director of Finance, quoted from the hearing transcript, has particular importance in evaluating the adequacy of the \$2,250,000 ceiling on capital outlay. At one point he declared, "And as I have said, in our opinion, the \$2,250,000 is not sufficient to meet the unusual needs of the fairs." Again, in discussing plans of the Department of Finance to give the Alameda County Fair \$1,100,000 in two annual installments to build the new grandstand, he said, "... this is a good indication, then, of the fact that you cannot take even half a million out of this pocket for one fair without seriously damaging the ongoing programs and stalling them too long at the other fairs."

As a result of our further study of the capital outlay problem, the joint committee disapproved the proposal that the balance left each year from the appropriation of \$4,680,000 to be allocated to district and county fairs for operating expenses be made available for capital outlay. The maximum grant to any one fair is fixed at \$65,000, and during the years since the annual amount was tied to the needs of each fair, the unallocated balance has stayed close to \$500,000 per year, which was felt insufficient to meet the real construction needs of fairs. The committee also advised against handling of unusual situations by special appropriation bills or budget augmentations because such a procedure could increase the legislative workload considerably, and could also lead to logrolling which would be harmful to all fairs.

The committee unanimously recommended that the ceiling be raised to \$4,000,000 for a period of four fiscal years, and that it then revert to the \$2,250,000 current figure, unless the Legislature again acts to change it. A Senate bill embodying this proposal was introduced in the 1963 General Session, but could not be acted upon because the budget bill for 1963-64 ran into serious difficulties which forced the calling of a special session.

The Alameda County Fair grandstand problem was alleviated, with the Governor's written consent, by legislative approval of two budget augmentations; the first of \$529,300 in 1963, the second of \$337,300 in 1964. The problem of the 37th District Fair was worked out by administrative action, under which the fair was granted \$235,000 to start construction of the required exhibit building this year, and additional funds were approved for later years.

These piecemeal actions did nothing to remedy the basic fault in the current statutory ceiling, publicly acknowledged by the Department of Finance, namely, that it is not high enough to take care of emergencies or "unusual situations" without depriving some fairs of capital funds. The Marin County Fair is still unhappily burdened with an "unusual situation" not of its own making, toward the solution of which only ineffective, token steps have so far been taken.

In its 1963 report, this committee commented on the difficulties which seem to be inherent in the present system of allocating capital funds. The Division of Fairs and Expositions has developed a series of project priorities, upon which it bases its recommendations to the Public Works Board for approval of allocations. About this series, the committee said, "It would not be easy to develop a new sequence of the criteria for priority of projects, but it is an inescapable fact that expansion to meet the needs of growth comes third behind health-safety factors, and replacement of existing facilities. The present \$2,250,000 ceiling has proved insufficient to meet needs of all fairs in the first two categories, so expansion, moving to new sites, or purchase of sites, seem to be well-nigh stopped until the Legislature acts to relieve the situation."

There seems to have been a certain amount of inequity, no doubt inadvertent, in the treatment accorded the Marin County Fair with respect to the capital allocations needed to move to its new site. For many years the fair has utilized a leased 10 acre site in the suburban community of Ross to stage its annual event. The site is too small to permit expansion, and the lack of parking space has become acute.

In a letter to the committee dated May 13, 1965, Mrs. Marcelle McCoy, manager of the fair, explained how it got caught in the "before and after" situation. Briefly, her account follows.

In 1953 the Marin County Board of Supervisors and the county fair jointly purchased a 140-acre site for combined use as a county administrative center and fairgrounds. The fair would occupy 80 acres, the county the remainder. In 1957 the county retained Frank Lloyd Wright, the famed architect, to prepare one integrated design to provide for the county's cultural, administrative, and fair needs. In 1958, before the ceiling was placed on allocations for capital outlay, the master plan, with a projected construction schedule and costs estimates,

was presented to the Division of Fairs and Expositions. It was "enthusiastically endorsed by the chief of the division, his staff, and subsequently by other state officials."

The plan submitted provided for a three-year site development and initial construction period, at a cost estimated at \$2,184,600. Total costs for a fully developed fair were tentatively fixed at \$7 million.

"State officials indicated during several meetings and consultations that it would be logical to expect allocations in the area of \$500,000 per year to develop the total fairgrounds project within a reasonable time." Whether such "indications" can be construed as commitments is doubtful, but they are certainly evidence that a request for allocations of capital funds had been made, and that a specific possible figure had been mentioned before the enactment of the legislation which established the ceiling.

Before the ceiling was imposed, the Marin Fair was granted \$181,500 towards the cost of the new plant. In the first year afterward, the allocation was \$115,000 for site development. Each year since, \$105,000 has been allocated for the project, but all of the money has been left in the State Treasury, pending start of actual construction. As Mrs. McCoy comments in her letter, this annual grant covers the inflation factor and little else.

The Marin Supervisors have committed \$719,087 of county tax funds towards the cost of the initial fairgrounds building, a multipurpose auditorium construction of which would enable the fair to move from its present leased site. However, even if this amount is added to the \$420,000 in state funds now on deposit, the total is still insufficient to start construction of the first building.

This recital of the Marin County Fair situation has been given to demonstrate the arbitrary effect of the ceiling on a necessary and valuable project which was initiated, and developed to a considerable degree before the law was changed. It would certainly follow from the facts cited that more equitable treatment might have been afforded the fair.

Sufficiency of Funds to Increase Capital Allocations

Attempts have been made to argue that since the law requires that any balance left in the Fair and Exposition Fund at the end of each calendar month to the General Fund, there is no money available to increase the \$2,250,000 ceiling on allocations for capital outlay. This specious argument falls apart when examined in the light of the legal and fiscal facts.

Section 19630 of the Business and Professions Code provides in part that "There is hereby appropriated annually from the second balance of the (Fair and Exposition) fund, for expenditure without regard to fiscal years, the sum of two million two hundred fifty thousand dollars (\$2,250,000) or so much thereof as may be approved by the State Public Works Board and allocated by the Director of Finance in his discretion for any of the following:" (permanent improvements at fairs; purchase of equipment; and the purchase of real property for sites.) Thus, the ceiling is statutory, and subject to change by law.

The last paragraph of Section 19630 reads in part, "Any unappropriated money in the fund (underlining supplied), shall be transferred to the General Fund . . ." Thus, there is no limitation whatsoever in the transfer provision on the amount which can be set as the ceiling on allocations in the first paragraph of the section, nor is there any express requirement that any ceiling whatever be contained in the law.

The fiscal records prove that horseracing revenues which flow into the Fair and Exposition Fund are more than adequate to furnish the \$4 million annually for capital outlay which this committee recommends be made available for capital outlay at district and county fairs during four fiscal years. The following table, taken from the Division of Fairs and Expositions report on interim uses of fairs, shows that during the 1963-64 fiscal year, after all statutory appropriations were subtracted from the horseracing revenues credited to the Fair and Exposition Fund, including the \$2,779,300 authorized for capital outlay under both the Section 19630 ceiling and the budget act augmentation of \$529,300 previously mentioned, there still remained the sum of \$14,704,426 which was transferred to the General Fund on a monthly basis as stipulated in the law.

**STATE OF CALIFORNIA
DISTRIBUTION OF FAIR AND EXPOSITION FUND REVENUE**

July 1, 1963, to June 30, 1964

Revenue from horseracing -----	\$23,148,326.48
Escheated warrants -----	25.00
Proceeds from sale of real property, Section 88, Agricultural Code -----	125.00
Total Revenue -----	\$23,148,476.48
Reverting balances redistributed -----	66,428.38
Total available for distribution -----	\$23,214,904.86
Less appropriation ahead of First Balance :	
Department of Agriculture -----	\$132,319.00
California Horse Racing Board -----	219,158.00
Department of Finance -----	143,877.00
California State Fair and Exposition -----	265,000.00
Los Angeles County Fair -----	250,000.00
1-A District Agricultural Association -----	250,000.00
California Museum of Science and Industry -----	15,000.00
48th District Agricultural Association -----	125,000.00
Capital Outlay, district fairs, Section 88, Agricultural Code -----	125.00
Total appropriations ahead of first balance -----	\$1,400,479.00
First balance -----	\$21,814,425.86
Less appropriations from first balance :	
Encouragement of citrus fairs -----	\$180,000.00
Encouragement of district and county fairs -----	4,150,700.00
Total appropriations from First Balance -----	\$4,330,700.00
Second balance -----	\$17,483,725.86
Less appropriations from second balance :	
Capital outlay for fairs, Section 19630, Business and Professions Code and Section 10.2 Budget Act of 1963 -----	\$2,779,300.00
Revenue for the General Fund -----	\$14,704,425.86

It should be noted that the amounts siphoned into it from the Fair and Exposition Fund are not the only revenues which accrue to the General Fund from the operation of parimutuel wagering on horse racing in California. Under Section 19632 of the Business and Professions Code all revenues from horse racing, except those appropriated to the Fair and Exposition Fund, and the \$750,000 appropriated annually to the Wildlife Fund, are paid into the General Fund. During fiscal 1963-64, Fund revenues received under this section amounted to \$19,236,220. When the balances in the Fair and Exposition Fund which were transferred to the General Fund are added to this amount, they increase the total revenues from horse racing of this Fund to \$33,940,646 for the year.

From this, it is evident that there can be little logic in maintaining that the diversion of an additional \$1,750,000 per year for the next four years to meet the pressing capital needs of district and county fairs would cause any serious inroads on General Fund revenues. On the contrary, it would seem to be a penny-wise and pound-foolish policy not to expend this additional amount to conserve our \$90 million investment in fairs facilities, and to improve them sufficiently so they can better meet the needs of our rapidly expanding and changing economy.

For the reasons explained above, the Joint Committee on Fairs Allocation and Classification renews its recommendation that the ceiling in Section 19630 on the appropriation for capital outlay be increased to \$4 million per year for a period of four years.

ENLARGING THE SERVICES OF DISTRICT AND COUNTY FAIRS

Important problems of fairs with which this committee is concerned arise from the steady shift of our state's economy from one agriculturally dominated to one in which, though agriculture is still the largest single income producer, industry is the dominant factor. One significant indicia of this shift is the great decline in the proportion of rural to total population in the last half-century: from 38 percent in 1910 to 13 percent in 1960. This tremendous shift in our economy has caused two types of problems for fairs. The first, is how to continue the fine work fairs have done in improving California livestock and crops. The second, is how to provide some educational and competitive services for youth which is oriented to scientific or industrial pursuits rather than agricultural. There are apparent elements of incompatibility between possible solutions for these two types of problems.

These problems lead to one basic conclusion, that district and county fairs must enlarge the scope of their services to meet the needs of more people, especially urban residents. Unless they successfully meet this challenge with the full assistance of California business and industry, their value to our entire economic and social fabric could be seriously diminished.

Growth of Fairs—1948 Through 1962

Statistics compiled by the Department of Finance from the annual reports filed by district and county fairs throw some interesting lights on the growth of these fairs since the war, and consequently on their adaptation to changing circumstances in the state. Though these statistics cannot be completely reliable, and are not always strictly comparable, they do enable the drawing of some valid conclusions.

Attendance

It is generally conceded that the effectiveness of a fair is best judged by the attendance it attracts. The record discloses that in the 15-year period from 1948 through 1962 (selected because of the availability of official population figures) total attendance at all district and county fairs grew from 2,021,680 to 4,774,351, or 136.1 percent. During this same period total state population rose from 10,064,000 to 17,094,000, or 69.8 percent. In comparison, fairs would seem to have grown much faster than population.

Some experts on fairs, however, maintain that the real test of fairs is the *paid* attendance they attract. Admittedly, the figures on paid attendance are more reliable than those for total admissions, which include exhibitors, their helpers, and even fair staff, as well as several varieties of free admissions. It is argued that those who pay to attend fairs are the real patrons of the fairs—the public which fairs seek to educate and entertain.

There are those who maintain that the value of paid attendance statistics is vitiated by the continued existence of fairs which do not charge admission. This contention, however, is disputed by the first group, who call attention to the fact that the number of free fairs has decreased from fifteen or sixteen in 1948 to ten at present, and total attendance at such fairs has dropped from 620,000 to 330,000. The record of paid attendance at fairs reveals that it has not grown as rapidly as has the total population of the state. It increased from 1,625,930 in 1948 to 2,557,531 in 1962, or only 57.2 percent as compared to the population growth of 69.8 during the same period. From this, it can be argued with some cogency that the fairs have not kept full pace with the development of California.

Finances and Capital Investment

The financial records of district and county fairs reveal rather steady growth during the 15-year period from 1948 through 1962. However, it should be noted that during this period, only four of these fairs (21st district, Fresno; 22nd district, Del Mar; Solano County; and Sonoma County) made more in operating revenues than they spent. The other 67 fairs expended more than their operating revenues, and depended on the annual allocations from state funds to keep themselves in the black, or drew on accumulated reserves.

Total operating expenditures of all 71 fairs grew from \$5,398,743 in 1948 to \$11,749,925 in 1962, or 117.6 percent. Operating revenues increased from \$3,407,217 to \$7,822,106 in the same period, or 129.5 percent. Net loss from operations for all these fairs increased from \$1,991,526 to \$3,927,819, up approximately 100 percent.

Figures about capital investment in fairs plant and facilities are not available for years prior to 1955. In that year the total capital investment in the plants of these fairs was reported by the Department of Finance to be \$49,368,569. By 1962 it had risen to \$74,843,289. The effect of the 1959 ceiling on allocations of state funds for capital purposes is evident; the percentage of increase from one year to the next averaged 6.5 for the first years, but after the law was changed it fell to 4.2 percent.

These statistics serve to demonstrate that fairs, though some may be small, collectively amount to a considerable business, one whose contribution to community welfare should not be treated lightly. It would seem to be best for the state as a whole to utilize their full potentialities for the benefit of all segments of our economy, not merely agriculture.

Unequal Distribution of Fairs

One important factor in evaluating the district and county fairs is their location with respect to population. Because they are generally thought of as agriculturally oriented, it might be concluded that fairs would tend to be concentrated in agricultural areas. An examination of the facts, however, reveals some noteworthy variations from such a pattern.

Counting in the six "exempt" fairs, the distribution of fairs between counties is like this. Two counties, Los Angeles (population 6,038,771) and Sonoma (147,375) have three fairs each. Nineteen coun-

ties, ranging from San Benito (15,396) to San Bernardino (503,591) have two fairs each. Thirty-three, from Trinity (9,706) to San Diego (1,033,011) each have one fair. Four counties have no fairs located within their boundaries, but three of these, Alpine, Mono and Yuba are included in districts whose fair plants are located in other counties. Only sparsely populated Sierra County has no legal connection with a fair.

Viewed from another angle, the location of fairs displays some interesting differentials in concentration around large population centers. Fair attendance, tabulated on the same basis, also reveals significant differences. There are seven fairs located within a 60-mile radius of Los Angeles, in four counties having an estimated population of some 8.5 million. Fifteen fairs are located within a 60-mile radius of San Francisco, in nine counties with an estimated population of about 4.2 million.

Fair attendance during 1963 at the fairs in the Los Angeles area totalled 1,766,417, of which 1,020,056, or 60 percent was at the Los Angeles County Fair, the state's largest. This attendance was equal to 21 percent of the area population. Three other fairs in the area each had attendance exceeding 100,000.

Attendance during the same year at San Francisco area fairs totalled 1,608,750, or 38 percent of area population. No one fair drew more than 20 percent of total attendance, but seven fairs in the area each drew more than 100,000.

Industrial Education—Successes and Disappointments

As originally enacted, Section 92 of the Agricultural Code authorized apportionment of state funds to district and county fairs on the amount which each fair actually paid in premiums for agricultural, horticultural, mineral and livestock exhibits, and exhibits of domestic arts, agricultural mechanics made or manufactured for other than commercial purposes in each year. The 1957 Legislature amended the section to enlarge the list of types of exhibits on which apportionments will be made to include "industrial education." The term is not defined in the act.

The Division of Fairs and Expositions promptly revised its master premium list to include industrial education exhibits, taking as its guide the definition of the term used by the State Department of Education. The revised list was used by a few fairs for the first time in 1958.

From the available information as to industrial education exhibits, it would appear that there have been both considerable successes and some disappointments in connection with such exhibits. Some fairs have devoted much effort to encouragement of industrial education exhibits, and have achieved exceedingly worthwhile results. Others have run into various difficulties which have impeded the growth of their programs, or caused other disappointments.

One fair program of industrial arts exhibitions which has achieved national recognition is operated on a statewide basis. This industrial arts exposition and award program is conducted by the California State Fair and Exposition as part of the annual State Spring Fair, and the fifth event was held in March 1965. Open to secondary school

students, the program offers cash awards in three grade classifications, for student designed and constructed exhibits in six categories: drafting, electricity-electronics, graphic arts, industrial crafts, metal working, and wood working.

Cooperating in the conduct of this program are the State Department of Education, through its consultant on industrial arts education, and the California Industrial Education Association. Working through a statewide advisory committee and 12 regional committees, exhibits are gathered at 12 collection centers from San Diego to Sacramento and the selections of the regional committees are shipped to the Spring Fair, where the award winners are picked by a judging committee of industrial arts experts from universities and colleges. No statistics as to number of student participants are kept, but it is estimated that about 5,000 entries were sent to collection centers, and 800 of these to the Spring Fair, in 1965.

While it is known that many of the exhibits in this program are later displayed at district or county fairs near the homes of their designers, no specific information as to the extent of this practice is now available.

In contrast to the successes are a few disappointments which have arisen in connection with industrial education programs. Two examples may be cited. The Los Angeles County Fair for a few years successfully staged a junior technical science exhibit. It was sponsored by a large aerospace firm, which held elimination contests at many local high schools, then brought the winners to be put on exhibition at the fair. Additional awards by the company were given in a final judging at the fair, including a share of stock in the company, and an air trip to its plant.

Because so many science shows are now being staged by schools, news media and community organizations, the company this year abandoned its sponsorship, and merely invited possible participants to place their exhibits directly in the fair. The additional awards were also dropped.

The second example illustrates another kind of difficulty which fairs are encountering in their efforts to expand their industrial arts exhibits. The Orange County Fair (32nd District Agricultural Association) reports that several local firms support its industrial arts department by donating money which is used to buy U.S. Savings Bonds for winners in the various exhibit categories and to provide a \$100 scholarship for the top winner.

The fair manager says that while these additional awards perhaps stimulate some interest among students in preparing and entering exhibits, the fair's main difficulty has been in developing cooperation among industrial arts teachers. He estimates that only about 12 percent of the 200-odd industrial arts teachers in Orange County cooperate with the fair program. He admits, however, that the fact that the fair is held during summer vacation may have an adverse effect on their participation. He concludes by saying, "Without the support and cooperation of the industrial arts teachers no amount of support by local firms will help the situation."

The California Museum of Science and Industry

Organized under state law as the Sixth District Agricultural Association, the California Museum of Science and Industry, located in Los Angeles, is unique among California fair district organizations. It still retains this form of legal organization, with a board of nine directors appointed by the Governor, though it has long since been transformed into a full-fledged museum dedicated to providing educational exhibits which demonstrate the scientific and industrial progress of our state. It is ranked high among the 17 museums of this type in the United States, also among which is the city-operated Academy of Sciences in Golden Gate Park.

Operating expenses of the museum are supplied from two main sources. About 40 percent of the approximate \$700,000 annual budget comes from the state's general fund. The remaining 60 percent is derived from rental proceeds of parking lots, and of land on which the Los Angeles Memorial Coliseum and Sports Arena are located.

The museum houses many costly permanent exhibits which have been paid for partly or entirely by private enterprise. One on the evolution of the motorcar, "The Turning Wheel," was financed entirely by an automobile manufacturer. Another, "The Science of Aviation," was financed on a matching basis by the state and the airframe industry on a matching basis. The 1961 Legislature authorized the addition of a permanent Space Museum to the educational complex, and the 1963 Special Session appropriated \$200,000 toward the cost of a new Hall of Health.

Like most of its counterparts, the museum depends on visitor participation to achieve its educational purposes. In one exhibit, when a visitor puts his hand on a small generator and pushes a button, the electricity stored in his body flows into a neon tube, which then lights up. At an exhibit called Mathematica, developed by IBM, bulbs light up to show what happens when a number is squared or cubed. After a trip through a giant animated atom, a student can test his memory of what he saw in a new teaching machine.

The year-round attendance figures of the museum are certainly impressive. At least 120,000 students, from grade school through high school, visited it in planned tours this last year. Total annual attendance grew from 1,009,441 in 1961-62 to 1,194,498 in 1962-63, and topped 1,300,000 in 1963-64.

The principal reason for this discussion of the work of the museum has been aptly summarized in an article in *Time* magazine, which said, "Science and industry exhibits are necessarily a collaboration between museums and private industry." The article further commented that while small museums might have to accept a big dose of advertising with displays of doubtful scholarship, larger institutions, like our Los Angeles museum, may invite major enterprises to supply elaborate installations which meet their primary educational requirements.

A Program for Action to Broaden Service of Fairs

At its meeting in Sacramento on September 6, 1963, the Joint Committee on Fairs Allocation and Classification considered a number of

suggestions submitted by its consultants as to possible areas for study and action by the committee prior to the 1965 session of the Legislature. One of the suggestions was that the committee undertake a program to enlist the active support of all segments of California business and industry for a program designed to extend the services of district and county fairs to all elements of our population, without impairing their service to agriculture.

In its discussion of this suggestion, the committee concluded that it would be difficult, if not impractical, for it to carry on such a program. Therefore, it was decided that the possibility of setting up an appropriate committee of business and industrial leaders to carry on the work should be explored. The consultants were requested to secure the opinions of organizations such as the State Chamber of Commerce, various statewide trade associations, and the Western Fairs Association as to (1) the necessity of undertaking such a program, and (2) the feasibility of working through a citizens' committee such as that suggested to achieve the desired results.

At its meeting in San Francisco on November 8, 1963, the Committee received an initial report on the contacts made to that date. It might be summarized briefly as follows: the consensus of those contacted is that there is real need to broaden the services of fairs in order to maintain and improve their importance as educational institutions. As to the suggested citizens' committee, it was the general consensus that the task could only be accomplished through the work of such a group, which should be composed of the most influential leaders in the most important lines of business and industry, drawn from all parts of the state.

At the conclusion of this meeting, the committee unanimously approved a program of enlisting business and industrial support of fairs, and the formation of an appropriate citizens' committee as a committee project. It was understood that this citizens' committee would at first have two major responsibilities: (1) to assist district and county fairs to upgrade their industrial education programs as far as possible, and to help fairs attract business and industrial exhibits of an educational not commercial character; and (2) to convince important California businesses, industries, and trade associations that it will be greatly to their advantage on a long-term basis by taking full advantage of the educational opportunities offered by fairs to inform the public more completely of the vital part they play in our economy, of how their processing and marketing is carried on, and on an even broader scale, of how they operate and survive in our private enterprise system.

In compliance with this action of the joint committee, invitations to membership on the statewide advisory committee of business and industrial leaders were addressed to a number of prominent and influential individuals. Represented were a cross section of economic activities of primary importance to California. Indicative of the caliber of those who have consented to advise the joint committee is the following list. It is anticipated that the full membership of the advisory committee will be from 20 to 25 persons.

Mr. S. Clark Beise, Retired President
Bank of America

Mr. W. G. Chaffee, Vice President
Pacific Telephone and Telegraph Co.

Mr. Francis V. Keesling, Jr., President
West Coast Life Insurance Company

Mr. Frederick W. Mielke, Jr., Assistant President
Pacific Gas and Electric Co.

Sigvald Nielson, Esq.
Pillsbury, Madison & Sutro
Attorneys at Law

Mr. T. S. Peterson, Retired President
Standard Oil Company of California

Mr. Robert W. Walker, Vice President
Santa Fe Railway

Informative material was prepared for the use of those who accepted membership on the advisory committee. Outlined in it were the statutory basis for the Joint Committee on Fairs Allocation and Classification, the problems confronting the district and county fairs in keeping pace with the rapid growth, industrialization, and urbanization of our state, the extent to which industrial arts education exhibits have been developed within the fairs, and the helpful information to be derived from the successful cooperation with industry attained by the Santa Clara County Fair and the California Museum of Industry and Science, which is organized under the laws relating to the formation of district fairs.

Because of the length of time required for preliminary organization of the advisory committee, it became necessary to schedule a meeting just before the convening of the 1965 Legislature. A combined meeting of the Joint Committee and the advisory committee was held in San Francisco on December 4, 1964. A majority of the advisory committee members already appointed were present, and those who could not attend sent representatives.

Mr. William Straub, secretary-manager of the Santa Clara County Fair, gave the meeting some valuable information concerning the specialized type of industrial participation in that fair. Dr. William Fitzgerald, director of the California Museum of Science and Industry in Los Angeles, presented a detailed account of the finance, organization, and operation of that institution, and gave a clear and thorough explanation of the cost, maintenance, and other factors involved in major museum exhibits, as well as an interesting and useful discussion of portable exhibits. Excerpts from the transcription of the meeting summarize these presentations, and the questions asked by members of the Joint Committee and the advisory committee:

Chairman Regan: William Straub, manager, Santa Clara County Fair—would you open the meeting by explaining the program for industrial exhibits, as it is organized, staffed, operated, etc., by your fair?

William Straub: Yes, Mr. Chairman, I will be very glad to. As you know, Santa Clara County is one of those that has increased tremendously in population. The increase in population has brought major new segments of industry into our area. Historically, Santa Clara Valley is one of the finest agricultural areas in the world, but now is playing host to new industries, such as the missile industry and the electronics industry. This change in our economy has been going on for a number of years now, beginning just after World War II. In anticipation of the continuation of this change in our economy, the board of directors of our fair association determined a number of years ago to adapt the program of the annual county fair to changing needs of the community. We have always recognized that basically we are a service organization to provide a needed useful service to the community. We, I feel, have established a fine record and on the agricultural level, so we undertook to introduce industry into the fair. First of all, to be of greater service to the community to enhance and improve the economy. You recall that the Legislature some years ago, between 1954 and 1955 conducted a pilot study regarding the inclusion of a junior industrial department on a competitive basis in which the state would provide cash rewards for youngsters in school programs other than those listed as vocational agriculture. Now, I had the pleasure of serving on that original committee and was personally quite proud of the idea, and felt that there was a great potential here, not only in manner of service to the community but as far as the content of the fair itself is concerned, from the show point of view, from the interest point of view for the benefit of our patrons. Some of the reasons for this are that the items that are made available for display from this area are recognizable, our customers can evaluate them, they are familiar things to most fair audiences, particularly urban population where contact with agriculture is diminishing. This is at the junior level. We also felt that we should reflect major industry in the area as an important segment of the economy, and so our board of directors authorized establishment of a committee, hopefully to be drawn from the top ranks of industry in our local area. Approaches were made through the fair association to various industries of great stature in our community, and the results were amazingly good.

Chairman Regan: For the record. When was this done?

William Straub: Done during 1959, and we went into action in 1960. The composition of the committee is approximately as follows: We had representatives from each of the major industries who agreed to participate in the standing committee. The understanding with the members of the committee was they would serve whether or not their particular industry took part in the fair as of that year. They wanted to establish a committee that could develop the program in an orderly fashion with continuity because we did anticipate at the outset the necessity of doing some probing to find the appropriate vehicle for bringing industry into fairs.

Chairman Regan: May I interrupt at the moment? Prior to 1959, would you say that your fair was primarily an agricultural fair?

William Straub: It was with the exception of the introduction in 1956 of the junior division, junior industrial participation based on the same similar program.

Chairman Regan: Since 1959 or since 1960 when you put the new facilities in, is there a trend, or has there been a transition, are you moving into an industrial exhibit, more substantial than agriculture?

Mr. Straub: Yes, we are. We aim at continual improvement and development in this area. We tried a number of different methods of approach. We started out in facilities that weren't quite adequate. Those of you who have visited our fair know that we are still one of the largest users of tents for our exhibit areas. However, the tent location which also accommodated commercial exhibits wasn't the proper location for the type of operating display that we had asked industry to design for us. The next step was to move the industrial display in its entirety into a building where the hazards of dust and undue heat and distraction from commercial facilities do not exist. This enhanced the exhibit considerably. At that time it was still the displaying of static exhibits with or without an attendant to give information and answer questions, etc. There are a number of drawbacks in this practice, principally one of cost, the headache factor was high from the point of view of both exhibitors and fair management, because the burden on the exhibitors for the cost of moving, assembling, and explaining equipment which was highly complex in nature, in the ordinary exhibit, the type you might see at a trade show. In fact, in the early days I believe a number of them were brought direct from trade show operations in, not only other parts of the United States, but foreign countries. I recall the display that Lockheed provided in the early days which was quite an expensive display, a beautiful display, and it moved to our fair from an air show that was held in Paris, France. Now, as you can imagine, this entailed considerable expense. It was a beautiful display, but the setting was not perfectly suited to it.

Going back now to what I think of is the senior in the industrial department, participation in this particular group exhibit by industry has been on an invitational basis under the direction and design of the committee consisting of representatives of industry.

Chairman Regan: You have a committee of industrial exhibitors, is that it? And from time to time they extend an invitation under the jurisdiction of the fair itself to other industries to participate, is that what you are saying?

Mr. Straub: To clarify this, this committee meets frequently through the year, plans a specific exhibit for the forthcoming year, issues invitations to potential exhibitors from the industrial community, acquaints them with the nature of the exhibit, the procedures and practices that are employed in participating in the exhibit.

As I indicated at the outset, we felt that we would have to probe around a little bit to find out the perfect vehicle after moving the

exhibit to better port, so to speak, changing the type of arrangements so that

Chairman Regan: If you don't mind my interrupting to clarify some points. You mention in the beginning that you primarily had tents, that you were great users of tents and that you have now, that there has been a transition period where you have gone into buildings. Where did you get the money?

Mr. Straub: We moved the exhibit to an existing building, Senator.

Chairman Regan: You didn't build any additional buildings?

Mr. Straub: Not for this purpose. We made space available in an existing building to accomodate this display. Due to the fact that it is committee designed, so to speak, and the area available is noncommercial, it is possible to invite participation so that the space will not be exceeded and need not be emptied. Some degree of control on the final form that the exhibit takes is exercised by the committee. This is the second step. We are talking about this move into the building now. However, many of the attendant headaches from the exhibitor's point of view still remain. These were, cost factors, problem of borrowing knowledgeable personnel from everyday operations. To setup or supervise the installation of this technical equipment still worked a great hardship on the exhibitor. The latest approach by the committee which was employed during the fair last year, was a different approach in which we combined the resources of the fair association, the industrial people in the community and the science students in the high schools with the cooperation of the science instructors. The display last year was in the form of live demonstrations sponsored by various organizations featuring science students in visual demonstrations of scientific principles involved in the production of profit in various industries. First thing the change did was to offer a wide field for subject matter. It removed the limitations of having to bring in a product which in many cases is the same year after year, even if it doesn't lend itself well to repeating. However, there are so many avenues of scientific approach in almost any industry that it is a wealth of new ideas and new ways to tell something about the company. It also tells of a product that we are very fond of—these are our students. It enabled us to put on the stage literally, in front of fairs visitors, enthusiastic youngsters who are in love with their subject, who can help to convey this to fair people in terms which our fair people can understand, our fair visitors.

Chairman Regan: Go back to the adult exhibits, now, and then we can go back to the students a bit later. What was the reaction of the public to this transition from agricultural exhibit to industrial exhibit?

Mr. Straub: Senator, if I may explain. The students I mentioned most recently are a part of the adult exhibit. This is the latest method used by which we provide participation by industry as sponsor and as counsel for these youngsters who demonstrated scientific principles.

Chairman Regan: I think one of the things we are interested in is what is the attitude of the public generally in your area to a fair.

Is it a matter of continued interest, or increasing interest or decreasing interest, can you discuss that for a while?

Mr. Straub: My feeling is that it is a matter of continuing interest and growing interest, particularly I think enhanced by this movement into the industrial area.

Chairman Regan: Senator Symons.

Senator Symons: You may have stated this. What is your estimated population of the area we will say, 50 or 60 miles radius that you would normally draw from?

Mr. Straub: We consider our service area to be 800,000 people, so you are getting about one-third of it in fair attendance.

Chairman Regan: I'm interested in the reaction of industry, generally to the transition in the fair in Santa Clara County, and particularly I'm concerned with whether or not you would have a waiting list of exhibitors who would like to exhibit. Do you have to go out and rustle around and convince them that they should from time to time exhibit? What is your reaction to that?

Mr. Straub: I think it is interesting to note that after the committee decision to adopt this new type of demonstration, with student co-operation with the fair, that the first 10 industries contacted by the appropriate member of our committee gave a yes answer, right now. In fact the available space was oversubscribed upon the first approach, and the interest was terrific. The valuation of results by all those I have been able to talk with was better than we expected.

To summarize our experience during the latest fair year with participation of industrial firms in our area. The effort was threefold in contribution by the students and the instructors who assisted us in the selection and preparation of students for live demonstrations. The fair association undertook the staging of the event, the lighting, the theatrical aspect of it, the area where we felt best qualified to provide this portion of the display. Industry provided the incentive in the form of honorariums for the students that participated, and assisted on expenses incurred by the student in travel, meals, etc. The students, of course, worked together with scientists and industries to prepare, and work out, and become familiar with this equipment that was used to demonstrate basic principles. Such demonstrations as the laser light beam in one case, transmission of music over beam of light in another, are examples of scientific work of the various firms that participated.

Chairman Regan: Would you address yourself to this situation? Was it necessary, or did you in the operation of the fair there at Santa Clara bring in entertainment to attract fairgoers? For example, you might have brought the Beatles or somebody down there. That might have something to do with bringing the people in. What I want for the record is whether or not you had to do that or did the new industrial participation, etc., the exhibits that came from industry and business, did they attract, or did you have to get the Beatles or their prototypes?

Mr. Straub: We didn't even have prototypes. We had entertainment, professional entertainment, we traditionally add a host of amateur act entertainment which is also a local product. The addition of the industrial display to the fair was a great supplement, and did a better job of telling the story of the county economy to the community.

Chairman Regan: What is the reaction of the individual, if you could give the answer? Is the individual interested in coming to see the laser displays, etc., or do you first have to attract him, and then as a side product, does he go around and look at industrial exhibits?

Mr. Straub: I expect that a fair, in offering what amounts to a smorgasbord, attracts different people for different reasons. Incidentally, many see other exhibits they didn't necessarily come to see, and their interest is in many cases awakened by casual contact with areas of the economy, and other educational features that they didn't know were there.

Chairman Regan: Now, in your participation with fair work at Santa Clara, could you give us a summary of your belief, the results of this transition, if there was one, from agricultural to greater participation by business and industry?

Mr. Straub: I think as I indicated at the outset, that basically the fair is a service organization which provides a needed service for the community. The introduction and strong representation by industry in our particular circumstance should reflect this in its role in the community, but might not necessarily be so in other areas. It is, however, in ours, and whether interested in this or not, it is essential to our customers.

Chairman Regan: Do you have any other questions?

Senator Bradley: Mr. Chairman, I would like just for the records say that this exhibit, I think you are referring to the one in Exhibition Hall, I have noticed it myself and I would say without any question that in my opinion it has developed as a growing attraction for people. They conduct these experimentations and demonstrations on a time basis, and in anticipation of a demonstration we will have a very substantial number of people, young people, adults, all kinds, who will go there well in advance of the next hour or next time demonstration. I think that this of itself is a very strong indication of the public interest that is developing and has developed in these industrial exhibits.

Chairman Regan: For the record, this is Dr. William Fitzgerald, director of the Museum of Science and Industry in Los Angeles, which is organized as a district agricultural association, as are most of the fairs with which this committee is concerned. Is that right, Doctor?

Dr. Fitzgerald: It is correct. Senator Regan, and members of the committee, and other guests present. I would like to step back for a moment and talk a bit about the basic purposes and give some descriptive material about the California Museum of Science and Industry.

In regard to that, I do have some publications, a sufficient number for all members of the committee. I am sorry I do not have a sufficient number for everyone here present. Certainly you are welcome—these can be distributed. One is a brochure describing the educational programs sponsored by the museum. The second is a pictorial annual report of activities of the museum culminating in our annual awards dinner last May. The third is a brochure describing one of the industrially sponsored exhibits, in this case that of General Motors, "the Turning Wheel." The last item is an example of our temporary exhibit program, because we have both permanent and temporary exhibits. Now, the California Museum of Science and Industry is an agency of the State of California and is the successor to the 6th District Agricultural Association. Our basic purposes are to present education in fundamental scientific principles to create a deeper knowledge of how those principles are being applied in modern industrial technology, and to increase the general understanding of the economy of the State and of the nation in which we live. Now, how do we achieve those purposes? Basically, through an exhibit program which emphasizes demonstration exhibits. I would like to stress this because we of the Museum of Science and Industry are different from the traditional "collection-oriented" museum. Our museum tells its story, performs its educational task, shows exhibits which demonstrate these principles in action. Now we are pleased in the report which the consultants prepared for this committee. They show, what I think, is the most dramatic example of this kind of exhibit contained in the Southern Cal Edison electricity exhibit. It is actually a Vandergraff generator which the visitor touches and the electricity is then absorbed in his body, he then presses a button which is like a neon tube, and the principle of the generation and the transmission of electricity is dramatically shown by the body, and through the body of the visitor. In other words, in that exhibit it really isn't an exhibit until someone comes and makes it work. The visitor is truly a part of the exhibit. That is about the best and most dramatic example I can think of, but our goal is to repeat and multiply exhibits with this kind of stress on the participation of the visitor in the museum.

The existence then of a permanent exhibit program is the backbone of the museum. However, we do have temporary exhibits which are sometimes on the fringe of a basic scientific emphasis because these tend to attract new people to understand what we are doing and to help them to appreciate the exhibit program at the museum. In that respect most notable, I think, would be the fact that we have the Kennedy Library Exhibit at the museum in the month of October, and this brought large numbers of people to the museum who had not been there before so I feel that these who understand what we are doing will become regular visitors.

We are open 363 days a year. The museum is closed on Thanksgiving and Christmas, otherwise we are open from 10 in the morning until 5, six days a week, that is Monday through Saturday, from 10 until 6 on Sunday. Our attendance figures are referred to in the consultant's report. I would merely add to them the figure for the fiscal year ending on the 30th of June 1964. The figure there would be

1,323,168. In other words, an increase from the previous year of something slightly over 130,000. Currently, our attendance for the first five months of the current fiscal year from July of this year our attendance is 850,000. This is quite a notable increase and indicates that the figure which is mentioned in the report of an attendance of 1,600,000 in the current fiscal year, will undoubtedly be exceeded. We have 850,000 for the first five months of this year.

Now, in regard to the history of the museum. The 6th District Agricultural Association has existed for a long time. There has been a permanent exhibit building and exposition park in the center of Los Angeles since 1912. The building was erected at that time for the purpose of holding housing exhibits primarily in the field of agriculture. There have been some changes in Los Angeles since 1912, as we are all well aware when we try to get out to the airport in the morning, among other things. The population of the city was 100,000 in 1900, and is 2,300,000 today. There has been through the years a number of changes in the exhibit program, but the emphasis remained in the field of agriculture. The board of directors of the museum in 1951 determined to change the focus of emphasis on the exhibit program to a broader one and did select the name "California Museum of Science and Industry." This was legalized by a specific act of the State Legislature in 1963. But the purpose of the board and the intention of the agency was made clear as far back as 1951.

I would say for the benefit of those present this morning that we on the museum staff date the transition to a true demonstration-oriented exhibit program from the time of the installation of the mathematical exhibit which was sponsored by International Business Machines was opened to the public in March, 1961. So the kind of emphasis we have in increasing proportion at the museum which we want to be the purpose of the total museum really is of quite recent origin. It dates, I would say, from 1961.

Now, perhaps of greatest interest to the committee is the role of the California Museum Foundation. Because the museum is a big agency, we are an educational institution with a function comparable to that of a large library. I think that is the best comparison to make of a first rate museum. It is a kind of resort to which people come for a special kind of learning. Someone once described our museum as a walking encyclopedia. At any rate, the reason for its being and its basic operational budgetary support comes from the State of California.

It is certainly notable that we have been able to improve the quality of our exhibit program and have been able to move more rapidly in the change over toward modern demonstration exhibits because of the support which has come from private industry to the museum from the California Museum Foundation. This is in the form of annual memberships by individuals which are more important in terms of the dollar amount than the memberships taken out by corporations. The amount of unrestricted funds raised by the Museum Foundation averages about \$30,000 to \$35,000 per year, not including contributions for specific purposes.

The estimated value of the exhibits which have been contributed to the museum in the past five years by private industry runs in the

neighborhood of \$2,000,000. An additional cost which industry is bearing in the presentation to the public of this high level exhibit program, is in the form of technical maintenance of their exhibits which was estimated in the last fiscal year as having a dollar value of some \$20,000. One example of this I would mention is that the Pacific Telephone Company which is represented here this morning has had a man in the museum daily since the opening of their major permanent exhibit in February last year, to indicate the concern they have of assuring high-powered technical maintenance. Now, in regard to the range of companies which are involved, I have just referred to the Pacific Telephone Company whose representative is here this morning—I also noted in the introduction at the beginning of the hour that a representative from Santa Fe Railroad is present. Both of these companies have major exhibits in the museum. Also in the catalog with major exhibits, would be IBM, General Motors, Southern California Edison, Union Pacific, Carnation Milk, Great Western Savings and Loan Association. A number of other smaller exhibits are displayed in what we call our Omnibus Room, where the exhibits need not have the magnitude of the "Turning Wheel Exhibit" which is described in a booklet before the members of the committee now.

The example I mentioned in response to the question about a combined industrial sponsorship is exemplified in our Science of Aviation exhibit. This is partly sponsored by the aerospace industry. In particular instance of cooperation with the state, an agreement was made that half of the cost of the exhibit be borne by the state and half by the aerospace industry, and that exhibit has been installed in the museum. The first phase was started in October of 1962, the second phase in November of 1963.

Through the medium of the California Museum Foundation, we have been able to attract annual, general, support fund through memberships, the installation of major exhibits at a considerable cost, the dollar amount which I mentioned be estimated at \$2,000,000 the past five years, and a considerable dollar contribution toward the cost of technical maintenance of these exhibits on a day-to-day basis. When you take into account the fact that the museum is open 363 days a year, or 364, because this year was leap year, and when you take into account the fact that last year we had 1,300,000 visitors, and in the current year we will certainly have 1,600,000 to 1,700,000 the problem of maintenance becomes a very significant one.

I also emphasize that when you have demonstration exhibits, when you involve the visitor, when you invite him to touch, we are a do touch museum, when you invite him to come and manipulate things, you are bound to have a problem of the maintenance of the exhibits. Care, of course, needs to be taken in the original research and design of the exhibits. Our own experience, I think, is that designers do a better job in this regard, so that we have exhibits that will stand up under wear and tear of such usage.

Reference was made earlier to the exhibits of trade show nature, and I think this is an important distinction to keep in mind, that is, the distinction between an exhibit which is primarily a display to showcase a particular product and one which is designed to illustrate a

basic scientific principle as it is being applied in modern industrial technology. I don't mean that there is an absolute distinction, so that we have to think of these things as unrelated. In fact, we in the museum, the kind of museum which we have, learned a great deal from the design of trade show exhibits and the use of color, the use of bright colors, and the use of attractive design help to distinguish our institution from some of the traditionally oriented museums. That would be illustrated in the pictures which are in that annual report which you have before you. I would like to say, also, in regard to that, all the literature that you have before you with the exception of the temporary exhibit schedule was printed at the expense of the foundation. Through our own print shop, we have in the museum printed the temporary schedule. Having materials of this kind available to encourage attendance and to help to keep understanding of the museum, I think is very important. Here again we can appreciate the contribution which industry is making through the California Museum Foundation.

The concern of industry to represent itself properly through institutional advertising in the press, and communication media is being met by the kind of opportunity they have in the museums such as our own. I think they feel that the visitor who comes to see the major company or industrial exhibit is concerned about public education. A company or industry which cares about the education of adults as well as the youngsters, enough to place an exhibit of this kind in a museum of our type gets the kind of return that makes the investment worthwhile. Also, it is true that the companies in question feel that they must participate in what I suppose in the last analysis is our most important purpose, and that is in providing intellectual and vocational stimulation for young people. Many youngsters get their first glimpses of their future careers by what they see in museums, by getting excited about ideas that might not have been exciting to them if presented in another format. We feel very proud about this as a fundamental reason for our being and we do feel that the excellence of the exhibit program has been greatly increased by the quality of the exhibits which industries offer to our visitors this year. These are the basic background remarks that I hope will put in context for you the function of the California Museum of Science and Industry.

I have tried to emphasize the relationship of the California Museum Foundation to the museum as supported by the state in order that the potential and possibilities of the assistance from industry to the fairs could be brought into closer focus. I feel certainly that our experience with temporary exhibits in the field of the aerospace industry has been a very successful one. On two successive occasions, for periods of six months, we had space exhibits—they were backboned by materials from NASA, but they were strongly supported by materials from aerospace industries. On both of these occasions we had a remarkable public response. In the last instance, we had 350,000 people go through that particular exhibit in the course of six months, and for part of that time we were not open during the week days except for school tours. I feel that industry is aware of the value in presenting to the general public material which illustrates what they are doing, and how they are applying science in their daily operations. In the experience

which our exhibit department has had, there is potential help and cooperation throughout the state for fairs. The staff of the California Museum of Science and Industry is ready to help in any way.

Mr. Queale: Dr. Fitzgerald, one question. The museum has a free gate, there is no admission charge, is there?

Dr. Fitzgerald: There is only one example of admission fee in the museum and that is in the model railroad exhibit, which I mentioned is cosponsored by Santa Fe and the state. At the time that the agreement was made for construction of the model railroad it was agreed by Santa Fe that the museum would charge a 10-cent fee which was to be returned to the state to compensate for the state's part in the cost of the construction and installation of that exhibit. This 10-cent fee continues at the present time. I would say that Santa Fe also provides a subsidy in that all school children who come to the museum on formal school tours with their teachers are admitted free and in fact, the Santa Fe does pay the 10-cent per child cost and that goes into the state's coffers. This is a very popular exhibit. Attendance at it ran last year about 150,000—a little over 10 percent of our total attendance. Last year 85,000 youngsters came through in regular school tours with teachers, conducted through the museum by guides who are employees of the museum.

Mr. Queale: One other question, Doctor. Are any of the exhibits—I haven't been down there in a year or year and a half—could any of these exhibits be in the form of a moving exhibit, that could be transported from one fair to another, in miniature form, or something of this type? I know that all of your exhibits are rather large, and bulky. This is what we are looking for.

Dr. Fitzgerald: I would like to distinguish here. The permanent exhibits work are designed to fit into particular areas, and are designed to be placed in our museum. Now, that is true of GM, IBM, Southern Cal Edison, Pacific Telephone exhibit. Pacific Tel had to dig out part of the floor in order to find the proper setting for Telstar. Actually a replica of Telstar. Now our permanent exhibits would not be movable. They were designed for our museum specifically. We have had, this is especially true in the realm of our space industry exhibits, a number of excellent transportable exhibits which have been shown at trade shows and other fairs and exhibitions of a temporary nature. It is also true that the experience which we had at the museum with particular units in the total exhibit would make it possible for some of these to be transported. I might say that personally I have felt for a long time that it would be highly desirable if we could have a movable museum. Many museums do this with great success. The Junior Museum in Sacramento did it very effectively a few years ago. To have and put on the road to the schools and to neighborhood groups one or two small units of a given number of exhibits could be very worthwhile. I think this could be done, but units would have to be specially designed for that purpose. The designer and the sponsor have to know what they want to do. If they want to design an exhibit which would be transportable, this certainly could be done, illustrating the same

principles and in many cases, I am sure, using the same devices which we have in the museum.

Mr. Queale: I was thinking particularly of the use in other fairs. A circuit of some of these exhibits. Is this a possibility? Of course there again, the cost of the construction of the exhibit and the willingness of the industry to exhibit other than at the Museum of Science and Industry, would have to be taken into account.

Dr. Fitzgerald: There certainly is a very distinct possibility that it could be done, especially when the number of people attending fairs around the State of California is explained to the potential exhibitor. In other words part of the attractiveness around the museum is the attendance which we have, and the fact that a large number of people will be exposed to the exhibit program.

Chairman Regan: Do you have any comment or any information that will help the committee on the matter of the cost of the installations like Santa Fe installation or Pacific Telephone. What I have in mind is this. The committee probably is interested in knowing whether or not industry would expand its exhibit features by going into other areas—to Sacramento, to San Francisco, to San Jose, to Fresno, Merced, etc. Now the cost of the exhibits that actually are attracting the people down there.

Dr. Fitzgerald: Now, we have a rough rule of thumb in regard to our discussions and negotiations with potential exhibitors. That rough rule of thumb is that a first-class, modern exhibit which emphasizes visitor participation costs about \$50 a square foot. Now, some of our exhibits cost more than that. If you are talking about a 1,500-square-foot exhibit you can figure the kind of money we are talking of here. It is possible to do a first-rate exhibit for less, and some of our exhibitors spend more, but I think that is a good rough rule of thumb. Now that figure could be reduced, I am sure, if the design purpose were to produce a compact exhibit. It would have to be shown in a smaller area. You could perhaps do it for less than that figure. That is the rough figure that we use in making plans for the new exhibits at our museum in Los Angeles.

Chairman Regan: Do you know whether or not any of the major exhibits in your museum have been duplicated any place else in the state?

Dr. Fitzgerald: I do not know of any that have been duplicated elsewhere in the state, but there is one outstanding example of the total exhibit which has been duplicated elsewhere. The mathematic exhibit of IBM has been duplicated for the Chicago Museum of Science and Industry. While the precise dollar figures are not known, it is estimated that that exhibit cost IBM for time and reasearch and development \$400,000. Charles Luckman, the designer, had free rein for a suitable period of time to work on this, in the early stages of his work with IBM.

Chairman Regan: Mr. Chaffee, you have been indicated there, would you comment on the activities of the telephone company?

Mr. Chaffee: I was going to say, we do duplicate some of the exhibits, insofar as the concept of those exhibits is concerned. For example, at the Sacramento Fair we have a permanent exhibit building there and we have demonstrated some of the same principles that we have at the Museum of Science and Industry.

Chairman Regan: Would you say that the results which are achieved have been considered beneficial to your company?

Mr. Chaffee: Oh, indeed.

Chairman Regan: Next question. How about further expansion by. . . We do have 71 fairs. To what extent would your industry or any other participate in any of the rest of the fairs in California?

Mr. Chaffee: I believe we participate in a number of them. I can't offhand say that we participate in all of them. We approach the fair on the basis of the kind of audiences we may be exhibiting to.

I was going to comment regarding your mentioning portable exhibits—we have one presently that sits in a trailer which we have taken over a good portion of California. We take it to the youngsters, in other words we make it available to youngsters, and there again, we demonstrate some of the same principles, and some of the same things we permanently display in the Museum of Science and Industry. We have found this very attractive to our young people. One of the things we are concerned about, is that we want to see young people get interested in science. We have somewhat of a selfish interest in that because we hope these young folks will go on and take an educational course which may lead to a position in our industry at some later date and we know they need a science background. This is somewhat of a selfish point of view.

Dr. Fitzgerald: Pacific Telephone had in our temporary space exhibit a fine replica of Telstar.

Mr. Chaffee: We have used this type of exhibit quite extensively throughout the state.

Dr. Fitzgerald: This is different from the way in which the basic concept was explained in the permanent exhibit in the museum. Each did an effective job of teaching. There are a number of units which we have in our museum in Los Angeles. There is the tic-tac-toe game played against the computer, which is a very attractive kind of exhibit that people get a lot of fun out of, and does illustrate the operation of the computer. The readiness and speed with which the computer can respond to any mark that a human competitor makes with it is astonishing. In fact, you can't beat the machine. Not only that, but how it works is exemplified.

Assemblyman Booth: Mr. Chaffee, what is the cost of your portable exhibit?

Mr. Chaffee: It varies. I can't tell you offhand, because we maintain a stock of various types of exhibits that could be used before various kind of audiences. Not only fairs, but various types of trade

shows, etc., so these would vary in cost depending upon their size. In addition to that, we try to man most of our exhibits so that we have experienced people who are available to talk to the public, explain things, because very often these exhibits are a little complicated in a sense of getting some concept of electronics, etc. So it would be rather difficult to give you a particular figure.

Senator Bradley: Mr. Chaffee, do other organizations—do you believe the cost to be prohibitive to the advantages they get out of it?

Mr. Chaffee: I think each organization would probably have to judge this on its own concept of what it might feel valuable to it. In our case we think this is a very valuable medium of reaching the public, particularly young people.

OTHER MATTERS

Fairs Not Within Jurisdiction of Joint Committee

Previously, the Joint Committee on Fairs Allocation and Classification has recommended that the various fairs which are not now legally within the jurisdiction of the committee, be brought within its province by appropriate amendments to Section 92.7 of the Agricultural Code. These fairs include the California State Fair and Exposition, the California State Exposition and Fair, the Los Angeles County Fair, Agricultural District 1-A (Cow Palace), the 48th District Fair, and the two citrus fairs.

The committee is of the opinion that this change will benefit these fairs by providing them with a forum in which their needs, problems, and programs may be discussed and dealt with, and will benefit all California fairs by developing greater cooperation between them in achieving their common purposes.

A bill to make this change was introduced in the current session, but failed to come out of committee. The committee feels that another effort should be made to enact this change in law at the next regular session.

Entertainment and Other Attractions at Fairs

One of the topics approved for study at the meeting of the Joint Committee on November 8, 1963, was entertainment and other attractions staged at fairs to draw attendance. Preliminary investigation revealed that the problems involved are so complex, and so many ramifications exist, that the study was necessarily postponed until a later date.

ACKNOWLEDGMENTS

The committee acknowledges with gratitude the cooperation of Charles Paul, Director of the Department of Agriculture; A. E. Suider, former Chief of the Division of Fairs and Expositions, and his successor, Thomas E. Bair; Dr. Julian McPhee, President of California Polytechnic College; Wesley P. Smith, State Director of Vocational Education, State Department of Education; Mrs. Marcelle McCoy, Secretary-Manager, Marin County Fair; Ed Clendennen, Manager, 37th District Fair; Roy Bell, Assistant Director of Finance; M. R. Harrington, Assistant Chief, Division of Fairs and Expositions; William Straub, Secretary-Manager, Santa Clara County Fair; Dr. William Fitzgerald, Director of the California Museum of Science and Industry; Richard Walker, Past President, Western Fairs Association; and Louis S. Merrill, General Manager, Western Fairs Association.

The committee expresses its particular appreciation to Messrs. S. Clark Beise, W. G. Chaffee, Francis V. Keesling, Jr., Frederick W. Mielke, Jr., Sigvald Nielson, Esq., T. S. Peterson, and Robert W. Walker, for accepting appointments as members of the statewide advisory committee of business and industry.

The staff which conducted research for the committee, and worked in the preparation of this report are also thanked and commended: C. William Queale, Consultant; Pat Merrick, Project Director; and Patricia Warner, Secretary.

Statement of Expenditures of Oil Revenue

By the City of Long Beach in Accordance With Section 10,
Chapter 138, Statutes 1964, First Extraordinary Session

Published by the
SENATE
OF THE STATE OF CALIFORNIA
1965

GLENN M. ANDERSON
President of the Senate

HUGH M. BURNS
President pro Tempore

JOSEPH A. BEEK
Secretary

Offices of The City Attorney of Long Beach
Long Beach, California 90802
October 1, 1965

Secretary of the Senate
State of California
State Capitol, Sacramento

Dear Sir :

In accordance with Section 10, Chapter 138, Statutes 1964, First Extraordinary Session, the City of Long Beach hereby files the Statement of Expenditures of Oil Revenue required under the aforesaid act.

Very truly yours,

LEONARD PUTNAM, City Attorney
By Robert W. Parkin, Deputy

Encl.

TIDELAND OIL FUND
TIDELAND OIL REVENUE FUND

SCHEDULE OF EXPENDITURES, INCLUDING OBLIGATIONS INCURRED BUT NOT PAID,
FROM OIL REVENUE FOR THE FISCAL YEAR 1964-65

<i>Description</i>	<i>Disbursements</i>	<i>Obligations incurred but not paid</i>	<i>Total expenditures</i>
Shoreline Development			
Property Acquisitions for Shoreline Drive and access to Arena-----	\$505,602.50	--	\$505,602.50
Title Insurance, appraisers, and negotiators expenses relating to property acquisition -----	12,662.99		12,662.99
Demolition and removal of buildings---	8,684.50		8,684.50
Site investigation, preliminary engineering and design, and preparation of preliminary plans and specifications by personnel of the Engineering Department, for preconstruction phase--	4,219.84		4,219.84
Professional services of Consulting Engineer -----	--	\$13,800.00	13,800.00
Purchase and equipping a work boat for use during construction of hydraulic fill --	4,002.40	3,511.83	7,514.23
Engineering services provided by Department of Engineering for the preconstruction phase of the Shoreline Development -----	2,344.33	--	2,344.33
Totals, shoreline development ----	<u>\$537,516.56</u>	<u>\$17,311.83</u>	<u>\$554,828.39</u>
Arena			
Modification of Attic access openings and ladders -----	\$5,350.00		\$5,350.00
Replacement of trees as part of landscaping -----	1,341.60		1,341.60
Purchase of equipment and materials--	61,235.75	\$4,802.87	66,038.62
Totals, arena -----	<u>\$67,927.35</u>	<u>\$4,802.87</u>	<u>\$72,730.22</u>
Marina and Marine Stadium			
Construction of Comfort Station and Shower Building for Basin No. 5----	\$6,147.17		\$6,147.17
Construction of Parking Lot at 72nd Place—Basin No. 5 -----	24,125.77		24,125.77
Demolition of Building and Improvements at 72nd Place—Basin No. 5--	1,495.00		1,495.00
Reimbursement for Hoist Platforms—Basin No. 5 -----	(4,680.00)		(4,680.00)
Engineering services provided by Department of Engineering for the construction of Basin No. 5 Improvements -----	4,886.14		4,886.14
Construction of Addition to Comfort Station—Basin No. 4-----	15,219.35		15,219.35
Engineering services provided by Department of Engineering for the construction of addition to Comfort Station—Basin No. 4 -----	3,271.07		3,271.07
